THE NATION, No. 20 Vesey Street, New York City, Cable Address: NATION, New York. Muriel C. Gray, Advertising Manager. British Agent, Miss Gertrude M. Cross, 23 Brunswick Square, London W. C. 1, England.

WITH THE PRESENT ISSUE of *The Nation* the editorial control and management are vested in a board of four editors—Ernest Gruening, Henry Hazlitt, Freda Kirchwey, and Joseph Wood Krutch. Oswald Garrison Villard remains as publisher and contributing editor. His pen will not be less devoted to the service of *The Nation*, with which he has now been associated for thirty-five years. The spirit and purpose of *The Nation* will remain unaltered.

TO HARPER'S MAGAZINE our compliments. It has "scooped" the daily press with an article by John T. Flynn entitled "Inside the R. F. C.," and has set forth such startling facts that the article has already been read into the *Congressional Record*. We urge everyone to read this amazing chapter in our national rake's progress, which makes the waste of money by the Federal Farm Board seem like kindergarten stuff. As for Mr. Hoover, what reputation for strict veracity he may have left suffers greatly. The statements from Mr. Hoover listed by Mr. Flynn, together with what actually took place, would have branded anyone else as guilty of mendacity, but of course it would be unpatriotic to insinuate such a thing in regard to our Chief Executive. Still, when he stated in April last that the \$125,000,000 lent to banks at that time had gone to banks and trust companies in forty-five States, and failed to add that half the money had

been lent to "just three big banks," he was certainly conveying a deliberately false impression. And this is only one part of the picture. Charlie Dawes, it seems, was offered \$90,000,000, only \$5,000,000 less than his bank's *total deposits*. Atlee Pomerene, the Democrat who succeeded Charles Dawes as head of the R. F. C., gave \$12,272,000 to the Cleveland bank of which he is a director, while the Detroit bank of which Roy D. Chapin, now Secretary of Commerce, was a director got \$12,983,000. The Globe and Rutgers Fire Insurance Company, whose president, E. C. Jameson, gave Bishop Cannon \$68,000 in 1928 to carry Virginia for Hoover, was well recompensed by a \$2,000,000 loan. And yet there are people who get excited over Tammany graft! Out of \$264,000,000 lent to the railroads by the R. F. C., no less than \$156,000,000 went to those belonging to three groups—the Morgan, Van Sweringen, and Pennsylvania groups. It all cries to high heaven for scourging.

WET LEADERS in the Senate now promise to give us legal beer before March 4. The Collier bill, these leaders say, will be accepted by the Senate substantially in the form in which it passed the House. There will be no riders attached to make the measure more acceptable to President Hoover. It was at first reported that the bill would be amended to provide for a general sales tax in addition to a tax on beer, the wet strategists believing that Mr. Hoover would swallow the legalization of beer if that was necessary to get his sales tax through Congress. More objective observers are less hopeful of a beer victory in the Senate. They seem to be on fairly firm ground in declaring that relatively fewer dries in the Senate have been won over to the anti-prohibition cause than in the House. A number of Senators have said that they will support the beer bill only after Congress has adopted a repeal resolution. Since the outlook for repeal at this session of Congress is not particularly bright it would appear that legal beer may be defeated in the Senate. Incidentally, we are curious to know by what manner of reasoning the House came to the conclusion that the 3.2 per cent beer permitted under the Collier bill should be excluded from sale in States which still have prohibition laws. This seems to us a tacit admission that beer of this alcoholic content is in fact intoxicating and that therefore the Collier bill must be unconstitutional. Because of the haste with which it is trying to solve the liquor problem Congress is bound to make mistakes of this kind. The wets should remember that the prohibitionists are ready to take advantage of any political or legal error, however slight, that they may make in their efforts to abolish the Eighteenth Amendment.

THE SENATE AND HOUSE conferees have agreed on an improved Philippine independence bill, but one which is still far from what it ought to be. The probation period before independence was fixed at ten years instead of the twelve voted by the Senate and the eight by the House. This period does not, however, satisfy the agricultural members of Congress who have been so eager for Philippine

independence because of their fear of Philippine competition. The bill now provides before independence a five-year period of preparation and then a second five-year period, to be marked by tariff "step-ups" and export taxes which, it is explained, would make it possible for the Filipinos to obtain the money to pay off the bonds held by America. Imports of sugar into this country were raised in conference from 615,000 to 850,000 tons a year, while instead of 150,000 tons of cocoanut oil, 200,000 may come in until the Islands are free. Instead of complete exclusion of Filipinos from the United States, there is to be an annual quota of fifty—how very generous! Immigration into Hawaii is to be regulated by the Department of the Interior "on the basis of the industrial needs of that territory." The proposed plebiscite on the question of independence at the end of ten years was stricken out. The worst feature of all, that the United States shall continue to own in perpetuity all naval and military stations now held by it, remains in the bill. So, too, does the instruction to the government to negotiate for the neutralization of the Islands. In other words, we are to demand their neutralization while reserving to ourselves the right to maintain army and navy garrisons in the Islands! As we write, the indications are that President Hoover may yet veto the bill.

PRESIDENT BUTLER of Columbia University in his annual report made a caustic reference to the failure of the big foundations to underwrite projects designed to mitigate the world's economic difficulties, and lamented the fact that most of the great funds which have been left "for the service of the public" are being dissipated over many fields instead of being "concentrated in large amounts on one, two, or three of the commanding problems" of the day. The next day, as if in statistical support of Dr. Butler's protest, the Twentieth Century Fund's study of the flow of foundation grants was published, showing that only 1.5 per cent of the \$54,600,000 given away in 1931 went into the field of economics—either for research or for economic action. As the Fund's director pointed out, "it might be expected, at a time when the capitalist world is facing the most dangerous economic crisis in all history, that organized philanthropy would make a special effort to help explore or eradicate the causes of these social difficulties, as philanthropy already has attacked and helped mitigate the causes of hookworm disease and yellow fever." The explanation of this amazing neglect of the whole field of our economic life is probably to be found in the average foundation's fear of controversy. Set up by millionaires to expend fortunes amassed in great industries, the foundations have been looked upon with some suspicion, and the closer they have ventured to fields in which social and economic interests are involved the more doubts they have created. The time has come, however, when the finest service they could perform and the greatest step they could take to win public confidence would be to devote some of their millions to the study of the almost fatal defects in the economic system which, in its more robust youth, made these great foundations possible.

SAMUEL SEABURY, in another report to the Hofstadter Legislative Committee, which has been investigating conditions in New York City, has struck another tremendous blow at Tammany Hall. Rarely have we seen a more effective

indictment both as to its contents and the admirable and remarkably convincing style in which it is phrased. Primarily it is a detailed review and analysis of the testimony in regard to former Mayor Walker, including his financial relations with Betty Compton. Miss Compton, as everybody long ago knew, was the "unnamed person" of the inquiry who was not namable until she voyaged abroad with the ex-Mayor. As for the ex-Mayor, Mr. Seabury correctly declares that his "so-called defense constituted a record of equivocation, evasion, and contradiction, based on contentions not susceptible of either verification or disproof by either oral or written testimony. The Mayor demonstrated himself to be unworthy of belief where his official conduct was called in question." Mr. Seabury with great courage also attacked the local political leaders, declaring that the welcome extended to Walker on his return from Europe was in his judgment "a disgusting spectacle" revealing "a sort of moral treason to the city." This is most refreshing language, and it is, of course, absolutely unanswerable. It appeared just when the leader of Tammany Hall, John F. Curry, and others of his stamp in the party were reaching out to take over the Democratic State organization. Finally, Mr. Seabury demanded the removal of the Borough President of the Bronx, Henry Bruckner, his Commissioner of Public Works, William J. Flynn, and also the Commissioner of Weights and Measures, whom Mr. Seabury found wanting in "the little mental ability" required by his job. This puts Mayor McKee into a pleasant hole, and it is safe to say that this "reformer" will do precisely nothing.

GOVERNOR MOORE of New Jersey is entitled to the hearty thanks of everyone who believes in justice and decency in the treatment of offenders against society for refusing to send Robert Elliott Burns back to a Georgia chain gang. From this hell Burns escaped twice, after having been sentenced to serve from six to ten years for the theft of \$4.80! He has since shown his desire to go straight and has lived up to his intention. To have sent him back after the publicity his case has received would have been to send him to certain torture if not death—probably the latter. Of course the Governor of Georgia pretended to be outraged by what his Prison Commission terms Governor Moore's "violation of the Constitution of the United States." He conveniently forgot his own refusal to permit New York to extradite a released convict desired for trial in a perjury case, and he even dragged in the case of the Lindbergh baby in order to vent his spleen upon Governor Moore. He also forgot that Governors Franklin D. Roosevelt and Alfred E. Smith of New York, Allen of Kansas, and Groesbeck of Michigan have similarly refused to return men to Georgia. We are glad to note that former Congressman W. D. Upshaw of Georgia has heartily commended Governor Moore for his action. Indeed, no man ought to be delivered to Georgia as long as it persists in its inhuman and barbarous chain-gang system. The Georgia Prison Commission defends that system. We reply that it belongs to the Middle Ages. If only Governor Russell and his commissioners might visit the prisons of Germany and Russia they could see for themselves how many decades, not to say centuries, behind modern methods is their treatment of prisoners. But men of this type refuse to open their minds to new ideas and believe in dealing with prisoners with sadistic ferocity.

CHANCELLOR VON SCHLEICHER continues to win public approval for himself in Germany by wise measures doing away with the restrictions imposed by his predecessor, Von Papen, upon the liberties of the press and of individuals. He has abolished the summary courts set up to try political offenders when the fighting between the Communists and the Hitlerites was at its height, and he has released several thousand political prisoners. Among those freed, we are glad to report, is Carl Ossietzky, the editor of the *Weltbühne*, whose severe sentence was imposed upon him because he allowed a contributor to tell the truth about the Reichswehr's relations with the Russian army authorities in aviation matters. General von Schleicher has also rescinded the Von Papen decree which gave the government the right to alter at will the social-insurance laws which mean so much to multitudes. Naturally these measures have gratified the labor unions, while the whole nation is relieved at the Chancellor's announcement that there is to be no tinkering with the constitution. Finally, Von Schleicher has done away with the death penalty for political homicides. It is interesting to note that since this military Chancellor has taken office talk of a growing monarchist movement has subsided. His policy is the wiser because all Germany so ardently craves domestic peace and quiet. Incidentally, the latest reports show a distinctly better feeling in business circles. If there are still nearly six million unemployed, there is growing confidence that the worst period of collapse and misery has passed and that Germany will now begin to show signs of industrial recovery.

THERE IS MORE THUNDER than lightning in Kenzo Adachi's announcement that he has at last succeeded in forming a fascist political party in Japan. It is a relatively simple matter to organize a new party in that country. Since the first political parties—the Jiyuto, Kaishinto, and Teiseito—were formed about fifty years ago, many such organizations have come and gone. Of the two major parties which are active at present, one, the Minseito, was founded as recently as June 1, 1927. The other, the Seiyukai, is thirty-two years old, but even this party has undergone many changes in policy and purpose, the name being retained almost entirely for the sake of convenience. Secondly, Kenzo Adachi, who is a political opportunist, is merely riding the crest of the fascist wave which is now at full tide in Japan. Finally, Adachi proposes to abolish the Cabinet, and presumably also the Diet, substituting for them a "state council of national affairs." This council would be responsible only to the throne. He would also nationalize a few industries. The Privy Council, the Imperial Household, and the Supreme Command (composed of the army and navy chieftains) today constitute the real government of Japan. While the Cabinet does enjoy a small measure of power, its elimination would hardly be noticed so far as the actual business of governing the country is concerned. The political reforms advocated by Adachi would mean little more than a change of personnel in the seats of power. His projected economic reforms fall far short of meeting the fundamental economic problems of the country. Many members of the Seiyukai Party, and even a few in the more democratic Minseito, have publicly advocated reforms which, when compared with Adachi's program, are really revolutionary in scope.

THE DREADFUL PICTURE of life in a starved Austrian village which we print elsewhere in this issue of *The Nation* unfortunately has its counterpart all over Europe. Conditions in Poland are also unbelievably bad. This we have on the authority of the former Prime Minister of Poland, Witos, whose statement has recently been published in a Warsaw newspaper. He declares that the Polish village now resembles only a cemetery where one sees silent, grim, odd-looking figures going about "like shadows of the dead." The peasants are without shoes or underwear, and are literally in rags. Undernourishment in the villages gets worse from day to day; there is hardly any salt to be had; and a match is a precious thing—the people have gone back to making fire with flint. At night the villages are entirely in darkness. Sickness is increasing rapidly, especially tuberculosis. Witos declares that the peasants have ceased to read, that there is no book to be seen anywhere, that a newspaper is a rarity in villages whose inhabitants used to subscribe to between ten and twenty different papers. The schools are being deserted, and many villagers live entirely by theft and open robbery because there is nothing else that they can do. The price of land is one-fourth of what it was and everybody wishes to sell. German newspapers confirm this picture not in the least overdrawn, and declare that the situation is even worse in the Polish Ukraine and in Polish White Russia. The horrible thing about it is that there is not the slightest prospect of any early improvement, and no one to give aid. How long can humanity endure under these conditions?

We shall have to hurt their feelings and wound their susceptibilities, and in some cases violate their most cherished sacred traditions, but we must face these difficulties unless we are to allow to lie undeveloped wealth that may provide prosperity for the country, in which every community can share.

THESE ARE THE WORDS of the chief commissioner for native affairs in Kenya, East Africa—a new version of Lewis Carroll's "I weep for you, I deeply sympathize," which the Walrus spoke with streaming eyes. The commissioner, of course, goes one step further: "It will be to the discredit of the country if a single native is a penny worse off for the discovery of gold in his own country." Gold—that is what it is all about. This precious metal having been discovered in the Kakamega region of Lake Victoria, which has belonged for all time to the natives, the Kenya Legislature, conscious of the responsibilities involved in the white man's burden, passed a law permitting the expulsion of the natives from gold-bearing lands when given other lands and "compensated as white men should be." Not that they are to have any share in the gold that is dug out of their land. Heavens, no! What would poor, ignorant, uncivilized savages want with it? It is reserved exclusively for the benefit of the superior race. Meanwhile, according to the dispatches, "clashes between the gold prospectors and the natives are increasing with the arrival of shiploads of white immigrants from South Africa." What a beautiful picture, what a perfect picture of the processes of civilization! What are "most cherished sacred traditions" and native "susceptibilities" worth when they stand in the way of a white man who wants to get rich quick? The answer is before us once more, in Kenya.

The Loss of Owen D. Young

OWEN D. YOUNG has dealt himself and his reputation a serious blow indeed by his testimony in the suit brought against the General Electric Company to compel it to return the collateral given to it by Samuel Insull to cover a loan of \$2,000,000 made to him when no bank in Chicago or New York would grant him an additional dollar. It is not only that, as we pointed out last week, Mr. Young made this loan of his stockholders' money to Mr. Insull after he was deeply in the latter's debt through the receipt of a \$175,000 interest in Insull Utility Investments at an insider's price far below that at which the public could buy. He himself admitted that he never inquired into the exact financial condition of either the Insull Company or Mr. Insull himself. It was sufficient for Mr. Young that "one of our best customers" wanted the loan. Indeed, Mr. Young admitted that he was in terror of Mr. Insull. Not only was he afraid that the General Electric Company would lose Insull's business if he failed to oblige him; he admitted that he did not dare to ask Insull what he wanted the money for; that while he held his stock in Insull Investments he did not dare to sell it for a profit or a loss lest he incur "Mr. Insull's displeasure"! If this is evidence that Mr. Young was a free agent and duly vigilant in protecting the interests of his stockholders, we do not understand the meaning of words.

More than that, Mr. Young approved the set-up of Insull Utility Investments when it was submitted to him by Mr. Insull in advance of its organization, and he still defends it. The trouble, it appears, was not with the set-up—even with its heavy load of \$60,000,000 of debenture bonds—if the maturities were far enough off and the operating companies provided enough interest to keep this capstone of the Insull pyramid going. A big if! As it was, the market was so unkind as to shrink after the break of October, 1929, and the Insull assets began to shrink as well. As Mr. Young put it, "at that period, as you know, everybody from the President of the United States down thought the crisis would soon be over." But the crisis refused to budge in the face of orders from King Canute Hoover and King Canute Insull, and all the rest of the King Canutes of our industrial autocracy. None the less, Mr. Young never dreamed of asking Mr. Insull how things were going when, *twenty-six months* later, he gave him the \$2,000,000 loan. Mr. Young plainly lived in a different world. He did not know that things were tumbling. He had not heard that the Chase National Bank had refused to give Insull a \$6,000,000 loan. When asked if he did not know that Mr. Insull was "financially irresponsible when he offered you his personal indorsement on the notes for \$2,000,000," Mr. Young replied that he "relied" on the collateral Mr. Insull offered and that he was not aware that Mr. Insull was "broke." Anyhow he left such details to Mr. Swope, the president of the General Electric.

But this is even less striking than a carefully prepared statement which Mr. Young presented to the reporters as he left the witness stand after his first examination. In this document, after explaining how it was that the Insull-Young set-up of Insull Utility Investments collapsed, he summarized

his view of Samuel Insull thus: "The most you can say about that old man is that he had too much confidence in this country and his own companies." "*The most you can say*"! Why, at the moment Mr. Young handed out those words Mr. Insull was a fugitive from justice in Greece, refusing to return, as any guiltless man would, to prove his innocence in court. When he wrote that kindly sentiment Mr. Young was perfectly aware that "that old man" was under indictment for embezzlement; that Insull had taken sound investments which secured the debenture bonds of Insull Utility Investments and pledged them to the banks for loans of \$45,000,000. It seems to us that there is a good deal more to say about "that old man" than what Mr. Young volunteered.

Now we are well aware that the practices which we have here set forth are common in the management of big business in the United States. It has been an everyday affair for our supermen to hold each other up and to blackjack one another. Perhaps to a large majority of the men in Wall Street Mr. Young's act will seem justified by the established practice. They will declare that it was up to Mr. Young to save his largest customer, that it was just too bad that the customer failed. They are doubtless asserting that if all had gone well and Insull had come out on top, Mr. Young would have been complimented for being smart enough to turn the General Electric Company into a banking firm, thus rescuing his largest customer and tying him to the company more closely than ever. They surely feel that it was extremely hard luck that Owen Young gambled and gambled wrong. But when we admit that this is common practice in Wall Street we merely explain why it is that we are shocked by Mr. Young's admissions—admissions made without the slightest apparent contrition or regret.

For we had thought of Mr. Young as being above this sort of thing—until the revelations of the last few years, including his connection with the management of the Radio Corporation and the recent voluntary dissolution of that combination, which the government was prosecuting for violation of the anti-trust law. We had long supposed that Mr. Young was cast in a different mold from the ordinary conscienceless Wall Street promoter and big-business manager. He has given many evidences of great public spirit; his name was attached to the plan which many people thought was the final and definitive settlement of the reparations difficulty. He has been mentioned for the Presidency of the United States, for Secretary of State; he has been a patron of letters and of universities. Now we find that when it came to a crisis he again did not stand up to the trust imposed upon him; he gambled to help out a man to whom he was under a deep personal obligation that had nothing whatever to do with the Owen D. Young who is Chairman of the Board of the General Electric Company.

Yet we shall continue to hear of the inability of our business leaders to understand the growing antagonism to them and to their system. We have headed this article *The Loss of Owen D. Young*, because we cannot conceive that, after these recent episodes in his career, he will be considered available for further public service.

Munitions and Peace

THE Associated Press has reported that Mr. Hoover is planning to ask Congress for authority to "declare embargoes on shipments of arms to countries in which hostilities exist or are threatened." The President's message, it was indicated, will refer especially to the war in the Gran Chaco between Bolivia and Paraguay as the occasion for making this request. However, it was understood that Mr. Hoover would seek authority broad enough to cover actual or threatened hostilities in all countries. Thus it could be applied to the Japanese invasion of Manchuria as well as to civil and international warfare in Central or South America. An executive order of a similar nature issued by Calvin Coolidge a number of years ago, which has been both used and abused by the State Department, was designed simply to apply to revolutionary activities in Latin America and China. The Manchurian story might have been different if Mr. Hoover had had the authority now proposed and had exercised it in the latter part of 1931 when the Japanese began their conquest of the Three Eastern Provinces. At least Secretary Stimson's efforts to reestablish peace in the Far East would have been immeasurably reinforced. It is true that Japan could have continued to receive munitions and other war materials from Europe, but the independent action of the United States would have had its influence on public opinion everywhere, and there would thus have been some hope of persuading France and England to follow the American lead.

A year ago the Women's International League for Peace and Freedom endeavored to induce Congress to adopt a resolution prohibiting the exportation of munitions to countries at war. Hearings on the resolution were blocked through the influence of the State Department, and the matter was dropped by Congress, but not by the Women's International League. It was privately explained by Administration officials that France and England were unwilling to cooperate with the United States in declaring a munitions boycott, and other reasons were advanced to justify the State Department's position. Since then all these objections have been swept aside, and both the State Department and Mr. Hoover apparently have been converted to the belief that an arms embargo is a necessary instrument of peace. Doubtless the Hoover Administration was impressed by the paradoxical position in which it found itself in relation to the war in the Gran Chaco. For months Washington has been making every effort to end the hostilities between Bolivia and Paraguay. At the same time American firms have been shipping large quantities of munitions to the belligerents. Could anything be more absurd? If the State Department is at all sincere in wanting to stop the war, it will also try to stop the munitions shipments which are helping to make that war possible.

We hope that nothing will prevent Mr. Hoover from taking the action forecast in the press. The authorization sought is essential as a first step toward governmental control of the traffic in arms. It would go far by itself toward strengthening our peace policy. In this connection it must be remembered, however, that an arms embargo would inevitably encounter several difficulties. Only the other day

it was revealed in the Argentine Congress that Argentina had in 1923 and again in 1926 negotiated secret loans amounting to \$40,000,000 for the purchase of armaments in this country. Furthermore, great secrecy surrounds all shipments of munitions from the United States. It is virtually impossible to obtain accurate or adequate statistics from either official or private sources concerning such transactions. Any order laying down an embargo on arms would have to take these factors into consideration. It would have to be devised as to prevent the bootlegging of arms or the exportation of munitions disguised as fertilizers or machinery parts. We could prepare in advance to meet these problems by joining with other Powers in a treaty to regulate the international traffic in arms, and by nationalizing our own munition industry. The peace societies have for years been urging that every country "take over as a state monopoly the manufacture and control of arms and munitions as a step to complete and final international disarmament." That is the goal toward which we must work if we would abolish one of the most active incentives to war. It is idle to talk of peace and peace machinery so long as private armament manufacturers are in a position to make huge profits out of war. But in the meantime it is imperative that Congress take whatever action may be necessary to prohibit the exportation of the materials of war to countries engaging or threatening to engage in hostilities.

Company Manners

UNDER the imprint of the International Bureau of Education at Geneva there comes to hand a 250-page report on "Children's Books and International Goodwill," financed by Americans and based upon a five-year inquiry in more than forty countries among librarians, parents, teachers, children, and societies for child welfare. Such a mountain of tabulation might have given birth to a really important inventory of world literature for children if, like so many gestures toward peace from Geneva, it had not been evasive. Tendentia literature is omitted; children are to know each other, but only in the atmosphere of international company manners, like diplomats on the eve of war. Granting all that can be said in its favor, this list is idyllic and nationalist, and therefore ineffective.

As long ago as 1846 it was written of the industrial age:

Instead of old wants, satisfied by the products of native industry, new wants appear, wants which can only be satisfied by the products of distant lands and unfamiliar climes. The old local and national self-sufficiency and isolation are replaced by a system of universal intercourse and all-round interdependence of nations. We see this in intellectual production, no less than in material. The intellectual products of each nation are now the products of all. National exclusiveness and particularism are fast becoming impossible. Out of the national and local literatures, a world literature arises.

Pinocchio, Robinson Crusoe, Ulysses have powers of survival through wars, and perhaps through revolutions, too. The Geneva report grants them honorable place. What we object to on behalf of children everywhere is the preservation in this report of the notion that nice lists of books can help

to re-create a comfortable bourgeois world or do more than obscure the future. "Around the world in children's books" was the slogan for Children's Book Week in 1931, and an admirable battle cry it was in a year when publishers were overstocked with both quaint and good-enough stories about every quarter of the globe. Single-handed, more than one juvenile editor had unearthed large portions of the bibliography published in Geneva. But now that the whole field for exploitation is made visible, and a rich field it is, something quite different seems important. Let all these books be translated into Dutch and Japanese, into Latvian, Italian, and English, and still there is no hard core to the list, no source of international good-will. "Heidi" prevents no wars; the folktales are told to children who do not get the gist of their own times—that an industrial society crunches the bones of the gentle heroes of hills and valleys; that wise men are silenced by the roar of the radio; and cash money, not seven-league boots, avails for world tours.

"What books give a true picture of child life in your country, and which are most popular with children?" The answers to these questions have been tabulated and set down in Geneva, but they are relatively unimportant. It would be more interesting to know what classes of children are literate, what they read at school, what books cost, how many children have access to libraries, what subjects are taboo in children's books.

Librarians will find this list good reading though not definitive even within its academic range. They will miss "Seven Brothers" from the Finnish list and be amused at the French inclusion of "The Crime of Sylvestre Bonnard." One looks in vain for the little picture book of "Graphic Statistics," by the head of the People's Museum in Vienna, used in the Austrian schools, and easily one of the most important books to include in any really international list because it makes social statistics interesting and dynamic. Why Ilin's book for Russian children on the Five-Year Plan was omitted (especially since it is available in English), though his excellent books on time and the alphabet are included, is not clear. Why Paul Bunyan was left off the United States list and Katharine Adams's sentimental tale of some children who visited their grandmother in a Swedish castle put on will puzzle many readers. What "The Runaway Sardine" or two books by and about Roosevelt will do to cement international good-will is hard to see. We even wonder whether the Petershams' beautifully printed picture book "The Christ Child" is cement for a crumbling world. An international world has to be built from the ground up. There is no peace by any other road; and celebration of the meekness, the mildness, of old ideals of peace is deception of the young.

Faster, faster must the young learn, not so much to glimpse in print the sunrise on Mt. Blanc and the works of the Hida craftsman, but to look at the architecture of their own towns, to see realistically the squalor around them, to perceive the misery of the farmers as well as the beauty of the fields. Young people need more than mere pacifism; they need all the help that we can give them to perceive the nature of the struggle which must be fought before gas masks are put aside in Manchuria and actual plans for peace, in place of resolutions on chemical warfare and shrewd bargains in arms quotas, emanate from the conference rooms of Geneva.

The Debt Impasse

THE deadlock to which President Hoover and Governor Roosevelt came after their exchange of telegrams on war-debt procedure is not entirely the fault of either individual. If we confine our view to the immediate situation, the President is to be praised at least for recognizing the importance of keeping negotiations open and losing a little time as possible. He is to be praised for consulting Mr. Roosevelt and inviting his cooperation. He is surely not to be praised for the manner in which he did it. It was an embarrassing blunder for him to announce publicly that he was seeking Mr. Roosevelt's cooperation on certain terms, before he had troubled to learn privately on just what terms Mr. Roosevelt would cooperate. His first telegram to the Governor was another example of the President's tactlessness. It lectured Mr. Roosevelt on what was necessary in the circumstances, told him precisely what Mr. Hoover intended to do, and then invited him to cooperate on that basis. It is hardly to be wondered at that the President-elect refused to fall in with this program. He not only disagreed with the President on the method of procedure, but pointed out how unsatisfactory for himself responsibility without authority would be.

Before March 4 Mr. Roosevelt could not have any representative with official standing unless Mr. Hoover appointed him, but that representative, when appointed, would be officially responsible to Mr. Hoover and not to Mr. Roosevelt. There is no way of surmounting this dilemma, and to this extent the failure of Mr. Roosevelt and Mr. Hoover to find a satisfactory basis for cooperation must be laid to the impractical workings of our Constitution rather than to either of the two individuals involved. The incident serves to emphasize dramatically the need for the Norris amendment now happily on its way to ratification.

When, however, we look beyond the immediate situation, it is clear that both men bear a large share of responsibility for the present impasse. Since the moratorium—the boldest and most admirable act of his Administration—Mr. Hoover's attitude on the war debts has been timorous, dilatory, and evasive. Not until actual default by seven nations did he directly venture to suggest to Congress that he would negotiate for a revision of the debts, and even now he makes reservations in advance that would severely limit the scope of discussions and perhaps render them abortive.

Mr. Roosevelt, on his side, has hardly covered himself with glory. True, he has suggested that Mr. Hoover should proceed with the selection of his representatives "to conduct the preliminary exploration," and he has indicated that he will conduct negotiations with our debtors through regular diplomatic channels and special representatives rather than through public speeches for home consumption and the glaring publicity of a conference. This method seems to us far preferable to Mr. Hoover's. Meanwhile, however, Mr. Roosevelt retains his almost pathologic fear of committing himself, and on an issue vital to economic recovery the world remains in the dark. How different the situation would be if he said boldly that he recognized the necessity of revising the debts, and that the first act of his Administration would be to resume negotiations to that end!

The Nation's Honor Roll for 1932

WE print below a list of American men and women who during the past year have performed some outstanding public service, have made important contributions to art or literature, or have otherwise added in some distinguished manner to the interest and gaiety of life.

Public Service

THE COMMITTEE ON THE COSTS OF MEDICAL CARE, for its thorough, realistic, and careful five-year study of the economic aspects of medical care, and for its majority report, which offers the most fundamental and practical recommendations yet formulated for bringing adequate medical service to the people at a price they can pay.

JUDGE SAMUEL SEABURY, for his masterly investigation of the government of New York City, which led to the resignation of Mayor James J. Walker.

PAUL BLANSHARD, of the City Affairs Committee of New York, for effective work in exposing the economic roots of civic corruption, and for collaborating with Norman Thomas in writing "What's the Matter with New York."

GRACE ABBOTT, chief of the Children's Bureau of the federal Department of Labor, who has valiantly fought to safeguard the welfare of children in the United States through the months and years of the depression.

BRIGADIER GENERAL PELHAM D. GLASSFORD, for his competent and sympathetic handling of the bonus army during its encampment in Washington; and for his persistent courage in defending the character of the bonus army and in denying that the use of troops was necessary on July 28.

BENNETT CLARK of Missouri, for his fearless and outspoken statements in favor of reduction of tariffs while seeking votes as a candidate for the United States Senate.

FIGIELLO LA GUARDIA, for distinguished service in the Congress of the United States and especially for his leadership in defeating the sales tax and in organizing the liberal minority group in the House.

NICHOLAS MURRAY BUTLER, for his intelligent and outspoken opinions with regard to prohibition, our international relations, and the cowardice of men in public life; also for his vigorous criticisms of the party to which he still belongs.

ANNA ELEANOR ROOSEVELT, who managed even in the heat of her husband's successful campaign for the Presidency to carry on her own valuable public and private activities and to maintain an admirable freedom of speech.

JUSTICE OLIVER WENDELL HOLMES, for thirty years of distinguished service on the bench of the Supreme Court of the United States, and for the simplicity and dignity with which at ninety-one years of age he relinquished the duties of that high office.

ABRAHAM FLEXNER, for the wisdom of the plan he has drawn for the Institute for Advanced Study and his success in securing Dr. Albert Einstein as its first professor.

AMELIA EARHART, for her solo flight across the Atlantic, her continued achievements in the field of aviation, and her extraordinary modesty in the face of the attendant publicity.

F. J. SCHLINK and CONSUMERS' RESEARCH, for their almost single-handed fight to protect the consumer against sharp practices and distortions of facts on the part of manufacturers and advertisers.

Journalism

WALTER LIPPMANN, for his thoughtful and brilliantly lucid articles in the New York *Herald Tribune*, which have enlarged the perspective of thousands of newspaper readers on our national and international problems.

WALTER L. SANBORN, of the *North Penn Reporter* of Lansdale, Pennsylvania, for notable patriotic service in bringing about the conviction of an assistant district attorney, a county detective, and a township police chief for administering the third degree to a man arrested on suspicion of committing a crime.

Books and Plays

FRANK LLOYD WRIGHT, for "An Autobiography," a record of courage and an illuminating self-study of an important American architect and his work.

JOHN DOS PASSOS, for "1919," a novel revealing an unsurpassed range of awareness of contemporary American life, uniting an implicit passion for social justice with the portrayal of living and convincing characters.

VAN WYCK BROOKS, for "The Life of Emerson," a biography reflecting the spirit of the Sage of Concord more successfully than any previous one, and for his admirable "Sketches in Criticism."

HENDRIK WILLEM VAN LOON, for making geography the fascinating science it should be.

JOHN HOWARD LAWSON, for "Success Story," a thoughtful and powerful drama which deals with a contemporary problem.

SIDNEY HOWARD and S. N. BEHRMAN, for writing, respectively, "The Late Christopher Bean" and "Biography," two plays which continue two of the best traditions of comedy.

Art and Music

THOMAS BENTON, for his murals, "The Arts of Life in America," designed and executed for the reading-room of the Whitney Museum of American Art in New York City. They constitute the most successful current achievement in mural decoration that is genuinely American in feeling and subject matter.

AARON COPLAND and the CORPORATION OF YADDO, for the Yaddo Festival, one of the first American musical festivals devoted to the interests and problems of young American composers.

REX BRASHER, of Kent, Connecticut, who has this year completed the monumental task—occupying forty-three years of his life—of sketching and painting all the birds of North America, totaling more than 1,200 species, and has just published the last of twelve volumes containing more than 3,000 plates.

The Future of Radical Political Action

By JOHN DEWEY

THE last election did not settle the future of political parties in the United States. It rather demonstrated the discontent of at least seven million voters with existing alignments. The general trend was definitely in behalf of policies which would use the agencies of government for the social control of industry and finance. It was far from an expression of confidence that the Democratic Party is capable of bringing about such control. For all who, like the present writer, believe that it is thoroughly incapable of doing the needed work, the article of Norman Thomas in *The Nation* of December 14 on The Future of the Socialist Party raises the question of what instrumentality will be the efficient agent for radical political change. Mr. Thomas holds that the Socialist Party alone has the philosophy which meets the political needs. Such a position certainly simplifies the situation. But it also narrows it. In view of the size of the Socialist vote, and of the extent to which it was in part an expression of confidence in Mr. Thomas personally, and in another part a protest vote from non-Socialist liberals, it narrows the problem perhaps unduly.

It is natural that Mr. Thomas should feel that the Socialist Party is the only way out. He has been twice the candidate of his party for the Presidency. There are divergences within the party, such as were manifest in the Milwaukee convention. It is not surprising that he should take the opportunity to set forth his solidarity with the section which officially controls the party; and that he should wish, even at the risk of ungraciousness to the non-Socialists who supported him and of indulging in recriminations, to clear his skirts of any leaning toward those who do not accept the *ipsissima verba* of official Socialist doctrine. But for the millions of the politically discontented who are outside the Socialist Party, the exigencies of the internal strategy of that party cannot go far to settle the larger question of the future of unified political action aiming at social control.

In discussing the matter I feel free to approach it from the angle of the League for Independent Political Action. I do not do so because of Mr. Thomas's unfortunate references to that organization. The league is not a party and has no ambition to become a party. Its function is to promote education and organization looking toward the organization of the desired new alignment. Since it aims to act as a connecting link, and as far as may be as a clearing-house, for groups and individuals who are seeking similar ends, it may stand at least as a symbol for one type of approach to the problem. We agree that a philosophy is needed as a basis for an effective political movement. We have never prejudged the question as to just how far that philosophy agrees or disagrees with that which Mr. Thomas says is the only possible philosophy. I shall not now try to pass on that question. I shall rather set forth our philosophy positively, leaving it to the reader, Socialist or non-Socialist, to judge our degree of divergence and agreement.

The first point in our political philosophy may be stated in connection with the charge brought by Mr. Thomas that the league holds "an intellectualized version of a watered-

down socialism." For the statement shows a radical misconception of what our stand is. It is quite true that many of our planks are socialistic and agree with the more immediate demands of the Socialist platform. It is true that we recognize the educational work done by the party and by Mr. Thomas and are grateful to them. But the league's agreements are not imitative. It has not first borrowed and then diluted. We believe that actual social conditions and needs suffice to determine the direction political action should take, and we believe that this is the philosophy which underlies the democratic faith of the American people. The belief is the mark of a positive philosophy, not of the absence of one. If charges against the League for Independent Political Action signify that our program is, in an ultimate sense, partial and tentative, experimental and not rigid, we do more than accept them as a compliment. We claim them as indications of our philosophy. We are confronted with a situation in which certain long-span economic forces are operative and which are sufficiently definite to provide a basis for a constructive political program. But we know that this situation bristles with unknowns and we cannot assume that all issues are settled in advance.

In saying this I am not charging the Socialists with being dogmatic or doctrinaire. I notice that Mr. Thomas in his statement calls for government ownership of the "principal" means of production and distribution. As far as the Socialist Party accepts the distinction between "principal" and other means, it inclines in the direction of what in the case of the League for Independent Political Action is dismissed as "watered-down socialism." For how can "principal" ones be settled upon, save on the basis of actual conditions and tendencies? And while collective ownership of all natural resources is called for, there is evidence that the Socialist Party recognizes a gradation in importance and in urgency, and would concentrate first of all upon coal and the water power from which electric power is derived. So far, then, as the Socialist Party is not doctrinaire, there are no differences which are not subject to discussion and conferences—and not so much with the L. I. P. A. itself as, through it, with the other groups which are concerned with bringing about a new type of politics in this country.

We are thus led to the second main point in the philosophy of the L. I. P. A. This is the belief that politics is a struggle for possession and use of power to settle specific issues that grow out of the country's needs and problems. There is very little difference of opinion among radical groups as to what these issues at present are; there is more difference, though not to an amount insuperable for unity, as to how they should be dealt with. Since it believes that politics is a struggle for power to achieve results, the philosophy of the league stands for that strength which can be had only by unity. It believes in working for agreement, not for emphasizing and magnifying the differences that stand in the way of union. I do not charge the Socialist Party with standing for sectarianism and division. I do say that we desire a union of forces to which Socialists can and should contribute.

Because we desire a union of forces instead of that isolation and division which have so weakened liberal and radical forces in the past, we are strongly opposed to all slurs and sneers at the farmers, engineers, teachers, social workers, small merchants, clergy, newspaper people, and white-collar workers who constitute the despised middle class. Since they also constitute a great part of the American nation, and since they are influential and are sensitive to the injustices and inequalities of the present economic order, we do not indulge in the fantasy that effective power can be gained by taking pains to alienate them, by assuming, for example, that they are animated by anti-social class motives. This attitude does not signify that we think their present political views are, upon the whole, sufficiently enlightened to afford the basis of a political program, but that we do believe that they are readily capable of education under competent leadership.

It is nothing less than misrepresentation based on ignorance to assert that this effort to reach the elements just spoken of is connected with disregard of the interests of the manual workers, to say nothing about those who go into the field of motives to search out unworthy ones, similar, for example, to those which members of the Communist Party constantly attribute to the Socialist Party. It has been a constant aim of the L. I. P. A. to find labor groups which believe in independent political action, to bring them together, and to carry

on education among those labor groups which have not yet seen the light. We are opposed to the defeatist policy which assumes that there can be no effective radical political action in this country until the majority of the population have sunk into the "proletariat." We are not yet convinced that the Socialist Party has taken this latter position even though individual Socialists have done so.

Because we are an organization working to secure unity of action where division now exists, we are necessarily exploring the field. We cannot prejudge the amount of unity that can be achieved. For this reason, we are proposing to have a conference of all progressive and radical groups in 1933 to consider this very question. Naturally we shall be disappointed if Socialist leaders slam the door in advance on all hope of cooperation.

Since Mr. Thomas in his "As I See It" states that the essential is to achieve the substance rather than the name, we hope he may be willing, "without prejudice" as to any ulterior commitment, to recommend to the party of which he is the honored head that it enter upon the exploration discussions which are the necessary preliminary to the united action which alone will achieve desired results. But in any and every case the L. I. P. A. invites the cooperation to this end of all individuals and all groups who are of like mind about the need for political action to bring about radical changes in our present economic and financial system.

ShoebUTTONS for Huckleberries

By PAUL Y. ANDERSON

Washington, December 24

AT first blush Roosevelt's "refusal to cooperate" with Hoover on the debt problem appeared to be the act, not of an old potato, but of a small one. However, additional information puts quite a different face on the matter. About "cooperation," as about so many things, Mr. Hoover seems to have peculiar ideas. His plan for dealing with the dilemma of debts and defaults is to appoint a commission which would study debts, disarmament, and world economic conditions jointly, and then conduct negotiations with other governments. Mr. Roosevelt, on the contrary, believes that these questions should be considered separately and handled through the regular diplomatic channels. Although neither has taken me into his confidence, I have solid reasons for believing that Mr. Hoover invited Mr. Roosevelt to "cooperate" by abandoning his own plan and accepting Mr. Hoover's. When the Governor politely declined, such impartial observers as Mark Sullivan made the dreadful discovery that he was "refusing to cooperate." It would do them and Mr. Hoover no harm to spend a few minutes with a standard dictionary. Without attempting to judge the merits of the rival plans (although Hoover's has much to recommend it), it is well to consider certain facts. The first is that Roosevelt probably suspects Hoover of trying to trap him—and that his suspicions probably are correct. The second is that if any settlement of the debt problem is reached, it will be reached by Roosevelt's Administration, and that for Hoover to initiate any policy which he knows will not be pursued by his successor would be an act either of sabotage

or invincible egotism. The third is that while doubtless it would be desirable to have the preliminary work start at once, there will still be time to handle the matter between the inauguration of Roosevelt and the date when the next payments fall due. Someone should remind Mr. Hoover that he is about to go out of office. On the subject of the debts themselves, except where Britain is involved, I remain a Ku Kluxer to the bone. Much of the money which France borrowed from us she lent in turn to her allies of the Little Entente, who used it to purchase armaments from French manufacturers. Has any Frenchman suggested the cancellation of those debts? The Poles and Rumanians and Jugoslavs will be eating shoebUTTONS for huckleberries before France forgives them a dime. If any forgiveness is to be practiced by our government, there are several million mortgage-laden American farmers who will want to know about it.

■ ■ ■ ■ ■

WHILE we are examining whose capacity to pay what, it may be helpful to glance at the latest statistics of income which have just been issued by the federal Treasury. Fewer than 1.2 per cent of the population had incomes in 1931 sufficient to require the payment of federal income taxes. Their taxable net income totaled about \$13,000,000,000, ■■ against \$25,000,000,000 in 1929. The number of taxable returns was 25 per cent less in 1931 than in 1930, and the total reported net income was 23.17 per cent less. Income-tax payments for 1931 will total about \$240,000,000, as compared with the juicy billion paid in 1929. So it will be ■■■■

that your Uncle Shylock isn't so flush himself. However, those who have been deriding Huey Long's complaint about the concentration of wealth might pause to note that one one-thousandth of all those making returns had more than one-twentieth of the reported net income, that there are seventy-five Americans in these days of famine who still had net incomes of more than \$1,000,000 each last year, and that the fortunate four at the very top averaged more than \$9,500,000 each. (Don't ask me—I don't know the names.) It is true that after a hard-hearted and rapacious government had finished taxing them, there remained only an average of \$8,123,178 for each. Four persons with nearly ten millions a year, and more than ten million persons tramping the streets—these are the fruits of "rugged individualism"! I should not care to be one of those four any more than I should care to be one of the ten million.

NEVERTHELESS, I dare say these four are very well satisfied with themselves. The self-assurance of American millionaires is something for future historians and psychiatrists to ponder. For example, a number of them met in New York three weeks ago and solemnly decided to launch what may be described as an American fascist movement. This particular hocus-pocus was sponsored by Walter P. Chrysler, the automobile manufacturer, Thomas L. Chadbourne, the New York lawyer who attempted unsuccessfully to form an international cartel to control sugar production, and Edward F. Hutton, a broker. With an optimism which would be inspiring under other circumstances, Chrysler underwrote the project for \$150,000, and eleven of his fellow-conners coughed up \$5,000 each. The prime objects of this comic-opera movement, as explained to those invited to participate, are: (1) repeal of the anti-trust laws to permit big business to "govern itself" (meaning, of course, to govern the country); and (2) to reduce government expenses and "improve methods of taxation" (meaning, of course, to substitute a sales tax for high taxes on large incomes). In support of the suggestion that these gentlemen actually take their movement seriously, I can only point to the fact that they have put up their money. It hardly seems to constitute a serious threat to our present political and industrial system, but there is no reason why the Department of Justice should not look into it. It is rather significant that the eminently practical boys who represent the United States Chamber of Commerce in Washington hastily refused to have any truck with the American Mussolinis. They don't even wish to be seen talking to them.

RETURNING to the world of grim realities, it is high time to observe that the operations of the Reconstruction Finance Corporation have been, on the whole, a dismal failure. Indeed, that fact was observed this week in the Senate by Robert F. Wagner, in the most crushing address which has been delivered during this session of Congress. There is no escape from the fact which Senator Wagner pointed out, namely, that the fault for this failure rests squarely on Hoover and the R. F. C. directors appointed by him. "Too technical, legalistic, and lacking in enterprise and human sympathy," was Wagner's bitter but accurate description of the manner in which R. F. C. funds have been administered. Established by Congress as the government's chief agency for the relief

of suffering and the creation of jobs, it has, as Wagner said, been conducted as "an ultra-conservative bank." States and cities have virtually been compelled to take a pauper's oath before they could get a nickel to feed their starving citizens. In instances where they borrowed for the construction of "self-liquidating" projects they have been compelled to pay an interest rate much higher than that paid by the government, and—still more significant—where those projects threatened to compete with privately owned utilities they have experienced great difficulty in obtaining the loans at all. The suggestion has been advanced that the directors of the R. F. C. must make a large profit out of their loans to States and cities in order to offset the losses which they expect to result from their loans to private corporations. It is not a very respectable excuse, but it probably has more than a grain of truth in it. In support of his demand for radical changes in the R. F. C. act and for additional relief legislation, Wagner presented these facts: (1) Factory workers in 1932 will receive \$7,500,000 less than in 1929; (2) factory wages in October of this year were 28 per cent lower than in October last year; (3) construction contracts in September of this year totaled \$127,500,000 as against \$251,000,000 in September of last year and \$445,000,000 in September, 1929; (4) exports in September this year amounted to \$132,000,000 as against \$180,000,000 in September last year; (5) during the year which ended June 30, 6,273,000 savings accounts were finally exhausted and \$3,500,000 laid up against old age and ill health had been used up. And so, a Happy New Year to everyone!

The Wall of Glass

By LESLIE NELSON JENNINGS

Between us rose a wall of glass;
We could not speak, we could not pass.
Death-cold against my flesh I felt
Crystal impossible to melt.
Your lips moved, but I heard no sound—
Only a silence more profound
Because of sight; it somehow grew
Starker than fear, and stranger, too.
I struck my fist against that wall—
It would not shatter, yield at all;
Only a glint of silver shone,
Like breath upon a window blown.
The image wavered and was blurred,
And if it spoke I caught no word.
So fell the dusk, and what became
Darkness was uttered as your name.
Surely, I thought, this wall is thinned
To nothing but a scarf of wind.
Not even stars and empty space
Can mask what still must be your face.
Night-long through that clear casement I
Stared at illimitable sky,
Moonless. Before the owl had drawn
His furtive wing across the dawn
I heard, far off, the fretful sound
Ice makes imprisoned underground. . .
That morning there was frost; and light
Lay on a world too blinding-bright.

Roxy's Advantage over God

Radio City Music Hall*

THE hall has a mighty, swift sweep. Hesitation there is none. It is as if, when you pushed aside the curtain, there had been a rocketing of space. All at once there is a vast firmament overhead, and a great distance stretching out under it. It is not the sensation of a dome. The dome, as you come under it, after a long approach, sensing its presence by the circle of light, opens up far overhead, majestic, poised, centered, floating, serene. This huge vault, however, is different. It has focus and energy. The focus is the great proscenium arch, over sixty feet high and one hundred feet wide, a huge semicircular void, filled, at the moment, by the folds of a golden curtain. From that the energy disperses. Like a firmament the arched structure rises outward and forward. The "ceiling," uniting sides and top in its one great curve, proceeds by successive broad bands, like the bands of northern lights. It has eight such transverse sections. They overlap like gigantic Venetian blinds, or like sections of a telescope; and the cove formed by each such lap or offset conceals the lights. Shining thus toward the stage in successive rows, they illumine the broad bands of the ceiling, from which the light then floats down into the huge space. The ceiling is now revealed as gold, of a sandy texture and beautiful low key; and the bands exhibit a fine fluting or ribbing. There are grills, or louvres, in them, too, arranged like the ribs of a fan converging toward the stage; at the pressing of a button the main lights go off, and the whole huge auditorium can be dimly lit by these spaced rays of what seem like distant overhead shuttered windows.

This vault is a delight. Not only the vast space: this nervous energy, this swift radiation. There is something about it that fits. It stands for our thoughts. Picture the Greek, with his serene colonnade topped by the low triangle of his pediment. It is measured and self-contained. Picture the Roman, who commands the round power of the masonry dome. Then the Gothic artist, who thrusts his vaults upwards: his buildings grow like plants. Baroque elaborates on the Roman; twists, turns, and moves. It is suited to theaters. But we can move in paths of a still greater variety. Our trajectory can be more direct. We have control over forces more abstract and more potent. The investigations of our thinkers are concerned with ethereal radiations and vibrations. It is these that have been manipulated to make possible the whole enterprise of our tremendous industry of sound communication. So it is fitting, almost symbolical, that a great hall of ours, devoted in whatever manner to music, should expand from a focus by waves that follow a great curve, exhilarating rather than serene; and that the great volume of space should depend, for its definition in color and for the various modulations of apparent amplitude or of mood, not primarily on pigment—though the most satisfactory color that is also exciting is this gold—but on intangible light itself.

I wish not to exaggerate the pleasure to be had, but I have vowed to record it. There are skeptics who, having followed the outward history of Radio City, believe that everything connected with it must be essentially absurd. Delight, however, follows its own path, and when or where it will strike is unpredictable.

The auditorium of which I am speaking, and for the sake of which I am obliged, in this short space, to surrender the whole gigantic outerworks of Radio City to others, along with all remarks on its place in society, has many flaws, some of them dangerous. May we leave them to another day? There still remains, after the first naive delight, a vitality to be explained: it inheres in the fact that the devices which were used were architectural.

Descriptions in the press say "starkly structural," as if it had been a matter of engineering; but that would have been easier. Piers and beams are easy to emphasize. This ceiling is not structural, however, in the sense of support, but is a mask. Two years ago (February 25, 1931) in these pages I described the first experiment with a similar shell, at the New School for Social Research. I then gave Mr. Urban insufficient credit for the innovation. It is his device that is here developed and properly used; its value becomes apparent. No confusion exists between what is shell and what is supporting structure; hence the shell can both look and be itself.

There are further architectural pleasures which arise from a good plan. The seats are generously spaced; they are comfortable; the sight-lines are excellent; and everywhere you can hear plainly without echo or burr. Despite the capacity of 6,200 the greatest distance from the stage is actually less than at the Capitol or the old Roxy, the theater being as wide as the block. Instead of the usual deep balcony, which cuts the average auditorium in two, there are three shallow "mezzanines." The impossible remains impossible, however, and no power of paradox can quite reconcile huge with intimate; so if the stage is to be used for anything much smaller than massed ballets and big orchestras, either it must be covered with a huge lens, or, as a friend has suggested, Robert Edmond Jones, the art director, will have to supply the actors with visible facial expressions by means of three-foot masks.

The architectural firms were three: Reinhard and Hofmeister; Corbett, Harrison and MacMurray; and Hood and Fouilhoux. I would have said that the manner seems most like Hood's, but they refuse to allocate personal credit, emphasizing the group nature of their work.

Roxy, the director, entered into collaboration on the music hall some six months after work began. Publicity releases from Radio City declare that a "sunrise at sea inspired him to this architectural triumph." Since Roxy made the sun, a sunrise must have been quite easy for him. Roxy has one advantage over God. He can apparently work backwards or forwards. He would not hesitate to create something that was already there.

DOUGLAS HASKELL

* Radio City Music Hall, in Rockefeller Center, New York City, was officially opened on December 27.—EDITORS THE NATION.

Art and Big Business

THE current witticism about Radio City Music Hall, the first to open of the Rockefeller-Radio ensemble, is that it is an auditorium and foyers to washrooms. Our best people in advanced *art moderne* circles competed for the work of styling and decorating these lounges. The jury was composed of twenty-one architects, and Roxy had the last word. Donald Deskey, who designed the modern art gallery on the top floor of the John D. Rockefeller, Jr., town house, and who also does cork and metal window displays for Saks Fifth Avenue, was put in charge of the decoration as a whole, functioning about like an orchestra conductor or a circus ring-master. The work was given out by him, subject to the approval of the architects and Roxy, and it went mostly to artists associated with, or known to, the A. U. D. A. C., advance guard of modern and modernistic artists and decorators.

The star project, however, a sixty-by-thirty-foot mural which can be seen from every part of the theater except the auditorium and the washrooms, was awarded to Ezra Winter by a special jury dominated by architects who are evidently not sympathetic to modern painting. It is painted in an inspirational style and represents "the upward march of mankind toward the great golden mountain where the Author of Life dwells beside the Fountain of Eternal Youth." The most interesting thing about this neuter composition is the story of how it was painted. Mr. Winter hired a hall and spread the canvas on the floor, and his workmen walked around on it with buckets of paint and put in the clouds and the foliage. The "mural" was then pasted to the wall. We heard it cost \$35,000, but neither Mr. Deskey nor the R. K. O. people will talk prices.

Queerly enough, the stylistic difference between the Winter painting and the rest of the décor makes no disharmony. The architects and artists and Roxy have all collaborated smoothly in obedience to the main principle of Roxy aesthetic, which is to displease no one. Architectural dogma supports this idea by the statement that the function of a decorator is to enhance and accentuate the lines of the room. Perspective in murals is forbidden because it "breaks" the wall, color should be muted, line should be pattern only. In other words, a muralist should be an accompanist with nothing of his own to say. Modern art takes easily to this secondary role because of its distaste for subject, its view of painting as primarily decorative, its emphasis on pure pleasure and choice contemplation, its tendency to view the artist as a superior person engaged in privately significant play. As to Roxy, what he wants is to make his patrons feel luxuriously cozy. The spectacle and the surroundings should please, amuse, and distract, should muffle and pad the emotions and make thought unnecessary.

From the point of view of what Roxy wants, the Radio City Music Hall is a huge success. The stage will provide gigantic pipe-dreams. The accommodations flatter and soothe. Every lady who powders her nose in any one of the four lounges provided for the purpose will feel like Marion Davies. Every gentleman who retires to each or all of the four corresponding foyers will feel rich and sophisticated like the beau ideal of the *New Yorker*. The art will not bother

them. Probably the ladies won't even see it, because in one of the feminine lounges it is ghostly white "Phantasmagoria of the Theater" on white parchment, in another it is a subtle fabric, in the third it is large and delicate flowers, and in the fourth nothing but mirrors, and here the dream is likely to become a nightmare. The Stuart Davis abstraction called "Men Without Women" in one of the men's lounges may excite some comment, but it would excite more if the name of the piece were written on it.

The ladies and gentlemen of the Roxy audience will meet in the main lounge, sit in plush and tweed modernistic chairs, sip their coffee, flick their cigarette ashes into restrained Varnum Poore ash-receivers, and gaze dopyly into the black depths of the glassy gun-metal columns which set off the promenade. The floors are richly padded, the walls are either polished or softly draped. Everything is subdued, discreet, costly. The eye catches on nothing but glint and smooth modulation of tone, especially since the Roxy-DeWolf Hopper party went through and had to notice three heroic-size aluminum nudes, two of which have already been disposed of.

One of them was by William Zorach. It was called "Rhythm" and stood in the main lounge. The other was an Eve, by Gwen Lux, in one of the women's lounges. DeWolf Hopper said women didn't look like that and Roxy thought they were both "too advanced," meaning that they were neither splendidly golden nor cozy. The third is a Goose Girl by Robert Laurent. She is posed discreetly in the gallery on the second floor, quietly visible from the main foyer. She looks like Irene Bordoni, and if she were made of marble she would stand a better chance of not being dispensed with, too.

As a unified work of art Radio City Music Hall cannot be taken very seriously, nor is any single creation in it of the major caliber a collector or a museum would value. It is in the good taste of this moment's fashion, but fundamentally it is as spurious, from a genuinely artistic point of view, as everything else fathered by Roxy and what he stands for. Some critics escape its implications by calling it "modernistic" instead of "modern." Others say it is at least a great step forward in the architecture and decoration of theaters. But these phrases are small apology for the vicious program both the theater and the building carry out, which is to be artistically null and socially soporific—immoral in the deepest sense.

Several of the artists seem uneasily aware of this. They blame big business. They had thought that the Rockefeller-Radio City project was giving them a chance to do their best and finest work, in collaboration with each other and for something artistically and socially necessary; in other words, it was giving them an economic meaning and a place in our social scheme, something of prime importance to folk dependent on whim, whose livelihood, as things are now, must come either from the "luxury trade" or big business, and both at a price. In the Radio City Music Hall the price turned out to be one that an artist who is also a responsible citizen, as all great artists always are, cannot pay; for such a person, as Benton says, must "make some relation to life," must contribute his thought and his point of view as well as his taste and skill, and in our times especially none but the weak can dream in a padded cell.

ANITA BRENNER

Ramsay MacDonald, Prisoner

By S. K. RATCLIFFE

London, December 2

IT was in August of last year that Ramsay MacDonald achieved the extraordinary coup by which he was enthroned as national Prime Minister of Britain and accepted as virtual leader of the still powerful Conservative Party. His rise to the premiership when leader of the Labor Party was one of the marvels of political history. This latest phase of his career is one that transcends definition. Joseph Chamberlain used to say that no place in the government of England was worth having except the first. In any other office a statesman had to take orders; the Prime Minister alone could have his own way, for however short a time. Mr. MacDonald would doubtless agree, although he has never, even for three months, wielded the actual authority of an Asquith or a Lloyd George. During the first stage of the National Government he possessed at least the nominal powers of a dictator. At that time his word, if he could have uttered it, would have been indorsed by Parliament and obeyed by the country. But it was only for a very brief spell that this could have been said of him. The experience of the past year has shown that he is a prisoner of the Tories. Ottawa and the Disarmament Conference, to say nothing of the unemployment crisis at home, provide dramatic proof of his helplessness, and we cannot be surprised that as the year ends, the air is full of rumors and guesses as to the alternatives that may soon be pressed upon him. Upon these matters I shall have a word to say at the end. Let us look first at the picture which England presents after sixteen months of a regime such as Peel and Gladstone never knew.

The Government faced the problems of 1932 virtually uncommitted. There had been no need to state a policy to the electorate. Mr. MacDonald asked for a doctor's mandate, his colleagues and supporters for a free hand. The only things quite beyond dispute were that the Tories, who had been outspoken during the campaign, would drive forward their scheme of a general tariff, and that in the interests of economy the unemployment benefits would be reduced and the social services, which had been upheld by every government for twenty years, systematically cut down.

The record of the Government so far lies within the sphere of tariffs. This was to be expected. The program of the Tories consists in tariffs. Their candidates said so, and the presence of Neville Chamberlain at the Exchequer was a plain indication of what was intended. His opponents are as ready as his friends to acknowledge that it is a remarkable feat to have made England a completely protected country, thus reversing the policy of nearly a century in the course of a few months. The change was made possible by the wearing out of the old free-trade sentiment in the country, the surrender by the Liberals of their historic position, and the continuance of Liberal ministers in the Cabinet for more than half a year after the purpose of the Tory majority had become manifest to everybody.

Ottawa is an event by itself. Before the convening of that singular conference all critics of the Government who

dwelt upon the facts of unemployment were advised to wait until after Ottawa, as though some magical remedy for the sickness of industrial Britain was to be found in tariff arrangements with four British dominions the government and peoples of which are resolved to protect their manufactures against all competitors. It is difficult to understand what expectations such politicians as Stanley Baldwin and Walter Runciman cherished with regard to Ottawa, for the latter was an earnest free trader until last year and the former has delivered speeches on the limitations of the tariff which must have done for him with the extreme protectionists. What everyone has remarked since the return of the delegates from Canada is that the results are commonly treated as small in relation to British commerce, although they are exceedingly important when considered as matters of policy. We cannot as yet begin to estimate what the results are likely to be on Britain's international trade; but it is recognized as of the greatest moment that Britain should surrender her tariff independence and, at the bidding of a limited and inexperienced politician such as the present Canadian Premier, should submit to agreements with the daughter nations of the Commonwealth binding her to tariffs that cannot be altered by the British Parliament until after a specified term of years. When Lord (once Philip) Snowden said, as he left the Cabinet, that the Ottawa agreement was to bring Britain down to a level below that of a British dominion, he was not mistaken.

Meanwhile it is to be noted that the champions of protection and the eulogists of Ottawa do not attempt to keep up the pretense that Empire tariff arrangements can in present conditions make any material difference in the grim facts of unemployment. A member of the late Labor Cabinet is busy reiterating what every American now knows quite well—that unemployment must bring down every government in the end. In a time of unprecedented stringency, when we can see no smallest sign of improvement in world conditions, it would be folly to expect that a government representing the interests once again dominant in England could devise a policy of industrial and financial reconstruction. Mr. MacDonald and his colleagues have no such policy. They will carry still farther their schemes of departmental economy and lower wage scales in the public services, and we cannot doubt that, despite the warnings of their own advisers throughout the country, they will continue to stiffen the administration of unemployment relief, in the somewhat desperate hope familiar to you in America that a turn in the tide cannot now be long delayed. And this brings me to the personal problem of the Prime Minister and his future.

Mr. MacDonald's case is exciting the keenest interest and, I am sure, very widespread commiseration. He has undergone a great change since the crisis of last year, and especially since the operation on his eye. These months have whitened his hair. The leader who for forty years was continually on the platform now seldom speaks outside the House of Commons and there only when he must. His more sensitive friends have lately been wishing that some means could be found by which he might be wholly relieved

of the duty of public speech, so far below the tolerable minimum of sense and sound have his utterances come to be. Until recently his physical resources were remarkable, his resilience hardly inferior to that of the most vital of his parliamentary contemporaries. We are assured by his physician that his general health is maintained, but one never meets anyone in the political world who speaks of him without anxiety. It is not improbable, I judge, that he may be able to hold on until the moment when a change in the government itself becomes imperative. What, then, of his successor? Could it be the Tory leader? Probably not, for Stanley Baldwin is believed to be wedded to the idea of the National Government; and it is undeniable that even if he were to be Prime

Minister again, it could not be for more than a brief interval. The Tory extremists who dominate the Conservative Party will not consent to be led by him. Nor do I find any instructed politicians who believe Neville Chamberlain to be a possible head of a government that retains the National label. The practical conclusion would seem to be that unless physical reasons of a compelling kind reveal themselves, Mr. MacDonad will continue in the premiership. But no prophetic sense is needed to make one feel that in the near future events may perhaps be of such a character that no man not enjoying the fulness of health and confidence can hope to command, either in Britain or in any country of Europe.

Eduard Bernstein

By LUDWIG LORE

ON Sunday, December 18, one of the last of the Old Guard of the German Social Democracy died in Berlin. Eduard Bernstein, the son of a locomotive engineer, was a dyed-in-the-wool Berliner. He loved the city of his birth as few have loved it—loved its people and its labor movement, knew its language and its slang, revered its artistic greatness, and sang its popular airs in the circle of his intimates even after he had reached a ripe old age. He was past master in the art of amiable give-and-take, with the quickness of wit and the broad, jolly humor that characterize a son of the German capital. His autobiographical works radiate this same good-natured friendliness, the comfortable atmosphere that emanates from a man who, in the midst of conflict, is yet inwardly at peace with himself and the world.

But the world will remember Bernstein, not as the author of his memoirs, nor as the recorder of those all-too-human episodes which, taken together, give us so graphic a picture of the social and political life of his time, nor as the party man who played so active a role in the day-by-day work of the Social Democratic movement. In its memory he will live as the historian and the theorist who made a contribution to the life of the international proletariat that no historian can overlook or ignore. In his collection of essays, "The National Economy of Our Times," Bernstein gave us a picture of his conversion to socialism and of his work in the Socialist movement. He portrays the reactions of the young bank clerk in the seventies of the last century to the party which, in that period, was just emerging from political insignificance and theoretical vagueness into an organized movement with a definitely outlined social philosophy and political program. At that time Dr. Karl Höchberg, the son of a wealthy Frankfurt citizen, engaged young Bernstein, who was only too eager to exchange his commercial career for political activity, as his assistant on a bimonthly periodical, *Die Zukunft*, in which he propagated an idealized middle-class socialism. When Bismarck's Socialist Exception Law (1878) put an end to Socialist propaganda in Germany, Bernstein went to Switzerland as a member of the editorial staff of the *Sozialdemokrat*, published in Zurich by the German Social Democracy for secret distribution within Germany. In 1881 Bernstein became the editor of this

fighting organ and followed it to London in 1898, when the Swiss government succumbed to Bismarck's threatening attitude. Engels, in 1881, wrote to Bebel from London: "... Bernstein is doing a splendid job... We can hardly hope to find a better man. In his hands the paper is improving from week to week, and he with it..."

During his London sojourn a gradual change in Bernstein's outlook took place—a change in his conception of the Socialist idea and the Marxian theory that crystallized into what became known as "revisionism." There he lived as far apart from the daily political struggle as a "landed English aristocrat," in the rarefied atmosphere of an abstract Fabian intellectualism. This spiritual transformation found expression in a series of articles published in 1896 in the *Neue Zeit*, the scientific organ of the German Social Democracy, of which Karl Kautsky was the editor. Three years later Bernstein systematized his theories in "The Prerequisites of Socialism and the Tasks of the Social Democracy," a book that made him the leader of revisionism.

Within the Social Democracy, during the years in which Wilhelm II endeavored to reconcile the labor movement with the monarchy, a new current was undermining the revolutionary class struggle and bringing to the fore a tendency toward a state socialism that aimed at immediate gains through parliamentary methods and preached a policy of mutual understanding between capital and labor. Bernstein became its outstanding exponent. He denied the inevitable intensification of the class struggle and the increasing impoverishment of the working class. He insisted that capitalism creates prosperous labor strata whose salvation lies not in revolution but in evolution, in the peaceful development of society into the Socialist state. In his opinion the Social Democracy, though it still spoke in revolutionary phrases, was no longer and could no longer be revolutionary in action. He demanded that the labor movement have the courage to preach what it practiced, to appear to be what it actually was—a democratic Socialist reform party. Rosa Luxemburg, Karl Kautsky, and Franz Mehring actively fought the spread of Bernstein's revisionism, which was threatening to divide the party. Had the split between the Marxian and the revisionist wings come at that time, the history of the German labor movement—indeed, the history of Germany—might

have been different. Mehring summed up his criticism of the new tendency in the pregnant words: "What, for the Marxists, is a means to an end, the incessant self-analysis with which he searches his attitude toward realities, is aim and end to the revisionist; he revises because revision is his goal; in fear of an absolute dogma he spurns every relative truth. He thinks no thought to an end and thus arrives from nothing, through nothing, at nothing."

Yet it was Bernstein who had correctly foreseen the course that German Social Democracy was to take. It followed his line, not that of the Marxists, who, as Germany grew to world power and world imperialism, strove for intensification, not amelioration, of the conflict with the ruling class. Trade unions and cooperatives with gigantic property interests amounting to hundreds of millions of marks stiffened the backbone of revisionism, with the result that the labor movement proceeded consistently to August 4, 1914, to the debacle of German and international Social Democracy.

Singularly enough, the World War, which brought the Social Democracy to an open break with its revolutionary past, found Bernstein, after a brief period of uncertainty, standing with Haase, Kautsky, and the others whose opposition to the war drove them to form the Independent Social Democratic Party. Yet this apparent contradiction may be the key to the real nature of Bernstein, the politician and the man. He had come from a Jewish, petit-bourgeois family of liberal tendencies. His father was active in liberal circles; his uncle, Aron Bernstein, was the celebrated editor of the

Berliner *Volkszeitung*. This tradition was reinforced by his ten years' stay in England. His conception of the relationship between the state and the people resembled the internationalism of the British free trader rather than that of the proletarian class struggle. The liberal pacifist in Bernstein for a time overshadowed the man of practical politics. With the end of the war and the emergence of the new issues of the revolution, he once more returned to his natural place, the Social Democratic Party, which he represented in the Reichstag up to 1928.

Characteristic of Bernstein's point of view was his attitude toward Soviet Russia. So great was his bitterness against the revolutionary methods of the Bolsheviks that he was led to an unfairness toward his opponents that was foreign to his kindly nature. In his resentment he even repeated the slanderous legend that Lenin and Trotzky had been paid for the November revolution with Hohenzollern gold. His last years, in spite of his great age, were devoted to his literary pursuits. Besides being tirelessly active in the Socialist movement, Bernstein had been an amazingly prolific writer. His works on the history of the German and the international labor movement belong to the classics of Socialist literature.

However one may evaluate Bernstein's influence on the labor movement, one must recognize the whole-heartedness and unselfishness with which he placed the rich resources of a great personality unreservedly in the service of the oppressed. The world has lost a courageous and faithful idealist.

When Men Eat Dogs

By ROBERT N. McMURRY

UNEMPLOYMENT begets psychological as well as economic problems. Much emphasis has been placed on its economic aspects; very little upon its psychological effects. It has remained for the psychology department of the University of Vienna, under the supervision of Professor Karl Bühler, and the Oesterreichische Wirtschaftopsychologische Forschungstelle, under the direction of Dr. Paul Lazarsfeld, to complete a comprehensive study of the effect of continued unemployment upon the worker himself. The stimulus to this investigation was the fact that Austria alone, with a total population of 6,500,000, has more than 500,000 unemployed, and that a like proportion is without work in Germany. The condition of many of these people is desperate. In parts of Austria it is a commonplace for a man to remark: "Yesterday we ate our dog. I hated to do it because it had been our pet, but this is the third year that I have been without work and we had had no meat in more than a month. I told my wife and children that it was horseflesh and they liked it very much."

Often an entire community is unemployed because the single industry which gave it support has been forced to close. Dr. Lazarsfeld chose as a typical example of such communities the village of Marienthal. Located approximately eighteen miles south of Vienna, Marienthal has been for nearly a hundred years the site of a mill of the Wool Spinning and Dyeing Company of Truman and Marienthal. It was the only industry in the village and when it was in

operation it employed more than 1,400 persons. It closed in March, 1929. Since then all but 37 persons out of a total population of 1,486 (98.8 per cent) have been without regular employment. Under the guise of an ostensible program of relief work, the residents of Marienthal were studied intensively.

As citizens of Austria the residents of Marienthal have for the most part received an *Arbeitslosunterstützung*, or unemployment relief. Its cost is borne jointly by Austrian employers, employees, and the state. After a maximum of thirty weeks the worker is eligible only for *Notstandshilfe*, or emergency help, which may continue for as long as one year and amounts to about 80 per cent of the unemployment relief. Both are administered by a district committee, usually a local organization. The amount of help which a worker receives varies from .72 to 1.85 Austrian schillings a day, or between 10 and 20 cents. At the conclusion of the emergency help, the individual is said to be *völlig ausgesteuert*, that is, ineligible for further assistance. Furthermore, anyone drawing unemployment-relief money is automatically barred from accepting any other employment on penalty of having his relief withdrawn. This limits the possibility of supplementary income to what can be obtained by cultivating small vegetable gardens or breeding hares. A few persons obtain occasional work with neighboring farmers, for which they are usually paid in kind.

Life in Marienthal moves in cycles of two weeks—the

period between payments of the dole. These payment days are more important than Sunday, for Sunday is only the day on which a few more prosperous families have meat. The day of the payment becomes a sort of macabre festival. The *Ratenjud*, the peddler from Vienna, comes with his stock of potatoes, meal, and fat. This is the day when payments are made on the accounts which everyone runs—the shoemaker alone has 8,000 schillings on his books and the cinema is almost universally attended on credit.

As with all people who live constantly on the verge of absolute want, the diet of the residents of Marienthal is badly balanced and monotonous. Its chief article is a sort of stew whose principal ingredient is potatoes, to which are added such vegetables and scraps of meat as are available, the whole cooked in grease. To conserve the fat, the mixture is usually left in the pot, fresh material being added occasionally to replace that which has been eaten. The effect of this diet is now evident in both the children and the adults. Among the children the health of 34 per cent was found to be very bad and only 15 per cent were rated as having normal health. No child from a family which had passed through the full period of help was found to have normal health. A similar condition, although not as pronounced, prevails among the adults.

When the mill closed, the people of Marienthal had a fairly large stock of clothes. By means of ingenious mending they still contrive to look presentable. In the case of the children, however, this is more difficult. Because of growth and activity they subject their clothing to much harder wear. Furthermore, since they attend school in a neighboring town they mingle with the children of fathers who are still employed. Thus their plight is brought home to them more vividly than to their parents, who have succeeded in isolating themselves from external contacts. No children are permitted by their parents to indulge in any sort of violent activity—even if they had energy enough—because their clothes might be irreparably damaged, and when they are gone, no one knows where any others will be obtained.

Among the parents of these children a certain fatalism has developed. When the mill first closed, there were innumerable rumors of a prompt reopening. But time passed and nothing came of them. Later a portion of the plant was demolished for the brick which composed its walls. Perhaps the best index of the apathy of these people is the record of the library. Between the years 1929 and 1931 the number of books lent decreased 49 per cent. The books are free and Marienthal has an exceptionally good stock of them. Not only has the total number of books lent decreased, but also the number of books per reader. In 1929 each borrower took out an average of 2.23 books. In 1931 the average had dropped to 1.6. When the factory was in operation, the village had a kindergarten. Part of its equipment was a set of Montessori toys. The kindergarten is closed, but the balls and the raffia and the building blocks remain, quite unused, in a box in the workers' clubroom. In the days of its prosperity Marienthal was very proud of its park. The hedges were kept neatly trimmed, the grass mowed, and the walks carefully tended. Of an evening and on Sunday afternoons it was customary to sit in the park or to stroll along the allée. Now no one goes into the park any more. The hedges are unclipped, the grass is dry and dead, weeds grow in the walks.

No longer are newspapers thoroughly read. In the words of Kurt S., one of the village political leaders, "Formerly, I read the *Arbeiterzeitung* until I knew it inside and out. Now I just look at a little of it and throw it away, in spite of the fact that I have so much more time." The *Arbeiterzeitung* is the central organ of the Social Democratic Party. It carries extended discussions of political and economic problems, and its journalistic style is such that for persons of limited education it is not easy reading. Between 1929 and 1931 its subscriptions declined 60 per cent in Marienthal, in spite of the fact that it is sold to the unemployed for only four groschen, or a little more than half a cent. On the other hand, the *Kleine Blatt*, with identical political affiliations but containing much more simple material, although it costs ten groschen, has lost only 27 per cent of its readers.

A similar lack of interest extends to politics. Formerly politics were taken very seriously in Marienthal. The best athlete of the *Deutscher Turnverein* commented sadly: "Formerly a man would not have dared to wear a *Heimwehr* emblem here! He would immediately have been beaten. Now it is quite different." At election time there is no longer any intense feeling. In the hotly contested national parliamentary election of April 24, 1932, the only demonstration in Marienthal was the destruction of a few posters. All the political organizations in Marienthal have lost from 30 to 60 per cent of their members. Finances play a small part in this defection because dues have been reduced to a minimum. It is significant, however, that by far the greatest proportion of those individuals who have retained their membership are still employed or, as students, have retained contact with the outside world. While this regression of political interest seems to be in conflict with the behavior of the people of Germany, it must be remembered that in Marienthal almost every man has the identical burden to bear.

Not all the organizations have suffered proportionate losses in membership. Some have actually grown. Chief among these is the cyclists' club. Since these people can no longer afford car fare, their bicycles remain their only mode of transportation. The Catholic kindergarten, *Frohe Kindheit*, has also shown a growth. However, the most significant growth, because it conflicts with the religious prejudices of many of the people, is that of the Social Democratic cremation society, *Die Flamme*. It is simply cheaper to be burned than buried.

Before the factory closed, a moment of free time was a precious thing in Marienthal. Since the women as well as the men were employed, it was necessary for them to do their housework at the conclusion of their work in the mill. Often they were forced to work half the night to keep their homes in order. Now all this is changed. These people are literally drowned in time. To the once busy workers the presentation of this leisure has been a tragic gift. Freed from the necessity of being punctual, or ever hurrying, time has lost its meaning. Nevertheless, a double conception of time prevails in Marienthal—one for the men, quite another for the women. In the case of the women, the necessity of caring for the children, preparing the meals, and doing the housework tends to keep them more closely in touch with reality. Although these women now have infinitely more time than when they were employed, the means at their disposal for keeping house are so much more restricted that

even simple tasks take much longer than before. So much time has to be spent in devising ways to make the old things serve just a little longer. And there is the perennial question of what to cook and how to prepare it. But underlying everything is the fact that as a result of three years of malnutrition these women do not have the strength they had formerly.

The only person who was observed hurrying in Marienthal was the village fool. For hours men stand about the street, alone or in groups. They lean on house walls or the bridge railing. Many smoke pipes. They hold long aimless conversations. If a wagon passes, they raise their heads a little. One day at noon, when street traffic was at its height, the speed of movement of 100 pedestrians was timed. The average gait of the men was one and one-half miles per hour; the women moved slightly faster. Only six men, of the sixty-eight who were observed, walked to their destinations without stopping from one to three or more times. Only eighteen of these men carried watches. Thirty-one others had left theirs at home. The others did not own watches. Many of these men have lost the capacity to judge the passage of time. They cannot distinguish one hour from three. Their day has three points of orientation—getting up, the noon meal, going to bed. They can remember little else. If questioned, they will say: "I got up and presently it became midday. Then presently it was time to go to bed"—nothing more. If pressed to define this "presently," an individual can usually recall a few of the outstanding events of the day, such as washing the baby or feeding the rabbits. The great majority of its happenings have left no impress upon his memory. Any trifling stimulus may determine the course of his behavior for the ensuing hour. Often these men forget to come in for meals. Frau Lisl K. complained: "Now we have regular quarrels every noon because my husband can never be punctual, although earlier he was punctuality itself." The behavior of these men strikingly resembles that of decerebrate animals who respond only to immediate stimuli and in the intervals between stimuli lapse into a sort of stupor.

For more than two years, almost to the time of the investigation, the morale of the people of Marienthal was well maintained. The tradition of almost a century of employment as skilled artisans had instilled a certain pride in themselves which would not permit them to break down. This was demonstrated by a stubborn refusal to work in another mill, even when an opportunity offered, at a lower wage than they had received at Marienthal. They will work for a farmer for the equivalent of a few groschen a day, but this is not at their trade, and moreover, as they are nearly always paid in kind, the smallness of the remuneration is not so apparent. Furthermore, because these families have been neighbors for so many years and have intermarried to a considerable degree, there is evident a strong group solidarity.

However, as time passes and conditions do not improve or show any prospect of betterment, several factors conspire to undermine the morale of the people of Marienthal. Probably foremost among these is the realization that they are trapped; that they are in a prison without bars. There is no work for them in Marienthal, or, for that matter, in all Austria. Nor is there any place else for them to go. Nowhere are there jobs, and if there were, there is no money with which to travel. They recognize that they are helpless, that they must remain in Marienthal. Relentlessly the time

approaches when they will no longer receive a dole, when, no longer eligible, they will have not even that meager income on which to depend. Meanwhile, their clothes become more worn, their household possessions are giving out, but there is no source from which they can be replaced. It is obvious to all of them that under present conditions it is useless for them even to hope.

This pessimism shows itself even in the children. Twelve-year-old Johann H. writes: "I wish to be either a flier, a submarine captain, an Indian hunter, or a mechanic. But I am very much afraid that I shall have great difficulty in finding a position! I hope that in the future I can have a care-free life. I feel so sorry when I see my parents and all the people in need suffer." Thirteen-year-old Mitzi M. writes: "I should like very much to become a seamstress, but I feel that I shall be unable to obtain a position and that I shall have nothing to eat."

The young men in Marienthal are rarely accompanied by the village girls of their own age. The girls have gone off with other young men from the neighborhood who are still employed and who can, in consequence, take them to dances or the cinema. Among the older women, regret at the closing of the mill is as much social as financial. Frau Wetti F., aged thirty-nine, voiced the almost universal plaint of these women: "If I could go again into the mill, it would be my most wonderful day. It is not only the money, but here in my four walls, so alone, I cannot live."

And inescapable is the fact that the health level of these people is continually sinking. As long as a man is employed in Austria, he has compulsory health insurance, but when he is without work, this protection ceases at once. If he becomes ill and has no money he receives no medical attention. Sporadically the Social Democratic organization sends a physician to Marienthal, but between his infrequent visits the people there are without medical service. If the sick die, the cremation society provides the funeral; if they do not, then they simply constitute an additional load on an already overburdened community.

But one recourse remains to the people of Marienthal—that is to attempt to reduce their requirements to the point where their incomes, no matter how small, will cover them. As they pass from unemployment relief to emergency help with its smaller remuneration, more and more of their wants must remain unsatisfied. There must be less food, of a poorer grade. Sugar must be eliminated entirely. The rent, although it amounts to only sixty cents a month, must be carefully hoarded. There can be no light at night. In the winter the family must remain a great part of the day in bed to conserve fuel. The only source of meat is an occasional cat or dog. When they finally become no longer eligible for any help, even necessities must be given up. Their demands must be constricted within a constantly narrowing circle.

The effect of this deprivation is noticeable in the children. So accustomed have they become to denying themselves everything that they have lost the capacity to wish. At Christmas 100 children were asked to prepare a list of the things which they would like to have if their parents were still employed. In this list the average value of all the items for which they wished, mostly practical or school requisites, amounted to 1.2 schillings. Ten per cent of the children questioned had received nothing at all for Christmas. Sixty-eight per cent received only necessities. The fact that 10 per cent were

given nothing at all is highly significant because the custom of making presents to children at Christmas is very deep-rooted in Austria.

Dr. Lazarsfeld has classified the people of Marienthal in three groups in terms of their reactions to their circumstances. In the first group are those who do not seem to have been affected. These he calls "normal." In the second division are those who still make an effort to maintain themselves, even though they recognize its ultimate futility. These Dr. Lazarsfeld calls "resigned." The third category includes those who have simply abandoned the struggle. There is a limit beyond which it is impossible to economize. This he characterizes as the "zero" or "breaking-point." When an individual reaches this stage, he breaks. Some take to drink. Others run away. If the husband and not the wife breaks, she will usually maintain the home. When she breaks, the home collapses. The children are no longer cared for or sent to school; meals become irregular; housekeeping is neglected; every action is marked by a reckless irresponsibility. These individuals he classifies as "broken."

At the time of the investigation, December, 1931, Dr. Lazarsfeld estimated that only 19 per cent could be classified as "normal," 49 per cent as "resigned," and 32 per cent as "broken." Furthermore, the average monthly income for "normal" families he found to be 34 schillings, or \$4.76; for "resigned" families, 30 schillings, or \$4.20; and for "broken" families, 23 schillings, or \$3.22. As more and more families are taken off the lists of those who may be helped, their incomes will fall to the level of those who have already broken. Whether or not all of these will break is problematical. From the trend of the past two years Dr. Lazarsfeld believes that most of them will.

What effect the reduction to despair and irresponsibility of large numbers of people will have upon the political fortunes of Central Europe, citing it as a single example, is quite unpredictable. However, Dr. Lazarsfeld thinks that it will be considerable. When people abandon nearly all the restraints which have marked their lives from childhood, when the social *mores* are no longer observed, their behavior can hardly be other than capricious. They are hungry. Their clothes are in rags. Their children are suffering. They themselves are half sick. A demagogue promises them food, shelter, work. Will they stop to analyze the validity of his program or the merits of his claim? Dr. Lazarsfeld doubts it. Rather, they will follow him, no matter how impossible his pretensions or how great a sacrifice on their part it entails.

If Marienthal were a single instance in an otherwise prosperous country, its plight would be pitiable but not profoundly significant. But Marienthal is not an isolated case. There are literally thousands of Marienthals in Central Europe alone. Even though a city or village may not be composed entirely of unemployed, every one has its quota of those without work. Dr. Lazarsfeld believes that probably many of these, too, are approaching the level of despair. Nothing exactly comparable to the present depression has ever faced Europe before. Therefore it is impossible to predict with certainty its final effects. Nevertheless, it seems almost inevitable that the people whom economic pressure has forced to the breaking-point and beyond will play some role in shaping the destinies of Europe. Whatever this role may be, one thing is certain: it will be dictated not by reason but by emotion.

In the Driftway

WORDS, words, words! Not merely the quantity of them but even more the shifting character of the flood fascinates the Drifter. Figures in regard to the increasing output of books and the expansion of newspapers are impressive, but fluctuations of vocabulary offer a subtler study. The rise of new words in this century, growing largely out of progress in science and technology, has been staggering. Mark Sullivan, in "Our Times," tells the sad story in this respect of the Oxford "New English Dictionary," which was begun about 1888 and designed to occupy forty years in the making. While the scholars were still at work on the letter "A," about 1893, the word "appendicitis" came into popular use, but too late to be included. Likewise while the learned jugglers with words were carrying on their cloistered labors with the letter "C," an innovation called the "cinema" stole in on them unawares, though later they grabbed it by the scruff of the neck and forced it into the dictionary under "K" as "kinema."

* * * * *

WHEN the dictionary was completed in 1928, the compilers were appalled to discover that while they had been at work, one new word had broken into the language for every ten old ones. So they set about a supplement, which doubtless will be followed by a supplement to the supplement, and so on. The supplement-makers were asked to include forty-three new words to describe various shades of women's stockings. They were conservative gentlemen who in the days when they were most concerned with women's stockings were able to discern only two colors, white and black, and they refused to introduce a new category. The supplement to "Webster's New International Dictionary," in 1929, contained 3,000 words that had come into accepted use between 1909 and 1927.

* * * * *

AS a rule people are more impressed by the advent of new words than by the disappearance of old ones. The average person's capacity for vocabulary is not highly elastic but fairly rigid, depending upon education, occupation, reading, and hobbies. A modern savant declared recently that 100 words would constitute a serviceable vocabulary, and the Drifter has a friend who maintains that a knowledge of four words gives one 60 per cent of the male conversation in Spanish-speaking countries. (No, the Drifter will not name the quartet.) However that be, it is probable that the addition of new words to the average vocabulary means the retirement of an equal number of old ones. It may be a long time before they are dropped from the dictionary or even labeled "Obs.," but that is because, unfortunately, this is an age in which construction outruns destruction and we don't half clean up our litter as we go along. Take the revolution worked by the automobile. We all can pop out a score of new words which it has made familiar, but we do not consider the old ones which it has rendered practically obsolete. A quarter of a century ago every country child, and many city children, could name all the important parts of a harness or a wagon, but how many grammar-school graduates today

could define hames, crupper, breeching, blinders, traces, hip strap, pole, whiffle-tree, or describe a buckboard or a democrat wagon?

* * * * *

DIALECTS are supposed to be disappearing. In the matter of varied pronunciation doubtless this is a fact, but in regard to differences in vocabulary are we not merely shifting from ■ geographical to a vocational base? Residents of Boston, Mobile, St. Paul, and San Antonio may talk more alike than they used to, but railroad men, bond salesmen, baseball fans, bridge fiends, and similar groups seem each to be developing a specialized vocabulary more and more difficult for the outsider to comprehend. Webster (the cartoonist, not Noah) has seized on this tendency for ■ series of newspaper drawings on the theme, "He doesn't speak our language."

THE DRIFTER

Correspondence

Students on Strike

[We print here three letters on the recent student strike at Commonwealth College which resulted in the withdrawal of thirty-three students. The college is run on a cooperative basis. The students work twenty hours ■ week on the school farm and pay ■ tuition of \$120 a year. The teachers work fifteen hours ■ week and give their services in return for maintenance.]

The first letter comes from one of the strikers. It was written while the strike was still in progress. The second is the reply of Lucien Koch, director of Commonwealth College. The third is a personal letter written by one of the students who did not strike to ■ friend in New York.—EDITORS THE NATION.]

TO THE EDITORS OF THE NATION:

Commonwealth College, a radical, non-factional labor school near Mena, Arkansas, has frequently attracted considerable attention because its students and teachers work together on the campus-farm for their maintenance. At present thirty-four students of the college, or more than two-thirds of the entire student body, are on a scholastic and industrial strike, in protest against the expulsion of two of their leaders and against what they consider the non-cooperative attitude of the college administration. Six strikers were arrested on warrants of trespass sworn out against them by the administration. The case was suspended by ■ justice of the peace on condition that the two expelled students leave the grounds.

The two student leaders, Henry Forblade of Newark, New Jersey, and Jack Copenhaver of San Francisco were expelled after they had led a two months' fight for student representation on the Commonwealth College Association and for the right of students to self-discipline.

The trouble has been brewing for about a year and a half. It broke this quarter when the student body in ■ meeting denounced what they termed the dictatorial attitude of the association, and declared that such a body had no place in a radical labor school. At that time they demanded the right of self-discipline and student representation on the association. They also asked that steps be taken toward the admission of Negro students. The association refused to accede to any of these demands. However, when the students first threatened to strike, the association granted the right of self-discipline. This concession was looked upon by the students as a long step toward representation on the association, and all was comparatively

quiet until Friday, December 2, when the association suddenly announced that Forblade and Copenhaver had been suspended. The students, on the assumption that the right of self-discipline included the right to pass on suspensions and expulsions, decided to strike if their leaders were not reinstated. After a meeting with the student committee, the association announced that the students would be given representation after Forblade and Copenhaver, whom it denounced as trouble-makers, had left. The students asked that the association reconsider. The association then announced that it would suspend action pending the decision of the Student Disciplinary Committee, consisting of five members elected by the student body.

The Student Disciplinary Committee decided that both Forblade and Copenhaver should remain at Commonwealth on probation and that student representation should be granted. This action, according to the leaders of the strike, was the only solution to the problem. The strike committee demanded that the association announce its final decision by half-past seven on Saturday evening. When the association did not answer, the time was extended to eight o'clock and a student delegation was sent to plead with the association that a decision be made. At eight o'clock the strike was called.

The striking students have elected a "strike committee" of five to direct the action of the group and are behaving in an orderly, disciplined fashion. They will not return, their committee has announced, until four conditions have been complied with. These are: (1) unconditional reinstatement of Forblade and Copenhaver; (2) a guaranty that both will be readmitted for the new quarter beginning January 3; (3) no discrimination against students taking part in the strike; and (4) adequate student representation on the association, which is the administrative board. In the meantime, all classes and unnecessary maintenance work have been stopped. The strike committee has taken complete charge of the school and the grounds, and according to its statement, will allow only necessary functions, such as cooking and food gathering, to be carried on. These functions will be performed by the striking students.

The students are spending their time singing radical songs, going on hikes, reading in the library, and attending student assemblies which are held about twice ■ day. Feeling is running high against the seventeen students who refused to answer the strike call. They are being called scabs, and mass picketing of classrooms and the farm is being employed to keep them from breaking the strike.

Mena, Ark., December 4

SAMUEL ROMER

TO THE EDITORS OF THE NATION:

In fairness to your readers, I should state that I was off the campus during the time of the "student strike," which Mr. Romer attempts to explain as ■ active participant. However, I was in close touch with events leading up to the crisis and have since received detailed accounts from both sides.

The basic issue of the strike, now a thing of the past following the withdrawal of those who struck, was not student representation but an attempt to force the school to abandon its non-factional position and adopt the position of the Communist Party. That not all the strikers were Communists or even completely aware of the aims of the two students against whose suspension they protested is merely a testimonial to the clever strategy of the Communist group in bringing extraneous issues to the fore.

The strike was not ■ spontaneous outburst of student indignation but a well-planned move led by the two suspended students and going back many months. The "conspirators" naturally seized every opportunity to engender bitter feelings against the association of permanent members. Incoming students, a majority of the student body this fall, were "rushed" and filled

with propaganda against the "bosses," who, incidentally, give their services without compensation except bare maintenance. With an ingenuity which might better have been exercised against some capitalist exploiter, they played upon the idealism and class loyalties of sincere but inexperienced youths, many of them but newly enrolled in the radical ranks.

The issue of students' participation in the management is no new one at Commonwealth, but has never been the occasion for serious friction before. The constitution of the Commonwealth College Association provides for student eligibility to membership after six quarters of attendance, and at various times a considerable proportion of the memberships have been held by students. Lately, on account of economic conditions, which make long attendance more difficult, the ratio of student members has become smaller, and plans have been under consideration for reducing the period for eligibility. Assuming good faith on the part of all in the community, there is no reason why the problem need be an insurmountable one.

The final straw was an organized attempt on the part of the "conspirators" to force the association to eliminate certain teachers whose political views did not square with the brand of Marxism held by the protesting students. This attempt was made despite the fact that the teacher upon whom the attack was centered was upheld by every member of his class and was teaching a subject which was not required.

Such unpleasant conduct being especially disruptive in a small educational community, isolated from urban contacts and dependent on its own social life, the association was finally compelled to accept the challenge. Its action consisted of suspending until the end of the quarter for "uncommunal behavior" the two Communist students who were chiefly responsible for the agitation.

Far from accepting the suspension, the two students remained on the campus for several days to create more dissension, whip up emotion, and play at revolution. The situation which had developed cannot be correctly understood without placing proper emphasis on the mass feeling created in a group which found a strike more exciting than studies and which, in this state of mind, was led to believe that the struggle was being waged over the rights of the group versus those of the association. The strikers, under orders of the "strike committee," broke locks of college buildings, picketed the office, the classrooms, the library, the workshop, the store, and other college buildings, and blocked the public mail highway, holding association members virtual prisoners. The college truck was put out of commission. A Communist Party member took over management of industrial work, and the strikers otherwise assumed control of the school.

To protect its educational plant, there was no course open to the association except to call in legal assistance. This was only done, however, after the insistent declarations of the two suspended students that they would leave under no other conditions. Charges against them were not pushed, after their departure to a hard-earned martyrdom. Their followers accompanied them, many of them reluctantly, but with no other course open to their pride.

The episode will undoubtedly be more difficult for the public to understand than for those who know the workings of our community—normally a delightful place but occasionally suffering from its concentrated but not thoroughly integrated varieties of radicalism. We feel very sorry that the followers of the Communist Party on the campus have not been content with their opportunity freely to propagandize their economic and political beliefs, which this school, with its prevailing "left" philosophy, was so willing to grant them. We merely objected to being mistaken for the capitalist system and made a target for Communist wrath.

Mena, Arkansas, December 13

LUCIEN KOCH

DEAR —: I will try to give you a clear picture of the situation from my point of view. The two students that were expelled had been complaining all summer from what I heard. I had been here no more than a week when a student meeting was called. I was rather surprised to hear the students speak so disparagingly of the faculty and the association. These two boys seemed to be running the meeting. They succeeded by clever talking in getting a number of "demands" passed by the student body to be presented to the association. Some of them were as follows: get a Negro student into the school as soon as possible; abolish the ten o'clock curfew; demand 50 per cent student representation in the association; demand more student participation in outside labor activities; and several others. Some of these were more than justified, others dealt with problems about which we knew less than nothing. Of course we saw only one side of the question and voted that way. The boys were clever enough to include in these demands some changes that even we who had been here only a short while considered reasonable. I consider the ten o'clock curfew entirely unnecessary, and I was thoroughly in favor of more outside participation in labor struggles, but I was not in favor of 50 per cent representation on the association because even at that early date I saw that it was a move to get control of the school.

There was endless discussion which took up a huge amount of our time. There were meetings every two weeks protesting against all sorts of things. The amount of work done in the way of studies was just a big joke. The association realized this and decided it would be best for the school if the two boys left. The strike was called when the association suspended them. I opposed the strike for several reasons. As I saw it, it was a matter of either a successful strike—and as a result no college at all or a college controlled by the Communist Party—or a college run along the same lines as before and governed by the same body—which suited me better. In my first strike I was a scab. Was I justified?

Thirty-three students have left from almost pure emotion. I sincerely think that they will regret it before long.

A COMMONWEALTH STUDENT

Mena, Arkansas, December 10

50,000 Foreclosures

TO THE EDITORS OF THE NATION:

It may interest your readers to know that according to the United States census of 1920 there were approximately 76,000 farm home-owners in North Dakota on January 1 of that year. Statistics taken this year show that about 50,000 of these farms have been lost by formal foreclosure since 1920. How many have been turned over to the mortgagees without any foreclosure proceedings is not known. If you add to the figure given above the number of farms lost through tax sales, you will realize that the farmers of North Dakota have been or soon will be reduced to tenantry.

Christine, N. D., December 12

O. S. GUNDERSON

Socialists and Progressives

TO THE EDITORS OF THE NATION:

For Norman Thomas and Gabriel Heatter to discuss the advisability of putting a false-face on the Socialist Party is close to nonsense. The important circumstance is that it is impossible for a progressive to support a Socialist hypothesis which he does not believe in or, perhaps, cannot understand; whereas a Socialist can support progressive measures which seem to him inadequate.

In other words, the two can keep together only if the speed of the faster is adjusted to the gait of the slower.

Mr. Thomas can be understood to say that the Socialist vote was small because the discontent was too great. (In 1928, there was too little discontent.) He suggests that the vote which was counted for La Follette merely indicates exactly the right amount of discontent at that time. This analysis may be correct, but it is also possible that the fault is not in the stars but in the unwieldiness of socialism.

Bogota, N. J., December 12

JOSEPH NEVIN

"Hunger"—

TO THE EDITORS OF THE NATION:

The first showing of the hunger-march film, produced by the Workers' Film and Photo League, with the collaboration of members of the League of Professional Groups, will be given Monday, January 2, at the Fifth Avenue Theater, Twenty-eighth Street and Broadway, New York, from 10 a.m. to 11:30 p.m. Besides being the only complete and uncensored film record of the hunger march, this three-reel picture represents an attempt to interpret and dramatize the conditions of destitution and misery out of which the hunger march arose.

The perversion and distortion of the facts by both the conservative press and the commercial newsreel companies has been little short of scandalous. At this premiere of "Hunger" members of the Writers' Committee who covered the hunger march for the League of Professional Groups will corroborate the film record by their personal reports as eyewitnesses. Among the speakers, one of whom will be present at each performance during the day, will be Malcolm Cowley, Michael Gold, Felix Morrow, Edward Dahlberg, and Robert Cantwell.

Literary Journalism

Titans of Literature. By Burton Rascoe. G. P. Putnam's Sons. \$3.75.

QUOTING a famous passage from Bernard Shaw, Mr. Rascoe takes the words out of his reviewer's mouth. "Nevertheless, journalism is the highest form of literature; for all the highest literature is journalism." There has always been a certain snobbery in the acceptance or rejection of the word "journalist," evaded in the characteristic American manner by describing a "journalist" as a "newspaperman." If my ear had not been long since attuned to the euphemisms of American pseudo-elegance, or pseudo-democracy, I should, naturally, have assumed that a "newspaperman" was a man whose trade it was to sell newspapers, but the American pseudo-euphemism covers a multitude of plain facts. By any other name, however sweet, a journalist is a journalist, and Mr. Shaw was right when he faced that fact and decided he was a journalist.

"The writer," in Shaw's own words, "who aims at producing the platitudes which are 'not for this age, but for all time'" is not a journalist; he may be something more; he is usually something less. Mr. Rascoe, in this Great Republic of newspapermen, is that unique phenomenon, a literary journalist. He has, that is to say, as keen an interest in literature as the average newspaperman has in booze, baseball, and the platitudes of politicians; he can make literature as lively a news topic as the usual sport and political bilge which newspapers and their newspapermen delight to honor; and he can, at the same time, render real service to literature and its unfortunate victims. When Mr. Rascoe edited the literary supplement of the *New York Tribune*, that overgrown village actually witnessed a first-rate literary journalist at work. Needless to say, that did not last very long. Mr. Rascoe failed to dish up the platitudes meant for all time as if they were the latest news. He was—apparently—a bad newspaperman. But he was a superb journalist.

In the interval since his departure from the *Tribune*, Mr. Rascoe has lived in comparative retirement in one of those suburbs which can be more conveniently reached by the New York, New Haven and Hartford than through the fastnesses of the Pennsylvania Station, Long Island side, and he has produced, as a result of his meditations, a book which admirably expresses himself and his attitude toward literature. In a sense, "Titans of Literature" is another "Outline of Philosophy," save for the fact that Mr. Durant has never, I imagine, sent anybody to the original works of the writers of whom he speaks, whereas Mr. Rascoe's heresies and enthusiasms are designed to provoke an immediate response to the authors whom he discusses. For the accepted figures of world literature he does in this volume what he did editorially on the *Tribune* for the literature of the world.

Homer, Sophocles, Virgil, Dante, Boccaccio, Rabelais, Villon, Montaigne, Cervantes, Chaucer, Shakespeare, Voltaire, Milton, De Foe, Goethe, Byron, Balzac, Victor Hugo, Verlaine, Dickens, Shelley, Flaubert, Whitman, Poe, Dostoevski, Tolstoi, Mark Twain, Anatole France, and George Moore are the "titans" about whom Mr. Rascoe discourses, not in chronological order, but in the order I have named. One notes at once that this is both an arbitrary and a conventional selection. One even notes that Mr. Rascoe must have read his Russians in French, since Dostoevsky and Tolstoy are the standard and now accepted spellings of those names in the definitive English editions of their work. One notices that he does not know the meaning

of the Italian word *commedia*, and at certain points one longs to impart information which is, of course, available in every textbook. For example:

In the chapter on Anatole France he writes: "Some of the questions left unanswered by those who have written about France were: (1) To whom was France first married, what was she like, how long did the marriage last? . . . (2) When did France first meet Madame de Caillavet . . .?" In a book indorsed by Mr. Rascoe I read this about his first wife: "Valérie Guérin came from too good a family; Anatole France, like his hero, Professor Bergeret, was later made to suffer from his wife's pride of birth. She was the granddaughter of the painter Guérin, celebrated for his miniatures of Marie Antoinette. Valérie Guérin was a lovely blonde, with very beautiful hands and feet." And the same author states that "Madame de Caillavet first met France in 1883," and that the earlier marriage, which occurred in 1877, terminated in a divorce in 1893. In his chapter on Milton Mr. Rascoe not only assumes, erroneously, that he is the first to blaspheme against the sanctified reputation of that eminent bore, but in a list of the sources from which Milton stole his concept of "Paradise Lost" he omits the "Carmen Paschale" of Sedulius, which antedated by more than one hundred and fifty years the "Adamo Canuto" of Salandra, which is given as the source of Milton's epic. Nor is there any mention of Dracontius, Victor, and Avitus, three Latin poets who flourished at the close of the fifth century, whose work, together with that of Sedulius, was shown by the Irish scholar, Dr. George Sigerson, to be the *fons et origo* of Milton's "Paradise Lost." In what is presumably a reference to Kuno Meyer, Mr. Rascoe rashly ascribes the Irish literary renaissance to "a spark ignited by a German scholar," when that spark was ignited by a group of Dublin students of Gaelic.

I remember that when H. G. Wells published his "Outline of History," the current gibe was that if one knew nothing of biology, one thought he was a great biologist, but if one knew a lot about biology, one thought he must be a great historian. In other words, the specialist can always detect flaws and decided errors in works of a comprehensive character written by a non-specialist in any of the fields covered. I have not examined "Titans of Literature" in that spirit. The few points I have raised merely jumped to the eye of a casual observer. But what also jumped to my eye was the charming vitality of Mr. Rascoe's interest in all literature, his obvious belief that great books are alive and of thrilling interest, that they should not be left to the dead hands of the professors, whose delight it is to champion the great and the mediocre alike, provided they are dead.

In this connection Mr. Rascoe's onslaught on the Romans, the dreariest bores in recorded history, and their dreary literature should be read by all intelligent youngsters. As Mr. Rascoe insists, the greatest Latin writers are not the pets of the pedagogues—Cicero, Vergil, and those other horrors of schooldays—but Petronius, Horace, Catullus, and Propertius. He might, I think, have added Tacitus and Lucretius, who certainly deserve all the attention wasted upon Livy, Ovid, Vergil, and Cicero. He rightly points out that Greek was the cultured language, and that if one must read an epic it is better to go to the Greek original than to the stilted Latin copy; that there is nothing anywhere in Latin comparable to Aristophanes, Thucydides, Aeschylus, Euripides, Sophocles, Herodotus; that even Xenophon was never so dull, despite his parasangs, as Caesar, with his ablative absolutes. If one classical language, and only one, must be taught, for heaven's sake let it be the civilized, subtle, charming, and beautiful language of the Greeks, not the Western Unionese of the super-Babbitts who divided Gaul into three parts.

In the course of his five hundred pages—or nearly so—Mr. Rascoe touches on topics too numerous to be commented upon in a brief article. Even when his scholarship is unimpeachable, no pedant will approve, because he bases his likes and dislikes upon personal human emotions, and not upon the theory of what is and what is not the right thing. I have always denied that literature can be “taught,” but a mind inclined toward books can be guided by those who have enjoyed the kind of experience of literature which is infectious. That has, fortunately for Mr. Rascoe and his readers, been the kind of experience which prompted the writing of “Titans of Literature,” and I can think of nothing better for a bookish youngster than to be presented with this book. Those of us who, like the author, managed to emerge from the grasp of the professors with our appetite for reading whetted and our desire for heretical enthusiasm stimulated, will turn his pages with an indulgent and often tender smile. It is good to be reminded of the kind of literary talk which sent one in pursuit of books.

It is not the kind of talk which sets one gerund-grinding or cramming facts to answer examination papers. It is the kind of talk that compels one to read or to reread, and to see in the grammarians’ funeral the living reality of literary art.

ERNEST BOYD

The Age of Reason

The Heavenly City of the Eighteenth-Century Philosophers.
By Carl L. Becker. Yale University Press. \$2.

WHENEVER Professor Becker writes a book, it is always the product of years of study and reflection. This volume of essays consists of an analysis of the intellectual movement in the eighteenth century, with special reference to the French *philosophes*. Professor Becker is that rare historian who both knows his facts and sees their significance—for us. The thoughtful reader, if he be of the liberal persuasion, can do no better than to read this keen analysis of the creed which became the battle cry of the intellectuals of the eighteenth century.

Every age, according to Professor Becker, has its “climate of opinion,” which is denoted by certain “key words.” In the eighteenth century, the Age of Reason, the key words were Nature, First Cause, Reason, Humanity, “without which no enlightened person could reach a restful conclusion.” In sharp contrast was the “climate of opinion” that came down from the Middle Ages, whose key words were God, Sin, Grace, Salvation. The *leitmotif* of Professor Becker’s book is that the underlying preconceptions of eighteenth-century thought were still essentially the same as those of the thirteenth century, that the philosophers “demolished the Heavenly City of St. Augustine only to rebuild it with more up-to-date materials.”

Now what were the up-to-date materials? At the foundation was the worship of Nature which the new builders substituted for the worship of God. And they looked into the Book of Nature with the same feelings of finality for a revelation of its laws as those with which the theologian looked into the Bible for a revelation of the Divine Will. Having “denatured God they deified Nature,” which became the test and standard of all things. What was new was merely a new dogmatism. Despite their surface cynicism the philosophers were men of faith, with “an eager didactic impulse to set things right.” They transformed the Christian ideal of service into a passion for social and political reform. By means of Locke’s sensation theory they rationalized the Christian will to believe into the conviction that men could, by using their natural faculties, deliberately bring their ideas and their conduct into harmony with the universal natural order.

All these views, according to the author, have no place in the modern climate of opinion, which is “factual rather than rational.” It is dominated by history and science, not by abstract principles and logical reasoning. In an especially illuminating chapter on the New History Professor Becker explains that the eighteenth century was not anti-historical, as is commonly supposed. On the contrary, the philosophers of the period were very much interested in history, in which they did pioneer work, as witness Gibbon’s “Decline and Fall” and Voltaire’s “Essai sur les mœurs.” But they studied history with a purpose, and that purpose was “to discover the constant and universal principles of human nature,” and to establish “rights suitable to man’s nature on the facts of human experience.” They did not study history because they loved the past, or because they saw the present as a continuation of the past, or because they were inspired by a disinterested love of truth. Finding that the light of reason was not completely satisfactory, they sought to supplement it by the light of experience.

What became of the Heavenly City built by the philosophers of the eighteenth century? Like its predecessor, the City of God, it betrayed the hopes of its prophets. When the principles of the French Revolution finally triumphed, “it was obvious that the abolition of the old oppressions and inequalities had done little more than make room for new ones.”

Professor Becker’s criticism of the philosophers of the eighteenth century is penetrating and suggestive. What makes his book especially attractive is that its pages are flavored with wit, sometimes kindly and sympathetic, sometimes subtly disdainful. The reviewer could not help reflecting upon a number of pertinent questions that came to his mind as he read this stimulating little volume. What made the “climate of opinion” in eighteenth-century France in which the *philosophes* flourished so luxuriantly? Did they just issue from the loins of Newton, Locke, and Descartes? Was the dogma of Natural Rights merely an abstract theory, or was it a battle cry of a class interest? Why this passionate interest in “man in general”? Was it not a manner of protesting against the feudal caste system?

J. SALWYN SCHAPIRO

Portrait of a Lady

Ellen Terry’s Memoirs. With a Preface, Notes, and Additional Biographical Chapters by Edith Craig and Christopher St. John. G. P. Putnam’s Sons. \$3.75.

ELLEN TERRY’S memoirs were first published in 1908 under the title “The Story of My Life.” A few persons recognized the high literary quality of her autobiography, among them Max Beerbohm, but in general the book was passed over rather lightly by the critics, who, if they expressed anything, expressed surprise that an actress should be literate at all. Not until the Shaw-Terry letters were published in 1931 did it become plain to a number of persons that Ellen Terry was not only an actress but a writer of parts. After the success of that lovely book, her son, Gordon Craig, angry at Shaw and his sister, Edith Craig, for permitting the letters to be published, published in turn “Ellen Terry and Her Secret Self,” in spite of the fact that after he was grown he spent very little time with his mother and as a consequence her secret self might not have been entirely revealed to him.

The present book consists of the original memoirs with copious notes at the end of each chapter, adding details which Ellen Terry was too generous to add, and explaining what needed to be explained. The biographical chapters at the end give an account of her last years, when keeping a diary was no longer possible to her, and of her death. And finally there

is ■ rather full account of the brother-and-sister controversy over the publication of Ellen Terry's writings, which is not without interest. Airing family linen in public, even when it is only slightly unfresh, is amusing enough if it is done with spirit.

But on the whole I rather think that Ellen Terry would not have been amused. She would have been interested least in the world in having justice done to herself; and it is not improbable that she would have grieved to see her children quarreling over her. It is a tribute to the present book that one feels so confident of what sort of woman she was, and of what she would have felt about this or any other controversy over herself. In her diary once she wrote ■ sentence about her interpretation of Beatrice in "Much Ado About Nothing": "She must be always merry and by turns scornful, tormenting, vexed, self-communing, absent, melting, teasing, brilliant, indignant, sad-merry, thoughtful, withering, gentle, humorous, and gay . . . a gallant creature and complete in mind and body." The last phrase could serve very well for an epitaph to Ellen Terry. Gallantry was certainly her first virtue; but generosity was a close second. If there was ■ trace of malice in her mind or her heart, it is not evident in her memoirs; she shows herself almost completely free from vanity, and certainly without a trace of the self-love that would make her cherish a grudge, even when a grudge was richly deserved. She could say: "I have the simplest faith that absolute devotion to another human being means the greatest happiness." And she found many persons to whom she could be absolutely devoted.

With this character, Ellen Terry may be followed through her industrious, brilliant career. It is plain that she had ■ mind—her notes on Henry Irving alone would testify to it; it is amply plain that she had ■ heart; it is evident, from the word of hundreds of her admirers, that she had ■ unique grace and an irresistible warmth and beauty; and to read her day-by-day account of her life is to know that she could write as well as act supremely well. This is an altogether charming book about ■ woman who herself was altogether charming.

DOROTHY VAN DOREN

The Capitalistic Labyrinth

A Guide Through World Chaos. By G. D. H. Cole. Alfred A. Knopf. \$3.75.

AS a seasoned dissenter, Mr. Cole might well have packed this volume with "I told you so's," and filled it to the brim with vitriol and evangelism. But he has actually given us ■ treatise which strives only for utter clarity of understanding. The choice was wise. From it has come a truly remarkable demonstration of the power that lies in calmness and restraint.

Mr. Cole attains his objective by doing six things well. He portrays the personality of capitalism, identifying those traits which may be said to be inherent, and which give to its behavior a certain inevitableness. Accompanying this is a description and analysis of certain pivotal institutions, such as banking systems, holding companies, and cartels, which lend themselves to the accentuation of capitalistic tendencies. The picture then broadens to reveal world economic unity through the machinery and operation of international economic activities. The war is placed in its true perspective, not as a major origin of our troubles, but as an accentuating episode. The Russian experiment is given scientific consideration, and finally there are placed before us the various alternatives from which we must choose our future course.

No conservative could award to capitalism more convincingly than does Mr. Cole the tribute which it deserves for the

achievements of the past hundred years. It has, indeed, done too well.

Modern industrialism by its very nature aims not at a static and balanced perfection, but at a constant movement from one victory to another. . . . It cannot stand still; but neither can it, even for ■ moment, wish to stand still. A static condition is fatal to it, because it is always being urged on by its own successive discoveries to production on a larger and larger scale, to an unending expansion of markets.

But eventually a point is reached when these forces, no longer having new grist to feed upon, recoil upon themselves, producing havoc internally, creating artificial trade barriers and intolerable rivalries between countries, and finally destroying the internationalism which they have built up and upon which they have flourished. Capitalism as we have it, therefore, is to be defended only as an intermediate stage in man's economic development. Though theoretically it might be reconstructed into ■ continuous blessing, Mr. Cole sees neither the will nor the means by which that can be done.

The cosmopolitan character of Mr. Cole's analyses is nowhere better illustrated than in his discussion of unemployment. The problem is not approached from the standpoint of group distress, but from that of national and international stability. There must be ■ progressive reduction of the working day to maintain employment and purchasing power in the interest of all, and through such a policy ■ country is not only protecting its own standards, but making the best possible contribution to the welfare of other nations.

To many the greatest value of the book will lie in the clarity with which it reveals the true nature of international economic relationships. The utmost concession is made to realism by dealing separately with the special situation of each country. It is in international relationships that the most poisonous concentrates of the war were deposited. Each of these poisons is adequately analyzed: the maldistribution of gold, the unstable currencies, the depreciated exchanges, the widening circle of debts, the raising of tariff walls by debtor countries to maintain the payments balance, the same procedure in creditor countries but for ■ different purpose—to keep out the deluge of goods precipitated by their own investments and loans—all ending in ■ hopeless impasse, with trade itself smothered under the debris of high finance.

The Russian experiment might be expected to receive fervid indorsement from one known to be predisposed to socialistic tendencies. Yet Russian organizations and policies receive the same cool and precise treatment as does the British banking system. The grandeur of the Soviet objective, the steadfastness of the underlying determination, the details of procedure, are clearly portrayed; but there is no minimizing of the awkwardnesses, the all-too-frequent mistakes, the planned ruthlessness, and such cold-blooded brutality as that which characterized the treatment of the kulaks.

Despite the inherent weaknesses of capitalism, Mr. Cole exhibits no great confidence in an early resort to socialism. The various countries are in different stages of readiness for economic change. Hence the most that can be done is to attempt to determine the unique composite of probabilities in each situation. The United States, lacking a powerful, unified labor group and a strong Socialist Party, but possessed of a vast army of petty tradesmen and technicians, having virtually unlimited natural resources and the traditions of individualism, offers no opportunity for communism. It is more likely to veer to a form of fascism. With slight reservations the same may be said of France. As regards England and Germany—but a review cannot substitute for the book, especially when the book happens to be the best of a comprehensive character that the depression has produced.

CLAUDIUS MURCHISON

Sanctions for Peace

Can America Stay at Home? By Frank H. Simonds. Harpers and Brothers. \$3.

WITHOUT arguing the question, Mr. Simonds flatly tells us that the answer is No, America cannot stay at home. He then proceeds with a devastating analysis of our foreign policy since the war to show that the United States has failed to understand the implications of its international position. In the first place, the American government has attempted to satisfy those who wish to retain the immunities of isolation and also those who wish to derive material gain from the newly established financial supremacy of this country. We have insisted upon keeping the high tariff, but also upon collecting the war debts and booming our export trade. By lending its unofficial support to the Dawes plan, the Coolidge Administration made it possible during a few years for Europe to borrow enough money in Wall Street to pay its debt to Washington; but the eventual result of this and other similar policies was the international depression, which made necessary the Hoover moratorium.

Secondly, Mr. Simonds stresses the fact that the United States has attempted to force its particular brand of "peace" upon other countries without understanding the complicated nature of international politics. To our innocent souls peace is a matter of good morals rather than of good economics or politics. When Europe refuses to take seriously our remedies, such as the Fourteen Points, the Kellogg Pact, and the Hoover disarmament proposal, we call Europe wicked. What we fail to realize is that unlike the United States, which has never been in danger of any attack, the European states live in deadly insecurity, and until international cooperation removes this feeling of insecurity they will cling to their arms. This inability to understand a fundamental principle in world politics has unwittingly caused the United States government to follow a consistently anti-French policy since the war. When the United States trumpets forth a demand that the world disarm, it really invites France to renounce its present superiority over other nations, but it does not give France any assurance that the disgruntled states of Europe will not take advantage of such a renunciation to tear up any international agreement which they dislike. Mr. Simonds may not put his thesis in exactly this language; but fundamentally his whole book is an argument in favor of the principle of international sanctions. Concretely, he proposes that the United States attempt to place force back of the anti-war pact and the League Covenant by agreeing for a five- or ten-year period to apply economic sanctions against any aggressor which refuses to evacuate invaded territory.

Simply written, with a minimum of detail, this book should attract many readers having little knowledge of international affairs. Valuable as it is from this standpoint, it suffers from the faults inherent in oversimplification. For example, the author's criticism of the Washington Conference is too drastic, largely because he fails to consider what the results might have been had the conference not convened. Moreover, while, admittedly, international sanctions are of fundamental importance, no system of sanctions can achieve its purpose unless it forms part of a wider organization which provides for the obligatory settlement of international disputes as they arise and for the gradual removal of such underlying causes as tariffs, war debts, maldistribution of raw materials, unjust boundaries, and mistreated minorities. Until the world is ready to attack such problems from a really international point of view, no agreement providing merely for sanctions will keep the peace.

RAYMOND LESLIE BUELL

Ex-Modernist

The Second Common Reader. By Virginia Woolf. Harcourt, Brace and Company. \$3.

THE interest which has awaited "The Second Common Reader" is different from that which awaited its predecessor. In the seven years that have passed since the appearance of her first volume of essays the critical role of Mrs. Woolf has changed. Originally she was regarded as a spokesman for some decidedly up-to-date tendencies. Not only did the public delight in her charming biographical skits; it sought her opinion on "the Russian point of view," on the insufficiencies of Bennett and Galsworthy, above all on the state of present-day letters. The first "Common Reader" closed with a paper called *How It Strikes a Contemporary*. "The Second Common Reader" closes with a paper called *How Should One Read a Book?* Right there we have the difference between the two volumes. And the public has been unconsciously growing aware of a transformation in Mrs. Woolf's status. No one regards her now as the champion of a new movement; instead, she is already beginning to be seen as one of a long line of quite orthodox belletrists and bibliophiles. When she refers by name to "English literature"—which she does in these essays with remarkable frequency—it is in a tone that a Catholic might use in referring to the church. No one could justly accuse her of being academic, but it can be said definitely that her critical standards are bookish. Twice, as though it were some sacred vessel, she imagines the Elizabethans discussing "the future of English poetry." I can speak with no authority in the matter, to be sure, but it seems more likely to me that the Elizabethans were without the reverence she would give them for the printed word. In fact, I believe that she has exposed here, slight though the instance, a rather naive and revealing misconception. The Elizabethan poets, naturally, took a passionate interest in the development of their art, but to bestow upon them retroactively that holy awe for literature which crowded shelves have brought, unfortunately, to some of us today is only too plainly the mistake of an imagination that was nurtured in the library. If the Elizabethans had felt this awe, needless to say, they would have been belletrists, not poets. And those who feel it today may produce a diverting kind of book talk, but not the best kind of criticism.

Mrs. Woolf's manner needs no description now. "The Second Common Reader" contains book talk of the highest order. It has that thing which sometimes seems all but vanished from the earth, good breeding. Passing chronologically through English literature from Donne's day to Hardy's (no living writers and no foreigners are discussed), we enjoy the refinement of one who is a lady both by birth and nature. Her polished, amiable book offers fireside pleasures which in this rude day the most apostolic opponent of archaism cannot altogether resist.

GERALD SYKES

Shorter Notices

Carlyle. By Louis Cazamian. Translated by E. K. Brown. The Macmillan Company. \$2.75.

Professor Cazamian's biographical and critical monograph on Carlyle appeared originally shortly before the Great War and did not at the time receive the recognition it deserved. But in the intervening years it has not been lost to sight. Judicious students of the subject have remembered and consulted it; and now in an excellent English translation by Professor E. K. Brown it should penetrate into a wider circle of readers in this

country. It is an exceptionally well-ordered and lucid study, marked by two qualities in particular—an unerring instinct for the proper emphasis and an ability to relate the facts of Carlyle's life to the development of his thought. No side of his achievement is ignored, and the pages devoted to his literary criticism, his historical writings, his social creed, and his metaphysic are all equally good. In recent years there have been several excellent studies of Carlyle; Professor Cazamian's bears comparison with any of them. It is true that in several particulars more might have been said in the way of adverse criticism; but of studies hostile to Carlyle there are enough. This book is the work of a critic and biographer in sympathy with his subject.

Flesh of the Wild Ox. By Carleton S. Coon. William Morrow and Company. \$2.75.

Mr. Coon went to the Rif before Abd El Krim had been caught and caged by the French, and while the fighting was still going on. His more formal report of his findings has been printed elsewhere under a numeral in a series of scientific studies of African life. For this more popular presentation Mr. Coon uses a unique and very valuable method. It is not fiction but it approaches fiction in immediacy and tempo. It selects a typical tribesman, sketches in his racial and family background, and follows him and his family through a representative Riffian lifetime. Thus ethnological data are made living facts by being embodied in personalities in whom we can become interested. The method is essentially the same as that used in those excellent films, "Grass," "Moana," "Nanook of the North," and "Chang." The success of the book, however, does not lie entirely in its method. Mr. Coon happens to have a talent for lively narration in a vivid, interesting style. It is a little terrifying to think of what a true dry-as-dust scholar would produce if he followed this valuable but perilous method.

Flight of the Swan: A Memory of Anna Pavlova. By André Olivéroff. E. P. Dutton and Company. \$4.

In 1916, when Anna Pavlova was in New York reorganizing her company for a six months' engagement at the Hippodrome, she signed on a young American of seventeen from Montclair, New Jersey, and gave him the stage name of André Olivéroff, unwittingly attaching a memoirist to her staff. For more than a decade he toured in her troupe, during the later years as first classical dancer. His long association with Pavlova entailed no disillusion; from first to last his admiration for her artistry and personality remained unchanged. "She seemed to you to be at once the most completely womanly being you had ever seen and yet never quite, never exclusively, human. She was aloof in the special sense that she had so projected her genius into her art that it was almost as though she, the woman, had now become but a symbol of that greater self which was her dancing." Because they are based on knowledge both of dancing technique and of the everyday life of Pavlova, Mr. Olivéroff's eulogies impress one not as empty rhapsodies, but as sincere tributes from one artist to another. He gossips entertainingly about his fellow-dancers and describes many of the company's adventures on the road. The book is worth reading for its subject matter as well as for its charm.

Oliver's Secretary. John Milton in an Era of Revolt. By Dora Neill Raymond. Minton, Balch and Company. \$3.50.

In the choice of the main title, "Oliver's Secretary," Dr. Raymond gives an impression that she probably does not desire and that her book certainly does not merit. For although in several places she draws insufficiently established inferences for dramatic effect, she shows clearly that she has mastered a large body of intricate learning and, what is unfortunately more rare, that she has attempted and, in large measure, attained

a complete and just interpretation of her material. Dr. Raymond stresses the middle period of Milton's life, the period of his passionate defense of liberty—ecclesiastical, domestic, and political. She keeps her subject always in true perspective, never saying or suggesting that he was the greatest statesman or social thinker of the day but always aware of his actual influence. For this reason her biography neatly complements the recent study by Tillyard. Dr. Raymond's sane and thorough analysis of Milton's political and social ideas balances Tillyard's acute and philosophical literary interpretations. This volume helps greatly in making the present detractors of Milton look even more like the menagerie listed in the angry sonnet on the divorce tracts.

The Victorian Sunset. By Esmé Wingfield-Stratford. William Morrow and Company. \$3.50.

In "Those Earnest Victorians" Mr. Wingfield-Stratford traced the transition of England from an agrarian to a manufacturing nation. He gave us no mere chronicle of legislative landmarks; the story was told in terms of the changes in manners, morals, and art, as well as in politics, and this subject matter seemed to tempt Mr. Wingfield-Stratford into a brash flipness of style that belied the scholarship and insight of the work. The present volume, a sequel, traces the transition from the England of 1870 to the England that was ripening for the war and economic debacle. It is an even more scholarly and incisive book than its predecessor, but is marked by an even more irritating flipness. When, however, one has discounted—one cannot forgive—this rather silly effect of the author's exaggerated fear of pedantry, one has a most penetrating account of the last years of the English nineteenth century—a skilful and balanced synthesis of the trivial and the momentous.

The Road to Repeal. By Joseph Percival Pollard. Brentano's. \$2.

All the amendments to the federal constitution have been ratified by the State legislatures. The alternative method of ratification by special conventions has never been employed. Mr. Pollard, inspired by the pending repeal of the Eighteenth Amendment, now pleads for the long-neglected method of submission to conventions. Unfortunately, however, he treats the question involved as one of constitutional mysticism rather than political expediency. Repeating Judge Clark's arguments at length, he hails that jurist as an intrepid hero for holding the Eighteenth Amendment unconstitutional because it was not submitted to conventions for ratification. To discredit the State legislatures, he attempts to prove that their members are usually of very low mental caliber, which may be true, but it does not follow from this that they would now defeat repeal. Moreover, as against the legislatures, Mr. Pollard exalts the judiciary as the champion of the popular will! Actually the Supreme Court has invalidated State statutes intended to secure expressions of the popular will before ratification by the State legislatures. On all the really interesting questions of expediency Mr. Pollard is practically silent. Special ratifying conventions constitute a very clumsy and expensive mode of procedure, hardly advisable unless in exceptional circumstances.

Fall of the Inca Empire. By Philip Ainsworth Means. Charles Scribner's Sons. \$4.50.

In his "Ancient Civilizations of the Andes" Mr. Means described the remarkable culture which reached its culminating point politically in the amazing empire of the Incas, perhaps the most efficient imperial organization the world has ever seen, superior to the Roman in the fact that it imposed not only military but economic order upon its inhabitants. The subject of the present volume is the overthrow of this empire by the Spanish invasion and the institution of the rickety Spanish

colonial structure in its place. It is on the whole an unpleasant story. The conquistadors were unquestionably heroic men, but other qualities were needed to administer an empire. Under Spanish rule the Andes lands exhibited a steady retrogression. The Indian population declined under the merciless exploitation of the conquerors; the Latin civilization that had been introduced was languid. The evil results are evident to this day. A small upper class lives on the labor of the Indians, who have been reduced to the small comfort that narcotics can give them. Mr. Means writes brilliantly without sacrificing the virtues of scholarship, but his conclusion—that a paternalistic attitude toward the Indians would be the solution of their problems—seems superficial. Mere economic justice might go far toward restoring to this race something of the maturity it showed in the remarkable cultures created before the Spanish invasion.

[In the notice of G. S. Ghurye's "Caste and Race in India" in *The Nation* of December 21, 1932, there was a slip that should be obvious to those acquainted with the politics of India but that ought to be corrected for the benefit of those not so well informed. In speaking of the untouchables, the notice said that Dr. Ghurye agrees "in the main with Gandhi . . . that it would be advisable to separate them politically from the mass of Hinduism." The statement should be "that it would be inadvisable . . ."—EDITORS *THE NATION*.]

Drama

Π in the Sky

THE RED PLANET" (Cort Theater) is full of Big Ideas. It begins in the laboratory of a young scientist who thinks that he is receiving messages from Mars, but before the evening is over interplanetary communication is no miracle at all by comparison with some of the other things which have happened. The world gets religion again; a Prime Minister announces in Parliament that he is going to supplant the gold standard with the Golden Rule; and crowds of unemployed march through the streets singing "Onward Christian Soldiers." Stock markets had tumbled and empires had trembled when the first of the alleged messages seemed to promise the secret of atomic energy and thus to give the final coup to a world already nearly destroyed by its technical achievements. But soon the mysterious communicant refused out of his wisdom to supply any more scientific information. Messages awesomely reminiscent of the Sermon on the Mount began to come instead, and the world, which had crucified its own Savior, consented to take its direction from the prophet on Mars.

Much of the play is ingenious enough. I myself was, for instance, interested by the preliminary test applied to the supposed Martians when one of the assembled experimenters suggested that they see what would happen when the signal 3.1415 was transmitted—the idea being, of course, that if the Martians had invented wireless they would certainly know all about that continuing decimal which represents the ratio of the circumference of a circle to its diameter. Sure enough, the next number—namely, nine—comes promptly back, and thus it is demonstrated that there is pi in the sky—which phrase, indeed, with a slight change of spelling, might be made to state the main thesis of the drama. Stern logicians might object that only a happy accident could explain the fact that the Martians employ, like us, the wholly arbitrary convention of a decimal system. Even waiving such quibbles, it must be confessed that the play grows less credible as it goes on, and that, if the truth is to be told, it is not very good. Despite its ingenuity and despite

THIS ECONOMIC CRISIS

Important Lecture-Discussion Series Arranged in cooperation with

THE LEAGUE FOR INDUSTRIAL DEMOCRACY

GEORGE MITCHELL: The American Scene, Jan. 6. Prof. Economics, Columbia Univ. Author: "Industrial Revolt in the South."

HENRY ROSNER: What is the Matter with N. Y.? Jan. 27. Research Secretary. City Affairs Committee.

LUCILE KOHN: Your Job and Your Pay, Jan. 13. Author: "Workers' Education."

MARY FOX: Control of Public Opinion by Press, Radio, School, Feb. 3. Executive Secretary, League for Industrial Democracy.

MAX DELSON: Breaking the Bread Lines, Jan. 20. Lawyer.

THERESA WOLFSON: Men and Machines, Feb. 10. Head Economics Dept., Brooklyn College.

6 more Lectures on "Ways Out" are to be announced. These lectures are open to men and women. The fee for entire series of 12 lectures is \$2.50. Single admission, 25c.

Bring in this ad by Jan. 5 and receive 50c rebate on series

Y. W. C. A., Lexington Ave. & 53rd St.

■ an elaborately skilful production, it becomes, like "Wings over Europe," exasperatingly pat, and for at least two reasons it fails really to convince.

The first of these reasons is that ingenuity is not enough for such a theme. It may serve very well when nothing more momentous than the solution of ■ murder mystery is concerned, but the salvation of the world is ■ large order, and something more than ■ neat little formula is necessary if we are to believe it possible. A great poet might dare to handle the theme. He might hypnotize us with his eloquence and his passion, and he might, conceivably, sweep us off our feet. But it is only ecstasy which can make salvation seem possible, and ecstasy cannot be generated by anything so mechanical as ■ fantastic melodrama.

It is also unfortunately true that no very convincing reasons are given to explain why humanity should suddenly decide to live by the Golden Rule, or why its new faith should be so much more effective than the old. For at least 1,500 years the vast majority of Western men believed that that rule had been laid down by ■ very personal God who promised eternal bliss to all who would follow it. Yet the most literal and absolute belief was insufficient to hold in check the natural appetites, and it is difficult to see how ■ modern's faith in his Martian prophet could be any more complete or effective than the faith which history has already shown to be not nearly enough.

It is not, however, really necessary to bring in such subtle considerations in order to explain why "The Red Planet" fails to achieve its ambitious intentions. The fact that the imagination of the author is by no means up to it is quite sufficient. The idea is one of those ideas which sound stunning if they are suggested late at night by one playwright to another. But like most of such it does not work out any too well, and what ought to be sublime is only rather irritatingly glib.

JOSEPH WOOD KRUTCH

□ JOSEPH WOOD KRUTCH says □

ALICE IN WONDERLAND. Civic Repertory Theater. It will fascinate children and adults alike by the reality of its unreality and the sense of its nonsense.

ANOTHER LANGUAGE. Booth Theater. Hilarious perennial exposing almost anybody's family.

BIOGRAPHY. Guild Theater. An intelligent and sinewy comedy about what happens when ■ cultivated woman of the world tries to choose between a pompous opportunist and an unmanageable idealist.

CRIMINAL AT LARGE. 48 St. Theater. Exciting and credible tale of crime in ■ country house. One superb performance.

DINNER AT EIGHT. Music Box Theater. Trick melodrama about what happened to the various guests invited to ■ dinner party. The general public likes it very much better than I do.

FIREBIRD. Empire Theater. Beautiful production of ■ highly theatrical play from the Hungarian.

LUCRECE. Belasco Theater. To be reviewed later.

MADemoiselle. Playhouse. Alice Brady and Grace George make a sentimental comedy pleasant enough.

MUSIC IN THE AIR. Alvin Theater. Pleasant operetta with music by Jerome Kern and a book rather better than average.

SUCCESS STORY. Maxine Elliott Theater. What happened to ■ radical when he rose in business. The best drama of the season.

THE LATE CHRISTOPHER BEAN. Henry Miller Theater. Light comedy from the French completely rewritten by Sidney Howard and charmingly played by Pauline Lord and others. All things considered, it is much the most enjoyable comedy of the season.

Films

Hemingway in Hollywood

THERE is little in the past performance of Hollywood producers to encourage high hopes in a film reviewer when he is preparing to see a new Hollywood film. To be sure, a few films shown during this season, notably Lubitsch's "Trouble in Paradise," have made one think that the producers were awakening to the demands of the more intelligent section of the movie-going public and were sincerely anxious to raise their standards. But apparently the occasional good things that come out of Hollywood are matters of accident, and the old ideas of what makes a good film still rule, even when an attempt is made to hitch the stars to a vehicle of recognized artistic merit. It is this disappointing fact that is glaringly evident in "A Farewell to Arms" (Criterion), the latest bid for cinematic laurels, which in some usually discerning quarters has been hailed, unaccountably, as the greatest American picture ever made.

Though I too hoped to acclaim this new masterpiece, I am compelled to report that "A Farewell to Arms" not only falls short of being great in any sense of the word, but is actually merely another screen "romance," differing from its countless predecessors only in its more natural dialogue and better acting. Neither of these distinctions, however, is sufficiently strong to overcome the fundamental banality of the story as it is unfolded in this free adaptation of Hemingway's novel. A film is not to be judged by its success or failure in giving dramatic form to the literary story which is its source. It must be considered on its own merits. But in the case of "A Farewell to Arms," it may be illuminating to point out how Hemingway's simple and charming romance has been vulgarized by the injection of cheap melodramatic episodes gratuitously introduced with the apparent object of making the story more dramatic.

At the outset it must be admitted that the story as told in the novel does not lend itself to successful dramatization. Except for the final sad ending of the girl dying in childbirth and the war background, there are no emotional developments and no dramatic situations in the entire course of the blissful love that unites the two characters of the novel. One might have expected the producers to let well enough alone and choose something more suitable to their ends. But the desire to present a best seller must have been irresistible, and once the story was started on the course of screen adaptation, it inevitably came down to the level of the usual sloppy screen love.

If there is anything particularly striking in Hemingway's narrative, it is the remarkable restraint in the conduct of his characters as well as in his account of the various episodes. In the film there are tears and sad partings and prayers and painful complications, none of which exist in the novel. The heroine does not say goodbye almost cheerfully, as she does in the book, but must come to the station by herself after the parting to watch her lover go away. She does not tell him that she is going to become ■ mother, but must go secretly to another country to bear her child. And all her letters to the man must be returned, so that she may collapse from shock. Nor do the two live in sin happily without much thought about proprieties. They must have a priest to throw a cloak of respectability over their union by a fervent prayer for their happiness. One could go on enumerating the "happy" touches introduced by the adaptors. But they are all of the same kind and their effect is invariably to strike a melodramatic note, to make the situation conform more nearly to the traditional screen conception of the tragic course of true love. THE NATION, No. 20 Vesey Street, New York City, Cable Address: NATION, New York. Muriel C. Gray, Advertising Manager. British Agent, Miss Gertrude M. Cross, 23 Brunswick Square, London W. C. 1, England.

AN AMAZING DOCUMENT is the report of the President's Research Committee on Social Trends, which has just completed a three-year survey of social conditions in the United States. The factual data assembled will fill thirteen volumes; the main report, already published, runs to more than 1,600 pages. Every significant aspect of human relations in the United States has been inquired into by the committee, which includes among its members sociologists, economists, and other authorities. Their conclusion is both striking and ironic. This group of men and women selected by that arch individualist, Herbert Hoover, has decided, after looking at all the available facts, that American individualism has failed, and that continuation of our present policy of drift may bring disaster. The committee sees the necessity of some sort of social planning. The report warns us that "nothing short of the combined intelligence of the nation can cope with" our present predicaments. The alternatives? "A prolongation of the policy of drift" or some dictatorial system, accompanied by "violent revolution, dark periods of serious repression of libertarian and democratic forms, the proscription and loss of many useful elements in the present productive system."

THIS CONTRIBUTION to social thought in America comes most opportunely. Never before have we so greatly needed to have pointed out by someone with authority the necessity for common or collective social action in dealing with our many social problems. Though the committee clearly wants a planned society, it does not insist on any

particular method or scheme for reaching that goal. Indeed, its report declares that its findings are "tentative and alternative." "The committee," the report continues, "does not wish to assume an attitude of alarmist irresponsibility, but on the other hand it would be highly negligent to gloss over the stark and bitter realities of the social situation, and to ignore the imminent perils in further advance of our heavy technical machinery over crumbling roads and shaking bridges." With its usual irony history may remember Herbert Hoover primarily for his appointment of this committee, whose findings have struck such a terrific blow at his personal philosophy. The committee declares it to be "conceivable that without any surrender of our belief in the merits of private property, individual enterprise, and self-help, the American people will press toward a larger measure of public control to promote the common welfare." This is a rationalization not justified by the committee's findings.

MR. ROOSEVELT has let it be known emphatically that he is opposed to the sales tax. He does not say that his mind is "open" on the subject. He does not pretend, because he has not been "officially" informed of every possible relevant fact, that he has no opinion. He does not intimate that he will wait until he gets into office and then appoint a body of experts or fact-finders to report to him upon the matter. He does not profess that the whole matter is none of his business until exactly noon on March 4 next. He is against the sales tax, and he has had the courage to make his attitude known, bluntly. The effect of his announcement was immediate. For the time being, at least, the sales tax has been dropped. Mr. Roosevelt is to be congratulated on his decision, but that decision only increases one's regret that his attitude has been so ambiguous and evasive on the war debts, where a flat insistence on the necessity of revision and a flat promise to address himself to the question when he came into office would in all probability have averted the default by France and by several other nations, and would certainly have been followed by an emphatic rise in the world's markets.

THE LARGEST AND WEALTHIEST industrial State, New York, has at last reached the point where it must ask for federal help in meeting its unemployment-relief problem. In his inaugural address Governor Lehman declared that the time has come "when it is absolutely essential that such application be made to the federal government by our State. It is no longer possible to avoid the necessity." *The Nation* has repeatedly said that the federal government would eventually have to bear the larger share of the country's relief burden; the States, municipalities, and private charities are simply not able to carry on without such assistance. Governor Lehman also asked that the Reconstruction Finance Corporation law be liberalized "so as to make it easier for us to benefit from this federal source in meeting the needs of our unemployed." This too must be done, though both parties in Congress, as well as Mr. Hoover, have thus far in the present session completely ignored the relief

problem. With Franklin D. Roosevelt, who is thoroughly acquainted with the New York situation, taking office in March, there is hope that something will be done in this respect before many more months. However, the immediate emergency is great; it cannot wait until March 4. Only a few days ago the New York State Temporary Relief Administration estimated that there were at least 1,750,000 persons without work in the State. This is higher by at least a quarter of a million than the most extravagant recent estimate we have seen. If the same ratio holds throughout the country, there are probably 17,500,000 jobless in the United States today, for more than 10 per cent of the wage-earners of the country are residents of New York.

AERICAN LABOR UNIONS have always been jealous of their traditional right to rule themselves. They have fought against interference in their affairs whether it has come from governmental or other alien quarters or from the higher bureaucracy of the American Federation of Labor. A New York court has now stepped in and taken over the administration of the affairs of a local union. Perhaps the internal controversy in Local 306 of the Moving Picture Machine Operators' Union, of which Sam Kaplan is president, justified this action from the legal point of view. But instead of observing union traditions, the court went outside the labor field to pick two of the three men it appointed to administer the affairs of Local 306. These two are John W. Davis, the corporation lawyer, and James J. Dooling, also an attorney of New York City. While the third man selected, Hugh J. Frayne, president of the New York State Federation of Labor, is of course a union official, he is a member of that higher bureaucracy against which the local and international unions have so long been contending in order to preserve their autonomy. As an isolated case this action of the New York court has perhaps no great importance. But there are indications that it is the beginning of a new public attitude toward the labor movement. At present there is widespread though still latent rebellion among union workers against their leaders. When this rebellion breaks out into the open, to whom shall the rank-and-file members turn for help? Ought they to resort to the more democratic method of reorganizing their own unions without outside interference, or must they now depend upon the courts and upon the assistance of such possibly benevolent representatives of the employing class as Messrs. Davis and Dooling?

THERE IS A WIDESPREAD IMPRESSION, held even by some present advocates of lower tariffs, that previous tariff reductions in our history, either because those reductions were hasty and ill-considered or because they unfortunately occurred just when other factors were making for a depression, have been followed by periods of poorer business. No doubt one of the causes of this belief was the depression that followed the passage of the Underwood tariff in October, 1913. That depression, however, though world wide, was much smaller than the present one, even when we include, in considering it, the collapse of the security, cotton, and other markets brought on by the outbreak of the war. An extremely interesting light is thrown on other tariff changes in our history by Rufus S. Tucker in an article in the *Annalist* of December 9. The tariff has been revised seven times in the last forty-two years—twice downward and five times up-

ward. Mr. Tucker, in a thoroughly objective study, in which he uses the various indices of business activity compiled by the American Telegraph and Telephone Company, by Axel Ayres, Persons, Snyder, and Standard Statistics, shows that "the worst depressions this country has had since statistics for measuring depressions have been available—the depressions of 1893-1894 and 1930-1932—occurred under the two highest tariffs this country has ever had—the McKinley and the Smoot-Hawley tariffs." He shows, moreover, on the other side, that the Wilson tariff, passed in August, 1894, reducing rates after the very severe depression of 1893, was followed by the sharpest recovery in twelve months that followed any tariff change, up or down. But the myth of tariff prosperity dies hard.

THE JIMENEZ GOVERNMENT of Costa Rica and the Martinez Government of Salvador during the last week of December hurled a challenge at the United States by denouncing the Central American treaty prohibiting the recognition of governments which come into power as a result of revolution. It was only at Secretary Charles Evans Hughes's behest that the five Central American republics signed this treaty at Washington in 1923. Although the United States is not a signatory, the State Department has been most active in compelling observance of this treaty. The primary purpose of our intervention in Nicaragua in 1926 and 1927 was to displace Emiliano Chamorro, who had seized power in violation of this treaty. So long as the United States insists upon applying this treaty, Central America will be confronted with the danger of American intervention whenever a local revolution takes place. Although the Hoover-Stimson Administration returned to the principle of de facto recognition in South America, the Dominican Republic, and Panama, Secretary Stimson has openly defended the principle of "legitimist" recognition embodied in the 1923 Central American treaty. The result of following two conflicting recognition policies is to create the impression that the United States wishes to maintain an exclusive sphere of influence in Central America. Costa Rica and Salvador, the two most advanced republics on the Isthmus, have resolved that any such tutelage shall come to an end; Mexico supports them in this attitude. And in thus repudiating a policy of recognition in which a large measure of dictation by the United States is implicit, they are taking a stand that is both natural and justifiable.

GREECE MAY HAVE BEEN within its rights in refusing to extradite Samuel Insull. He certainly had lawyers enough on his side to make the best argument possible against his being returned to the United States. At this distance, however, we find it rather difficult to follow the argument that if any guilt existed it belonged to the corporation that employed Mr. Insull and not to the precious gentleman himself. Such an explanation may satisfy public opinion in Greece; it does no such thing in this country. The whole procedure, moreover, stamps Samuel Insull as a presumptively guilty man. A really innocent man would come right straight back to the United States to tell the whole story of his activities to a jury. Of course his friends will say that he could not expect a fair trial in Chicago in view of the tremendous feeling against him on the part of the unfortunate victims of his corporate practices, whether these were criminal or not.

They will doubtless assert, too, that the State officials are bent on persecuting him to satisfy the public clamor. That is all very well, but an innocent man would take the risk and demand vindication. As it is, Greece may yet rue the day that it granted asylum to Samuel Insull; a sentence in one of the dispatches intimates that he will now settle in Greece and engage in the development of public utilities!

A STRIKING COMMENTARY on American political morals is to be found in the case of former Representative Crisp of Georgia. Crisp has resigned from the Tariff Commission, to which he had been appointed by President Hoover, and has accepted a position as legal representative in Washington for the Savannah Sugar Corporation and "some of their associates." These sugar companies doubtless will have business in the future before the Tariff Commission, and certainly will be interested in tax and financial legislation before the House Ways and Means Committee, of which Crisp was formerly an influential member. Some of our public men can apparently change bosses as easily as they change their clothes. But in Crisp's case there was perhaps not a real change of bosses. Throughout his long service in the House he worked faithfully and diligently in behalf of legislation sponsored by financial and business interests. Though a Democrat, he frequently voted with the reactionary Republicans. Among those pleased by this sort of service was Mr. Hoover. When, after having resigned his seat in the House to run for the Senate, Crisp was defeated in the Democratic Senatorial primary in Georgia, President Hoover promptly found a place for him on the Tariff Commission. However, the Senate refused to confirm the appointment on the ground that President-elect Roosevelt should be permitted to choose his own officials. For some unexplained reason Crisp did not want to intrust his political future to the leader of his party. Instead, he accepted the job as lawyer for the sugar interests.

WE HAVE READ without complaint ten thousand publicity releases from Radio City. This blurb to end blurbs is for (our own) immediate release:

With the exception of the ushers, every fitting in the newest and largest music hall in the world is the biggest of its kind on earth. The chandelier, which throws indirect lighting in all directions in four different colors, accommodates five electricians and their families, while its intense heat is not only sufficient for their cooking and other needs but even supplies heat to four old-law tenements on Second Avenue several blocks east. In the foyer is a mural showing the largest man ever painted bent on the longest quest in history for a fountain of youth which by means of a mechanical device just perfected by S. L. Rothafel, better known as Roxy, is said to throw a stream a little higher than Niagara Falls in winter. The orchestra pit is large enough to be used for a landing field for Zeppelins, in case of attack, and the stage is so wide, deep, and far away that it is impossible to see the stars without a telescope. The whole ensemble strikes a note of intimacy loud enough to be heard in every part of the auditorium.

The entertainment with which the music hall was opened was dedicated to the American public and exceeded all expectations. It was conceded to be the longest, the least original, and the most boring spectacle ever conceived. There were 6,200 guests, including Nicholas Murray Butler and John D. Rockefeller, Jr., better known as Roxy.

Mr. Rothafel has announced that this achievement will be his last venture in the theater. He has succeeded in opening the biggest entertainment hall at the lowest point in the worst depression in the history of the greatest industrial nation on earth. If the project fails, as it is confidently expected to do, it will constitute not only the greatest of several great failures so far enjoyed by Mr. Rothafel, better known as Roxy, but the most colossal failure in entertainment history. S. L. Rothafel could not do less.

"Golden Remedies"

THE scientists are meeting again, and the reports of their year's pursuits once more afford the layman fascinating glimpses into the strange detached world of test-tubes and tissues in which investigators live. But one of the reports this year is doubly strange. It comes from two Chinese scholars, Dr. Amos Benkov Kuan-chin Penn of Johns Hopkins University and Dr. Pei Lung-tang of Harvard; and it informs us that the theory of evolution ~~was~~ known in China 2,500 years ago, that anaesthetics were administered by Chinese surgeons in the third century before Christ, that a Chinese biologist 2,000 years before Harvey found that blood circulates through the body, that the catheter, which the West invented in 1850, was described in "The Thousand Golden Remedies" in the seventh century after Christ, and that dissection was practiced by Chinese anatomists in 1122 B.C.

All organisms are originated from a single species [wrote Tson Tse in the sixth century B.C.]. This single species had undergone many gradual and continuous changes, and then gave rise to all organisms of different forms. Such organisms were not differentiated immediately, but, on the contrary, they acquired their differences through gradual change, generation after generation.

His description of mutations is original and interesting.

All species have a single beginning, whole or seed. This seed, after having acquired water, gave rise to minute water organisms called *chi*. Some of these minute organisms, which emerged between water and land, became a kind of lower organism called *qui ping tse i*, which were some sort of organism we call sponge.

These lower organisms made their living on land and became a kind of land animal. Some of these land animals then wandered among the trees and became a sort of bird called *wu chu*; some became worms and butterflies; others became a sort of beast called *chin lin*, and *chin lin* gave rise to *cheng*, and *cheng* gave rise to horse, and horse gave rise to man.

The description of the circulation of blood is brief and clear:

The blood flows continuously like the current of a river, or the sun and moon in their orbits. It may be compared to a circle without beginning or end.

The blood travels a distance of six inches in one respiration, making a complete circulation of the body about fifty times a day.

As for the art of dissection, the nature of the viscera and tables of weights of various internal organs were set down in the "Hard Classics" more than 3,000 years ago by Chin Yueh Jen, anatomist.

The most interesting thing, however, is the explanation

given by Dr. Benkov and Dr. Pei of the reason why these scientific discoveries were not handed down through Chinese history to modern times. They assert that Chinese preoccupation with literature and philosophy rather than science during their long history caused the work of zoologists and other investigators to be neglected, so that their discoveries did not carry through.

But the explanation needs to be explained. Why did China neglect science and become preoccupied with literature and philosophy? Can it be that in some still hidden fold of China's past we shall find evidence that she knew also that full-fledged child of science, the machine age, and found it wanting? China has absorbed and forgotten innumerable conquerors, just as her commentators predict that she will absorb and forget the Japanese invaders who are now harassing her. Shall we yet discover that China absorbed and forgot a machine civilization, that she deliberately rejected Technocracy for the stylized poetry of Li Po and the long view of Confucius? In America, in 1933, *Anno Depressions*, we should like to know.

The Seabury Plan

SAMUEL SEABURY has given us great hope that something may at last be done to bring about sorely needed reforms in the structure of the New York City government. In his final report to the Hofstadter Legislative Committee Mr. Seabury included a draft of a new municipal charter. He asked that the State legislature submit the proposed charter to the voters at a special election this spring. His plan goes much closer to the heart of New York's problem and certainly offers more fundamental reforms than almost any similar scheme we have seen.

Two changes of primary importance are recommended by Mr. Seabury. He would simplify the municipal structure by abolishing the anomalous borough governments and by grouping into ten administrative departments the many bureaus and divisions now existing in the municipal government. The borough governments have long been an unnecessary luxury. The work they perform can be administered more efficiently and economically from a central office. But New York has clung to the borough system because it has provided the ruling political rings with an abundance of jobs for their supporters. Mr. Seabury's plan would not only save the taxpayers a great deal of money—the city pay roll now runs over \$350,000,000, about 60 per cent of which, Mr. Seabury declared, is "appropriated for casual and indefinite employees"—but it would at the same time strike a telling blow at the source of power of the political machines. Much the same purpose would be accomplished by consolidating the various offices and bureaus in the municipal government. Mr. Seabury also recommended that the size of the legislative and executive branches be reduced by eliminating the Board of Estimate, the Board of Aldermen, and the Sinking Fund Commission, turning their powers over to the Mayor and a relatively small City Council.

But the most important and most valuable of Mr. Seabury's proposals is to be found in his plan to introduce proportional representation in the election of the members of the council. By itself this would be a tremendous step for-

ward, for it would give minority parties and groups, which are now entirely excluded, a definite voice in the city government. Under the Seabury plan, which is based largely on the Hare system of proportional representation, there would be one representative on the City Council for every 50,000 voters. A minority party with that many followers could concentrate its votes on a single candidate and so be sure of having at least one representative on the council. Unfortunately, the plan divides the city into five election districts comprising the five existing boroughs, so that the minority party would have to find its 50,000 voters within one borough. The Seabury proposal is open to a few minor criticisms. For example, it provides for a council of about twenty-eight members (depending upon the total number of votes cast), which seems to us to be still too large.

We feel that Mr. Seabury erred in not recommending the adoption of a modified city-manager plan. We would not have the city manager given full executive authority. General administrative policies should in any case be left to the discretion of an elected mayor and council, under whom the manager would work. However, if we are to have no city manager, we believe it essential that at least the heads of the ten municipal departments be experts in their fields. They ought also to be removed as far as possible from all political influence and pressure. To achieve this it would be necessary that they be engaged under contract with the City Council, the terms of the contract being so rigidly drawn that the experts could not be dismissed for political reasons, but only for just and sufficient cause.

We are not impressed by the usual criticisms of the city-manager plan. Some Socialists, for example, feel that those who want to be governed by experts betray a secret yearning for a dictator. They declare also that the hired expert could not afford to be as independent in the matter of laying down policies as a politician "with a direct mandate from the electorate." We cannot agree that our desire to be governed by persons trained in the science of government indicates any special hankering for dictatorship. Moreover, the Socialists themselves, if and when they come into power, will have to call upon experts, for no form of government needs technicians more than does socialism. Under our suggestion matters of policy would be left wholly in the hands of the elected representatives of the people, the trained and experienced administrators remaining subordinate to these representatives. However, Mr. Seabury ignores this point altogether. His plan provides that "the head of each of the departments of the city government . . . shall be appointed by the mayor and shall hold office during the pleasure of the mayor." In other words, these jobs would remain political spoils to be disposed of at the pleasure of the dominant party. Perhaps Mr. Seabury believed it necessary to throw this sop to Tammany and its Republican allies in order to make the rest of his program more palatable to the machine politicians. In any event, this is the only really serious defect we find in his plan. Mr. Seabury has done exceedingly well by New York City. It is reported that the Hofstadter Committee will present most of his recommendations, particularly that concerning proportional representation, to the legislature when it meets in January. We hope that the legislature will give the voters an opportunity to act upon this program, and that the people of New York City will accept it. By doing so they would benefit no one more than themselves.

Where the Sales Tax Falls

GOVERNOR ROOSEVELT'S emphatic rejection of the sales tax makes it seem highly improbable that that device will be included in any measure passed either in the present session of Congress or in the next. Yet the need for increased revenues is imperative; Congress seems to be convinced that they cannot be raised by higher inheritance and income taxes, and it is possible that Mr. Roosevelt, after he becomes President, may be converted to the sales tax in the belief, already so widespread, that this impost must be accepted because no alternative is left. It is important, therefore, that the grave objections to a sales tax should be made plain.

The "manufacturers' excise tax" of $2\frac{1}{4}$ per cent, recommended by the Administration, would, it must be confessed, at least be less harmful than a general sales tax. The latter contains the possibilities of indefinite duplication and pyramiding. If there were a tax on sales of iron ore, a tax on sales of pig iron, a tax on sales of finished steel, a tax on automobile bodies delivered to an assembly plant, and a tax on finished automobiles, it is obvious that the total tax on the final product could rise to a fantastic figure. A manufacturers' excise tax would eliminate most—though not all—of this kind of pyramiding; and it would be less difficult to administer than a tax on retail sales.

Compared with other forms of taxation, however, the advantages of such a tax are far from clear. Most of the opponents of the tax have held that it would be paid ultimately by the consumer; most of its champions have maintained with equal confidence that it would be paid by the producer. Even if this latter point could be proved, it is difficult to see how it would help the case for the sales tax. For if it were true that the sales tax would be paid entirely by the producer, there would obviously be no need for a sales tax at all. The revenue could be raised simply by an increase in the corporation income tax. If, for example, a tax of $2\frac{1}{4}$ per cent on gross sales were equivalent on the average to a tax of 12 per cent on net profits, why should not the present corporation tax of $13\frac{3}{4}$ per cent be increased to $25\frac{3}{4}$ per cent? The sales-tax advocates would reply, no doubt, that the corporations could not stand so heavy a tax, and that, moreover, it would be double taxation, because the corporation income is taxed again in individual income taxes when it has passed into the hands of security holders. But if the sales tax really fell on the producers, these objections would apply with double force against it. For an increased tax on net earnings would at least have an equitable incidence; it would fall on the corporations that had the money to pay out.

If, on the other hand, the sales tax fell entirely on consumers, it would be still more difficult to justify it. For it would amount to a repudiation of the principle of graduation of taxes; it would tax the poorest at the same rate as the richest, the buyer of the cheapest shoes and stockings at the same rate as the buyer of the most expensive diamond brooch. It would tax the incomes of the poorest elements of the population perhaps 2 per cent and almost certainly more than 1 per cent, yet under our income tax a married man with two dependents pays less than 1 per cent even on a net

income of \$4,000. The administrative expense of collecting direct income taxes on small incomes is disproportionately high under our present methods; but a simplification of these methods would seem greatly preferable to a sales tax.

It becomes obvious that the real merit of a sales tax, in the eyes of its advocates, lies either in the fact that they do not believe the public will know where and how such a tax is going to fall, or that they do not know themselves. It is this blessed ignorance of the incidence of the tax that is "painless," not the tax itself. How would the tax actually fall? The answer is not a simple one. It might sometimes not be passed along to the consumer, because it would be advantageous to have a "round" price. Such cases, however, would probably be offset by those in which the added price to the consumer, also for the sake of "rounding it out," would be much more than the amount of the tax. In general, however, the tax would tend to fall unfairly both on producers and on consumers. It seems likely that it would be passed on to consumers in the case of most necessities and paid by the producer in that of most luxuries. Wherever it was paid by the producer, it would bear most heavily on those producers with the smallest margin of profit on turnover.

The margin of profit on turnover on the most common articles is frequently small; it is often only 5 per cent or less. In such cases a sales tax of $2\frac{1}{4}$ per cent, if paid by the producer, would absorb approximately 50 per cent or more of his net income—a very heavy burden. The margin of profit on luxury articles, such as pianos, on the other hand, is nearer 100 per cent, and here the sales tax would not bear heavily on the manufacturer, nor is it probable that it would be passed on. While in the first instance the sales tax might fall indiscriminately on producer and consumer, however, the tendency would be for the burden to be shifted more and more to the consumer as time went on.

If, in spite of the grave objections to it, a sales tax finally seems inevitable, its opponents ought to make one final stand for the principle that it should at least be a graduated tax and not a flat one. This graduation could be based on the ratio of profits to gross sales. A product on which the ratio of the profit to the sales price is 50 per cent, for example, ought obviously to pay a higher percentage tax on gross sales than a product on which the ratio of the profit to the sales price is only 5 per cent. Much less of such a graduated tax would be likely to fall on the consumer than would a flat tax. An industry with a very narrow margin of profit on turnover would very soon raise its prices to pay the tax, but an industry with a wide margin of profit could absorb the tax without raising prices. To the extent that it fell on producers, a graduated tax would adjust itself much better to ability to pay, for to the producer with a narrow margin of profit a small tax on gross income may mean a very high tax on net income; this is less true of a producer with a wide margin of profit. In general the widest margins of profit on turnover are made on luxuries rather than on necessities. To the extent that this is true, the part of the burden that the consumer would have to bear would be shifted, by a graduated tax, to luxury goods.

Issues and Men

AFTER fourteen and one-half years of service as Editor of *The Nation* I have relinquished that post to become Contributing Editor and turned over the complete control of the paper to three of my associates—Freda Kirchwey, Henry Hazlitt, and Joseph Wood Krutch—and Ernest Gruening, formerly a member of the staff. This does not mean a complete separation, if only because I shall remain as owner and publisher. But I have felt that the time had come for me to free myself of the burdens of active editorship so that I might have more time for speaking, especially over the radio, for writing books, and for engaging in other literary work which has necessarily been limited heretofore. I cannot deny, however, that the break, though primarily a shift in functions, involves a sentimental wrench. My grandfather, William Lloyd Garrison, was a contributor to the first volume of *The Nation*, and my father, Henry Villard, to the third issue, in July, 1865—just after his return from the front after four years of active service in the Civil War as a war correspondent. My uncle, Wendell Phillips Garrison, one of the two founders of the paper, was literary editor and editor during almost his entire active life. Finally, my son, Henry H. Villard, contributed an article to *The Nation* in the issue of November 2, 1932. Five other members of the family have written for it. In the light of this record, it will be clear how much *The Nation* means to me, and how impossible it would be for me to stop writing for it.

Now that I can look at the problem of the liberal journal in a more detached way, I should like to take this opportunity to urge the vital necessity of maintaining it at all costs. It is apparent to anyone with a mind and a conscience how desperate is the present national emergency. But perhaps only those who are giving their lives to the problem of economics and government can realize how essential it is that there shall be free and outspoken journals of opinion such as *The Nation*, the *New Republic*, the *Survey*, the *World Tomorrow*, and the few other publications, both daily and weekly, which can fairly be classed in the group of progressive-minded and economically free journals.

The pressure upon the daily press to conform, and not to attack evil, or espouse new causes, or advocate drastic remedies, grows greater with the depression. Loss of advertising cannot be wholly offset by economies or reductions in the cost of production, or by the laying-off of employees. Hence those newspapers that are weak or timid or deliberately allied with the great business forces which have too long dominated our political life are more careful than ever not to go counter to the prevailing currents of opinion. They have plenty of excuses: they do not wish to "rock the boat"; they assure you that if officials are corrupt or lawless, if the police are brutal and ruthless in dealing with those who dare to exercise their right of public assembly and protest, it is kinder to "treat 'em rough" than to have riots or bloodshed. It is better, they say, to breach the Constitution, to perpetrate much injustice,

than to risk disturbance of the public order. Privately they admit that the old order is in a bad way, but publicly they insist that all is well or will be very soon. They do not print all the facts about what is happening the country over—the misery, the suffering, the hunger, the deaths by starvation; to do so, they say, would be to depress the American morale and create the wrong psychology. They are one with President Hoover, whose falsification in 1929 and 1930 of the facts of the depression is not only defended but praised as having been

necessary to keep up the country's courage. Surely that is an insulting derogation of American stamina, American bravery in the face of odds, American ability to fight in the last ditch with back to the wall!

In other words, the bulk of the daily press fights blindly and often stupidly for the old system. It has no new program, no plan for reconstruction or reorganization; it merely holds on, hoping that somehow or other prosperity will return so that there may be business at the old stand in the good old way. Surely, we need a free and outspoken press as never before to demand that this chaos and misery shall never come to pass again; to insist that there are ways out to a normal and decent world; to refuse to listen to the suggestion that we must go back to the cycles of great apparent prosperity alternating with horrible depressions, that we must again be a country governed by and for the rich, with materialism our god, the narrowest nationalism our nation's goal, and the heaping up of riches our be-all and end-all.

Of course I know that the liberal journals of opinion also have their weaknesses; that they often err in their judgments, and at times in their methods. They have the defects of their qualities. All of them face recurring deficits, and all but one are greatly handicapped by their lack of funds. We of *The Nation* have rarely produced an issue that came within 50 per cent of our ideal of what it ought to be. We are compelled by the logic of our positions, and by the mass of error and injustice which we must attack, to seem captious, overcritical, unduly fault-finding, never satisfied, never content to allow to frail human nature its due proportion of inherent weaknesses. It is charged that we are never ready to see anything but pure black and pure white, overlooking all intervening shades. Well, many of the criticisms of us may be true, but still I maintain that the liberal press is indispensable and serves a profoundly valuable purpose—yes, an absolutely necessary one—if the country is not to go on the rocks of blind conservatism, base intolerance, and criminal refusal to face conditions as they are.

And so I bespeak your support for *The Nation*, and for the editors who have so generously volunteered to take the burden and responsibility from my shoulders.

Under the title, Issues and Men, Oswald Garrison Villard, The Nation's Contributing Editor, will write a weekly page of comment on personalities and public affairs.

Oswald Garrison Villard

Owen D. Young and Samuel Insull

By NORMAN THOMAS

OWEN D. YOUNG is still front-page news. When President-elect Roosevelt consults him and they are too busy to go out to lunch, a photograph of the distinguished conferees lunching in Mr. Roosevelt's office adorns the window of my neighbor, a storekeeper who regularly posts pictures of the last-minute news. With the help not only of Governor Roosevelt but of President Hoover, Mr. Young makes the first page regularly.

To be sure the days are gone forever when Mr. Young symbolized that new capitalism which, in the opinion of some of those who have now gone in for technocracy in a big way, was about to save the world. Walter Lippmann's sedate optimism about disinterestedness in business, as exemplified by the General Electric, and Stuart Chase's more tentative hopes of leading business men as potential planners read curiously at the end of 1932. But Mr. Young still stands out as the internationalist, friend of Russia, and influential economic adviser to the incoming Administration, which, as everybody knows, is committed to the "new deal." In spite of the strictures that Paul Y. Anderson and others have published in the columns of *The Nation* on Mr. Young's role in the formation of the Radio Corporation of America, in spite of the amazing stories of what the Radio Corporation of America did to the stock of Radio-Keith-Orpheum and its more or less innocent investors—a story, by the way, which got less publicity when I told it in the last campaign than any other important statement I made—Owen D. Young, chairman of the board of directors of the General Electric and chairman of the executive committee of the Radio Corporation of America, philanthropist, patron of education, reputed author of the Dawes Plan as well as of its now defunct successor, the Young Plan, is still news.

Samuel Insull, recently of Chicago and now of Greece, is also news—but not good news. The collapse of the complicated structure of holding and investment companies through which Samuel Insull, his son, and his brother controlled a two-billion-dollar public-utility group has been called the second greatest collapse since the stock market was invented. Scores of thousands of small investors were dragged down to ruin with it. Samuel Insull and his brother are now under criminal indictments. Holding and investment companies are in bankruptcy, and lawyers for the numerous creditors are seeking to discover all possible assets to save their clients from complete loss of their investments.

Under these circumstances one might think that the juxtaposition of the names of Owen D. Young and Samuel Insull would make big news. Not so, however. For the most part it has been ignored by the press. The *Times* was the only New York paper to find space for a competent report of the proceedings before Referee John E. Joyce of 70 Pine Street, New York, under order of a federal judge of Chicago, in which Mr. Young's connection with the Insull failure was examined; and even the *Times* published the story far back in its financial pages. Yet few bits of testimony shed a more glaring light on the way in which capitalism, new and old alike, goes about the business of operating for the maxi-

mum amount of private profit a great public utility which in a sane world would be directed by engineers for the use of society.

Mr. Young was dragged into the complicated hearings on the Insull bankruptcy after this fashion: An able attorney, L. F. Jacobson of Chicago, representing creditors of the bankrupt Insull companies, procured a hearing in New York to find out whether certain New York banks were not holding collateral which in point of law and justice should go into a common pot to satisfy, so far as possible, the demands of all the creditors. Under the law, if a bank makes a loan to a corporation which goes bankrupt in less than four months thereafter, such securities as may have been deposited as collateral for the loan become not the property of the bank in particular but of the creditors in general. The question then was: Did the banks make loans improperly or juggle the date of receivership to their own advantage? This inquiry involved the General Electric, which had made Insull a \$2,000,000 loan in December, 1931, at a time when Mr. Jacobson claimed its officers knew that the Insull investment companies were insolvent. The particular one of Insull's many companies at which the New York inquiry was directed was the Insull Utility Investments, Inc. This was an investment trust organized by Samuel Insull in order to perpetuate his family's control of their vast structure of public-utility groups, into which, in the boom days of 1928 and 1929, the public was buying. Insull put his own holdings in his own companies into the portfolio of the investment trust and then, on the basis of these securities, sold preferred and common stock in the trust in order to get more money to buy more securities of his companies, which, of course, he as manager of the investment trust could control. This company was one of three Insull companies which were beneficiaries of the \$2,000,000 loan made by the General Electric in December, 1931.

It was not merely the \$2,000,000 loan made by the General Electric on his recommendation which brought Mr. Young into the picture. He had also acted as mediator to keep the banks in line and to stave off proceedings by any one of them which would have precipitated Insull's bankruptcy. Perhaps the best way to bring out the facts and their meaning is to give the story of what happened, first, as Mr. Young wanted to make it appear to the referee in bankruptcy, and, second, as it appeared after Mr. Jacobson had finished questioning the witness.

According to Mr. Young it happened this way: Some time in December, 1931, Samuel Insull, Sr., an old friend of his, a splendid customer of the General Electric Company, and one of the great men in the public-utilities field, came to him to borrow \$2,000,000 from the General Electric. On the basis of Mr. Insull's reputation, his personal indorsement of the loan, and the deposit of collateral which Mr. Insull agreed to keep up to a market value 40 per cent in excess of the loan, the General Electric granted the \$2,000,000 with no questions asked. Up to that time Mr. Young had heard little or nothing to create any doubt in his mind of the financial soundness of the Insull companies. As a friend, and at the

request of Mr. Insull, he had bought stock in the Insull Utility Investments in January, 1929. He did not buy as a speculation but to stay in, because the elder Insull "said he would feel better and safer if I had an interest in it." Originally he put in \$50,000, which amount was raised by allotment to \$175,000. Mr. Young did not explain, nor was he asked to explain, the ethics of a situation in which he went in at an insider's price of \$12 a share while the public was allowed to purchase at \$30 or above. Before the crash the stock went to \$149 a share. Mr. Young did not even read the reports of the company. No matter what they showed, "I could not have sold at any time in that period to make a profit or take a loss without incurring Mr. Insull's displeasure."

By February, 1932, however, things were so bad that another appeal had to be made to Mr. Young, this time to use his influence to procure from New York bankers an agreement not to call their loans or ask for any more security on them until some time in August, 1932. There were some differences of opinion and interest between the Chicago and New York bankers. Insull inter-company relations were so complicated that they continually had to be watched. Finally Mr. Young worked out an agreement whereby an expert accountant in Chicago named Arthur Anderson was to watch operations for the New York bankers, who agreed for the time being at least, and until further notice, not to press their loans. Mr. Anderson's report, however, resulted in a general agreement of the New York and Chicago banks on April 8, 1932, that the situation could not be saved and that the stand-still agreement must end. On April 16 a receivership was declared. Mr. Young refused to admit that the receivership was declared because the company was insolvent in the ~~sense~~ that its total liabilities greatly exceeded its assets. It was merely unable at that time to raise money to meet obligations as they matured. Following the first day's hearing Mr. Young issued a public statement to the effect that "the most you can say about that old man [Insull] is that he had too much confidence in this country and in his own companies." According to a recent report of the receiver of the Insull Utility Investments, Inc., that company alone sold stocks and bonds for more than \$600,000,000 on the basis of net assets now worth \$35,000,000; yet the Insull set-up, Mr. Young now maintains, was sound. So much for the Young version. Now let us look at the same story after Mr. Jacobson had completed his questioning.

Although Mr. Young first said that he made no real examination into Insull affairs until February, 1932, and did not recall "ever receiving or ever seeing any annual report," he had to admit not only that he probably did receive reports but that he had received a financial statement of the Insull companies in December, 1932, prior to the General Electric loan. He passed on to Gerard Swope, president of the General Electric, the responsibility for going over the reports in detail but admitted, "It is very likely that I saw them," when he was handed the documents in question. These documents showed that Insull Utility Investments, Inc., which had lost money ever since its first year, had in 1931 lost about \$1,500,000, and that its position was steadily growing worse. At the very time the loan was approved, the securities provided only a 30 per cent and not a 40 per cent margin in the case of two of the three companies among which it was divided. Moreover, the accounts receivable by

the investment company, totaling some \$12,000,000, to which Mr. Young at one point in the examination referred as helping to justify a loan, were shown to be receivable only from instalment-plan purchasers who were being allowed to pay for stock in a company on the edge of bankruptcy. Furthermore, although Mr. Young kept insisting that he was dealing with the situation "in a large way" and not bothering with details, it is almost impossible for a layman reading the minutes of the hearings to believe that a man of his wide business experience did not know that the Insull companies were virtually insolvent at least at the time when he made the banks agree to a stand-still arrangement.

Still worse, Mr. Young was finally forced to admit that in December he knew there was outstanding \$60,000,000 in debentures, that is, in certificates of indebtedness to be paid at a given date, which certificates were protected presumably by securities in possession of the company. Mr. Jacobson argued that the \$2,000,000 loan was to pay the interest on the debentures in order to keep the holders quiet a while longer. Neither Mr. Young nor any of the bankers yet examined, however, could be made to admit that they were aware that the debentures had been issued on the plainly published stipulation that the Insull company would incur no added indebtedness if, as a result, its total indebtedness should exceed 50 per cent of the value of its assets. Actually all available securities of the Insull investment and holding companies were put up with the bankers. Finally, the date of receivership, April 16, eight days after a conference of bankers had agreed that the companies could no longer be saved, was set just outside the four-month limitation period and permitted some of the twelve banks which had been lending money to Insull to claim securities deposited as collateral on loans made or renewed the previous December. On being asked by Mr. Jacobson, "Didn't you know that lawsuits were bought off during that time to defer the bankruptcy until April 16?" Mr. Young replied, "I do not know that." He insisted that the key to the situation was bank loans and that he was justified in considering such loans by themselves, ignoring altogether the interests of instalment-plan purchasers of Insull securities and of more than 20,000 holders of debentures in the Insull Utility Investments Company, whose \$60,000,000 worth of claims was completely stripped of the protection of underlying securities because these had been deposited with the banks as collateral. Mr. Young's general opinion was that if the banks could be satisfied, the companies might manage to keep going, and these debenture holders, into whose rights he never inquired, might be saved.

So the matter rests as far as the relation of Owen D. Young to the Insull failure is concerned. So it rests, that is, unless the testimony of Gerard Swope or someone else yet to be examined sheds new light upon it. Only one of two conclusions is possible from the testimony: first, that Mr. Young was in collusion with the bankers to protect their interests at all costs and was willing to gamble with them, utterly ignoring the small investors, on the slim chance of saving Insull, who was a good customer of the General Electric and in whose companies he, Young, was a heavy stockholder. The alternative is that Mr. Young, acting on his own initiative and according to his best judgment, took the immense responsibility of lending a large sum of his company's money without acquainting himself with the most elementary facts

concerning the financial situation of the companies he was trying to save, or the legal claims of holders of debentures. He could only think in terms of big business and big loans and he took none of the precautions so stringently demanded in dealings with small borrowers. In either case the revelation

is disastrous, not merely to Mr. Young as the hero of a new industrial era, the shining example of the statesman in business, but to the system which makes such action on the part of its own leaders a matter of course. The new capitalism seems to be much the same sort of glorified racket as the old.

The Farmer's Bootstraps

By JAMES E. BOYLE

SINCE the half-billion-dollar Farm Board experiment proved such a costly and unmitigated failure, new and bigger experiments are almost sure to be made by Congress. Two measures are now pending. The allotment plan, as applied to wheat, means a sales tax on bread of one or two cents a loaf. The equalization fee is also a sales tax on bread, but contains no "allotment" features or other control of production.

The equalization fee is one type of valorization. To "valorize" is to give to a commodity by law a value different from or higher than its true or market value. The equalization fee is one of many theoretical plans for artificially elevating prices. More specifically, it is a scheme to elevate the price of a surplus. The history of 5,000 years of agriculture fails to record one single example of valorization in agriculture which helped the farmer as much as it hurt him. The equalization fee is a patent medicine, and a powerful patent medicine, the first dose of which would stimulate but the subsequent doses of which would cause the most harmful reaction. There are four fatal objections to the fee: it would not be paid by the producer of the commodity; the producer would not in the long run be the chief beneficiary of it; it would constitute dumping under our own tariff law and under the tariff laws of many of our customers; it would increase the surplus, making worse the disease it aims to cure.

Most of the arguments in defense of the equalization fee are a tissue of sophistries. It is held, for example, that this fee is not a subsidy, but is borne by the producer himself as his contribution, his share of the expense. The fact is that this fee is paid by the consumer, not by the producer. So far as the producer is concerned, it is a direct bonus, subsidy, gift, or whatever you choose to call it. A little hard and clear thinking will show that this is the case. Its workings when applied to wheat may be illustrated by the following example: Assume that the farmer's wheat is 40 cents a bushel. He wants to see this price elevated by the amount of the tariff, namely, 42 cents. That is, he wants to raise the domestic price of wheat to 82 cents, while the world price is 40 cents. The government, through the Farm Board, undertakes by means of the equalization-fee plan to put the price of American wheat on a "domestic basis," that is, at 82 cents. The Farm Board's first step, then, is to set the price at 82 cents. This means, of course, that our 7,000 flour mills must pay 82 cents for their wheat. This is the pegged price. They cannot buy it for less. Next, the Farm Board dumps the surplus abroad at 40 cents a bushel, the world price. The Farm Board, to operate in wheat, must buy the surplus, some 200,000,000 bushels, at 82 cents and sell it at 40 cents. It must also pay numerous salaries and other administrative costs. This loss and these costs must be subtracted from the

price the wheat farmer receives. If this loss and these costs amount to 15 cents a bushel, as they doubtless would, then 15 cents a bushel is subtracted from the price the wheat farmer receives. And 82 cents minus 15 cents equals 67 cents. This gives the farmer a net price of 67 cents. The results of the operation thus far are two—namely, to elevate the price to the farmer 27 cents a bushel; and to elevate the price to the mills 42 cents a bushel.

The fee, 15 cents, representing the export loss and the administrative costs of the Farm Board, is called the "equalization fee." The flour mills pay it because it is added to the price they pay for wheat. They pay 82 cents for the farmer's 67-cent wheat. The wheat farmer does not pay it. In fact, he collects 27 cents a bushel extra because of this scheme.

I have said the mills pay it. They do, in the first instance. But they pass on this charge to the domestic consumers, that is, to the bread eaters of the whole country and to the users of mill feeds. Since wheat products play a big role in the dairy and poultry ration, this tax would largely be passed on to the dairy and poultry farmers. In other words, the scheme gives a subsidy or bonus to the wheat farmers of 27 cents and collects a fee of 42 cents from the dairy and poultry farmers to help make up this bonus. Yet wheat ranks seventh in importance among our farm products, both dairy and poultry ranking ahead of it. For the last five years the average per capita value of farm output has run as follows:

Milk	\$25.23
Corn	15.91
Hogs	14.21
Cotton	11.06
Hay	10.39
Poultry	10.09
Wheat	8.53

So the scheme is a scheme to rob Farmer Peter to pay Farmer Paul.

The mills would suffer seriously in this one respect—namely, their export trade in flour would be instantly killed. They could not buy 82-cent wheat and compete abroad with 40-cent wheat. This destruction of the mills' export business would curtail mill purchases to strictly domestic needs, and thereby impose terrific losses on our milling industry.

We come now to our second question: Who is the chief beneficiary of this fee? There are 2,000,000 wheat farmers in the United States who would feel some immediate benefit from this tax. In the example we are giving, this bonus would amount to 27 cents a bushel the first year. But the chief beneficiary would be, first, the European mills which compete in Europe with our mills, and, second, the European consumers of the 40-cent wheat shipped to Europe. It would

be a frank donation to them, as compared with American consumers, of 42 cents a bushel on 200,000,000 bushels.

This brings us to another extremely vital issue involved in the equalization-fee plan. Does it constitute dumping? The answer is, yes. All our principal customers have anti-dumping laws similar to our own, and this is what our law provides:

Sec. 303. Countervailing Duties—Whenever any country, dependency, colony, province, or other political subdivision of government, person, partnership, association, cartel, or corporation shall pay or bestow, *directly or indirectly*, any bounty or grant upon the manufacture or production or export of any article or merchandise manufactured or produced in such country . . . and such article or merchandise is dutiable under the provisions of this act, then upon the importation of such article or merchandise into the United States . . . there shall be levied and paid, in all such cases, in addition to the duties otherwise imposed by this act, an additional duty equal to the net amount of such bounty or grant, however the same may be paid or bestowed.

Stated in plain English, the law says that when any government or any association or any person, *directly or indirectly*, pays any bounty or grant upon the production or upon the export of a commodity, then this payment constitutes dumping and we will impose countervailing duties. If our customer countries invoked their anti-dumping laws against us, as they certainly would, then what should we do with our surplus?

Finally we come to the principal objection to the fee. The free market penalizes the farmer for producing a big surplus. The market price is the producer's best barometer of consumer demand. The equalization fee destroys this barometer. It goes even farther in unbalancing the world's agricultural production: it rewards the farmer for producing a big surplus and bribes him to raise a still bigger surplus. Our Department of Agriculture is wisely spending much time and money trying to help farmers adjust their production to the market demand. Here the equalization-fee scheme comes along and encourages farmers to disregard the simplest principles of supply and demand and rewards them for doing so. So we may feel sure that the equalization fee, like Brazil's coffee-valorization scheme, would at the end of five years leave the wheat farmer with an unparalleled surplus of wheat on hand (and of whatever other products the fee was applied to) and a price much lower than the present one.

If we turn to the allotment plan we find it is also a scheme for giving the farmer a bonus and putting the burden on the consumer. It is sometimes called a tariff-adjustment plan, but this name is pure camouflage, since the scheme has no connection whatever with the tariff. The allotment plan is best understood when examined in reference to wheat. Seen in its stark and naked form, the plan is a sales tax on bread. The tax is paid by the consumer. It is used for two purposes: first, to pay the expenses of administration; second, to give the balance, if any, to the owners of wheat land. The aim is to increase the income of the wheat farmers by giving to each of them an annual bonus, whether or not they grow any wheat. At the same time the plan aims to control and decrease wheat production. Control over the farmer's wheat acreage by the Washington bureau is called "voluntary," because only those farmers who sign the contract with the government will receive the bonus. Once the farmer signs the contract, however, the Washington bureau may

virtually take over the management of his farm and tell him how much to decrease his wheat acreage, what crops to grow on the idle wheat land, and, in general, deprive him of the liberty of running his farm to suit himself.

The tax on consumers is to be collected first at the mills. The mills will pass it on to the bakers, and the bakers will pass it on to the consumers. No tax is to be collected on wheat products exported or used at home for animal feed. The tax is limited to domestic consumption of wheat for human food. This fact must be kept in mind when we consider the administrative difficulties of the plan.

Can this plan be administered? Probably not. It is too complicated and too expensive. First comes the Washington bureau, with a staff large enough to keep books with each of the 2,000,000 wheat farmers, inspect their contracts, determine whether or not these contracts have been fulfilled, and then mail a check to each farmer at the end of the year, if that farmer has lived up to his contract. There are to be some 44 State committees, on salary. These will deal with the 2,500 county committees in the wheat counties of the United States. These groups will also be on salary. Then come the 7,500 township committees, also on salary.

The big machine is set in action when the bureau at Washington, after examining wheat statistics, determines what our wheat acreage should be next year in order to reduce our annual production from 800,000,000 bushels to 600,000,000. This is a hard job because the weather is uncertain, so uncertain, in fact, that one acre of wheat may produce one bushel or twenty-five bushels or fifty bushels. However, the Washington bureau, in its wisdom, will set an arbitrary acreage. An "allotment," or quota, is then assigned to each State; the State gives each county its allotment of acreage. Finally the county committee gives each farmer his allotment, if he has signed the contract.

Here we come upon one significant detail. The farmer's quota is based on his acreage for the past five years. So each farmer must be visited and his production record obtained. But very few farmers keep such records, and Mr. Farmer will depend on his memory—or his imagination. The bigger his average production is, the bigger his share of the bonus. So he will surely make his record liberal. The township committees will have the ugly duty of policing their neighbors to see that the contract is obeyed and that a correct production report goes to Washington at the end of the crop year. For on the basis of this report the Washington bureau will make out each farmer's check.

The 7,000 flour mills will also be closely policed. When a mill grinds wheat it produces six or eight products—flour, bran, shorts, middlings, "red dog," and so on—only one of which goes into human food. Products which are exported must also be segregated and exempted from the tax. So we see that from 10,000 to 20,000 persons will be required to administer the plan for wheat alone. But the farm blocs in Congress, by the old log-rolling process, will doubtless try to extend the plan to cotton, rice, prunes, tobacco, hogs, corn, oats, rye, barley, and so on, and also to increase the bonus. How long would or could the consumers foot the bill?

I have consulted many farmers on this plan. Nearly all of them smile and say: "You can't lift yourself by your bootstraps. This plan is meant to help the politician, not the farmer."

Stalin Faces the Peasant

By LOUIS FISCHER

Moscow, December 9

IT is almost eighteen months now since Stalin delivered his famous "six-point" speech. That was his last public utterance. A year and a half is a long time for a leader to remain silent in a country like Russia where the "chief's" silence means that his subordinates never say anything new. The nation yearns for guidance and light. Stalin was expected to address the October plenary session of the Communist Central Committee. One could feel the whole country hold its breath in eager anticipation. He disappointed it. On November 6 a vague rumor circulated here that Stalin, following the Lenin tradition, would make an important political statement at the annual anniversary meeting of the Moscow Soviet. The city waited excitedly. Instead, we were treated to a dull report badly read by President Kalinin.

Silence may mean self-assurance and perfect control. It may reflect an impasse. It inspires sometimes a feeling of respect for the leadership's wisdom, sometimes an uncomfortable sense of drift. The head of a state must not say too much, but he dare not say too little. Today the entire Soviet nation wants Stalin to take it into his confidence, give it an interpretation of the recent past and a peep into the future. A big change is apparently in preparation. But the masses, harassed by the daily struggle for existence, are too distressed to enjoy the perspective of the few on high.

Every one of Stalin's pronouncements since 1929 has been a milestone in Soviet development. Each brought him the sympathy of some section of the population. His "dizziness-with-success" article in March, 1930, pleased the peasants who had objected to forced collectivization. His "six-point" speech on June 23, 1931, won the applause of the intelligentsia of labor. In it Stalin dealt with what is perhaps the Bolsheviks' greatest problem at this stage of the revolution—the application of private initiative in a Socialist economy. The fifteen years of sovietism have demonstrated that social incentives are a powerful lever and can be translated into increased productivity. But without immediate gains to the individual, social incentive may gradually become inoperative.

This problem remains. The idea of shock brigades, or groups of conscientious workers bent on especially intensive effort, is not new. Lenin spoke of it far back in 1920. He saw the thing very clearly, however. He said: "The workers are materialists: if you want shock-brigade work, they say, give us bread and clothing and meat." Today, however, the Bolsheviks seem to have forgotten not only that the workers are materialists, but that they themselves are materialists. Every day the *Pravda* and *Izvestia* print editorials revealing some economic shortcoming. Here an industry has failed to fulfil its program. Here the transport system functions poorly. In the North Caucasus grain collections have fallen below normal. Why? Bad organization, slack guidance by party members, insufficient loyalty to Moscow's instructions, and so on. The reasons are always subjective. These Marxists, whose philosophy is based on economic determinism, stress only the psychological element. They glory in the often

repeated nonsense that objective difficulties do not exist. They do exist, and the Bolsheviks strive to cope with them, yet by failing to talk frankly about them the Communists either mislead the people or, more frequently, undermine the average citizen's faith in their incomplete analyses of current events. This emphasis on subjective causes is all the more harmful because it appears to justify draconian steps. Since men are at fault, men must be punished. What is needed, however, is not punitive measures which embitter their victims but curative measures which remove concrete ills.

The course of the Bolshevik Revolution is still determined by one central fact—the relationship between the proletariat and the peasantry. When Lenin, in March, 1921, reintroduced private capitalism into Russian economy in order to placate the village, he had no fears. He was certain that the city workers could maintain their dominant position in the state. He was right. Since then the city has grown infinitely stronger. The proletariat is much more numerous; the government has built new giant industries; the value of industrial products almost equals that of Russia's crops. In the last ten years the economic balance has definitely shifted in favor of the proletariat. This significant historic change was achieved at the expense of the peasantry but with its help. The village has carried a large part of the cost of the city's progress. But this process of making the peasant pay the piper has gone so far that a stage of diminishing returns has now been reached.

How did the village pay the city's bills? Through state procurements of grain, meat, cotton, flax, hides, and the like. While obstructing the peasant's access to the open market, the government more or less compelled him to sell his surpluses to it at fixed prices. At the beginning of the Five-Year Plan period the peasant could get very few manufactured articles for money thus obtained; more recently the government has paid in paper rubles so devaluated as to make its procurements almost equal to requisitioning. At the same time prices of city commodities rose steeply. The village protested. It did not wish to give away its grain for next to nothing. As a concession the Kremlin, in a series of decrees published last May, cut the amount of procurements and allowed the collectivized peasantry in the kolhozi to sell what remained at any price it could extort on the free market. At the same time the government shipped large quantities of consumers' goods into the villages.

But the new system of kolhoz trade is not working well. It is doubtful whether important grain-growing areas like the Ukraine, North Caucasus, the Volga region, and the central black-earth district will have much left for open sale when the government finishes its procurements on January 15. The May reforms, therefore, have introduced no great change. They have merely added a new irritant—the peasant feels that if the state did not take so much, he could sell on the free market and make some money. As a result of all these circumstances the peasants have this year stubbornly resisted the state's grain collections. Procurements were always a difficult task. Inflation has intensified opposition.

Even the big state farms, or sovhozi, which are direct servants of the central government and ought, therefore, to submit automatically to grain deliveries, have preferred to sell on the open market at inflation prices. How natural, then, that the collective, which despite its high-sounding name plate and exalted purpose is still merely a group of backward peasants suddenly precipitated into the Socialist caldron, should forget social incentives and try to get as much as possible for its crops. The Soviet press makes no secret about the peasants' attitude. "Bread procurements in East Kazakhstan," reads a *Pravda* news item, "are proceeding in an atmosphere of bitter class war." "There is grain in the North Caucasus," says another dispatch, "but that grain is hidden from the government in pits." It then speaks of the "sabotage of procurements." Comrade Shubrikov, the party chief for the entire central Volga region, reports that "we have collective peasants and private peasants who fail to carry out the collections plan in the hope of speculating with grain later. They sit and wait for the free sale of grain"—which will be permitted, presumably, after the national procurement program is fulfilled on January 15. The Bolsheviks attribute this sabotage to "kulak psychology," but it is really good business sense. Not only so-called kulaks but middle and poor peasants and, significantly, even party members have obstructed grain deliveries—sometimes by lying about the size of the harvest and sometimes by concealing part of it underground or, in worse cases, by letting it rot on the fields. Rather than give up their grain and meat to the official collector for depreciated paper rubles, the peasants waste it, feed it to animals when they can, and distribute excessively large reserves among themselves. Shrill summonses from the daily newspapers and repressive measures by official visitors from Moscow may bring some of the grain out of the pits, but this method will have to be repeated year in and year out with diminishing success unless procurements are abolished once and for all. This year a new form of passive resistance has been added to other types of obstruction: Kaganovich, second in command, admitted recently that the peasants in the Moscow district sowed fewer potatoes because they did not wish to plant in order that a government collector might procure. This is now a common phenomenon. Agricultural output must drop noticeably in consequence of this situation.

Something is not clicking right in the Soviet administrative machine. Usually it is most sensitive to passive popular pressure. It crushes a part of such pressure ruthlessly and then makes partial concessions to the rest of it. But this time the machine is slow to react. And yet the field is all prepared for a shift of policy. The longest step toward such a shift is the slow and painful attrition of the ration system. By cutting bread rations, by legalizing the free sale of bread outside the ration system, and by extending the method whereby each factory or economic unit finds independent sources of food and goods, the government is liberating itself from the burden of feeding the population through a centralized distributing agency. To meet the obligations imposed by this burden, the government had to procure the peasants' surpluses. By scrapping the arrangement the government could do away with the obnoxious procurements. G. Nehman, a Soviet economist, in the June issue of *Planned Economy*, stated that kolhoz trade "made it possible already in this year to take considerable measures toward reducing the rationed distribution of goods and limiting the centralized sup-

ply system." The assumption was that when the collectives began to sell on the free market, the population could cover its needs in that way and relieve the government of the necessity of rationing. The trouble is, however, that the kolhoz markets offer too little. Yet rationing is being cut down. This produces a food shortage. Moreover, since wages have not kept pace with inflated currency and price tendencies, the free market is not accessible to the worker or the low-salaried government official.

Only two alternatives are open: either the state will resume rationing—and the development is all in the opposite direction—or it will open the gates wide to free kolhoz trade by eliminating procurements. The combination of kolhoz trade and procurements is illogical and impracticable. If you allow the peasant to sell directly to the ultimate consumer you must leave him something to sell.

The Bolsheviks have been tardy in submitting to this iron logic. They probably think that they might as well have the benefit of this year's procurements, but they will pay a high price in peasant resentment for that benefit. They may feel that considerations of prestige require a continuation of the present policy for some time so that the peasant will not think he forced the government to retreat. They perhaps hope that by the next harvest the restriction of food exports, the drop in imports of heavy machinery, the slackening of new construction, and the concentration on light industries will enable them to reduce price levels, stabilize the ruble, and produce a volume of consumers' commodities big enough to convert procurements into a normal exchange, at market prices, of the peasants' real surpluses for the city's goods.

This is the goal of the Five-Year Plan, and I think that ultimately the purpose will be achieved. It would mark the beginning of the end of the proletariat's exploitation of the peasantry. It would mean that the peasantry would commence to reap the reward for its sufferings. It would create a real instead of a paper *smychka*, or bond between countryside and town. But I doubt whether so radical a change in the situation can intervene before the next planting season, and it is that which is important. For unless the peasant receives a very firm assurance that he will not have to submit to procurements again next autumn and winter, he will not plant this coming spring, and the Soviet Union will have another bad harvest.

On this point the Kremlin must speak quickly—in January preferably, in March at the latest. March is the final term in Russia for effective agrarian reforms. If the peasantry were vocal it would demand, first, a reduction in the quantity of grain it must yield to the state. This year procurements amount to 15,000,000 tons—a recent reduction from the original quota of 18,000,000 tons—but since the government is scrapping rationing, and since it has its own state farms, it should not need more than 7,000,000 or 8,000,000 tons in 1933. Second, the peasant must know in advance what part of his crops is to go to the authorities. Procurements have been arbitrary. The peasant plants. Then an official inspects his crop as it stands in the field and says: "You will have to give us x poods." A month later, if the procurement quota of the district is not fulfilled, the collector may reappear and say: "You will have to deliver x plus y poods." The advantage of the *prodna-log*, or grain income tax, which Lenin substituted in 1921 for the requisitions of

military communism was, as he then declared, that "the exact amount of the tax is known in advance, that is, as early as spring, to every single peasant. This will mean less abuse in the collection of the tax. This will mean that every peasant will be more interested in increasing his acreage, in improving his household, and in striving to increase his harvests." Like many other things that Lenin said, these words apply with equal or even greater force today. Lenin regarded the tax as transitional. "Neither requisitions nor a tax but the exchange of the output of large ('socialized') industry for peasant products," he wrote, "that is the economic essence of socialism, its foundation." To Lenin such an exchange was a vague dream. Now it is beginning to be possible. But the situation requires careful, subtle handling, and this year the Bolsheviks have been giving it crude, bureaucratic handling.

Stalin ought to come out and say: "We are abolishing the ration system with all its billions of yards of red tape, theft, and favoritism, and all the specially privileged retail stores. We can therefore abolish procurements. We give free rein to kolhoz trade. We therefore give free rein to inflation, and recognize it officially after it has existed in fact for several years. We are sure, however, that the emphasis now being placed on the production of consumers' goods, our decision to cut imports and exports, and our slackening of the tempo of industrialization will shorten the period of inflation and gradually lessen its hardships even before it ends. We will combat inflation, too, by cutting government expenses. Kolhoz trade, moreover, will expedite the turnover of goods and thus operate against inflation."

Stalin must not only say these things. In some way he must make the peasants believe that this new policy is "serious and for a long time," for the people no longer take Moscow at its word. There has been too much arbitrary ruling and too much superimposition of authority. The village collectives must be permitted to manage themselves democratically. The factory cooperative stores must be operated by the workers and not by the director with so-called proletarian control as an ineffective supplement. What the Soviet Union needs to make necessary reforms real is self-interest, initiative, and responsibility from below instead of dictation from above—more economic democracy.

I do not see how the new policy can safely be delayed much longer. It is already seven months late. Writing from Moscow as far back as July 17, I suggested the complete abolition of rationing.* That it must ultimately come I have no doubt. And if, after a difficult period, normal exchange of goods between Socialist city and collectivized village is finally established, the country will not have suffered in vain. Then the Soviet Union will be on the threshold of socialism.

I suspect, however, that the Bolsheviks may prefer to introduce the reforms piecemeal. This is regrettable. They will argue that inflation may get beyond control. If they increase the output of their light industries, this danger is not great. They may be afraid that if they leave too large surpluses in the hands of the peasantry, they will this year not have enough consumers' goods with which to purchase those surpluses. But this problem could be solved by importing ready-made goods. Foreign goods worth \$100,000,000—if they could be obtained on eighteen months' credit—would solve entirely the immediate Soviet economic problem of food and goods.

In the Driftway

THE Drifter's celebration of the dirt road has brought him a membership in the Society for the Preservation of Bad Roads and four pages of twin-rut reminiscences from a correspondent in Colorado. The S. P. B. R. is the pleasant invention of E. B. Whiting, who writes about it in his Boston Letter to the Springfield, Massachusetts, *Republican*. His special concern is the dirt road of New England. The Drifter wishes him luck. Moreover, he accepts the invitation to the S. P. B. R., providing, of course, there are no dues, no meetings, and no correspondence.

* * * *

THE twin-rut reminiscences come from Robert Langan, of Denver. He incloses in his letter the newspaper account of one dirt-road rancher in Nebraska who waited eight days, with two broken legs, for someone to pass by. "I fancied you might be interested to know," he writes, "how really lonesome some of those dirt roads are." Then he continues:

My friend, I too have plodded and drifted along twin ruts down many a horizon in God's country. I recall one trip of twelve days, covering about three hundred miles, across central Oregon and northern Nevada before the days of railroads, trucks, and buses. I and another buckaroo, being broke and minus everything, hiked into the open-range country across the High Desert along the old United States military highway. There was a paradise of twin ruts. You should have been along. We subsisted mostly on crackers and cheese along with a few hand-outs and set-downs from freight wagons and sheep-herders' outfits. We packed our water in quart Sunny Brook bottles. In one stretch we didn't see a house or human for two days. On the third day, in a strip that had been opened under the Carey Desert Land Act, we sighted a homesteader's shack far off the road. We hiked over but there was no one at home, so we just broke in and helped ourselves.

All he had in the shack to eat was cornflakes and canned milk, and some rotten water in a barrel. The homesteaders hauled all their drinking water from eight to twelve miles. We built a sagebrush and buffalo-chip fire in his stove, boiled the water, and filled up on cornflakes and canned milk. It was like opening your mouth and letting the wind blow in, but at last we both filled up. Then we washed the dishes, swept the floor, and put the fire out. These rites having been attended to, as was customary and expected then as now in remote sections of the West, we addressed a little note to him, signed it, and left it sticking out underneath the lantern on the table.

The moral to this story, if any, could be that the natives on the fringe, deep in the country of the twin ruts, are more wont to observe the amenities than their more progressive brethren on the macadam. Counterpoint: maybe it's because the getaway is harder. Who knows?

* * * *

THE dry farm, caught in a web of deserted ruts that lead to no visible destination, is an unforgettable Western sight. There is an old saying to the effect that under the homestead law the government bets you 320 acres of land that you can't "prove up" on it in three years without starving to death—on most dry farms it is easier to raise a barbed-

wire fence than a crop of wheat. The settler must still haul water for miles. For farming he must depend entirely on rain, and in many sections a growing season sufficiently wet to grow and ripen a crop is the exception rather than the rule. Children, in fact, are the most abundant crop. The Drifter has often seen ten of them emerge from a tar-paper shack in the center of nowhere to watch the slow jolting progress of a passing automobile. Only recently he heard of an episode that is probably still typical. The doctor, finding oil lamps inadequate for the work in hand, maneuvered his car outside the window into such a position that its headlights flooded the crude delivery room.

THE DRIFTER

Correspondence

Where Do We Eat?

TO THE EDITORS OF THE NATION:

Here in Berlin I religiously read *The Nation* and find it the only source of reliable information about what is really happening in the United States. But your discussions of foreign affairs sound unreal over here. Surrounded by German, Russian, and French newspapers, from the *Lokal Anzeiger* on the right to the *Rote Fahne*, *Pravda*, and *Réveil Ouvrier* on the left, it is hard to treat seriously the attempts of the existing governments to overcome the crisis by conferences. The League of Nations and the disarmament conference are splendid comedy, better even than "Of Thee I Sing," and the economic conference promises to be funnier still. But after the comedy comes the question, "Where do we eat?" And that is serious.

Unless *The Nation* wants to take rank with *Ballyhoo* as a humorous paper, wouldn't it do better to stop discussing with a straight face the antics of governments and take up seriously the question of how, when, and where we shall eat, after the disarmament conference has doubled the present armaments and the economic conference has destroyed what little trade and manufacture there is left? Isn't it about time for a supposedly serious paper like *The Nation* to stop discussing absurdities and devote its talents to discussing what we shall do when the inevitable collapse comes? The crash may look a long way off in New York; it looks very close in Berlin.

Berlin, December 1

ERIC A. STARBUCK

Anti-Japanese Feeling

TO THE EDITORS OF THE NATION:

I am really very sorry to see you so adamant in your attitude about the Far Eastern crisis. Of course your contentions are correct, but don't you see that your continuous propaganda against the Japanese is more and more inflaming public opinion against Japan, thus making a conflict inevitable?

Can't you see that the military clique in Japan will go to any length to gain its ends? Can't you see that they are determined to fight if they are unable to achieve what they want otherwise? And wouldn't it be far better to recognize a bad situation and make the best of it peacefully than to bring about another wholesale slaughter?

Is not this propaganda against another people which fills the American press the kind of thing we must avoid if we wish to prevent a recurrence of the catastrophe of 1914?

Toronto, December 15

B. GODFREY

Louisa May Alcott

TO THE EDITORS OF THE NATION:

As a teacher who is attempting to present literature to children as a means of criticism and understanding of their world, I wish to protest against your reviewer's praise of Louisa May Alcott in *The Nation* of November 23. It is true that Miss Alcott's influence has been insidious and widespread. She is responsible to a large extent not only for the childish taste which chooses "The Five Little Peppers" and its modern imitators, but for the adolescence which lays aside "A Portrait of the Artist as a Young Man" for books by Booth Tarkington and Dorothy Canfield Fisher.

Her popularity is due to the impulse, not confined to children, to avoid actuality and revel in a jolly world of pious sentiment and sweetened moralizing. What help is there in "An Old-Fashioned Girl" for the present problems of youth—sexual, social, and economic? We should teach our children that literature is not an escape from their environment but an aid in conquering it. Literature must be an intellectual challenge not moral pap if it is to give the new generation the courage to face reality.

Brooklyn, December 12

ELIZABETH C. WALLACH

Einstein Propaganda

TO THE EDITORS OF THE NATION:

The Nation is to be congratulated for pointing out that Consul General Messersmith was outrageously misrepresented—and by supposedly careful news associations at that—in the Einstein affair. It is a pity that more of those newspapers which loomed at the mouth over our alleged national humiliation through the supposedly "incompetent and stupid conduct" of the Berlin Consul General's office did not take the trouble to find out the facts. Messersmith is an educator and scholar and is regarded by the Germans as the "best type of foreign representative in Berlin." So also are his first assistant, Mr. Geist, and his second assistant, Mr. Follmer.

Much of the pro-Einstein flurry in Berlin is about equal to the hysterical belief that in the United States we have no physicists, no astronomers, no mathematicians who can do more than sit anxiously at the table with Einstein in the hope of picking up a few crumbs of scientific truth as they fall from his esoteric lips.

Havelock Ellis

Views and Reviews. By Havelock Ellis. Houghton Mifflin Company. \$5.

APPROPRIATELY enough Havelock Ellis came into the world during the year of "The Origin of Species," and, like Roebuck Ramsden, he might say to most of us, "I was an advanced thinker before you were born." Straddling the entire gulf between mid-Victorian days and our own, he had, perhaps, the most hospitable mind of his generation, but he remained, nevertheless, singularly serene in the midst of the innumerable new ideas which he was always on the alert to welcome. Of many subjects which interested him, sex was merely the one which he chose to develop most persistently, and the choice was probably in part determined by the fact that his study of it typified in many ways the effort of his generation to throw the light of fact and reason into secret places.

It is [he remarks in a review included in the present volume] his deepest primary impulses which man is most unwilling to investigate. . . . It is not two centuries since he first ventured to begin analyzing the economic factors in life; a century ago it was an offense to question the orthodox religion . . . while the scientific study of sex is only of yesterday.

And the implications of that statement contain the ruling idea of his life.

The majority of the fifty-nine pieces included in this long collection are of no great individual importance. They cover a period of time from 1884, when he was discussing Women and Socialism, to 1932, when he was writing on Creating a New Spain, and most of them are reviews of very diverse books. But if the articles are not individually important they present in a remarkable cross-section the mind and temper of a man who may stand for the intellectual of his age. From them one gets a comprehensive idea of what the "advanced thought" of the last generation was, and one can sense what are the differences between the points of view of that generation and our own.

Ellis had, first of all, a mind more genuinely and unreservedly open than is common—even among those who make openness of mind their chief boast. He was always ready both to receive and to publicize new data or opinions, even though they ran counter to the tendencies with which he was most sympathetic. He press-agented most of the striking new theories, from those of the Lombrosian criminology, through Freudianism, on down to the neo-Nietzschean doctrines of Elie Faure. He was ready to defend what he believed valuable even in books which he thought largely mistaken, like Briffault's "The Mothers," or Lothrop Stoddard's "The Rising Tide of Color," and true to his eclectic attitude, he can speak even now with high admiration of a thinker as radically opposed as T. S. Eliot to everything for which he himself had stood. Such catholicity is not common or even commonly admired today, and the reason for it probably was that Ellis retained the shreds at least of one late-Victorian faith—the faith in the value of knowledge and tolerance as such, the faith that somehow good was bound to emerge from any adequate combination of sound knowledge and good-will.

In no small measure that faith has been lost by the present generation. It no longer believes whole-heartedly in dispassionate study. Neither is it any longer sure that mankind, being on the right road, has merely to continue forward. Its most respected leaders do not agree with one another even on the most fundamental issues, and intransigence, acrimony, and fanaticism are once more popular. In various ways and for vari-

ous reasons many of its thinkers are saying that the day of "the open mind" is past, even though, of course, they are by no means agreed upon what it should be shut against. Faith in a "beneficent illusion," faith in faith—if not in anything particular—threatens to replace faith in knowledge as such. Hence not only skepticism but tolerance as well has gone out of fashion, and there is nothing which commands less respect than eclecticism of any kind. Mr. Eliot can win fame as an Anglo-Catholic royalist, and a dozen can win fame as Communists, but one is expected to say something with vehement intransigence. If Mr. Ellis was the typical "advanced thinker" of his generation, he is far from being typical of ours. Indeed, his detachment, his intellectual hospitality, his genial serenity, and his ever-renewed interest in new ideas will probably make him seem old-fashioned, sentimental, and even a little absurd to many. Others may find something truly Olympian in the figure of a great Victorian who has kept his serenity in an intellectual atmosphere very different from that to which he and his fellows looked forward.

JOSEPH WOOD KRUTCH

Hawthorne Restored

The American Notebooks. By Nathaniel Hawthorne. Based upon the Original Manuscripts in the Pierpont Morgan Library and Edited by Randall Stewart. Yale University Press. \$5.

SOPHIA HAWTHORNE would have protected herself against the judging eyes of posterity if, after editing and publishing her selections from Hawthorne's notebooks, she had committed the manuscripts to the flames, as he had committed her "maiden letters." Inconsistently, but fortunately, she refrained from this act of destruction, and now that Randall Stewart's industry has reconstructed the whole of the American Notebooks from the manuscripts in the Morgan Library, it is possible to see how far Sophia was dominated by the standards of her class and of her era. Not, of course, that any sensational confessions or secrets have been lying concealed during all these decades in the little bound volumes of Hawthorne's journal: it would be easy to exaggerate the intensity of the new light which they throw on the man's personality, and perhaps Mr. Stewart does somewhat exaggerate it. Hawthorne was a few shades less euphemistic, a few shades harsher in his judgments of people, and a few shades more skeptical, than his wife cared to have the world suppose: this is the sum of what can be said, and it is enough to make one gape and blink at the spectacle of Mrs. Hawthorne's psychopathic delicacy. But in such cases a few shades more or less amount to more than their merely quantitative measure: a Hawthorne who could talk about whores and backsides and bellies, who could call Emerson a "seeker for he knows not what," and confess to a decreasing respect for the clergy is a slightly different Hawthorne from the man his wife revealed; and this is more than enough to justify Mr. Stewart's labors.

His volume—in which (except for what has disappeared) literally all that Hawthorne wrote as a diarist before leaving for Europe is preserved—is a model of what such editing ought to be. Its real interest is not at all a sensational one, and the newspapers have given a foolish impression of it to the public. It is simply the kind of book which readers and students, once they have learned that Mrs. Hawthorne's text is bowdlerized and unreliable, are eager to have available: here are the notebooks just as Hawthorne wrote them, without purification or softening, and with the kind of annotation that makes them readable and usable. They are far from being always, in them-

selves, intensely interesting; their mildness is sometimes monotony, and their amplitude is sometimes dullness; it is impossible to read every word of the "Twenty Days with Julian and Little Bunny"—delicate and paternal as it is—without an occasional yawn; and the "remarkable items" which Hawthorne now and then set down have somehow lost their salience. But Mr. Stewart is hardly responsible for Hawthorne's *longueurs*: his prolixity, his determination to clutch at every detail, his sometimes pedestrian pace—these are themselves only a part of the whole picture, and we may as well know the worst. They do not keep the notebooks, even in their pitiless totality, from being essential to a full understanding of the man and the writer Hawthorne.

In a scholarly preface Mr. Stewart has not only summarized the effects of Sophia Hawthorne's passion for the fig leaf; he has shown at length and in detail just how Hawthorne drew on the notebooks when he came to write his tales and romances; he has made an interesting analysis of certain character types which recur—with significant unresourcefulness—in Hawthorne's fiction; and has traced the recurrence in his work of four favorite and, indeed, obsessive themes. But the notes at the end of the book are of still greater value, I think, to the reader of Hawthorne; in fact, they are more than mere pieces of perfunctory annotation: they contain the materials for a more painstaking biography of Hawthorne than has yet been written. Based partly on letters that have not been published, and enriched by the most patient research, they fill in certain gaps in the story of Hawthorne's life, and round out our impressions of other chapters in it, with admirable fulness and precision. Just who the Upham was who served as a model for Colonel Pyncheon, what Hawthorne thought of "Mardi" and "Moby Dick," what the campaign biography of Franklin Pierce did to many of Hawthorne's friendships—these are some of the things that come out in these notes, if not literally for the first time, at least for the first time in convenient form. Altogether they make up a volume which, even if it contains no lurid revelations and forces no drastic revision of old estimates, takes its place at once as an indispensable. Physically, it is an unusually fine book.

NEWTON ARVIN

Chaucer's "Troilus," Modern

Troilus and Cressida: A Love Poem in Five Books. By Geoffrey Chaucer. Englished anew by George Philip Krapp. Random House. \$3.50.

CHAUCER'S "Troilus and Criseyde" is the most ambitious of his completed poems. "The Canterbury Tales," greater in design and performance, is technically unfinished—a superb fragment. "Troilus" we have in full, and it may stand as second in significance among Chaucer's achievements. Indeed, aside from the "Tales," it is the only poem of length which exhibits Chaucer's genius in anything like its full maturity. Accordingly, those who have felt the necessity of rendering Chaucer from Middle into Modern English (and I am among them) have always conceded the importance of having a "Troilus" in poetry of our own day. Professor Krapp, well-fitted by scholarship and artistic skill to attempt such a version, now offers a translation, the first of its kind to appear.

The task he set himself is a difficult one. "Troilus" comprises all told 8,239 lines in the well-known rime-royal stanza. It has been called the first modern novel, and with justice. As a novel, it involves the building of character and the psychological interplay of feeling and action which the term implies. But it is also a medieval poem, its tapestried descriptions and mannered speeches giving it a remarkable complexity, intensified by Chaucer's love of classical allusion and scholarly atmosphere.

Out of its arras-like background steps the immortal figure of Pandar, the prince of go-betweens, with his sly and bubbling humor; and there is the love night of the young prince and his lady, done as frankly as any episode in a twentieth-century love tale, but with a vivid sense of ecstatic flesh and eternal life which is peculiar to its age in idiom and beauty.

Professor Krapp has met the necessities of this difficult task with sustained skill and understanding. His version runs stanza for stanza with the original. While professing to make no word-for-word translation, he keeps close, even in detail, to the fourteenth-century poem. The verse is at times triumphantly delightful. The engravings by Eric Gill and the format given to the book by Random House give it an additional distinction as a physical thing.

Chaucer in modern English must naturally be represented by a modern English poem, and Professor Krapp, while achieving no miracles with feminine endings or in tonal quality, has kept much of Chaucer's accent, and has made a clear, flowing narrative. His rendering of the humorous scenes between Pandar and Troilus and Pandar and Cressida is particularly happy. It has been done with much modern idiom and a wit and raciness that in passages quite parallel the original. So when Pandar advises Troilus how to write a love letter, he admonishes him:

And don't mix things that do not harmonize,
In love and medicine the same note strike,
But always use the style that best applies
To what you say, so that it seems lifelike;
For if a painter painted finny pike
With asses' feet and headed them like apes,
He'd be no artist but a jackanapes.

Such freedom carries its own warrant, but it has offered difficulties which Professor Krapp has not always overcome. He changes from the older forms of address to the modern "you," employs contractions like "I'll" and "you're" much more than Chaucer does, and uses expressions like "I'll bet," "splendid match" (of a marriage), "in your eye" (meaning not at all). But he also keeps "ere," "anon," "naught," and even lapses into inconsistencies like

Why do you act like this? For shame on thee.

The result is subtly to break down the medieval atmosphere without completely building a modern one. Indeed, the modern one could not be built, and a little more acceptance of the medieval quality would in my opinion have lost no humor and definitely gained in atmosphere. Nor am I in most cases able to be happy about Professor Krapp's departures from the original meaning. Often they seem unnecessary, and add nothing. So at the beginning of the poem Chaucer speaks of his story as one

In whiche ye may the double sorwes here
Of Troilus, in loving of Criseyde.

And how that she forsook him ere she deyde.

The final line has so definite and incisive a quality, and seems to offer so little difficulty, that one is surprised to get in modern English:

What sorrows once on Troilus must fall
In loving Cressida, who first returned
His love, but for new love this old love spurned.

In Part IV this type of freedom is married to a strained word order and at times to a triteness of phrasing which are far from Chaucer's simple, if, in that book, not always immortal, phraseology. Nor is Professor Krapp always happy in rendering the relatively few passages of high poetry which the poem contains. The great love scene and the ending of the poem are well done—though the latter not exceptionally well—but often more could be wished for.

Yet the translation makes "Troilus and Cressida" available in modern verse with much of Chaucer's spirit and humor.

The task which the translator faced was so intricately difficult that while the definite limitations of the modern poem should be noted in justice to Chaucer, the fact that the work has been an achievement should be gratefully remembered. Professor Krapp has brought the "father of English poetry" closer to readers who cannot or will not read him in his own tongue.

FRANK ERNEST HILL

The Tragedy of John Clare

John Clare: A Life. By J. W. and Anne Tibble. Oxford University Press. \$3.75.

IT took the latter-day Georgian poets, the Edmund Blundens and J. C. Squires, to rediscover John Clare. They recognized at once their own kinship with this forgotten poet and shared his pleasure in the small delights of English rural landscape, which he painted with the sure hand and the realistic eye of a John Constable. Despite their enthusiasm and their discerning praise, John Clare's cycle of obscurity is about to repeat itself. In 1820 no well-read person in London could afford to ignore him; seven years later his name aroused a kindly smile but little interest; his work had merit, but wasn't he that extraordinary farmer from Northamptonshire who wrote of birds and flowers?

Even now, after a hundred years, reading the story of his life is like stepping into a slowly evolving horror story. His family, the Clares, had always been poor, and the changing world of agricultural society left them more helpless than ever. Out of this hopelessness came John Clare, sanguine, gentle, eyes alert, lips smiling. The winter of 1820 brought him to London. It was a short visit, and he just missed meeting Keats, who had listened to a reading of his poems. Taylor, his publisher, repeated what Keats had said: "Description too much prevails over the sentiment"; and Clare replied: "Keats keeps up a constant allusion (or illusion) to Grecian mythology, and there I cannot follow. . . . Yet the frequency of such classical accomplishments makes it wearisome to the reader, where behind every rose bush he looks for a Venus and under every laurel a thrumming Apollo." This was the negative statement of Clare's creed; it was his purpose to describe all beautiful things in nature and set them down in their true colors, to make a frog as grand as any prancing medieval stallion—away with your richly dressed and fine dead ladies.

On the day he was to have met Keats, Clare was back home at Casterton Church marrying his Patty, and soon to be surrounded by a family of small children. Clare's group of patrons assured him thirty pounds a year. The sum merely served to make him confident of earning more by writing, and did not relieve the immediate pressure of providing for mother, father, wife, and prospective additions to the family circle. Hope was to die a slow death in him. If the money earned from poetry was pitifully small, he could and did manage—by falling into debt—to stay alive. During the summer and into harvest season he worked as a day laborer. He was never idle; there was always time for writing more poetry.

There were a number of short trips to town, and Clare met Hazlitt, Lamb, and Tom Hood, who genially enough introduced his poetry to magazines and annuals. Here were candles, gossip, ale, and wine, and Clare was grateful to sit at the table, to hear for an hour the glib, busy men of London, each with his own ambitions hidden behind each separate mask. Nor could Clare assume the noble air of Wordsworth, aloof, apart from all this pleasant chatter. The London men were kind, and seeing them was a false relief from cares at home. Here at the table fears slid backward into shadows on the wall and the terrifying city streets dissolved in larger shadows out of doors. One sees

Clare in a corner of a room, smiling, amiable, distraught, his mind choked with books (he had read much under pressure of self-education) and minute photographs of flowers, insects, birds—memories of all things seen, felt, and heard in Northamptonshire.

The London trips were failures, and the return home was a reminder of debts unpaid, of further struggle from one day to the next. Almost by inches Clare steered his way toward the insane asylum. His economic worries were transformed into evil spirits, nightmares that broke through the tissues of sleep and entered his waking hours. In the train of these came the awakening of an early love affair, the dream of perfect adolescent love to counterbalance the horror of reality and the nightmare beyond. The smiling surface that he presented to the world was broken by swift blasts of anger and terror. These he would vaguely understand, and then the habit of acquiescence would return; he would "know his place" and fall back into smiling sanity. In 1837 he was committed to an asylum: wife, children, and the responsibilities of life were out of sight, and the stream of poetry flowed onward. He looked everywhere for the cause of his failure, and could write only of lost dreams. Had he been another Blake he might have cured himself; he might have struck at the root of his own disorder and walked free. As it was he merely floundered onward in semi-consciousness until he died in 1864.

The present biography, a sincerely written tribute to his memory, carefully annotated and soberly presented, is one of the most depressing books I have ever read. The hardships of a Robert Burns seem light compared to Clare's; and from this record of Clare's life a sense of inarticulate tragedy rises, not unlike the feeling one experiences in reading the major novels of Thomas Hardy.

HORACE GREGORY

Stirring the Devil's Brew

Hitler. By Emil Lengyel. The Dial Press. \$3.

The Cauldron Boils. By Emil Lengyel. The Dial Press. \$2.50.

HITLER and Poland, Poland and Hitler—what a devil's brew these two have been stirring! Of course, Hitlerism and the Polish minorities are only two of Europe's problems. Yet no other two hold greater peril for European security and peace. Perhaps Hitler's star has begun to wane. There are certainly many indications that it has. But as a symbol of the turbulent, unharnessed power of dissatisfied Germany, Adolf Hitler is no less menacing today than he was in September, 1930. Every contribution to the further understanding of the forces that produced Hitlerism must be welcomed. Mr. Lengyel, alas, has added little to this understanding. His "Hitler" is simply another biography of the *Osaf*—a biography, it must be admitted, that ranks among the best of the many dealing with this strange messiah, but one, nevertheless, that merely looks at the man and leaves the casual reader to guess for the most part at the true historic, political, and social significance of Hitlerism.

In quite another category is Mr. Lengyel's more recent work, "The Cauldron Boils." Here the author rises far above the usual level of political journalism. He combines expert reporting with scholarly detachment, a deep knowledge of political problems with a sympathetic understanding of human needs. Mr. Lengyel does not bore us with details, yet manages to give us a comprehensive and intelligible picture of the difficulties confronting the Polish authorities on the one hand and the minority groups on the other. Nor does he swallow the propaganda which has been flowing endlessly out of Germany and Poland. Instead, he has adopted the novel though logical method of bal-

ancing this propaganda against the feelings and opinions of the human beings directly concerned. These opinions he has determined for himself by talking with the inhabitants in Danzig, Vilna, Warsaw, the Polish Ukraine, Upper Silesia. He has visited them in their offices and workshops and on their farms. Of necessity he devotes more space to the Corridor problem than to any other, though he does not neglect the Lithuanians in Vilna, the Jews of the Warsaw Ghetto, or the German workingmen in Kattowitz. No fairer—and no more alarming—picture of the Polish problem has ever been presented. The caldron is boiling. There is still some hope that the devil's broth which it contains can be drawn off without great harm to anyone. A new type of state in which all the nationalities, the minority groups in full measure with the Poles themselves, have equal rights and duties, is Mr. Lengyel's solution. He would have Poland create "a confederation of equals" based on the Swiss political system, giving each group full autonomy within its particular geographical area. To this must be added sincere co-operation between Germany and Poland. Otherwise "it is difficult to see how the explosion can be avoided."

MAURITZ A. HALLGREN

Shorter Notices

A Lady Who Lost. By Alice Beal Parsons. Gotham House. \$2.50.

Having cleverly juxtaposed her hostile social camps in the quiet little town of Pawlet, Mrs. Parsons manages, by a skillfully devised plot, to bring these camps into active and significant conflict with one another. There are the indigenous residents of Pawlet, exclusive and dignified, living a Victorian life of peace and complacency; the parvenu exquisites from New York, importing culture and sophistication; and lastly the Communist agitators among the mill workers. A spectacular murder in one of the oldest families and a strike among the mill-hands precipitate a state of affairs that involves all three groups in a miniature social upheaval. The factor common to these groups is the sensitive and receptive James Hillyer, who, more than any of the others, finds his old loyalties and standards challenged by the turn of events. In tracing the conflicts of James Hillyer and his relations with three women, each of whom symbolizes for him a social order, Mrs. Parsons gives to her readers the twofold pleasure of following a moving love story and at the same time witnessing her keen and intelligent analysis of the cross-currents of contemporary life.

A Wanderer in Woodcuts. By H. Glintenkamp. Farrar and Rinehart. \$3.

There is something strangely ascetic about a woodcut in black and white; and when more than a hundred of them are strung together to tell a visual story, you feel like a monk in sackcloth. When Mr. Glintenkamp forgets he is making a grand tour through the Continent and lets the feel of his subject take hold of him, he does some splendid gouging, and is the equal of our best woodcutters. Most of the time, however, he is the facile commentator with his stock in trade of technical effects, the woodcut reporter on a holiday. Not all the comments that accompany his woodcuts are trivial; Prague, he wisely observes, is "the meeting of Eastern and Western culture—it is the beginning of the Oriental mood falling on Europe."

Richard Wagner: The Story of an Artist. By Guy de Pourtales. Translated by Lewis May. Harper and Brothers. \$4.

Successful with his popular portraits of Chopin, Liszt, Ludwig II of Bavaria, and Nietzsche in Italy, Guy de Pourtales now applies his romantic method to that superlative egotist,

Richard Wagner. It is by far the longest of his books, and in its consistency the most satisfactory. But he is more the advocate than the impartial delineator, and there are too many omissions of significant data and too many errors in facts for this biography to rank high as a work of reference.

The Spirit of World Politics. By William Ernest Hocking. The Macmillan Company. \$5.

Professor Hocking deals with the relationships of imperial Powers to "backward" peoples. He describes the administration of mandated nations and colonies, particularly in Egypt, Syria, and Palestine, where he has spent several years of travel. He observes the ironic situation of the new nations of the Near East, where the gain of nationhood is balanced by the loss of a national culture. Professor Hocking's observations are very keen; the pretensions of imperial "missions" are ingeniously exposed; the questions of the fitness of one people to govern others and of the fitness of subject peoples to govern themselves are subjected to penetrating discussion. The ebb of imperialism is made decisively clear. Such thoughtful and comprehensive work is very valuable. Though the book is occasionally marred by unsuccessful flights of rhetoric, it is composed in a readable manner.

Three Chaucer Studies. By Russell Krauss, Haldeen Braddy, and C. Robert Kase. Oxford University Press. \$3.50.

This volume makes a threefold contribution to the discussion of Chaucer's life and works which perennially goes on. Mr. Krauss establishes an excellent base for his claim that Thomas Chaucer was the son of Philippa Chaucer but not of Geoffrey, and for his theory that John of Gaunt, not Geoffrey, was the father in the case—this, too, not before Geoffrey's marriage to Philippa but several years after it. Mr. Braddy seems to prove that the "Parlement of Foules" was written in 1377 rather than 1381, the date traditionally assigned to the poem. And Mr. Kase discusses two groups of the "Canterbury Tales," G and DE, as insertions "into a framework not entirely prepared for their reception." Each of the three studies should permanently modify the problem which it approaches, and each of them is distinctly a credit to American scholarship.

The Life and Writings of Hugh Henry Brackenridge. By Claude M. Newlin. Princeton University Press. \$5.

In this valuable monograph Professor Newlin makes use of an expedient which is hereby recommended to all who have occasion to write books about minor literary figures. Recognizing that there is no possibility that Brackenridge's books will be reprinted, he has printed extended selections from them at strategic points. Hugh Henry Brackenridge is interesting from many points of view. He was the author of "Modern Chivalry" (the first two sections of which were reprinted in Greenberg's Rogues' Library in 1926). He is interesting as a type of educated man on the frontier, as one of the original Jeffersonians, as a man deeply implicated in the Whiskey Rebellion, and as an important early American lawyer. He was educated at Princeton and numbered Freneau among his early literary associates, taught school for a while, served in the Revolution as a chaplain, studied law, had a fling at literature, and emigrated to Pittsburgh in 1781. He made himself a power in the community, though his point of view and lively capacity for criticism debarred him from political success. He wrote, in addition to "Modern Chivalry," much satirical doggerel which is freely reprinted in this book. Probably the most exciting episode in his career was his connection with the Whiskey Rebellion of 1794, and under Professor Newlin's hand this matter is made to illuminate the whole question of the reception of Hamiltonian principles by the frontiersmen. "Modern Chivalry," says Professor Newlin, "which is our first back-country book, is the

result of using classic European literary traditions in an attempt to impart 'seasonable lessons' to the tousle-headed frontier democracy." It was extremely popular in its day and is very interesting reading even now. Professor Newlin has presented a fascinating "character" exceedingly well.

Drama

"Lucrece"

MUCH was expected of "Lucrece." Thornton Wilder translated it from the French of André Obey, and it has been staged with obvious skill at the Belasco Theater, but the admirers of Miss Katharine Cornell are frankly bewildered by a method and an intention very different from any with which we are familiar. Apparently the effort of the author is to produce an effect not unlike that of the "classic" drama of Racine, and in the pursuit of his aim he has thrown to the winds all the traditions of contemporary playwriting to produce a dramatic recitation bound to puzzle any audience which expects a play to be a play.

The story is simply Livy's tale of the Roman matron whom Tarquin violated, and its main outlines are conceived much as Racine, or Shakespeare, would have conceived them. Early Rome becomes a Renaissance court where the warriors are dressed in doublet and hose; the background is a permanent set of pseudo-classic columns; and much of the story is told through the mouths of two masked "narrators" who stand at the side to relate what has happened or to comment upon the events—many of them in pantomime—which are acted out before the eyes of the spectator. The tale of fortitude and woe proceeds with grave decorum to its expected end, and such comment as the author has to make is summed up by the concluding remarks of the two narrators. "Poor frightened bird—poor deer," says the female figure in Shakespeare's ornate words. "This," replies in substance the male narrator, "is history. Rome's business was to teach the world courage and order and decorum. Lucrece is a necessary, an inevitable, part of her great story. It had to be."

If M. Obey has given us any explanation or defense of his unusual technique I am not familiar with it, but I can imagine that it might run something like this. The attempt of the stage to reproduce the manners and costumes of a particular epoch is, like all realism, essentially romantic in that it lays great stress upon the ideas of time and chance. It implies that the ways in which men have differed from one another are even more important than the ways in which they have always been alike, and it goes along with a relativist attitude toward morals because it suggests that in a world where everything has local or temporary aspects even the spiritual meaning of events depends upon the local conditions and manners. Classicism, on the other hand, is interested only in eternal things and, indeed, founds itself upon the assertion that some things are eternal, that below the accidental and changing lies the essential and permanent. Hence classicism disregards that realism which occupies itself with outward things. So far as its subject matter is concerned, it makes no difference when the events occurred or what costumes its actors wore. And in order to emphasize this fact, in order not to distract the attention from the essential, it sets its action in a conventional setting and tells its story in a completely artificial manner, thus putting the whole out of place and time. The values of the story I have to tell are not affected in the slightest degree by local circumstance. I am not, like a romantic relativist, making a "study of the early Roman attitude toward the question of a woman's honor." I am, on

Technocracy

When an exciting new idea sweeps through the press, the thinking man demands a lucid, an authoritative exposition. The source of it all is contained in one brief, readable volume which the Herald Tribune calls "The original gospel from which the theories of Technocracy have been developed." **\$1.50**

the other hand, presenting the eternal aspects of lust and pride versus fortitude and dignity. Hence my "Lucrece" cannot be realistic and accurate. It must be abstract, formalized, and without local habitation.

So much for what I imagine to be the theory behind M. Obey's play. Yet the fact remains that for all the persuasiveness of such arguments and for all the dignity which it does achieve the work still lacks the great majesty which alone could make it really successful. To strip oneself of the aid which variety and incidental ornament provide, to dispense with the vivacity of realism, and to depend upon nothing except the grave beauty of sculpturesque outline is to make upon oneself demands which only great genius can meet. There was only one Racine as there was only one Milton, and "Lucrece" does not wholly escape the curse of frigid formalism which has fallen upon ninety-nine out of every hundred efforts to write plays in the "classical" manner. Realism of either the romantic or the everyday sort may be incompatible with the greatest and the most exalted art, but it is an invention which has saved from dullness most of those artists of the second class upon whom the world has had to depend for most of its books and plays and poems.

As Lucrece Miss Cornell is extremely effective, achieving a style in which a certain decorum is not incompatible with an expression of genuine anguish. Yet the high point of her performance, as well as the high point of the play itself, is the scene in which Tarquin wakes her from her sleep and announces his intended violence. That scene is, indeed, a scene of exceptional power, but it is also the one in which the author approaches most closely to the methods of modern dramaturgy. One realizes that Racine would never have written it, that to him it would have been something to be told about just as obviously as, to a modern playwright, it is the one inevitable *scène à faire*. To say that is to say that M. Obey abandons his method at the crucial moment and very nearly disproves what would appear to be his own thesis.

JOSEPH WOOD KRUTCH

More Mountains, More Mice

IN view of the unparalleled size and magnificence of the theater, in view of the deafening blast of advance ballyhoo, in view, above all, of the money its sponsors had to spend, the inaugural program of the Radio City Music Hall was the most uninspired that could possibly be imagined. Patrons of Mr. Rothafel's (endearingly, "Roxy's") former theaters will remember those elaborately expensive twenty-minute interludes of boredom that used to precede the feature picture. Imagine a series of these stretched over an entire evening and you have Mr. Rothafel's present offering. Former Roxy patrons will remember, again, that there were always scenes from "Carmen" on the program. These become the *pièce de résistance* of the opening week's bill at Radio City Music Hall. Besides doubling the quantity of dancers, soldiers, matadors, real horses, cigarette girls, etc., Mr. Rothafel has introduced the interesting innovation of a dancer in a 1932 New York costume appearing in the midst of the "Carmen" revelers. In addition to the operatic scenes there are a choric dance for an antique Greek tragedy by Martha Graham and her dance group, Doctor Rockwell, with his medical lecture, and Ray Bolger, an amusing modern tap dancer. This indicates either a very catholic taste on Mr. Rothafel's part, or, what seems more probable, the complete absence of any taste at all. One suspects that his theory is that he should give his patrons Art and entertainment, and that these are two separate and distinct things which must be alternated in different acts: that entertainment has nothing to do with Art and that Art has nothing to do with entertainment. Or perhaps

Mr. Rothafel's is the much simpler theory that the important thing is to spend money, buy names, and put on elaborately lavish "spectacles" with enormous choruses, and to please everyone by having Martha Grahams for the highbrows and Dr. Rockwells for the lowbrows. But he may yet live to learn that congruity is not only an artistic canon, but a commercial one.

Of the revival of "Cyrano de Bergerac" at the New Amsterdam, with Walter Hampden in the title role, there is little to be said except that Mr. Hampden acts the part with as much spirit as ever and that the supporting cast is competent.

H. H.

□ JOSEPH WOOD KRUTCH says □

ALICE IN WONDERLAND. Civic Repertory Theater. It will fascinate children and adults alike by the reality of its unreality and the sense of its nonsense.

ANOTHER LANGUAGE. Shubert Theater. Hilarious perennial exposing almost anybody's family.

ANYBODY'S GAME. Bijou Theater. To be reviewed later.

BIOGRAPHY. Guild Theater. An intelligent and sinewy comedy about what happens when a cultivated woman of the world tries to choose between a pompous opportunist and an unmanageable idealist.

CRIMINAL AT LARGE. Forty-eighth St. Theater. Exciting and credible tale of crime in a country house. One superb performance.

DINNER AT EIGHT. Music Box Theater. Trick melodrama about what happened to the various guests invited to a dinner party. The general public likes it very much better than I do.

GOODBYE AGAIN. Masque Theater. To be reviewed later.

GIRLS IN UNIFORM. Booth Theater. To be reviewed later.

LUCRECE. Belasco Theater. Reviewed in this issue.

MADEMOISELLE. Playhouse. Alice Brady and Grace George make a sentimental comedy pleasant enough.

MUSIC IN THE AIR. Alvin Theater. Pleasant operetta with music by Jerome Kern and a book rather better than average.

SUCCESS STORY. Maxine Elliott Theater. What happened to a radical when he rose in business. The best drama of the season.

THE LATE CHRISTOPHER BEAN. Henry Miller Theater. Light comedy from the French completely rewritten by Sidney Howard and charmingly played by Pauline Lord and others. All things considered, it is much the most enjoyable comedy of the season.

TWENTIETH CENTURY. Broadhurst Theater. To be reviewed next week.

WHAT MAKES ONE CREATIVE?

What is real originality? What distinguishes the creative individual from the imitator? Who are the true creative geniuses of recent times? These and other equally important questions are discussed by two Nobel prize winners

John Galsworthy and Gerhart Hauptmann

in the current issue of The

MODERN THINKER

Edited by Dagobert D. Runes

Among other essays in the current issues you will find Maxim Gorky on *Philosophy of Madness*, Alfred Adler on *Pampered Beings*, *The Making and Unmaking of Habits*, by Knight Dunlop.

THE MODERN THINKER is not a magazine you read and cast aside. It is an encyclopaedia of current thought.

THE NATION, No. 20 Vesey Street, New York City, Cable Address: NATION, New York. Muriel C. Gray, Advertising Manager. British Agent, Miss Gertrude M. Cross, 23 Brunswick Square, London W. C. 1, England.

THAT THE MILITARY FORCES of the United States are merely "a glorified bill-collecting agency" was the declaration of Major General Smedley D. Butler, U. S. M. C., retired, before a Brooklyn forum, according to the *New York Herald Tribune*. He related further that he had been "canned" in Haiti because "I didn't want to make the Haitians raise sugar" for a New York bank, and added, "I wouldn't want to see a boy of mine march out with a Wall Street collar about his neck." The authorship of this testimony makes it valuable. General Butler served extensively both in Nicaragua and in Haiti. He was reputed to be the roughest of all the treat-'em-rough marine officers. *The Nation* has long contended that the whole Haitian episode was motivated by the desire of American concessionaires to cash in on their dubious investments. For this sordid end the military and diplomatic strength of this great nation was mobilized. The recent attempt of the Hoover-Stimson regime, by means of a further ironclad treaty, to guarantee the security of investments which at home would have shared the fate of similar speculations is the latest episode in this discreditable chapter of American foreign policy. Of General Butler it may perhaps fairly be said that he serves his country better in peace than in war. On his own testimony he was, while in uniform, collecting for private interests. His present frankness on the lecture platform serves the interests of

the American people. It gives them the first confirmation from a quasi-official source of their betrayal by their supposed servants in Washington. Apart from the great losses throughout Latin America resulting from ill-will, some \$22,000,000 of American taxpayers' money and the lives of a score of American boys have been sacrificed in Haiti since 1915 so that a few bank and railroad stockholders might be certain of their dividends.

TOMATOES AND POTATOES may long since have been cheaper, but not power and light, at least not appreciably; nor are the rates within striking distance of those which would prevail if regulation were effective. The failure of regulation to protect the consumer has long been evident. That even the employee of our profitable State-protected monopolies in no wise shares either the prosperity or the security of his absentee-owner employers is exemplified in the policies and practices of the Brooklyn Edison Company discussed elsewhere in this issue. Were the company's reduction of employment necessitated by hard times, it could perhaps be justified. But the depression simply serves as a pretext for squeezing the already underpaid worker for the benefit of the common stockholder. The consumer does not benefit. Reduction in the price of materials and labor costs is not passed on to him. It is a paradox, and a striking example of the lag in our political and economic practices, that at the time when the State is seeking more taxes from the public to take care of more unemployed, it extends its benevolent protection to a public utility which, on the one hand, increases the public's burden by unduly high rates and, on the other, adds to the general distress by increasing unemployment. Why should the State's protection be limited to those in the industry who neither toil nor spend?

THAT REPEATING, false counting, intimidation of voters, and other irregularities in the Twentieth Congressional District contributed to the defeat of Representative Fiorello H. La Guardia in November is unquestioned. But to obtain, at this late date, evidence sufficient to prove the invalidity of somewhat more than 1,000 votes credited in the returns to Mr. La Guardia's opponent, James J. Lanzetta, may not prove easy. For against La Guardia, staunch liberal, were arrayed an unscrupulous Tammany and a conniving or at least indifferent Republican organization. The opposition of the Republican organization to party members who maintain their independence of thought and action is not new. The flagrant attempt to defeat Senator George W. Norris in Nebraska in 1930 by running a spurious George W. Norris against him is still fresh in the public mind. Another contested election which will come before the House was in the Third Maine District. There the Republican machine was determined to beat the progressive Ralph O. Brewster, twice Maine's Governor. Having failed in the primary, the Republican organization entered the Democratic lists. It sponsored the candidacy of a reactionary never before conspicuously associated with the Democratic Party. His election was reported. But illegal registration

of voters, falsely marked ballots, and miscounting, subsequently uncovered, prevented his obtaining a certificate of election. The Republican organization managed, however, to deadlock the Republican Governor's Council, so that neither candidate has been certified. The next House will have to hear the evidence. In the case of both La Guardia and Brewster, the services of unusually disinterested and enlightened public servants are at stake.

THE DEFLATION of our big-business statesmen closely parallels the depression curve. Two weeks ago Owen D. Young's feet of clay were revealed to a long-reverential public. Now the same \$2,000,000 loan of General Electric money to Samuel Insull, when that noble Athenian was already bankrupt, discloses the stuffing under the shirt of Melvin H. Traylor. It will be recalled that Mr. Traylor was deemed one of the pre-convention Democratic Presidential possibilities. This sagacious financier, whose bank, the First National of Chicago, had already advanced millions on Insull collateral and might therefore have apprehended the impending Insull insolvency, was likewise a director of General Electric. He too felt that the loan should be made. In fact, Gerard Swope's testimony indicates that it was chiefly on Mr. Traylor's recommendation that he acted so generously. Mr. Traylor has been among those mentioned for the Secretaryship of the Treasury in the Roosevelt Cabinet just as Mr. Young had been mentioned for both that post and the Secretaryship of State. At the present rate of liquidation of once great reputations the forecasters will, before March 4, have to start picking a Cabinet all over again.

THERE IS GRAVE DANGER that the Dies bill, which has already passed the House, may be quietly approved by the Senate and signed by the President before the groups opposed to this vicious measure have had an opportunity to throw their united strength against it. The Dies bill provides for the deportation of alien Communists, and its definition of a Communist is so broad and loose that it can be interpreted to include virtually every foreign-born resident or visitor who is not frankly and whole-heartedly in sympathy with non-Socialist forms of government. At present substantial proof is required by law to show that the alien radical is actually advocating the overthrow of the American government by force or violence. Under the Dies bill a mere expression of opinion, however lightly voiced, would suffice to render the alien deportable. More than that, the pending measure refers only to persons advocating the overthrow of governments not under the control of Communists, and thus by implication would establish the United States as an asylum for foreigners conspiring against the Soviet regime in Russia or against other communistic or socialistic governments that may be set up elsewhere. The various organizations and individuals interested in preserving civil liberties should fight this measure with all the power at their command.

WHY HAS WILLIAM GREEN suddenly taken to blustering about general strikes and the class war? These phrases seem strange, not to say insincere, coming from the successor to Gompers. There is little doubt that Green has taken this militant attitude because of widespread discontent in the ranks of organized labor. The president of the American Federation of Labor must do something to still

the growing unrest and make sure that rebellion will not sweep him out of his job. The workers want determined action, aggressive leadership that will relieve them of some of the horrors of unemployment. President Green offers them the right to strike, a weapon which under normal conditions has its advantages, but which under the present circumstances would be the least effective that organized labor could possibly adopt. The employers are not worried by such threats; there is more than enough surplus labor to go around. For the same reason the workers who still have jobs are likely to hang on to them as long as they can. Yet in appearing before a Senate committee William Green can talk about a "universal strike." If the American Federation of Labor had in the past been more consistent and vigorous in defending the workers' rights, these warnings might have real weight. But its traditional policy of cooperating with capital, largely at the expense of the workers, has all but destroyed its influence.

A GOOD DEAL of chop-licking has gone on among certain unsympathetic correspondents and other observers of Soviet Russia's recent economic difficulties. One might almost imagine that the rest of the world was enjoying good times, so impressed are these persons by the evidences of hunger and industrial breakdown in Russia. Now, at the end of the period—actually four years and three months—of the first Five-Year Plan, Stalin has issued a statement analyzing clearly, if a bit optimistically, the present economic situation, and announcing a slower tempo for the next two or three years coupled with an increase in the output of articles of consumption rather than machines of production. Thus, by executive fiat, the dictatorship alters the course and heads the ship in a new direction. Incidentally, it is exactly this course that Louis Fischer pointed out, in our last issue, as the essential one for Russia to follow.

KING ALEXANDER of Yugoslavia, according to reports from various European capitals, is planning to substitute a more democratic regime for the present dictatorship. There is also some talk of admitting the failure of the Serbian scheme to establish a unified national state which was to have been dominated by the Serbs. According to present reports, a definite measure of autonomy is to be accorded to the Croats and Slovenes and probably also to the Macedonians and to one or two other minority groups. This may well prove the solution of a desperate internal situation, as well as of an increasingly grave international crisis involving primarily Yugoslavia and Italy. The agitation of the Croats recently took on such dangerous proportions that the Belgrade government found it expedient to renew its quarrel with Italy in the hope of diverting the attention of the Yugoslavs from their domestic difficulties. It was decided that Italy was responsible for the Croatian independence campaign, and a formal protest was sent to Rome. Soon thereafter Mussolini asked Albania, Yugoslavia's neighbor to the south, to join Italy in a customs union. Belgrade interpreted this move as unwarranted interference in Balkan politics. Rome was informed accordingly. The result has been to stir up a great deal of bitter feeling in both countries. The historic Venetian lions, which for six centuries had stood guard at the entrance of the harbor of Trau, now a Yugoslav port, were destroyed by patriotic vandals. After this incident the

Italian government became noticeably more bellicose in its attitude toward Yugoslavia. Other European governments have exerted diplomatic pressure upon both Belgrade and Rome, urging them to compose their differences, but as yet this intervention has had no apparent effect.

PREMIER AZANA OF SPAIN has managed to keep the republican government running smoothly and firmly partly because of the strong support he has received from the bourgeois elements in the country and partly because of the loyalty of the Civil Guard. However, in attempting to satisfy these groups he has had to follow a moderate, one might even say conservative, policy. This has of necessity delayed the industrial and agrarian reforms which the revolution seemed to promise, and as a result the workers and peasants have become increasingly restive. Though the Civil Guard has supposedly been "purged" of its royalist sympathies, the workers and peasants suspect it and are demanding that it be disbanded. They accuse Azaña of having established a bourgeois dictatorship, and there is much evidence at hand to support this charge. Their discontent has created a fertile field for syndicalist and anarchist agitation, which now has led to serious disturbances in which scores of persons have been killed. If these disturbances continue, the Azaña regime will have to move to the left or face the prospect of being overthrown by the radicals. Premier Azaña appears disposed to combat the spread of radicalism with the help of the Civil Guard, and this suggests that Spain may be in for an extended period of civil warfare.

INCREASINGLY THE CONSUMER may come into his own. Now we have the indestructible radio tube, extremely simple in construction and inexpensive—indestructible even after transmitting Ed Wynn. In a Newark laboratory the new tubes have been operating continuously for 1,200 hours. They are without vacuum. More than that, no A or filament power is necessary. Engineers agree that this bulb is likely to revolutionize the whole vacuum-tube and radio industry in a very short time. At least here is promise of a device which should benefit the consumer tremendously. He is denied the good-for-a-lifetime automobile and the razor blade which lasts several years and ends the difficult old problem of what to do with used blades. He is still waiting for the indestructible suit made of ramie. Let him give thanks, therefore, if and when the everlasting radio tube with its salutary effect upon the cost of hearing and living is put on the market.

WE NOTE WITH SATISFACTION that John Hamill, author of a volume dealing with the early career of President Hoover, has retracted some of the more sensational charges made in his book. All fair-minded persons must deeply resent attempts to vilify unjustly the President of the United States. If Mr. Hamill is guilty of wilfully distorting the facts so as to cause misleading inferences to be drawn, as he is reported to have admitted, he should be prosecuted. Mr. Hamill's admission that his "interpretations were in error in some instances" does not clear Mr. Hoover's record of all the grave charges that have been made against him. The essential facts remain unchallenged. While, as was pointed out in several of the reviews appearing in *The Nation*, the majority of the books dealing with the

President's early life were so obviously inspired by malice and partisanship as to be untrustworthy, at least one of the volumes—"The Rise of Herbert Hoover," by Walter W. Liggett—was restrained in tone and supported its charges with impressive documentation. The fact that no adequate reply has ever been made to the questions raised by this book has resulted in considerable confusion regarding the whole of Mr. Hoover's career. Such explanations as have been made of his role in the seizure of the Kaiping mines from Chinese control have been unconvincing in the light of available records. What is more to the point, no evidence has been advanced to show that he ever took a vigorous stand against the stock-flotation practices and labor exploitation of his business associates, or that he was even aware of the deeper social implications either of their actions or his own as a promoter and financier.

CALVIN COOLIDGE succeeded in pleasing the great masses of his fellow-citizens and yet never comprehended, or was able to comprehend, the deeper meaning of the economic surges on which he was borne forward like a chip on the crest of a wave. He reduced government problems to the sublimely simple terms to which he reduced the question of the war debts—"They hired the money." He dealt with issues only as they were forced upon him, left no constructive suggestions to cure our ills, and made no contribution whatever to the science of government. He vetoed the bonus, it is true; but it was easy for him to be courageous when he knew that his friends and backers in Wall Street would have damned him had he done anything else. In large degree, the Calvin Coolidge the public read of was the creation of press agents and the newspapers; even his famous telegram on the occasion of the Boston police strike, "There is no right to strike against the public safety anywhere, any time," was composed for him. The reporting of his death and funeral followed the same pattern. The crowds around the church were represented as bowed down with grief and awe, silent and reverent. An eyewitness assures us that it was a pushing and pulling rabble of sight-seers. So the Coolidge myth persisted to the end.

MRS. HENRY MOSKOWITZ, whose death occurred in New York on January 2, was a remarkable figure in the philanthropic and political life of New York. To Alfred E. Smith she rendered years of invaluable service as aid, adviser, and confidante, not to say general manager. For years she ran his publicity bureau, helped him with his speeches, took part in planning his campaigns, and was generally so useful and so devoted to him that it is no wonder that Mr. Smith broke down when he heard of her death. But Belle Moskowitz by no means devoted all her rare talents and unusual mentality to Mr. Smith. She was distinguished in her own right. She was a leader in philanthropic undertakings before her affiliation with Mr. Smith began, and her counsel was widely sought at all times by the group of undaunted men and women who in good and bad times steadily labor for the social and moral deliverance of the metropolis. Rarely has the city seen such an outpouring of men and women of all walks of life as attended her funeral to bear testimony to the breadth and nobility of her soul and to an intellect which, particularly in political affairs, was the equal of that of anyone of her day.

Again a Challenge to Humanity

THAT is what Japan's latest action in Northern China is—a challenge to humanity. The Shanhaikwan horror is but a repetition of the original Manchurian episode. According to Captain John W. Thomason, Jr., of the United States Marines, somebody threw a bomb at the railroad station at Shanhaikwan on the night of New Year's day. The Chinese say that it was thrown by Japanese or by agents in Japanese pay; the Japanese assert it was exploded by Chinese. The next morning a detail of Japanese soldiers was fired on and a lieutenant killed. Again, as in Manchuria, Japanese reinforcements for the 300 Japanese troops appeared as if by magic from their station four hours away and attacked in full force with all arms, including tanks and airplanes. On the following day the Japanese succeeded in driving out the Chinese Ninth Brigade of regulars after a most stubborn resistance and took over the city. The daily press reports that Shanhaikwan is "a smoldering ruin"; there were large "civilian casualties," that is, unarmed civilians to a number estimated as high as 3,000, in addition to 1,700 Chinese soldiers, were killed, and 100,000 refugees are reported fleeing from the stricken city "in unheated box-cars which are trailing into Tientsin and Peiping." In other words, there has been wholesale slaughter because the Japanese went ahead as if the whole Shanhaikwan episode had been planned in advance. They revenged the bomb and the dead lieutenant with the same ferocity that they displayed at Shanghai, and with the same utter disregard of consequences.

It is, of course, a pure accident that the city in which this "incident" occurred is in a most strategic position, being only a few miles from the eastern end of the Great Wall. It is thus nearly on the border between Manchuria and China proper and it was occupied by the Japanese, without the semblance of an excuse, just a year ago without much opposition from the Chinese. It is a pure coincidence, too, that this "incident" took place in the very city one would wish to occupy if bent on a move toward Peiping or if one were intending to set up another "independent state" under Japanese control, this time centering about Peiping and Tientsin.

This is the very plan which has been attributed to the Japanese for months past. Shanhaikwan is, of course, a purely Chinese town, and no state of war exists between Japan and China. But the Japanese are now demanding the withdrawal of all Chinese troops from the town, while offering also to withdraw theirs and make it a "neutral" city. Japanese troops will not be withdrawn until these terms are accepted, and the reports persist that an apology by the Chinese must also be forthcoming. Tokio reports a determination to "localize" the affair. But the fact remains that the camel's head is again in the tent; the Japanese are to all intents and purposes within the Great Wall and are in a most fortunate position from which to go on and further divide China.

We repeat that all this is an affront to humanity. There was not the slightest necessity to maintain a Japanese garrison in Shanhaikwan, and as long as such garrisons exist the possibility of "unfortunate incidents" is ever present. Here are the facts—once more flung in the face of the League of

Nations, which has just successfully shelved the Lytton report and has listened to downright defiance of its authority by the Japanese representatives at Geneva. What is the United States going to do about it? What are Great Britain and France going to say to this latest slaughter of innocents in the war which is no war? Is public opinion utterly ineffective? Must the world sit back with hands folded and watch the progressive carving up of China? Is the United States government, after having advanced the Stimson-Hoover doctrine, going to sit by idly without a protest of any kind? If so, the League might as well be disbanded and the collapse of the Stimson-Hoover doctrine openly confessed, and the Japanese might as well be told that they may go ahead and wreak their bloody and conscienceless will upon the Chinese people until they are satiated.

The government of the United States should first let its attitude be unmistakably known. Following that it can and should take another step—it should appeal to Congress for an embargo on all shipments of arms and ammunition. We understand, of course, that if the United States denies to Japan the right to purchase arms and ammunition, the Japanese may go to Germany, or Great Britain, or France, or Italy, and purchase there what they need. None the less, we think that the time has come for this action, and we believe that the Congress would almost unanimously vote such an embargo if the President appealed for it. Only three weeks ago a feeler came out from Washington to the effect that the President was going to ask for an embargo of this kind with special reference to the war in South America, so that the present belligerents in that part of the continent would not be able to get further military supplies from the United States. If that is worth doing in this smaller scene of hostilities and this relatively less important sphere of action, why should it not be done in regard to Japan? Even if it failed to be wholly effective, it would be a magnificent gesture of disapproval, for it would have behind it, we believe, the public opinion of America. It might even inspire the British and French governments to take a vigorous stand, instead of encouraging the Japanese to go ahead by their refusal to join hands with America or to support the recommendations of the Lytton Commission to the League of Nations.

Senator Dill offered a resolution in Congress last winter during the Shanghai fighting asking for such an embargo on arms shipments, and even Congressman Hamilton Fish has proposed the same thing and has made the striking statement, according to the *Chicago Journal of Commerce*, that "in the undeclared war between Bolivia and Paraguay American bankers have already loaned Bolivia \$20,000,000 with which she has purchased munitions of war, largely in England, while millions of American people and their government are urging peaceful relations among nations." This conservative journal favors the embargo, declares that Secretary Stimson favors it, and asserts that it is now "up to President Hoover." He is, of course, a weak reed to lean upon. All the more reason why the public opinion of the country should make itself felt. We are for the embargo without the loss of a day.

A Revolutionary Document

IT is no slight irony that it was Herbert Hoover who officially originated the survey which has culminated in the epoch-making report on "Recent Social Trends in the United States."* For it was under the aegis of the apostle of "rugged individualism," the embodiment of contented conservatism, that the factual and interpretative material was assembled which makes plain the imminence of and the imperative necessity for a profoundly altered political, economic, and social order. It was in the autumn of 1929, the final fall, indeed, of the old America—that the President of the United States, looking forth on a land seemingly flowing with milk and honey, summoned the social scientists to research and report. They were asked to provide "such a review as might supply a basis for the formulation of large national policies looking toward the next phase in the nation's development." Well, the report is timely. The next phase is here. Were the White House tempted to use the blue pencil on this as on the Wickersham report, only complete suppression would serve. For while the tempo of "Recent Social Trends" is measured, its attitude objective, and its presentation scholarly both in letter and spirit, it is, by cumulation of fact and inexorable deduction, the most formidable revolutionary document in our day and country.

It is obviously impossible to convey in brief compass the wide sweep and profundity of this collaboration. The initial two volumes comprise over 1,500 pages, divided into a "review of findings" and thirty-one chapters, each a monograph by experts; they are to be supplemented by thirteen volumes of additional detail. The committee members—Wesley C. Mitchell, Charles E. Merriam, Shelby M. Harrison, Alice Hamilton, Howard W. Odum, and William F. Ogburn—have not only justified their scholastic reputations, but have enhanced it.

The report abstains from any direct comprehensive conclusions and recommendations. The broadest deduction to be made from its graphic reiterations is that, in a world transformed by invention, the American people have sought to carry on with an obsolete political structure, outworn economic principles and practices, and an increasing lag in social ideology. Our technical efficiency has outstripped our other capacities. Hence the astonishing contrasts—skyscraper and slum—and vast disorganization.

Politically our dominant philosophy has been that "the role of government is 'to provide the circumstances under which private initiative can operate most successfully.'" So "powerful individuals and groups have gone their own way" to the community's detriment. And although "our administrative areas are obvious anachronisms," the "units of government laid out a century ago are now too small for the discharge of various functions," yet "in governmental affairs . . . proposals for change have been identified with treason . . ."

Our economic system is signalized everywhere by conspicuous waste. Despite gains in shorter hours and higher earnings "there has been no such success against the terror of unemployment." Typical are the extractive industries.

In the "prosperous" era from 1923 to 1929 some 3,300 bituminous coal mines were forced to close, 250,000 men lost their jobs, the wages of the rest have been cut again and again. Every year 150,000,000 tons of minable coal—equal to the entire post-war production of Germany—is lost through wasteful methods. Corresponding conditions obtain in the oil industry. Yet the roots of the evil are "imbedded in legal conceptions of mineral property transplanted from Tudor England." Our antiquated judicial system perpetuates economic inequalities. Our "judge-made law" arises from the social philosophies of judges. Progress is impeded by the "massive irresponsiveness of the bar and bench to the challenge of the present system of civil and criminal justice by modern social and economic conditions, and the indifference to the sweeping indictments of the drift by leading jurists."

Socially, conservative attitudes are responsible for much maladjustment to altered circumstance. "Some schools and colleges still offer courses which are survivals from the scholasticism of the Middle Ages." Materialism, our concepts of property, are a retarding force. "By virtue of commercialization the problem of leisure is bound up with purchasing." And there is the interesting suggestion: "Happiness and unhappiness have been little studied by science, yet happiness is one of our most cherished goals."

The report finds that social thinking and planning are our most pressing needs. To deal with surpluses, unemployment, underconsumption, "economic planning is called for." At present, however, "that phrase represents a social need rather than a social capacity." The best that can be done now "is to lay plans for more planning." And pointing to the unity of purpose and coordination achieved in the World War, the report asks: "Is it beyond the range of men's capacity some day to take the enhancement of social welfare as seriously as our generation took the winning of the war?"

In the immediate future the committee expects and welcomes more public enterprise and control of previously private functions. It "observes nothing alarming in the widely varying forms of social adjustment undertaken by government, whether maternal, paternal, or fraternal." "The alternative to constructive social initiative may conceivably be a prolongation of a policy of drift." More likely is some form of dictatorship in which "the basic decisions are frankly imposed by power groups, and violence may subordinate technical intelligence in social guidance."

Well, the collective intelligence of our social scientists has given us a chart so that we need no longer drift, but may steer straight ahead. As the report makes clear, we must, before we can move forward, understand the phenomena of change and their far-reaching implications. The report lays the cornerstone of understanding on which alone a new order can be erected. It happens incidentally to be an intensely readable, at times, a thrilling story, with its glimpses of a better society arising from the old on a soil in America perhaps "not . . . unfavorable for cultivation." And history may yet regard this as the first step toward a Magna Charta of a reemancipated people and as the outstanding achievement associated with the Presidency of Herbert Hoover.

* "Recent Social Trends in the United States." Report of the President's Research Committee on Social Trends. McGraw-Hill Book Company. Two volumes. \$10.

The Parity Plan

THE farm "parity plan," favorably reported to the House by the Agricultural Committee by a vote of 14 to 8, is even more dangerous than the allotment plan it supersedes. It aims to pay a special bonus, at the consumer's expense, to the producers of four farm products—wheat, cotton, tobacco, and hogs. This bonus is not to be a fixed amount: it is to be sufficient to give to wheat, cotton, tobacco, and hogs their so-called "pre-war purchasing power" in terms of other commodities. The duty and the power to decide what this amount is will fall upon the Secretary of Agriculture, who is to be given dictatorial powers never before held by any individual in our government in times of peace.

The parity plan is, in brief, a plan to pay to a special group of producers a direct subsidy without parallel, in its size, in our national history. This subsidy is to be raised by a direct tax on the necessities of life. It is to fall on the consumer of bread, ham, pork, cigarettes, and of the cheapest clothes. It is to fall on, among others, the 12,000,000 jobless. It would amount to probably 100 to 300 per cent on the commodities affected—compared to this a sales tax of $2\frac{1}{4}$ per cent on those commodities pales into insignificance. It is claimed by some of the supporters of the measure that the added price of these commodities would not be passed on to the ultimate consumer but would be absorbed by the "middle men." There is no evidence that the middle men—the flour mills, the textile industry, and so on—could in such times as these support the burden.

Even if one assumed that the plan would benefit the farmers as a whole at the expense of everyone else, it would be difficult to see how one could justify in principle a plan by which an unemployed man buying bread would be compelled to help support the owner of a large wheat farm. In practice the four groups of farmers subsidized would be subsidized at the expense of all other farmers who are producing dairy products, poultry and eggs, sheep, oats, barley, rye, buckwheat, rice, hay, beans, peanuts, potatoes, apples, peaches, pears, grapes, oranges, lemons, grapefruit, asparagus, cabbage, cantaloupes, carrots, and onions. Are we to subsidize each of these? The sponsors for the present parity plan hold that raising the price of the four lucky farm products will raise the price of all farm products; but it will be hard to get the raisers of the other farm products to believe this. The subsidy would mean no net increase in the country's purchasing power, for it would take away from the consumer exactly as much purchasing power as it would give to the favored producer.

The final excuse for the bill is that the manufacturer is already receiving a subsidy through the tariff, and that the farmer must now receive his through the parity plan. In other words, as the manufacturer is supported out of compulsory doles from the farmer, the farmer must now be supported out of compulsory doles from the manufacturer. This is Alice in Wonderland economics; the mythical islanders who lived by taking in each other's washing begin to seem relatively plausible. What is wrong with a drastic tariff reduction that would open the world's markets to the farmer's products and no longer make it necessary for him to endow the manufacturer?

Cosmic Row

THE scientists gathered at Atlantic City for the annual meeting of the American Society for the Advancement of Science may have learned a good deal from one another, but the spectacle which they presented was not entirely edifying to the layman. Drs. Millikan and Compton, the two Nobel Prize winners, clashed acrimoniously, and though the former has protested against the account of his attitude given by the correspondent of the *New York Times*, it is obvious enough that there was more heat than light in the argument which revolved around stupendous deductions from highly dubious data.

Professor Millikan continues to harp upon the cosmic implications of the "cosmic ray" which he discovered, and which, according to him, is not produced by ordinary electrons because it is not influenced by the earth's magnetic field. Professor Compton replies that it is so influenced, and to that Professor Millikan retorts with something very much like a polite form of the lie direct. Yet upon the basis of data so dubious that two of the most famous physicists in the world cannot agree even as to the immediate concrete facts in hand, the one proclaims that the universe is constantly building itself up while the other is equally positive that the classic conception of a cosmos slowly running down is correct.

To the layman it is all more than a little disturbing. During the course of a century he has gradually built up such a faith in the hard-headed caution and accuracy of the scientist that he accepts quite docilely many statements about nature and the world against which mere common sense would rebel. He has, with many beneficial consequences, tended to put himself more and more in the scientists' hands, but his faith is being seriously shaken by the all-too-evident willingness of eminent scientists to announce stupendous conclusions which must be unjustified if they can be so readily contradicted by other scientists equally eminent. We now have the very highest scientific authority for stating positively that the universe is "expanding" and also that it is building itself up. Unfortunately, however, we also have the very highest authority for stating positively that it is contracting and running itself down. Under the circumstances, is it possible to conclude anything except that both statements are made upon the basis of evidence obviously inadequate?

The true explanation is, of course, that Drs. Millikan and Compton are really discussing religion while they pretend to discuss science. The former, a religious optimist, does not want to believe that the universe is running down, and quite frankly displays his pleasure in announcing that the cosmic rays are the "birth cries" of raw matter being born and that they furnish "some experimental evidence that the Creator is still on the job." Dr. Compton may be neutral or he may be equally anxious to discount anything which would weaken the support which science gives to a skeptical materialist. In any event, however, it is evident that their argument would never have taken the form it did if both had had only a disinterested desire to get to the bottom of the facts involved. An outsider can hardly help feeling that neither has enough information to draw any conclusions at all, and that the heat of the discussion was generated entirely by that age-old disturber of the peace, the *odium theologicum*.

Issues and Men

Calvin Coolidge

CALVIN COOLIDGE was a child of fate if ever there was one. But he was more than that; he was a perfect product of his time and as such he exactly suited the American mood at the moment when that same kindly fate so generously removed President Harding from the scene just in time to save him from utter disaster and humiliation. A few weeks before Mr. Coolidge was elevated to the Presidency one of the ablest United States Senators—one who is always regular at election time—spoke privately of the Vice-President with complete pity. Mr. Harding would have to be renominated, but Mr. Coolidge—why, this curious and odd person, who had made no friends among the Senators and ate his lunch from a tin box in a corner of a committee room, would, of course, be retired to private life. Presto change, and Mr. Coolidge was in the White House and this very Senator was one of the first to render him obeisance, while an extraordinarily servile and romantic press seized upon the “curious and odd” person and painted of him a portrait that bore little or no resemblance to the actual Chief Executive.

But this was nothing new in Mr. Coolidge's career. When Oregon nominated him for the Vice-Presidency on the ticket with Mr. Harding at Chicago in 1920, the Massachusetts journalists present roared with laughter. It was a joke; it was Coolidge's luck again. For they knew that there was no truth in the story that Governor Calvin Coolidge had broken the Boston police strike with the fearless courage and intrepidity which the press attributed to him throughout the length and breadth of the land. They had read the report of the citizens' committee which cooperated with the authorities in handling the strike and had read over the signature, not of a radical, but of the late James J. Storrow, then the head of Lee Higginson and Company, that when the crisis came and the counsel of Governor Coolidge was sought, he was not to be found for forty-eight hours. The necessary action was taken without him; the honors, such as they were, belonged elsewhere. His own bombastic proclamation, telegraphed everywhere, came one day after the strike had been settled by Mayor Peters. But Mr. Coolidge never disavowed the unearned praise showered upon him. He was content to rise by the myth that made the Oregon delegates believe that they were honoring a great American.

Beyond that, nothing stands out in the early career of the man who was “sold” to the American people as the embodiment of the simple and rugged virtues of the simple and rugged Vermont from which he came. He chose Northampton, Massachusetts, for his permanent home, and he rose in due course like many another to the Governorship of that State because he was a Republican in a Republican town, in a Republican county, in a Republican State, and because he was absolutely loyal and obedient to the party machine, without a spark of initiative or independence. He did not distinguish himself in war time when he was Lieutenant Governor; before that he was an undistinguished legis-

lator. But he belonged to the period in which, after you got to be a Republican president of the Massachusetts Senate, no power could stop your becoming Lieutenant Governor and Governor. The custom of years had decreed this and so it was in Mr. Coolidge's case.

Once in the Presidency Mr. Coolidge's characteristics as portrayed by the press tickled the public no end. The plain men of the farms and the small towns felt him to be one of themselves. The multitudes in the cities, reveling in an orgy of getting rich quick and spending as quickly, attributed their luck to Calvin Coolidge. The “masters of America”—as Woodrow Wilson called them—the great heads of the corporations which dominate our social, business, and political life, found in him just the complaisant national figurehead they so eagerly desired. He had been utterly silent in the face of the corruption of the Harding Cabinet, in which, by invitation, he sat; he never talked, as did Mr. Wilson, about our being “in the midst of a revolution” against the great capitalists. Nor did he denounce any of the big business men as “malefactors of great wealth,” as did Theodore Roosevelt; and there was no chance under him of such shocking scandals as disgraced the Harding regime. So as the tide of prosperity rose higher and higher, it became “Coolidge prosperity,” as if he had created it by some wave of a magic wand. And when he capped the climax, just before the expiration of his Presidency, by prostituting the White House as it has never been prostituted before by his statement of January 6, 1928, encouraging the maddest, wildest speculation in the world's history, the spokesmen of finance and big business called him blest.

Calvin Coolidge's shrewd sense that it was time to leave the White House saved him. Had he run again and been elected he would today have been as deflated and hated as Herbert Hoover himself. He made his choice and retired with the Coolidge myth still unexploded. He was still the wise, homely, simple, penurious citizen who went—for a time—from the White House to his \$35-a-month apartment in Northampton. His thinly trickling, often unintentional, vein of humor continued to be exploited to the full. He became the “Sage of Northampton”; the noble Cincinnatus back at his plow. And only a few of the irreverent and the dissatisfied continued to point out, as they had done throughout his Administration, that not a single great constructive step was taken during his Administration; that, on the contrary, the Coolidge policies, so highly praised, were based solely on the crassest materialism and inexorably helped to drive the country into the limitless disaster in which it finds itself today. This disaster spells the end of many things. It is above all the final harvest of the policies of Calvin Coolidge and of those for whom he stood, whose desires he fulfilled, whose faithful servant he was.

Dwight Garrison Kilgore

Brooklyn Edison Against the Public

By JEROME COUNT

HARD times seem to mean little or nothing to the stockholders and managers of the electric-power industry. Although some of the holding companies have collapsed, to the detriment of thousands of stockholders, most of the large operating companies have, despite the depression, continued to pile up huge profits and pay good dividends. Only the consumers and workers have failed to share in this remarkable prosperity. Indeed, these two groups, but particularly the latter, have had to undergo sacrifices in order that the inflated dividend record of some of the utilities might be maintained. This is especially true in the case of the Brooklyn Edison Company, which through good times and bad for twenty-nine years has not once failed to declare its regular annual dividend of 8 per cent. This record remained unbroken in 1932. Thus, by virtue of a State-protected monopoly on Brooklyn's electric business, the original stock of the Brooklyn Edison Company has now been redeemed two and a half times over.

An 8 per cent dividend might not appear excessive at first glance, but when examined in its relation to other factors its excessive nature stands clearly revealed. For example, the profits available for payment of dividends by Brooklyn Edison have amounted during the depression to approximately 30 per cent of the gross income of the company. In 1931 the sum of \$13,400,000 was available for dividends, compared with gross sales in that year of \$48,000,000. In 1930, \$13,700,000 was available for this purpose out of \$46,000,000 gross income. The dividends actually paid in 1931 amounted to \$8,800,000, and \$10,000,000 was paid out in 1932.

Brooklyn Edison's continued payment of dividends presents a marked contrast both to its labor policy and to the needs of the community to which it supplies electricity. Its issued capital stock increased from \$19,000,000 in 1921 to \$125,000,000 ten years later. This means that the 8 per cent dividend rate is now paid on 600 per cent more stock than a decade ago. Electric consumption, however, has increased only 10 to 15 per cent each year. Dividend tribute levied upon the people of Brooklyn has increased five times more rapidly than their demand for electric service. Meanwhile, Brooklyn Edison has not neglected its future. It added \$4,200,000 in 1931 to its surplus of \$26,500,000. Its reserves were increased to \$20,000,000. Its surplus has been increased by 250 per cent in the past five years alone.

With these facts a matter of record, it was astonishing to learn recently that 3,000 more men had been discharged by the company, increasing the lay-off to 5,000 for 1931 and 1932. Determined protests by the Brotherhood of Edison Employees have brought no relief, and it is fitting to inquire into Brooklyn Edison's labor policy as contrasted with its huge accelerated profits. The most recent reports disclose that Brooklyn Edison business for these two years will show a net increase of 38,000,000 kilowatt hours in electric sales over the year 1930. Dividends for 1932 totaled \$10,000,000—\$1,200,000 more than was paid in 1931 and \$2,800,000 more than in 1928, 1929, or 1930. Since 1921 the annual

dividends paid have increased at the rate of 60 per cent. The pay roll, however, has increased only at the rate of 15 per cent each year—an increase in labor force and not in average wage.

It is significant that while the increase in the share of labor coincides with the increased demand for electricity—15 per cent annually—the stockholders' share in the benefits of a decade's expansion in this industry has exceeded both by 400 per cent. The year 1931 intensified this injustice by decreasing the pay roll by \$1,126,017, while dividends increased by \$1,600,000. The year 1932 crowned all previous Brooklyn Edison achievements with a \$4,000,000 decrease in wage payments as compared with 1930, and a \$2,800,000 increase in dividends compared with the same year.

The prospects for Edison employees is more dismal for 1933. Construction work will reach the vanishing-point and wage cuts are threatened, but dividends will continue their unbroken record of twenty-nine years. There is even danger that Brooklyn Edison will issue \$15,000,000 more stock, now held in reserve, and again increase dividends by \$1,200,000. The significance of these figures is even more striking when they are reduced to terms of the average worker and the average stockholder. In a typical year, 1926—before the Consolidated Gas Company assumed control of Brooklyn Edison—8,666 employees, devoting their entire year's labor to the production and distribution of electricity to more than 2,000,000 people, received an average annual wage per man of \$1,500. The sum of \$500, or one-third of this wage, was paid to 11,343 average stockholders enjoying the privileges of absentee ownership. The dividends distributed were equal to 48 per cent of the total amount paid to wage-earners. The elimination of dividends would have raised a miserable wage level—less than \$30 a week in the boom year 1926—to \$2,000 a year. It is well known that many skilled Edison employees, supporting families, earned little more than \$25 weekly in boom times, while union men were paid two and three times as much. Mr. J. C. Parker, president of the Brooklyn Edison, has suggested that the relative permanence of jobs in his company justified the meager wages paid. Fourteen thousand Brooklyn Edison workers believed that thesis at the beginning of 1931. Since then 5,000 of them have become completely disillusioned; 2,000 workers have been out of the company's employ for two years and 3,000 more were dropped in 1932. These 5,000 men could have been retained at a cost of \$5,000,000. During the same period Brooklyn Edison had \$25,000,000 available for dividends (of which \$18,800,000 was actually paid) and reserves of \$22,000,000 were accumulated.

The desperate plight of Edison men, as a result of this inequitable labor policy, was brought out at a hearing held by the Public Committee on Power Utilities and Labor. A young worker twenty-seven years old, with a wife and two children to support, was asked to describe his circumstances since his discharge from the company. He testified: "My present circumstances are that I haven't worked for four months. The only job I received was a couple of days ago and I made \$2. The relief committee paid my month's rent

for me and supplied me with \$2.50 a week to eat on." Mr. Parker, president of the Brooklyn Edison, with singular irony, was chairman of what his former employee calls the "relief committee" in the recent drive for unemployment relief funds. Mr. Parker pleaded with Brooklyn to donate \$1,250,000. He apparently sees no moral problem involved in thus committing arson with one hand and playing the hose with the other.

It has been declared by Mr. Parker that construction projects on which these men were employed have been completed and, in his own words, "when a house is built, it can't be built again." Let us examine this claim. In 1928 Brooklyn Edison laid out a ten-year construction program, including replacement of overhead wires and improvement of distribution facilities generally. After the second year of this ten-year program, Brooklyn Edison discharged 40 per cent of its force and left 36,000,000 feet of overhead electric wire still to be placed under-

ground. The State legislature declared this change to be a public necessity forty years ago, but at the rate at which it has progressed during the past five years, forty years more will be required for its completion. Yet Mr. Parker insists that Brooklyn Edison has no work for these 5,000 men to do. Similarly there are 15,000 customers whose service is to be transferred from direct to alternating current. Mention this to Mr. Parker and he answers, "We are way ahead of schedule." Excessive rates and underpaid and insecure employees are the keystone of Edison prosperity. The Public Service Commission has proved incapable of obtaining reasonable rates and until recently has avoided all

responsibility for labor conditions in public utilities. Although it is believed that the present law grants adequate authority to act, public bodies have sought an express legislative mandate for fifteen years to direct the commission to deal with its problem. The constant threat of discharge hangs over the heads of Edison employees affiliating themselves with union activities. The American Federation of Labor has failed to take effective action against an illicit agreement between the electricians' union and the Edison system whereby the union maintains a "hands-off" policy. Labor and the consumers have met defeat at every turn.

When Brooklyn Edison was combined with the Consolidated Gas system, Morris L. Ernst, representing the Public Committee on Power, endeavored to oppose the Public Service Commission's unconditional approval of this deal and was all but ousted from the so-called public hearings. It is not without interest to analyze the results of this consolidation. According to Matthew S. Sloan, then president of the Brooklyn Edison Company, the unification meant an annual saving of \$17,700,000 to the companies. Within the space of a few months the Consolidated system raised its

dividend rate by \$8,000,000 per annum and in the following year the dividends were again increased, so that the former holders of Brooklyn Edison and Consolidated stock received \$18,000,000 in additional dividends just after the combination took place.

The last official report of the Public Service Commission reflects the stockholders' rewards from this deal. In the year following the combination, dividend payments in the gas and electric industry of New York City, dominated primarily by the Consolidated system, amounted to \$43,600,000, representing an increase of 33 per cent over the previous year. During the same year, however, employment (as measured by wages in the industry) increased only 3 per cent. Again, in the following year, dividends were increased by an additional 25 per cent—almost \$11,000,000. The pay roll increased only 5 per cent. Thus, during the two years immediately following the merger of Brooklyn Edison with Consolidated

Gas, labor received the benefits of increased industry to the extent of 8 per cent, while stockholders reaped 58 per cent more dividends. At the same time the demand for power and gas increased only 10 per cent, while the public paid the same excessive rates. The files of the Public Service Commission reek with Edison scandal: \$70,000,000 in accumulated "unification savings" was to be passed on to the public in the form of reduced rates, according to a promise made by Mr. Sloan five years ago, but this has not been done; \$150,000,000 in fictitious capitalization is still awaiting investigation; a \$50,000,000 permanent annual dividend load paid by consumers is still to be justified; other and hardly less important matters need

How Stockholders Have Profited at the Expense of Labor and the Public Since Brooklyn Edison Combined with Consolidated Gas in 1928.

looking into. Fifteen years of struggle against this situation, during which the Public Service Commission has been besieged with protests, petitions, and complaints, have been virtually barren of results. In fact, the only concrete action taken resulted in a substantial increase in the rates paid by small consumers of electricity. It was announced that the company must have the right to charge a minimum rate as a necessary condition to a well-advertised plan of a "voluntary reduction" of \$5,500,000 offered by the Consolidated system in 1930. The reduced rates became effective, however, only when the consumer used more than a specified amount of electricity. Experience has proved that the "reduction" resulted in an increase for 50 per cent of the consumers who were forced to pay the new minimum rate; while the only buyers of electricity who profited by the reduction were the large users, industrial and otherwise.

Lest the consumer despair, it may be said that a recent report had it that the commission is opposed to further increases in rates except under "special conditions." Those who have their ears to the ground, however, are unable to report that rate reductions have even been rumored.

The Fifteenth of December

By IDA TREAT

Paris, December 15

IT is not a new discovery that no one likes to pay his debts, or that the grudge against the creditor is human and universal. But from that very instinctive attitude to the actual gesture of default—is a world, as the French say. In the case of the middle-class Frenchman, the default of December 15 implies nothing less than a revolution.

By two in the afternoon of December 13—date of the final session that was to decide the fate of the debt payments—the Chamber of Deputies was in a virtual state of siege, the center of a charmed circle swept clear of all traffic, with 6,000 police and Republican Guards massed on the circumference. Behind the rows of blue uniforms the heavy façade of the Palais Bourbon looked down on an empty square of wet asphalt occupied by a solitary brigadier astride a fretting horse that shied nervously when the automobile of a belated deputy swept over the bridge from the Concorde.

Along the iron fence by the entrance, rows of umbrellas sheltered hundreds of would-be spectators waiting for hours in the December drizzle, in the forlorn hope of squeezing their way into the already crowded galleries. In the discreet background of the rue de l'Université more mounted guards stood in reserve along a massive file of police cars and black Marias ready for emergencies. Along the boulevard St. Germain squads of patrolling *agents* hustled traffic and pedestrians into the side streets, urging the loiterers to "circulate" in no uncertain tones. As the afternoon wore on, the loitering groups grew denser. By five o'clock they had taken on the proportions of a mass demonstration, charged—as all Paris crowds are—with a tense something that needs only a spark to expand and explode. Casual conversations took on a sharper tone, grew heated and aggressive.

"*Bien sûr*, we won't pay. Nobody's going to pay. We've been dupes long enough." That from an orator in a derby hat, his back to a tree in a jostling, applauding circle.

"But what about England? England's let us down," someone called from the outskirts.

"Nothing new about that. What else did you expect?" That bit of sarcasm from the man in the derby provoked such a chorus of invective directed at the neighbors across the Channel that a timid little man in eyeglasses had to tug at the speaker's sleeve to get his attention.

"But, but if we don't pay, then nobody will pay us," the timid little man piped, his voice shrill with excitement.

The derby hat shook him off brutally. "Nobody *has* paid us. That's just the point," he stated gruffly.

"Oo-oo! Down with Hoover! Down with the debts! Down with *all* the debts!" shouted the crowd.

"Socialists!" hissed the little man, "Communists!" And he pushed his way out of the circle.

"Circulez. Circulez." A wedge of blue dug its way into the mass. The crowd eddied but held its ground. On the terrace of a corner cafe a big American brandished a Paris *Herald* over the heads of a row of gesticulating Frenchmen. In the hubbub it was hard to make out whether he was aggressor or aggressed.

The crowd thickened. From every street it poured into the boulevard. A middle-class crowd—employees, functionaries, *jeunesse patriote*.

"A bas les dettes! A bas Herriot! Vive la France!"

From St. Germain, hats on one ear and swinging their heavy canes, glad of the chance to step from political oblivion into the limelight, marched the ranks of *l'Action Française*. At the same moment a massed force of police reserves surged forward.

"Look out for the cops!" A band of small boys scrambled to shelter in the nearest doorway as the storm broke. Fists, canes, and clubs. A crash of glass in the windows of a street car, blocked in the crowd, fell to splinters. A louder crash—the iron tree-guards, deadly weapons of all Paris street fights, wrenched from their sockets, banged to the pavement. Then came a lull. The crowd wavered and broke, to form again a hundred yards away. A row of police cars, packed with noisy demonstrators, moved off to the police station; a few damaged heads found first aid in a pharmacy.

"A demonstration *pour la forme*," a man in a worker's cap remarked ironically. "A *bagarre* in gloves, so to speak. If you ever saw a real one you'd know the difference."

But still the crowd lingered, surging for hours about the Palais Bourbon, held in check by the police, shouting itself hoarse, while thousands of feet stamped the rhythm: "We won't pay. We won't pay. Down with the debts!"

Behind the façade of the House-Without-Windows it is as if the shouts from without had penetrated the sound-proof walls—a discreet echo of the street. In the lobby a solemn delegation of veterans, their chests hung with medals, stand ready with their resolution: no payment under any conditions. In the airless hemicycle, no hand-to-hand fighting but plenty of vigorous invective. The Right, solidly aggressive; the Radicals, splitting; the Socialists against the Radicals; and high to the left the group of Communists dropping judicious oil drops into the flame.

Herriot in the tribune—a heavy man, beads of sweat on his forehead, his features sagging with fatigue. Beaten in advance he maintains his losing fight for the inviolability of contracts, his defense of "what should be the most precious of all—the signature of France."

"What a man, what a heart!" murmurs my neighbor in the gallery where the public sits tense with excitement, like spectators at a match. His next neighbor shrugs his shoulders. This is no time for sentimental effusions. What interests him more is his personal beefsteak. He quotes in an undertone Marin's statement to the effect that France's default will cost the American taxpayer only thirty-two cents; whereas if France pays, the French taxpayer's pocket-book will be twenty dollars lighter. Those are figures that talk.

Down on the floor an approving murmur greets the Premier's eloquence. Applause not for what he says but for the way he says it. Even the Socialists are moved. But admiration for the speaker—a very Latin trait—in no way implies a change of conviction, as the vote proves—402 against

187. The Cabinet and the debt payment have crashed together. All victory to the man in the street.

The man in the street is elated, even a bit tipsy, to tell the truth, at his success. You owe money and you don't pay. So incredibly easy. But none the less it is a revolution. That is at bottom what bothers the French petit bourgeois and troubles his joy. To begin with, he has an ingrained horror of debt. "I don't owe a sou to anyone," he states proudly. If by chance he does—such accidents will happen—he is characteristically as scrupulous in his payments as he is pitiless toward his personal debtors. A matter of everyday morals; otherwise where would society be?

Now, in his heart of hearts, he is worried. There is somehow a disturbing discrepancy between his attitude toward his own affairs and his attitude toward those of his government. Of course, in the matter of the American debt, he feels that he has ample justification. He has even a convenient scapegoat—Hoover and the moratorium. "If Germany doesn't pay, how can the Americans expect us to?" (His financial policy still clings firmly to the threadbare "L'Allemagne paiera.") Transferred to his private life, however, that argument seems distinctly non-waterproof.

"If I tell my creditors I can't pay because the man next door doesn't pay me, it doesn't help matters," says the man in the Métro. The next step—he knows it—would be a visit from the *huissier*. Is the situation altered because the

United States has no all-powerful *huissier* to follow up defaulting debtors? A knotty question. Perhaps the best solution would be to take seriously the sarcasms of La Fouchardière in this morning's *Œuvre*. "France is not the French. . . . A government is a special providence that thinks and spends (*pense et dépense*) for its citizens," who have only to pay or march as the case may be. Relations between governments have no analogy with relations between individuals. As the case of war proves.

The middle-class Frenchman feels uncomfortable. The broken contract, the *chiffon de papier*, sticks in his throat. Then, too, there may be consequences. What will happen next? he asks uneasily. Will it mean loss of credit, the fall of the franc? Inflation? The word strikes terror to the heart of the petty employee, but the manufacturer thinks with a certain complacency that that solution might help him shoulder off some of his personal debts at small cost.

But these are all problems for tomorrow. Today the tension is relaxed. Something springlike and irresponsible floats in the Paris air. Whatever his inner apprehensions, the average Frenchman is jubilant at the gesture of his government. It appeals to his Gallic sense of temerity. "Think of it," says the man in the corner cafe, "last Fourth of July our Ministry of Finance put out the American colors. Symbolic, wasn't it? Now times have changed. This is our Independence Day—if I had my way, every house in Paris would hang out the tricolor."

Congress Studies Relief

By PAUL Y. ANDERSON

Washington January 7

THIS Congress is rapidly succumbing to a mood of desperation. Every incoming mail is bursting with heartrending appeals for work or relief. Three days ago a once prosperous citizen who had lost home and business sat in the office of a Senator whom he has known for years and calmly disclosed his plan to end his life unless he found a job before the end of the month. Despite all the shallow wisecracks about the selfishness and insensibility of Congressmen, the strain is telling. That something must be done, and done quickly, is the universal sentiment, but concerning what can be done to avert complete disaster there is no union of minds. Restoration of the purchasing power of silver to enable other nations to buy our products is the demand of Wheeler of Montana and others. Wagner of New York reiterates that the only way to make a dent in the colossal army of unemployed is by the inauguration of a gigantic program of public and semi-public construction. In tones of mounting authority Borah repeats that the world is suffocating under its burden of armaments. The stricken farmer grasps frantically at the domestic-allotment plan, although some of his best friends warn him that it will only aggravate his plight. Through all this fear and confusion runs a steady current of bitter malediction against the man whose persistent procrastination and pollyanna prophecies of "prosperity around the corner" are held responsible for the extremities to which the country has drifted. Two years ago, or even a year ago, they say, the drift could have

been arrested; now it may be too late. Out of this willingness to try something—or anything—is growing a very pronounced sentiment for currency inflation, and nobody should be surprised if a measure of that kind passes both houses before March 4. Whether it is likely to provide for additional coinage of silver, new currency issues to be based on government securities, or the simple use of the printing-press, neither I nor anyone else knows at this writing, although a combination of the first two would seem a likely surmise. The important fact is that Congress is rapidly approaching the conclusion that what this country needs is more money in circulation. I suspect there are persons who will concur in it.

■ • ■ • ■

THAT Congress does not exaggerate the desperateness of conditions will be recognized by anyone who has studied the testimony before the Senate Manufactures Committee during hearings on the new La Follette-Costigan bill. Members were told that in Chicago 800,000 workers, half the employable population of the city, are idle, and that approximately two-fifths of the employable population of Illinois are unemployed. They were told that 250,000 families in New York State are receiving public relief and that another 100,000 will be added to the rolls before the end of winter. Samuel Goldsmith, director of the Jewish Charities in Chicago, testified that all efforts to administer relief on the basis of "maintaining pride or self-respect" have

been abandoned, and present endeavors are limited strictly to the prevention of acute physical suffering and death. Witnesses were unanimous in declaring that local taxing agencies have reached the limit of their resources, and that the federal government, with its boundless powers, must come to the rescue if the situation is to be saved. For example, the city of Chicago is five months in arrears on the payment of city employees, owing them a total of \$16,000,000. The Board of Education of Cook County owes the teachers five months' salary and other employees seven months' wages, a total of \$22,000,000. Cook County is five and a half months behind on the pay of county employees, owing them \$5,000,000. Contributions to private relief agencies are falling off steadily, and these are the agencies to which Herbert Hoover for two long years stubbornly referred every supplicant for federal aid! Is it any wonder that the latest of his own commissions to report—that on Recent Social Trends—voices a solemn warning of the danger of revolution? The marvel is that the revolution is not already here.

■ ■ ■ ■ ■

MEANTIME, the Reconstruction Finance Corporation, which was Hoover's cure-all for the depression, instead of relieving the situation has succeeded in getting up to its ears in scandal, and faces the threat of a prompt and sweeping investigation by Congress. More than a year ago I wrote in this place that an institution which undertook secretly to lend billions in public funds could avoid scandal only by a miracle. This was common sense, not prophecy. But Mills and Hoover insisted on their secrecy clause—and what is the result? We learn that a loan of \$14,000,000 was authorized to the Cleveland bank of which Joseph R. Nutt, treasurer of the Republican National Committee, was chairman of the board; that a loan of \$12,000,000 was authorized to the Cleveland bank of which Atlee Pomerene, president of the R. F. C., is a director; that a loan of \$13,000,000 was authorized to the Detroit bank of which Roy Chapin, now Secretary of Commerce, is a director; and that \$7,000,000 was apportioned to the Globe and Rutgers Fire Insurance Company, headed by the barrel-hearted E. C. Jameson, who will be recalled as the noble philanthropist who furnished Bishop Cannon with \$65,000 with which to carry Virginia for Hoover in 1928. The country already knew about the \$90,000,000 loan authorized to Charlie Dawes's bank in Chicago a few days after that great patriot resigned from the board of the R. F. C., announcing that his work was finished and the country had been saved. The whole ghastly tale, including the incredible subterfuges employed by Hoover to deceive the country about what was happening, is brilliantly told by John T. Flynn in the January number of *Harpers*—and no one should miss it. Better than anything else it reveals the brutal favoritism and the unparalleled insincerity which have characterized this Administration. Help the rich and lie to the destitute—such has been its philosophy and its rule of conduct.

■ ■ ■ ■ ■

IF Walter Lippmann and the other ivory-tower dwellers retained any doubts concerning the temper of Congress toward our defaulting debtors, I trust they finally were disillusioned by the Senate discussion of the subject this week. Not since the kidnaping of the Lindbergh baby has

either house exhibited such vehemence or unanimity of opinion on a given subject. The mildest sentiment to be heard was that expressed by Borah when he declared that until the nations of Europe agree upon a program of peaceful cooperation, *including drastic reduction of armaments*, "war debts will be a closed subject." Ranging upward in the scale of bitterness was the assertion of Reed of Pennsylvania that we should refuse to negotiate with any defaulting nation; Joe Robinson's pledge to vote against the ratification of any agreement which might be reached with a defaulter; Gore's envenomed inquiry as to what agreement could possibly be reached with a nation which dishonors its signature; and Hiram Johnson's dramatic peroration: "Ye who advocate cancelation of these debts—beware! If that day comes to pass I warn you that the overburdened American farmer and the jobless American worker will find a way to hurdle or break down the sanctity of private contracts, and seize for himself the same indulgence which his government has extended to the governments of Europe." If anyone supposes that this threat to repudiate private debts in the event our government forgives the war debts is a hollow one, he is lacking in information. The air is full of such talk. And why not? Sixteen days after France defaulted on her miserable \$19,000,000 instalment to us, Paris announced that work would proceed immediately on a new battle cruiser which will cost \$24,000,000. At almost the same time the Finance Committee of the French Senate approved a loan of \$14,000,000 to Austria. Shove that news under the nose of an Iowa farmer who is about to be sold out by the sheriff, and then try to talk to him about "the difficulties of transfer"! No, on second thought, don't do anything of the kind. The only thing to be said for the French is that they have some cause to feel they have been betrayed. What was said between Hoover and Laval at the White House I do not know, but I know this: that when Laval talked to Borah that evening in Stimson's home he was perfectly confident that France needed only to revise reparations payments in order to obtain a revision of the French debt settlement with the United States. However, the French are reputed to be realists. As such, surely they must have known that debt revision rested with Congress—and surely they must have known Hoover. No, the "demagogues" seem to have it. We shall do something for our British cousins; we might even lend a helping hand to Mussolini. But thus far and no farther.

■ ■ ■ ■ ■

IT is fitting to record that one of the last acts of the Hoover-Wilbur regime was an attempt to deflate public education. Without such an attempt the public careers of these two great humanitarians would have been incomplete. You will recall their attack on the Children's Bureau. Having failed to undermine this agency for child health, it was only logical that they should undertake to sabotage child education. Accordingly, in the name of the President, Wilbur assembled a conference of hand-picked delegates here to discuss the cost of public education. And what were the topics emphasized? That the number of children in the public schools is increasing, while the number of children (under fourteen years of age) employed in industry is decreasing; that the average yearly wage of teachers has now reached the stupendous figure of \$1,430; that the possibility

of charging tuition fees for high-school courses has not been fully explored; and that money might be saved by abolishing the kindergartens and shortening the length of the school year. As a matter of fact, the law of diminishing tax returns already had pioneered the way for those kindly men, Herbert Hoover and Ray Lyman Wilbur. In four States more than

half the rural schools have been closed. Sixty cities have abolished night schools, and 145 have abolished kindergartens. It would appear in this particular respect that the cruel law of nature requires no official assistance. But we must remember that "economy" is a popular word right now, and that poor Hoover imagines he is running for reelection.

Sales Tax or Income Tax?

By ERNEST MINOR PATTERSON

LET no one fancy that fiscal problems this year are simple for our lawmakers. Government services—federal, State, and local—take an important fraction of the national income. A few years ago this fraction was estimated to be about 10 per cent. The decline in the price level and a slackening of economic activity have reduced the national income by perhaps half. Public expenditures have not declined correspondingly; in fact, some lines of government activity have grown rather than diminished. Accordingly, taxes exact a larger percentage of the lowered income. What was a mild problem before is an acute one now. If under such circumstances our legislators become excited and do strange things, there is no real occasion for surprise.

One rather simple fact about taxation is often overlooked. No matter what the nature of the tax imposed, its purpose—and its effect, if successful in operation—is to take from the taxpayer a part of his income. In this sense every tax is an income tax with differences merely in the ways in which incomes are measured and the taxes applied. Another thing to be remembered is that most of the protests against increases in taxation are entirely futile. Not only will taxes continue in the long run to rise in absolute amounts, but they will also increase as a percentage of the national income. Cooperative effort is more and more displacing individual effort. Some of this cooperation is and will be private, but with the growth in the size and complexity of our problems government activities will increase.

Certain reductions in public expenditures may properly be made. Certain old government functions may be abandoned. Some wastes may be stopped, a bit of graft and inefficiency may be eliminated, the decline in the price level may lower some costs of operation. Most inquiries show possible savings without loss of efficiency, but the amounts involved are usually minor as compared with the growing demands for larger outlays. Nothing more than a slight retardation in the upward trend can be hoped for, and most of the proposed economies can be put into effect only after years of delay and in many cases only after constitutional changes.

In fact, a protest should be recorded against the clamor of those who are indiscriminately demanding governmental economies. There are, of course, many public services that are being poorly performed and even many that are no longer needed. Elimination of old ways of doing work, such as copying records by long hand instead of by the photostatic process, would mean large savings. Federal commissions and bureaus placed to suit immediate convenience could be rearranged so as to permit important economies. Our methods of aiding war veterans have been reckless and wasteful.

That many economies are highly desirable is certain, and every effort should be made to effect them, although it is unfortunate that public support in such attempts can be secured only in times like the present, when each individual displaced, even though he is not needed for the efficient conduct of government, may become an addition to the ranks of the unemployed and a claimant for relief. At such times, also, any diminution in government purchases is just as serious for business as a corresponding reduction in private buying.

Both economic and political difficulties are to be encountered in effecting reductions, and the amount of desirable economies that may be obtained will probably be slight. The present demand for savings is apt not to touch the worst abuses, since they are deeply entrenched and have strong political support. In many cases savings can be made only after constitutional changes involving harassing delays. Instead of satisfactory economies we shall probably see the elimination of a few of the newer and more friendless services, regardless of their social importance, and a reduction in the pay of such valuable public servants as the policemen and firemen.

All this means that the problem is primarily one of raising revenues, not of effecting economies. It can best be approached by considering first the local governments, where tax difficulties are most serious. Of necessity these local authorities rely chiefly upon real-estate taxation supplemented by a multitude of fees and licenses. They can locate the owner of real estate and measure his capacity by placing a value upon his property which is tangible and cannot be removed or concealed. To this value a tax rate is applied and in a very crude fashion the owner's income is reached. But in such times as these many owners of real estate have little or no income, and assessed values decline. To increase rates of taxation is useless. Moreover, local governments are restricted in their borrowing power. The net result is that they are hard pressed and display a growing tendency to demand aid from State or national sources.

State governments are less hampered. They have fewer legal restrictions upon their borrowing power, but in many cases their credit is weakened by their existing load of debt and their declining revenues. More sources of revenue are available to them because of their broader base, but unfortunately many States, Pennsylvania, for example, have antiquated and complicated tax systems which cannot readily be adapted to the present emergency. Thus various States, too, are turning to the federal government for relief.

Fortunately the problem in Washington, though acute, is less serious than with the State and local governments. Federal-government credit is good and more reliable sources

of revenue are available. It is to be expected that a multitude of proposals will appear, ranging from the weird and impossible to those that can effectively be employed if agreement on them can be obtained. But, fortunately or unfortunately, one cannot analyze the problem and propose solutions with reference only to economic considerations. Political and psychological skill are needed and perhaps also the services of the psychiatrist. A federal sales tax of some sort will certainly be among the proposals urged. In its favor it will be argued that it will yield a considerable amount of revenue, is easy to collect, hard to evade, and not acutely noticed by the taxpayer.

Nevertheless, this form of taxation ought not to be employed by the federal government, for three reasons. The first is that it is a regressive tax. We shall do well not to abandon unnecessarily the principle that taxes should be levied as nearly as possible in accordance with ability to pay, and this principle can be applied most definitely and equitably through income and inheritance taxes with highly progressive rates. If the sales tax is to yield any important amount of revenue it must be applied to articles of general consumption, that is, to necessities. The more exceptions made, the less general is the tax and the lower the yield. The poor man, of course, pays a higher percentage of his income for such articles than does the rich. This is serious enough, but becomes worse when the second objection is presented. The sales tax tends to restrict rather than to encourage business. No one can predict in advance its real incidence, but we may at least say this. If it is for the most part shifted to the consumer, it adds to the woes of the common man, who is threatened with many other new burdens, including an estimated \$750,000,000 for the aid of agriculture under the proposed domestic-allotment plan. In so far as the sales tax is not shifted to the consumer but is finally paid by the manufacturer, his costs are increased and business is further restricted. And this is at a time when legitimate business needs all the encouragement that can be given it, rather than more restrictions to stifle it. We are already trying to hoist ourselves by the bootstraps by means of other devices, such as by pushing exports and debt collections while restricting imports. To these devices for strangling business a federal sales tax should not be added. The third objection lies in the fact that many States have already imposed a sales tax and others are considering it. New York, for instance, may pass such a measure to raise \$53,000,000. The State sales tax has all the objectionable features just discussed. To impose a federal sales tax on top of it would be most unfortunate.

What is the alternative? Nothing that is magical, nothing from which defects are entirely absent. There are two sources of public funds, however, that are superior to the sales tax. These are the income and inheritance taxes. The rates now imposed are about equal to those of 1922. They may quite properly be raised to the 1918 levels. If it be argued that such rates will take too many dollars from certain taxpayers, attention should be concentrated upon what such persons will have left after payments are made rather than upon what they pay. If there are few or no incomes remaining in the higher brackets, the answer is to fix the rates in the law to reach such large incomes as may exist and to meet the proper demand of the man of small or moderate income that he shall not be asked to shoulder the burden without at least an attempt to reach the millionaires.

How much can be obtained from higher income and

estate taxes is not easy to estimate, even by experts in the Treasury Department. Nevertheless, the preliminary report giving statistics of income for 1931 is just available and from it the following data are taken for the years 1918 and 1931:

	1918	1931
Number of individual returns.....	4,425,114.....	3,116,317
Net income in individual returns. \$15,924,639,355....		\$13,231,352,042
Tax in individual returns	1,127,721,835.....	241,282,875

In 1931 the number of individual returns was 70 per cent of that in 1918. The net income reported was 83 per cent of that in the earlier year, but the taxes in 1931 were only \$241,282,875, or 21 per cent of the corresponding figure for 1918. If the same rates as in 1918 had been applicable throughout in 1931, the yield might perhaps have been 83 per cent of the 1918 yield, or over \$936,000,000.

This conclusion is a crude one and may not be even approximately true for 1932, a year in which incomes were presumably much less than in 1931. However, it is suggestive. Rates in 1918 included a normal tax of 6 per cent and surtaxes to a maximum of 65 per cent on incomes of \$1,000,000 and over. Rates in the Revenue Act of 1932 include normal rates of 4 per cent and 8 per cent and surtaxes to a maximum of 55 per cent on incomes of \$1,000,000 and over. For years we have been told that high rates mean a low yield, although the returns and the practice in Europe regularly show the opposite and our own common sense reinforces this evidence.

One special argument against high income and inheritance taxes deserves special reply. It is asserted by many that such taxes drive wealthy persons to invest in tax-exempt securities. This allegation is much exaggerated and to the best of the writer's knowledge has never been supported by any general statistical evidence. All available data show quite the contrary to be true. But even if the temptation exists, the volume of new State and local bond issues is now so small as to be unimportant and the only large volume of new issues is in securities of the federal government. Any great rush for these will lower the yield so much as to be a deterrent; and we should not entirely forget the fundamental argument for tax-exempt issues—the exempt feature lowers the interest rate that must be paid by the government. As soon as possible issues of such securities should be discontinued, but in the meantime their importance appears to be relatively slight.

Of course the budget will not be balanced. Not only will expenditures properly chargeable to capital account be covered by loans, but so will many that under strict accounting methods should be charged to income. Fortunately the credit of the federal government is good. Short-term issues are being floated at amazingly low rates. Long-term issues must give a higher yield but the rates that are offered are by no means excessive. The federal debt will grow until we pull out of the slump. When recovery comes we should reduce it even more rapidly than we did from 1920 to 1930. During that period we retired the debt at what seemed an astonishingly high rate of nearly a billion dollars a year. Perhaps political considerations would have blocked an effort at more rapid reduction, but our present difficulties certainly make clear the necessity for even more strenuous efforts in that direction in future years.

Ernest Hemingway

An American Byron

By CLIFTON FADIMAN

THERE is always a lost generation; and there is always a book in which it perennially finds itself. One finds itself in "The Sorrows of Werther," another in "Fathers and Sons," still another in "Marius the Epicurean" and "The Picture of Dorian Gray." These books, by a technique of enlargement, clarify the dissatisfaction of a generation that falls in love with the sensation of believing itself lost. They are popular far beyond their deserts because they make lostness picturesque, beautiful, or dramatic. It is better to die like Werther than to live like a Geheimgat. Lostness is promoted from mere bewilderment to the plane of a program. A transformation formula, applied to disintegrating moral values, yields philosophies of suicide, nihilism, or aestheticism.

Ignoring for the moment his purely literary qualities, I would suggest that Ernest Hemingway and his heroes stand in somewhat the same relation to our time as Dorian Gray and the young Goethe and Des Esseintes and particularly, as we shall note, Lord Byron did to theirs. It seems clear that the brilliance of his writing accounts only in part for Hemingway's success. Had he written half as well, but in the same manner and about the same subjects, his dominance would have been as notable. The fact is that he has triumphed more as hero than as artist. Hemingway is a man born in his due time, embodying to perfection the mute longings and confused ideals of a large segment of his own and the succeeding generation. He is the unhappy warrior that many men would like to be. About him has sprung up a real contemporary hero-myth. Do we not see young men adopting the Hemingway attitude as others do the Noel Coward attitude, or as a certain type of young woman, in a desperate effort to prevent herself from becoming a young lady, does the Dorothy Parker attitude?

Why is Hemingway news? Though he heartily despises newspaper publicity (being, indeed, the very Greta Garbo of novelists), his name is more often and more heatedly mentioned in literary circles than that of any other contemporary American writer. It is because this young Lochinvar out of the Middle West is a hero. It is because he apparently creates a new tradition for those who have rejected all the old ones. He provides a modern and more violent romanticism to replace the sickly and worn-out romanticism of the nineteenth century. He takes a spiritual malaise and translates it into something vivid, vital, even splendid, giving to bitterness an exuberance that joy itself cannot match.

The generation for which Hemingway so ably speaks has been often described. No one has characterized it with greater shrewdness or warmer sympathy than Malcolm Cowley. To his analysis little can be added, except perhaps in one respect. The generation that lost itself in the Argonne or among the hassocks of Gertrude Stein's drawing-room was not the only one. A part, very probably the major part, of the succeeding generation is equally lost today, in the crisis. Hemingway's present readers, I would hazard a guess, are

largely under thirty. Though to this group the war can mean little more than something in a book, they feel as vitally maimed as the hero of "The Sun Also Rises." They are the defeated and the betrayed, so disillusioned as to have no desire to attack their betrayers. They are too deeply wounded for the easy salve of sophistication. The values with which they have been inoculated they discover to be false. The culture which they have been instructed to flaunt as the badge of their superiority proves hollow. Since most of the grand words have collapsed, they throw them all overboard. They become rebels who smile at reform and offer a bitter shrug to revolution.

Where are these young people to place the animal faith deeply grounded beneath all their tragic rejections? In historical crises, when the flesh of the dominant system has withered away and laid bare the bones of chaos, the superior individual either makes common cause with his fellows in some attempt at a finer order or, as in the novels of Hemingway, retreats upon his instincts. He abandons, as Hemingway puts it, all efforts "to save the world." He cultivates to the point of fetishism those primal emotions which cannot betray him, as his hands and feet cannot betray him. Among these emotions may well be the fear of death and the delight in it, the stoic joy of battle and the pleasurable acceptance of the flesh and the muscles. In the last analysis he worships his reflexes, tending to exalt any activity which the act of introspection cannot corrode. He reverts, however subtly, to the primitive and even the brutal, because on these levels he finds no echo of the culture which has cheated him. He attempts to cling to the hands of the clock, to become a non-political animal, an individualist contemning all creeds, individualism included.

Having forsworn both his national and his class roots, he is at home in all countries. He puts his faith in simple things rather than in complicated words and shakes off all phrases that smack of the metaphysical or the moral. He seeks the companionship and tries to share the experiences of booze-fighters, killers, athletes, and sportsmen, men who lead careers of physical sensation, superficially insulated from the main current of the life of their time. He may even cultivate a special interest in the reactions of animals, creatures unspoiled by the general infection of the world. Above all, he looks for a hero, one who does all this with efficiency and elegance, one who presents a convincing rationale of his behavior and transmutes it into the contemporary eternity of art.

Hemingway is the hero thrown up by the American ferment, as, in a different way and on a profounder level, D. H. Lawrence was thrown up by the industrial ferment of England. Hemingway is the modern primitive, who makes as fresh a start with the emotions as his forefathers did with the soil. He is the frontiersman of the loins, heart, and biceps, the stoic Red Indian minus traditions, scornful of the past, bare of sentimentality, catching the muscular life in a

plain and muscular prose. He is the hero who distrusts heroism; he is the prophet of those who are without faith.

If we compare Hemingway with a great poet who died a little over a century ago, we get an interesting insight into the manner in which similar epochs evoke similar dominating personalities. In the imagination of young Europeans, Byron occupied a place startlingly analogous to Hemingway's position today. To call the author of "Death in the Afternoon" the American Byron is a bold gesture for anyone who bears respectfully in mind Mr. Hemingway's ceremonial *espada*, not to speak of that matricidal rifle which must have dowered so many ducks with the gift of death. However, let us chance it, at the same time making clear that the comparison is merely between the impacts the two personalities have made upon their times. I am in no way suggesting that there is any analogy between the works the two writers have produced.

Both Byron and Hemingway awake to find themselves famous at twenty-five. Both cut themselves off at an early age from their native lands. Byron adopts Greece and Italy; Hemingway celebrates Spain. In Greece Byron finds the fatal theater in which to stage his worship of liberty. In Spain Hemingway discovers the shrine for his cult of violence. Both are attracted by the glory of military life, and meet with disillusion. Both are highly prepossessing examples of maleness and both exploit an athleticism which wins for them—as much to Byron's satisfaction as to Hemingway's disgust—a matinee-idol popularity among literary young ladies. Both are attracted to wild and romantic places—Byron to the Swiss mountains and the Greek coast, Hemingway to Montana and the Ozarks.

But these Plutarchian parallels are irrelevant beside the profounder similarity which history itself points out for us. Byron is a product of the post-Napoleonic period. His defiant romanticism focuses the turmoil, the disillusion, and the bitterness which flooded Europe after her first great imperialist civil war. Hemingway is no less clearly a product of the second breakdown, and the hard, tense quality of his romanticism marks the difference in spiritual tone between 1825 and 1925. But the two are distinctly post-war men, typical of a period of violently shifting values. Driven by the surrounding chaos in upon their own sensations, they inevitably charge their work with this very chaos from which they seek to escape. Byron, writhing under the spell of the Judeo-Christian myth, prefers to think himself "damned," whereas the Manfred pose is impossible to the more sophisticated Hemingway. But at the heart of both lies a tragic sense of defeat, vitalized by a burning rebellion.

This rebellion they express in an open defiance of conventional morality—Byron with the grandiose gesture of the aristocrat, Hemingway with the casualness of the hard-boiled reporter. In controversy both employ a brilliantly acidulous style, and each, using the language of his day, goes as far as postal regulations will permit. They bear the hallmark of many outstanding modern romantics—a fascinated concern with the more outré aspects of sex. Byron's florid incest-obsession, though partly rooted in his biography, is as much a reflection of current literary fashion as Hemingway's bitter-comic preoccupation with homosexuality, nymphomania, and impotence. Both laugh off their lostness with a certain wild *morbidezza*. Byron drinks from skulls. Hemingway enjoys

a nice cold riot in bloody hospital scenes and Peninsular testicle feasts.

The ethical ideals of the two, apparently dissimilar, are actually very much alike, not only in their picturesqueness but in their internal contradictions. Byron is torn between a very real love for the grand words of his epoch—liberty, freedom, the chainless mind—and Don Juan's aristocratic cynicism which negates them all. In Hemingway a not dissimilar opposition exists. In "A Farewell to Arms" he writes: "Abstract words such as glory, honor, courage, or hallow were obscene beside the concrete names of villages, the numbers of roads, the names of rivers, the numbers of regiments, and the dates." One can see part of his nature—the hard-boiled half—spurning the grand words which have turned out to be deceivers, while another part—the *panache* half—seeks desperately for a new set of phrases, finding them perhaps in the Spanish *pundonor*, in the super-romantic accent he gives to the death-concept, and in the very vocabulary of disillusion itself. Cynicism and mysticism frequently combine in personalities we think of as "modern."

In the value hierarchy of Hemingway and Byron passion, action, and violence reign supreme. Both exalt sport, though with Byron this is owing partly to his clubfoot and partly to his Tory, country-gentleman tradition. Neither has much capacity for logical reflection, and Goethe's oft-quoted remark about Byron's thinking powers may be applied with some justice to Hemingway. This lack of interest in rational analysis, however, is responsible for a great deal of the drive, energy, and emotional power in the work of the two writers. Both admire the noble, the chivalric individual. ("Nothing ever happens to the brave.") This admiration is founded on the notion of the superior virtues of a trained caste—the samurai feeling. Byron finds this ideal in his cloudy Oriental princes, Hemingway in his matadors. There is a very real cousinship between Manolo, the undefeated bull-fighter, and Byron's corsairs and *giaours*. Worship of a highly specialized, arrogant caste is natural to the man of strong and positive emotion who, whether an early nineteenth-century English lord or a twentieth-century Middle Westerner, can find nothing to admire in the banality of bourgeois culture.

Elsewhere I hope to devote some pages to a discussion of Hemingway's books proper, and to indicate why, as a purely literary figure, he must be considered one of the most distinguished living American writers. This brief note has tried simply to bring out that side of him which we might describe as his social function, his significance as a model of behavior. Like Byron, he expresses the aspirations of that portion of his generation which genuinely feels itself lost and is eager to admire a way of life which combines lostness with courage and color. Both Byron and Hemingway have an unforced faculty for creating an aura of violence, waywardness, and independence which dazzles the imagination of those among their readers who suffer, in Charles Du Bos's admirable phrase, from "the need of fatality." This need of fatality—the courting of violence, darkness, and even death—is a kind of splendid, often very beautiful, disease of the imagination noticeable during periods of social decay. It is frequently the most powerful writers of an epoch—Robinson Jeffers is an example—who are afflicted with it; and among them must surely be named Ernest Hemingway.

In the Driftway

THE Balearic Islands, until a few years ago, were three beautiful, unobtrusive patches of land lying quietly on the sunny blue expanse of the Mediterranean far off the track of the tourist army that laid waste Europe every year. For the most part only Spaniards from the mainland went vacationing in Mallorca, where winding carriage roads led up to miniature mountains and down to a warm sea, where a thrifty devotee of idleness could live in flower-scented air and simple ease for a dollar a day, if he cared to seek out one of the more remote and primitive sea villages.

* * * * *

WHAT inevitably happened to Mallorca, Minorca, and Ibiza is briefly and pointedly related in a communication from Madrid that breathes a sad disgust.

The propaganda of the tourist agencies [writes José M. Estruga] has certainly borne its fruit in the beautiful Balearic Islands, whose inhabitants until now had chosen to live peacefully and cheaply. It was this very cheapness, as well as the enchanting scenery, which attracted the hordes of American, English, and German tourists. A good many went there to stay. As a result, prices have become so high that they are quite out of reach for the Islanders.

Two English and one German newspaper are being published in Palma, with the usual society and gossip columns. People promenade in the streets in the scantiest of beach attire, to the amazement of the natives. Bars, cocktail houses, tea shops, English and American boarding-houses, and English schools have sprung up overnight. A new American-style hotel is being planned to satisfy the taste of millionaires. A club is even being organized, where only English-speaking people will be admitted. The Spaniards in the Islands are looked down upon as aborigines. We are only waiting now for American "hot-dog" and peanut stands to make their appearance.

* * * * *

IT is a sad story, but not a new one. The interesting thing is that the inhabitants of the Balearics, being a proud and unobsequious race, do not accept their degradation. Ordinarily, the natives of a tourist-ridden country are able to assuage their resentment against the encroaching foreigner by raising prices and making disparaging remarks in a language which the visitors suspect but do not understand. But the Mallorcans, from what the Drifter has heard, are in open revolt against the foreign invader, and have even indicated that they prefer his room to his company. Not long ago they spoke their minds vigorously against the scanty costumes, the cocktails, and other tourist importations that have embarrassed the hitherto sedate streets of Palma; more recently the Mallorcan government decided to exact a license fee from foreign owners of automobiles that would make it extremely impractical to drive a car along the island's quiet roads.

* * * * *

THE Drifter's sympathies are thoroughly aroused. He only wishes that he were not a foreigner, so that he might be present on the day the citizens of Mallorca drive the tourists into the sea. He believes firmly in the rights of

small nations to throw off the foreign yoke. But knowing the tenacity of tourists, he foresees no such happy ending. He is afraid that the only way the Mallorcans will succeed in getting rid of their unwelcome visitors is to move away themselves.

THE DRIFTER

Correspondence

Tariffs and Revenues

TO THE EDITORS OF THE NATION:

Of course the present Congress will pay no attention, but the new Congress had better begin thinking of the fact that Uncle Sam wants more revenue. Well, a perfectly certain way to get a large increase of revenue is to reduce the tariff on most of the dutiable articles. The well-known fact that at present most of our imports are on the free list is conclusive proof that the duties are too high for revenue; they operate to freeze out trade and so prevent the collection of duties that would be owed on many articles if the rates were low enough to allow some trade.

Of course I have heard the argument that it is just the other way—that since we now import very few of the articles on which the law piles duties, it is proved that the duties have hardly any effect in keeping goods out. But this is one of those propositions that are simply intelligence tests. If a man believes that argument, he has not enough business sense to be competent to express an opinion on economic policy—not even though the American people have chosen him for the highest elective office in their gift, or though he has written a textbook on economics containing that argument.

STEVEN T. BYINGTON

Ballard Vale, Mass., December 27

"Emily Dickinson Face to Face"

TO THE EDITORS OF THE NATION:

The controversy over Emily Dickinson has come to the front again with the latest attempts of would-be biographers to get at the identity of the famous poet's lover, who inspired some of her finest writing. So far, guesses, rumors, examinations of gravestones, and comparisons of dates have failed to produce anything satisfactory. The near relative and inheritor of Emily's effects refuses to be bullied into revealing her aunt's secrets.

But what, after all, has the man to do with it? To establish the fact that he was an attractive and eloquent divine, pastor of a given congregation in the eighteen fifties, who captured the affections of a young disciple would appear to be the only possible reward of a painstaking search. There were countless clergymen of that type in the Victorian period, followed by adoring females, unable to dramatize their emotions as successfully as Emily, but probably equally desperate in the grip of hopeless passion for a married man. It is not unlikely either that ministers themselves were sometimes hard put to resist temptation. If the long-sought-for personality were pinned down and his identity revealed to the satisfaction of the literary searching parties, we can imagine ensuing disappointment that so gifted a being as Emily Dickinson had made him the subject of her superb outpourings. Even when scientific integrity has done its utmost, there is no accounting for tastes. Would it not be far better to leave the gentleman still obscured and inferentially glorified by mystery?

Lewis Gannett, who has become involved in the fray,

suggests that the mass of material now held by relatives be turned over to outsiders for a fresh inspection, comparison, and deduction. The prevailing mania for relegating investigations to a commission appears to have attacked him. It is to be undertaken in "fairness" to the person who particularly desired to avoid it during her lifetime and to prevent it after her death! The poet, he asserts with proprietary confidence, is today "more than a family possession; she and her love story are part of the nation's heritage." Very good; but her own evidences of the love story were destroyed by her special command, and only a very small minority of national heirs are demanding any more.

What the lovers of her poems desire is a closer acquaintance with Emily herself—her life and friendships, her interests, her occupations, and her family. The public still stands, with the Amherst community of a century ago, outside that hedge within which she intrenched herself. To know more intimately what went on behind its leafy impenetrability is the demand which Madame Bianchi has met in her new and charming book. It may not contribute much to history to disclose that a distinguished poet could bake gingerbread and "set sail in silks" to make village calls; but the intensity of the poet's girlish friendships, her attitude toward the religious limitations of the time, the stimulating masculine comradeships and correspondences which she kept up through her years of retirement until almost the end, have an importance which cannot be ignored. She will always invite, and baffle, analysis. Would a story of Emily Dickinson's Lover Face to Face clear up the mystery? In any event, it will probably remain a dream of the fact-gatherer.

RUTH HUNTINGTON SESSIONS

Northampton, Mass., January 3

The Federal Worker

TO THE EDITORS OF THE NATION:

My faith in *The Nation* as an exponent of the rights of the under-dog received something of a blow when I read the editorial Taxes or Economies? in the issue of December 21. I may as well confess that I am one of "a class protected at the expense of every other class," but my conception of my job evidently differs somewhat from yours. I feel that the compensation I receive for the services I render is quite in order, and I fail to see that I am in the least "supported by taxes on all the others."

You should know that in times of prosperity the federal employee's salary was not commensurate with that of the individual doing comparable work in private industry. Nevertheless, he paid just as much for rent, interest, taxes, light, gas, and telephone bills, as others. Now, you might be interested to learn that of the 700,000 federal employees, 17 per cent receive less than \$1,000 per annum, 37 per cent less than \$1,500 per annum, 57 per cent less than \$2,500 per annum, and 95 per cent less than \$3,000 per annum.

For illustration, suppose we consider the \$1,500 man. How much does he actually receive? First of all, 3½ per cent is deducted from his check for the retirement fund, which leaves him \$120.62 a month. Under President Hoover's furlough plan, effective July 1, 1932, one-eleventh of his basic salary is deducted, leaving \$109.26. Employees of the Department of Labor, in accordance with an administrative order which took effect January 1, must now take an additional five days' furlough each month. For our \$1,500 man this will mean a further monthly reduction of \$20.80, leaving him a net monthly income of \$88.46. While this represents a reduction of nearly 30 per cent in his basic salary of \$1,500, his loss is still somewhat smaller than the farmer's reported reduction of one-third of his income. How-

ever, when I lived on the farm we usually had a bin of potatoes and a fair supply of home-cured pork on hand. I am rather skeptical about the federal employee with his \$88.46 being able to keep a very extended supply of either.

San Francisco, December 28

EMERY SIMS

The Tampa Cases

TO THE EDITORS OF THE NATION:

The Tampa *Tribune* of December 7 devotes two full columns to telling its readers that "under the heading, Tampa's Reign of Terror, *The Nation* . . . published what purported to be a review of the riotous disturbance here in November, 1931, in which two police officers were wounded and for which fifteen persons, eight of them aliens and described by the State as Communists, were convicted." It admits that the article deals "with facts and conditions which were fully published in Tampa newspapers at the time" but charges that this is an "attempt to stir trouble by trying to make it appear that something that happened a year ago is happening now."

The story, which appeared in *The Nation* of December 6, was a factual account, which can be substantiated in every detail, of the way in which the Tampa authorities, the police, the federal immigration agent there, and the cigar manufacturers fought down and dissolved the Tampa Tobacco Workers Industrial Union, raided its treasury and membership files, threatened its members with deportation, bound all cigar workers to stringent and unfavorable working conditions, and sent fifteen people to jail for an aggregate term of fifty-three years on charges of criminal assault, but on evidence tending to prove only that the defendants were in the building outside of which the police officers were wounded. It is a case which involves fundamental issues of political and civil rights, and it is furthermore aggravated by the brutal treatment the prisoners have received and by the measures which have been taken to prevent their defense. The fact that these men and women were sentenced last February and not last week has nothing to do with the significance of the case.

It is plain even in the defense made by the *Tribune* that the official mind in Tampa does not see any injustice in the fact that these fifteen people were sentenced for criminal assault on evidence tending to prove that their political beliefs were unorthodox. The statement that "the red flag seized by the police . . . was put in as evidence, along with a number of banners which the State contended supported its charge of inciting to riot" is followed by another statement that the fifteen defendants were convicted "on two counts, the first charging assault with intent to commit murder in the first degree and the other charging riotous assault." The State made no charge of inciting a riot and did not try the defendants on the merit of its charges of criminal assault, but under a statute providing that all persons present at the scene of a riot who do not aid the police if asked to do so are responsible for whatever happens to a policeman in that riot; and the evidence even on this charge did not tend to prove whether or not the defendants were asked to help the police, but merely whether or not they were present and whether they were or were not "red," as "red" might be understood in Tampa.

Moreover, these men and women are in jail now, except for two who have gone insane as a result of their treatment; and the thousands of cigar workers who struck in protest when they were first jailed are still suffering from the effects of the lockout and injunction which followed that strike. The Tampa *Tribune* cannot refute my story by saying it is a year old. I challenge the *Tribune* to publish the records of the trial, and for good measure the records of the deportation hearings in-

volving cigar workers connected with the affair; and I challenge the Tampa authorities to allow investigators and physicians to see its jails and interview and examine the fifteen prisoners sentenced in February.

Letters from Tampa citizens who must be protected by not being named say that *The Nation's* article understated the case; and one pitiful scrawl smuggled out of the jail itself makes terror a dull word to describe the desperate measures by which Tampa quiets its social nerves. The only error of fact that needs to be corrected is the statement in the original story that the case had been appealed, but was pending, owing probably to lack of funds. The first steps toward an appeal were taken and lack of funds did prevent the first hearing, but technically the appeal is yet to be granted or denied, and what happens must be watched, for the story is not yet finished.

New York, December 20

ANITA BRENNER

Erratum

In the article, Shoebuttons for Huckleberries, by Paul Y. Anderson, which appeared in *The Nation* of January 4, two figures were incorrectly printed. It was stated that factory workers in 1932 will receive \$7,500,000 less than in 1929, and that \$3,500,000 laid up against old age and ill health has been used up. The two figures should have read, respectively, \$7,500,000,000 and \$3,500,000,000.—EDITORS THE NATION.

Do you wish to keep well-informed?

The Extension School of Adult Education offers a group of special lecture programs to give the mature person of alert mind an opportunity to orientate himself within special fields of modern thought and to continue his education in the cultural aspects of life:

- What the Modern Writers are Doing
Professor Homer A. Watt
members of the English Dept.
- How to Enjoy the Theatre
Asst. Professor Bruce Carpenter
- Survey of Modern Fiction
Mr. William E. Troy
- Abnormal Psychology and Mental Hygiene
Asst. Professor Vivian E. Fisher
- Philosophies of Civilization and History
Asst. Professor Sidney Hook
- Survey of Symphonic Music
Asst. Professor Martin Bernstein
- Fascist Political Philosophy
Dr. Carlo M. Flumiani
- The Appreciation and History of Art
(From the Renaissance to the Present)
Mr. Bernard Myers

Fee for each course of fifteen lectures \$15
Admission to single lectures \$1.50

The following courses are parallel in content to courses within the degree curricula of the Washington Square College: they meet each week for the length of time (one hour and forty-five minutes each); they are taught by the same departmental faculties, but do not carry college credit:

- General Psychology
Personality Study
Elementary Public Speaking
Advanced Public Speaking
Radio Speaking
Speech Improvement
- Introduction of English and American Literature
Elementary English Composition
Reading Course in French
French Conversation
Reading Course in German
Woman's Law Class

Fee for each course of fifteen lectures \$20

Registration from January 16 to February 11 from 9:00 A.M. to 8:00 P.M. in the office of the University Extension Division, Room 233 East Building, 18-24 Washington Place. For bulletin with full description of courses, address

INDIVIDUAL and COMMUNITY SOCIAL WORK

The social worker working with Jews must be trained to deal successfully with the socially maladjusted Jewish family and individual.

He must be able to see the problem in the large. He must "see" the Jews of America as a distinctive group aiming at adjustment to the general environment for its own greater happiness and the enrichment of American life.

HOLDERS and prospective holders of a bachelor's degree are invited to examine carefully the advantages of

Jewish Social Work as a Profession

A number of scholarships and fellowships for each academic year are available for especially qualified candidates who are prepared for professional graduate study leading to the Master's and Doctor's degrees.

Books, Art, Music, Drama

Marxism or Tolstoyism?

By HENRY HAZLITT

FOR several months now the suspicion has kept recurring to me that perhaps most of the literary critics who have recently come to think of themselves as Marxists are really much closer to Tolstoy. A new reading of Tolstoy's "What Is Art?" a product of his post-conversion period, has now largely confirmed that suspicion, and seems to make it worth while to examine his position afresh.

"What Is Art?" appeared in 1898. One has to keep constantly reminding oneself of this fact, so contemporary does it sometimes seem in its tone and in its references. It is one of Professor Babbitt's favorite contentions that in all aesthetic movements America lags thirty years behind Europe. That thesis receives disturbing support in Tolstoy's volume. Here is Edmund Wilson, in a book not two years old, introducing us to the symbolists, to Baudelaire, Mallarmé, Verlaine, Huysmans, Villiers de L'Isle-Adam, and all the rest. Here is Max Eastman, in a book still more recent, deriding "the cult of unintelligibility." And there was Tolstoy, thirty-five years ago, introducing the symbolists, Baudelaire, Mallarmé, Verlaine, Huysmans, Villiers de L'Isle-Adam, and all the rest, to the Russian public of his day, and denouncing them for their dogma of obscurity.

Before we turn to the similarities between Tolstoy and the so-called literary Marxists, it may be well to begin with the differences. The ultimate criterion of the Marxist critics, as they see it, is an economic one. The criterion of Tolstoy is economic only in a secondary and derived sense; primarily it is ethical and quasi-religious. The final aim of art, Tolstoy held, was to promote "the growth of brotherhood among men," to "unite men with God and with one another." In so far as Tolstoy looks forward to a classless society, he is on common ground with the Communists; yet he is sharply opposed to any class war, or to that art which aims at "uniting the people of one cult only to separate them yet more sharply from the members of other cults, and even to place them in relations of hostility to one another." He did not believe, in other words, that the way to bring about "brotherly love of all men" was to begin with a prolonged period of bloodshed and hatred.

Yet Tolstoy, like our present-day Marxists, was opposed to what he constantly calls "upper-class art," as well as to "upper-class science," and many of his phrases are strikingly Marxian:

What the members of the upper classes who are occupying themselves with science most want is the maintenance of the system under which they retain their privileges. . . . Therefore one side of science, including theology and philosophy adapted to the existing order, as also history and political economy of the same sort, is chiefly occupied in proving that the existing order is the very one which ought to endure; that it has come into existence and continues to exist by the operation of immutable laws not amenable to human will, and that all efforts to change it are therefore harmful and wrong.

His denunciation of upper-class art is even more scathing. It is a mere amusement-art; it reflects an appallingly narrow range of feelings, and those feelings are nearly all contemptible:

The range of feelings experienced by the powerful and the rich who have no experience of labor for the support of life is far poorer, more limited, and more insignificant than the range of feelings natural to working people. People of our circle, aestheticians, usually think and say just the contrary of this. I remember how Goncharev, the author, a very clever and educated man but a thorough townsman and an aesthetician, said to me that after Turgenev's "Sportsman's Notebook" there was nothing left to write about in peasant life. It was all used up. The life of working people seemed to him so simple that Turgenev's peasant stories had used up all there was to describe. The life of our wealthy people, with their love affairs and dissatisfaction with themselves, seemed to him full of inexhaustible subject matter. One hero kissed his lady on the palm of her hand, another on her elbow, and a third somewhere else. One man is discontented through idleness, and another because people don't love him. And Goncharev thought that in this sphere there is no end of variety. . . . In reality almost all the feelings of people of our class amount to but three very insignificant and simple feelings—the feeling of pride, the feeling of sexual desire, and the feeling of weariness of life. These three feelings, with their offshoots, form almost the sole subject matter of the art of the rich classes.

In denouncing upper-class art Tolstoy did not, like the Marxians, contrast it with "proletarian" art but with what he called "universal" art. His conscious objective was not an art that would reflect the ideals of one class rather than of another, but one that would reflect the universal ideals of mankind. But here he fell into several confusions. He rejected the upper classes as essentially perverted; he looked upon their education as at bottom a mere indoctrination with false and base ideals; he dismissed all professional critics as "erudite, that is, perverted and at the same time self-confident individuals"; and he ended by taking as his real critic the Russian peasant. Tolstoy in his youth had been tremendously impressed by the works of Rousseau, and it is obvious that Tolstoy's peasant is the exact equivalent of Rousseau's noble savage, the "unspoiled" and "natural" man. Strict adherence to this ideal compelled Tolstoy to glorify ignorance, and he did not shrink from the logic of his choice. "To say that a work of art is good but incomprehensible to the majority of men is the same as saying of some kind of food that it is very good but most people can't eat it." The analogy is unfortunate, for nothing makes clearer than geographic and historical comparisons the extent to which the taste for certain foods is a matter of habit and custom and palate-training. And what of, let us say, the differential calculus? Is it any less valid because it is difficult to understand? Tolstoy comes almost to the point of facing this question. "A speech

delivered in Chinese may be excellent, and yet remain incomprehensible to me if I do not know Chinese; but what distinguishes a work of art from all other mental activity is just the fact that its language is understood by all." This begs the entire question, and violates all plausibility. Just as, if we do not understand Chinese, we cannot appreciate what is excellent in Chinese, so we cannot appreciate what is excellent in our own language until, after years of growth and training, we have learned that language. And we cannot appreciate what is excellent in art until we have mastered the language of art.

How did Tolstoy come to make his egregious error? It goes back, I think, to his original definition of art. "Art," he holds, "is a human activity consisting in this, that one man, consciously, by means of certain external signs, hands on to others feelings he has lived through, and that others are infected by these feelings and also experience them." This definition holds a valuable truth, for it is obvious that the effectiveness of all art depends upon this infectiousness: indeed, "infectious" and "effective" are here almost synonyms. But while infectiousness is an indispensable condition of art, it soon becomes evident that it is not the essence of it, though Tolstoy clearly believes that it is. "There is one indubitable sign distinguishing real art from its counterfeit—namely, the infectiousness of art. . . . And not only is infection a sure sign of art, but the degree of infectiousness is also the sole measure of excellence in art." It immediately occurs to one to ask how one is to measure degree of infectiousness. Degree in whom? As a criterion, infectiousness is inescapably relative and inescapably subjective. It reflects no more than a relationship between a particular work of art and a particular spectator. A youngster who might be deeply infected by a dime novel would not be infected at all by "Paradise Lost."

Tolstoy never really confronted this problem. He denounced all the Wagnerian operas as counterfeit art, but he never explained how they came to infect the Wagnerites. When he did touch on the question, he begged it. The people who liked "upper-class art" were "perverted" (and "perversion," in Tolstoy, often seems to mean precisely what most of us would call education), while the peasant's sense of smell in such matters was as sure as a hound's. And Tolstoy's peasant, as I have hinted, was never the real peasant, but an idealization: he was, in fact, a small edition of Tolstoy himself. "Such feelings as form the chief subjects of present-day art—say, for instance, honor, patriotism, and amorousness—evoke in a workingman only bewilderment and contempt, or indignation." Well, I for one presume to doubt that the depiction of amorousness evokes either bewilderment or indignation in the average workingman; and I do not believe that that workingman would refer, like Tolstoy, to "odious female nudity" or "women's naked bodies and all sorts of abominations." The movies, burlesque, and the tabloids get along quite well today by working on precisely the opposite theory. Moreover, if "infectiousness" were really the surest sign of art, then art depicting amorousness and women's naked bodies ought to stand very high.

Tolstoy's judgments of actual artists were appalling, and shortly after the middle of the book the reader's interest declines as the argument moves from the relatively plausible to the clearly absurd. Tolstoy begins by dismissing the symbolists for their affectation and obscurity. Then he throws out such writers as Rémy de Gourmont, Pierre Louys, and

Huysmans for their "erotic mania." Soon one becomes aware that he is calling Goethe's "Faust" and Shakespeare's "Hamlet" "simulated" art. He rejects all of Wagner and finds Beethoven's later symphonies "artistic ravings." He condemns the work of the Greek tragedians, of Sophocles, Euripides, and Aeschylus, as well as that of Dante, Tasso, and Milton, as "brain-spun" and "invented." And in a mere footnote he consigns practically all his own artistic productions to the category of bad art. What is saved from the wreckage? What art is admirable? Some peasant songs, Millet, and a few obscure paintings portraying poverty, brotherly love, or pity, Schiller's "The Robbers," Hugo's "Les Misérables," Dickens's "The Tale of Two Cities" and "A Christmas Carol," Eliot's "Adam Bede," Dostoevski's work, and "Uncle Tom's Cabin."

What had happened? A doctrinaire had had the courage of his doctrines. And what was wrong with those doctrines? Is not "to unite all men" a noble aim to set for art? No doubt. But such an end, like that of happiness, may often be more successfully achieved obliquely than directly. And it is not the sole end of mankind. The ends of man are irreducibly pluralistic, and so, likewise, are the ends of art.

The appalling conclusions of Tolstoy's "What Is Art?" should serve as a warning to our present "Marxist" critics. The proletarian for whom they want literature hereafter to be written is not the actual proletarian, any more than Tolstoy's peasant was the actual peasant; he is merely an idealized creature, a potential creature—the proletarian as he might become if they could edit him, if they could transmogrify him, if they could vaccinate him with just those elements in bourgeois culture which they approve of, and withhold those of which they have come to disapprove—if, in short, they could make him into a little copy of themselves. If they think that the aim of art should be immediately to precipitate a class struggle, they are giving it a very dubious mission. If they think the aim of art should be to speed the day of a just and humane and classless society, they are giving it a very noble mission. But they should never forget that art may do this in ways at first glance far from obvious. And they should never forget that even such an aim cannot sum up all the ends of man.

Nor from Tolstoy could the new Marxists learn only the weaknesses and pitfalls in their approach; they could learn, also, part of its possible strengths. A sincere and powerful mind like Tolstoy's could not write a book, no matter how wrongheaded its main conclusions, without filling it with many penetrating incidental truths. He was right in seeing in the cult of unintelligibility a sign of decadence, and in the obsession with new forms a symptom of anemia. For when writers have something genuinely fresh to say, something that they vehemently desire to communicate, they do not engage in these little games of half-revelment, half-concealment. It does not occur to them, as it did to Mallarmé, that "to name an object is to take away three-fourths of the enjoyment of the poem, which consists in the happiness of guessing little by little." When they have something real to say, they let the matter dictate the form, not the form the matter. Tolstoy was right, too, in condemning the obsession with sex in art, not for the superstitiously prudish and ascetic reasons that he sometimes gives, but on the wiser ground that this obsession is a sign of a narrowing of the circle of feelings and interests covered by art, a warning signal of impoverishment. He was

right in his analysis of so much "upper-class art" as the work of idle and satiated men. He was right, finally, in rejecting the view that the function of art is primarily to amuse, and in holding, rather, with whatever mystical and religious confusions, that art must reflect the entire range of man's values, the whole sense of his destiny. Amusement-art might give us "The Mikado"; it could never give us "Macbeth." "Art is not a pleasure, a solace, or an amusement; art is a great matter." And to that perception the author of "War and Peace," and of "Anna Karenina," always held fast.

Poets All

Bentham's Theory of Fictions. By C. K. Ogden. The International Library of Psychology, Philosophy, and Scientific Method. Harcourt, Brace and Company. \$3.50.

MUCH of Bentham's work on the unmasking of the "ghosts" or "fictions" which men mistake for realities was done in the very year of Waterloo—and as could be expected, this "small still voice of one weighing the meaning of words" went unheeded during stress. "Even less was it heeded when the storm had died down," and men began nibbling at the edges of his doctrines while completely neglecting the core. So here we are, a century after his death, at another time of Waterloo, beset by a whole astral sphere of unexorcised, gibbering ghosts. They are, perhaps, with their vague terrors, their "ingenious perversion of the language of praise or blame, to make it comprehend that which did not properly come within the quality expressed," observable in such terms as "raids on the Treasury," "saving the railroads," "national honor," "sound money," "private initiative," "sanctity of contract," "observance of the law," "good for business," "favorable balance of trade," "wholesomeness of our people under strain," "confidence," "fundamentally sound," "scraped bottom." Bentham dreamed of a vast lexicographical project which would eliminate the vaguenesses of words forever, at least the pivotal words of ethics, politics, and law—and though one can imagine wiseacres saying that the meanings of words are funny things to be fooling with while millions are in danger, they might well recall the past great changes wrought in the social structure by "Encyclopedists," writers of dictionaries—and these same objectors will, if they are "practical agitators," go forth to plead with people, from soapboxes, by the hour, attempting nothing other than the reshaping of the terms in which people consider their situation. A wily old trout lives only because he has learned to distinguish the meaning of bait from the meaning of prey; men dodge automobiles successfully because of the meanings that an onrushing car happens to have for them; and, similarly, our social processes may be as dangerous as unsuspected poisons until we have well defined them. "Give us our rights, say the thousands and the millions. Give us our rights, they say, and they will do well to say so. Yet of all who say so, not one perhaps can say, not one perhaps ever conceived clearly, what it is he thus calls for—what sort of a thing a right is." So it might be an eminently practical matter for us to have a thorough technique of definition. Bentham, to eliminate the tragic human bunglings that come of ideological vagueness, would develop a method for making men fully conscious of the linguistic aspects of our thinking.

Language, to guide us, must be a naming. Yet in all probability language did not originate as a naming at all, but as an instrument for exhorting and conveying attitudes. In its origins and underlying machinery it is probably about as much like "thought" as a dog's perking of his ears and bristling of the hairs along his spine when he scents a cat. Bentham would never overlook this unintellectualistic genesis of speech, and would so

codify the rules of definition as to guard as much as possible against it. Thus, in the present book, edited by the coauthor of "The Meaning of Meaning," we are shown the ambiguities and vaguenesses inherent in speech, "linguistic" structures which man has attempted to read into the very structure of the universe; we see the bewilderments these ambiguities can cause in human conduct; and we find in outline a methodology of definition whereby they may be avoided. Fundamentally, it is a method for forcing one to disclose the picture-thinking and emotional tinges hidden in the necessarily metaphorical language one employs, and for compelling one to carry one's analysis of vague words (such as "obligation," "rights," "justice") to the point where they are made to refer to "something real and observed."

Bentham knows the tricks of the rhetoricians, tricks so deep that even the rhetoricians are seldom aware of using them—for rhetoric as he conceives it is only too constantly at the command of all. By the Bentham teaching, all men are poets, alas! as they judge and act and exhort their fellows by terms which work upon our unsuspected prejudices, or words which are really talking about two things when they seem to be talking about one. And he knows the handy "appellatives" which have ever come to the assistance of "moral" men by furnishing them with the best motives for their acts, as a simple "love of gain" may appear in the "eulogistic covering" of "industriousness" (devices which he calls "fig-leaves" for the "unseemly parts of the mind").

Bentham expected that not merely one century, but many centuries, would pass before we might have hopes of such a quiet and deep-lying change as is at the bottom of his methods. Meanwhile, we shall probably continue to combat old ghosts with new ones, ever fighting wars henceforth in the name of peace, fantastic wars-to-end-war, and adulating such jungle ways of thought as might serve us better if we were trying to rip live meat with our claws than for properly apportioning the national income. Perhaps for a long time yet flags will be torn down only when there are stormers to raise other flags. This, Bentham would call the "license of cheating people for their good." The Benthamite revolution, on the other hand, will never occur in its purity unless criticism and skepticism can enjoy the place of honor in the state, along with a completely non-theological utilitarianism based accurately upon human pains and pleasures, avoiding those strangely gnarled forms of religiosity which are no less religious, and even *magical*, through the fact that the flaming words of their inspirational cult are to be found primarily in the financial columns of our press.

KENNETH BURKE

Zweig's Tetralogy

Young Woman of 1914. By Arnold Zweig. Translated by Eric Sutton. The Viking Press. \$2.50.

IN a note to this novel Zweig declares that until the completion of his four-volume work on the war (of which this, in point of narrative time, is the first and of which "The Case of Sergeant Grischa" is the third and central volume) he "would deprecate any misinterpretation of his intention." Exactly what this means is not clear, but it is perhaps an apology for certain qualities in the book which carry it far below the fine "Grischa," but which, in the light of the completed work, may turn out to have a redeeming structural function. Thus, the light emotional impact of this volume may have been intended to provide for a later crescendo of emotional force. The vagueness of some of the characters may be remedied in their reappearance. Later volumes, too, may give us a fuller picture of German civilian life in war time, which is here adumbrated only through the comparatively slight suffering of the upper middle class.

Yet even extenuating conjecture cannot explain the sentimentality with which the heroine, Lenore, is conceived, or the uncertainty of what important aspect of the war her story is intended to illuminate. Lenore's lover, Werner Bertin, has gone to war with an eagerness which belies his liberal opinions, his writer's temperament, and, most important to Lenore, their own happy relationship. Indeed, Bertin has looked to the army to relieve him of his artistic isolation and his sense of responsible personality. He becomes temporarily a fatuous person, and in a moment of his new "manly" and "objective" self-assertiveness he practically rapes Lenore, who becomes pregnant. The rest of the book is concerned with the suffering of a sheltered young woman procuring an abortion, with the theory and practice of the operation, with Lenore's bitterness at Bertin's insulation against her misery, and finally with the reconciliation of the lovers in marriage.

Zweig is a writer considerably but not supremely endowed with novelistic skill; it was his strong intelligence playing over the confused aspects of a great theme, the problem of human justice, that made "The Case of Sergeant Grischa" so fine a book. The theme of "Young Woman of 1914" is perhaps not calculated to call forth the play of intelligence, and Zweig's novelistic skill is sufficient only to make an interesting but not an important book. Yet we have the right to expect of Zweig that he present to himself a theme in terms to attract the full play of his intelligence in its execution.

LIONEL TRILLING

Shorter Notices

Human Being. By Christopher Morley. Doubleday, Doran and Company. \$2.50.

This is not, as the title and the first chapter suggest, an objective story of a common man. A good many novelists have attempted that feat but few have succeeded. Success in that direction would be especially unlikely for Mr. Morley, as he is one of our most subjective writers, obtaining his material chiefly by gazing patiently in a mirror. And Mr. Morley is not a common man. He is at his best when revealing his own thoughts, fancies, and enthusiasms. This he has done so delightfully in "Human Being" that it impresses one as the ripest and most full-flavored of his books. There are side-splitting pages on the publishing business, picturesque pages on the show business, and understanding pages on the human business. Mr. Morley's sensitiveness to the romance of Manhattan Island comes out in his affection for the "L," with its "Swiss chalets of stations," and in the poetry he finds in Bullinger's railway guide and the directory of the Flatiron Building. One of Mr. Morley's definitions of a human being is "a superb actor in a hokum play," and in an orchestration generally designed for comedy one detects a thin, pleading note of pathos.

Jane Austen's Letters to Her Sister Cassandra and Others. Volume I: 1796-1809; Volume II: 1811-1817. Collected and Edited by R. W. Chapman. Oxford University Press. \$12.50.

All the letters of one of the most delightful letter-writers who ever lived, collected in two handsome volumes the editing of which is beyond praise. The letters have many of the best qualities of Jane Austen's novels. They present the minutiae of a small society in language that is always fresh and exact, with a penetration that is only exceeded by the wit which pointed what the eyes saw. They present also Jane Austen in person, as an irresponsible, gay, sharp-tongued girl of twenty-one, and as the mature, generous-hearted woman she grew up to be. She never lost her keenness of observation or her ability to prick vulgarity or pretentiousness when she met with it. The char-

acters in her letters—the flesh-and-blood members of her own large family or her equally large circle of neighbors and friends—are as clearly drawn as are the characters in the novels. If the letters lack the order and the selection which make the novels the works of art they are, they are not wanting in qualities which make them worth reading and reading again. With Mr. Chapman's admirable guides to persons and places everything is clear. And the wit and penetration is clear all by itself, requiring no glossary. From the famous Mrs. Blount with "the same broad face, diamond bandeau, white shoes, pink husband, and fat neck," to the novelist who declared of the second edition of "Sense and Sensibility," "I cannot help hoping that many will feel themselves obliged to buy it. I shall not mind imagining it a disagreeable Duty to them so as they do it," these two volumes afford as good reading as most novels which have heralded masterpieces.

Paul Bunyan. A Folk-Comedy in Three Acts. By Richard L. Stokes. G. P. Putnam's Sons. \$2.

Mr. Stokes has fashioned a hilarious farce out of material which is to be found in the books on Paul Bunyan by James Stevens, James Bowman, and others, and in the book by H. L. Mencken on the American language. The language of this rollicking verse is fiercely vernacular and authentically American; the action, touching as it does the present depression and recalling as it does at one point the recent performance of "Lysistrata" on Broadway, is lively and rich. Furthermore, the piece is carefully planned for a stage performance. One hopes that it reaches, say, the stage of the Metropolitan Opera House, where Mr. Stokes's "Merry Mount" is eventually to be heard to the accompaniment of music by Howard Hanson. One really hopes this. The Metropolitan could not do better than to make room on its boards for the fabulous lumber-jack and his Blue Ox Babe.

Emily Dickinson Face to Face. Unpublished Letters with Notes and Reminiscences. By her niece, Martha Dickinson Bianchi. With a Foreword by Alfred Leete Hampson. Houghton Mifflin Company. \$3.50.

This book includes the author's personal recollections of her aunt, some facts about the Dickinson family, and a good deal of material about Austin Dickinson, Emily's brother and the author's father. There are also some notes that were omitted from the "Life and Letters." The book adds virtually nothing to our knowledge of Emily Dickinson.

Sad Indian. By Thames Williamson. Harcourt, Brace and Company. \$2.

While not, as the jacket announces, the first novel to come out of native Mexico, this is doubtless the first fictionized close-up of folkways south of the Rio Grande by other than a Mexican author. Mr. Williamson has made a careful portrait of the mentality of the *peón* of today—the Indian who still wears the *calzón* and *camisa*, the native pajama-like costume of white cotton, and walks either barefoot or in sandals. It is around his annual journey from his native village of Iztapa to the market town of Techichilco to sell the corn he has raised that the story revolves. Juan is revealed as a primitive of a few deep-seated and unchangeable habits and numerous superstitions, whose chief animus is against the *mestizo*, the "mixed-blood" who despises, dominates, and tricks him. Whether this antipathy of the full-blood is as constant and all-pervading as the author leads one to conclude is open to question. Apart from that this peasant is primarily concerned with satiating his appetites—for food, drink, and sex. Especially drink—*pulque*—the fermented juice of the *maguey*, primordial beverage of Aztecs and Toltecs. This he guzzles till sotted at the town's two *pulquerías*, named "I Am Laughing" and "The Heart of

Jesus." Though Mr. Williamson confines himself to describing the stupefying effects of the drink on his central character, he suggests the devastation and degeneration pictured in Zola's "L'Assommoir." Here, incidentally, is a refutation of Stuart Chase's thesis of the happy Indian—cheery craftsman and debonair dancer—and of the need of rebuilding Mexico upon him. Instead, we have an existence that is drab, dreary, and dirty, depicted with rare faithfulness of observation, intuition, and craftsmanship.

Authors and the Book Trade. By Frank Swinnerton. Alfred A. Knopf. \$2.

One can imagine Mr. Knopf putting this monograph on his list in the wild hope that it might lessen the number of manuscripts submitted for his verdict. A burgeoning author who can read these plain truths about what happens to a book before and after publication and still retain his ambition to follow authorship as a profession must have an overweening confidence in himself. But since ninety-nine out of a hundred burgeoning authors possess just that quality, few will be dissuaded from trying their luck by Mr. Swinnerton's revelations. In essence a wise and witty discussion of a puzzling subject—what makes a book sell—this compact manual approaches the mystery from the angles of the publisher's reader, the publisher, the literary agent, the reviewer, the bookseller, and the reading public. Mr. Swinnerton believes that the success of a book depends neither on advertising nor the praise of critics, but on talk. The matters of production costs, distribution, contracts, and royalties (if any) are set forth explicitly.

Brain. By Lionel Britton. The Vanguard Press. \$1.75.

Imaginative power is revealed in this expressionistic play by the author of "Hunger and Love." The scene is the whole earth, and the time the future—fifty million years of it. A group of people form an association to construct a mechanical brain which will coordinate and preserve the thoughts and impulses of humanity before they are dissipated. A secret organization is created first, with the members devoting their lives to building the brain in the Sahara Desert. Eventually brain becomes powerful in spite of the opposition of business men and politicians, and collective reason rules the world. The triumph comes too late, however; men have fought with and preyed upon each other for so long that control of natural forces is not perfect when collision with a star is threatened. Lionel Britton's symbols for communicating this message sometimes lapse into the prophetic tone of the popular-science magazines, but for the most part the play is stimulating and the satire effective.

The Changing Culture of an Indian Tribe. By Margaret Mead. Columbia University Press. \$4.50.

"This," says Dr. Clark Wissler in a Foreword, "is a pioneer study in a neglected field." As such it is of importance not merely to the Americanist and anthropological specialist, but also to the sociologist and student of political history. Dr. Mead's approach is purely that of the scientist in search of facts. Her book is a study of the "impact of highly organized modern cultures upon a primitive group," an examination of what has happened and is now going on in the development of a seminomadic hunting tribe into "citizens" of a complex, industrialized civilization. The tribe chosen is given the pseudonym of the "Antlers," to avoid offense. It is the remnant of a Mississippi Valley tribe which came in contact, first, with the French, then, about seventy-five years ago, with the Presbyterian missionaries, and then with the white settlers. The Antlers are citizens, though still living on a reservation; many own or have owned their lands in fee, and all are nominally Presbyterian converts, though the Peyote cult seems to be their chief

religion. The first part of the study covers their history and general background; the second section deals specifically with the Indian woman under the transitional strains; and the third part gives a full tabular statement of the basic material and statistical data. The conclusion is that the "individual of the primitive society is left floundering in a heterogeneous welter of meaningless uncoordinated and disintegrating institutions."

Art

Art and American Life

THE big news in museums and galleries this season is American art. The Museum of Modern Art assembled a huge choice exhibit of painting and sculpture done by American citizens in the past seventy years, announcing that in this period American art emerged from "the provincial" into "a national and cosmopolitan phase." The pictures were cleverly arranged so that no one could go to see Whistler's Mother without looking also at Eakins and Speicher and Pollet and Benton, to see Demuth and Weber and O'Keeffe without looking also at Burchfield and Ryder and Sloan. The earlier part of the nineteenth century was unconventionally represented by an exhibit of amateur, mostly anonymous, works bracketed under the title of "The Art of the Common Man" in America.

Simultaneously John Becker exhibited a collection of the same period and the same general character as "The Art of the Common Man": romantic landscapes, innocent portraits, fruit and flowers on velvet, quaint mementos in odd techniques. The Whitney Museum cleared all its wall space for modern Americans only, and opened its Benton room, supposedly a reading-room but actually a battlefield because on various fundamental points it contradicts current fashion, as represented in Radio City. First, it is painting and not decoration—that is, it demands and absorbs your attention and arouses strong feelings; second, it is mural painting done *in situ*, and is part of the room, or rather *is* the room, and not an enlargement fastened on an available wall space; third, it has bold social meanings as plain as a poster; and, fourth, alas, the painter was paid just about what the job cost him, and less than the rate per foot paid to commercial decorators for restaurant and hotel jobs.

Each of these exhibits has its own claim to attention, but together they mean a boom, not without ballyhoo, which can be easily traced to the same potent sources as tariffs and "Buy British" campaigns, and which may bring Brooklyn painters to protest before long because the Hotel St. George was decorated by artists living in Manhattan. The source of this movement is resentment at the costly snobbery of the French mode of the nineteen twenties; it takes coherent form in a "Buy American" attack on contracts given to Rivera, Sert, and Brangwyn by those in charge of the Rockefeller projects.

The emotions and issues involved are as powerful as any that ever fed the glow and heat of a renaissance. Given this drive, it is possible that we are indeed witnessing the first stir of a revival or a revolution and a period of great art in our part of this continent; especially as forces at bottom the same launched the powerful Mexican school whose influence is now pushing North American art in the direction taken by the Mexicans—away from small decorative spots destined for private homes, and toward large, monumental, more or less permanent decoration of public buildings; away from the noncommittal, the "art for art's sake" individualist cult, and toward choice of subject with a social meaning, and a purpose, too. Propaganda, in fact. And away, finally, from European modes, toward a violent nationalism that is more anti-foreign than exuberantly

patriotic, is intensely self-assertive and veers into picturesque local color, emphasizing what is native in subject and style.

Thomas Benton is the first considerable painter in whom these tendencies are clearly marked. He may be a lone phenomenon or else a sort of signpost on a new road. But in the seventy years of American art assembled by the Modern Museum, certain choices of subject and manners of treatment begin to stand out by repetition as possible indications of the direction in which American art has been going and the ideas against which American artists may turn; emphases of subject and manner which would distinguish at once a made-in-America picture hanging, say, in the Tate Gallery or the Munich Pinakothek. These are the things which would help us to define what we mean by American art, other than that the artist is or was entitled to travel on a United States passport; and if our findings do not seem very significant, or do not suggest further inquiry and analysis, it may be that we shall have to discard the term as pure affectation, and that would be useful too.

When the show at the Modern Museum first opened, a collection of Persian frescos was also on exhibit, creating much excitement because they seemed "so modern." The pictures were all variations on the theme of love, contrasting in this respect with the seventy years of American expression on the three floors below, for in that entire collection there was only one indication—a Zorach piece—that such a thing as love between man and woman was known in our part of the Western world. A list of the subjects which would seem to represent us may turn out to represent England as well, and in that we must recognize the influence of powerful traditions upon us. Still, the numerical proportion of one kind of subject to another may point to specific American traits.

The lead is taken by landscape; then portraits, especially of children, genteel ladies, and "types"; then interiors and still-life, particularly flowers; then group-scenes of the "common man," usually picturesque; animals; and, late and few, female nudes. The first three constitute almost the entire range of our folk-painting, reflecting our nineteenth-century art. And yet these ideas do not mean period only, as the moderns at the Whitney Museum group themselves into the same half-dozen species in about the same proportion. They do not mean "human nature" either, for other peoples—the Mexicans for example—almost never handle landscape, our favorite subject, as other than background.

Our insistence on landscape may be one clue to the social and psychological bases of the American style. The pictures themselves disclose that this field has attracted a great many different temperaments, and the traffic develops some traits we can call American because they depart from European modes: a marked sense of space, a hardness of outline, strident color. These qualities appear first and most vigorously in scenes with railroads, automobiles, factories, and less so in what appears to be our other favorite, a type of landscape we might call "unrealism"—exotic, romantic, a dreamy quest for a somewhere else. And in the moderns especially, a combination appears that is typical of our commercial art, of great skill, virtuosity even, with negative feeling, to the point of evasion, where the sense of space becomes a sense of emptiness instead.

Turn to your catalogues of the shows reviewed, or walk through them if they are still open, with an eye out for what being American has meant and may mean artistically; ask yourself why Whistler made witty intangibles and why O'Keeffe paints as if she were deaf. And considering the mark of spiritual isolation on the great mass of this work, it may seem plain that if something is wrong with American art, and the blame is on the artist, the answer may be that our artist as a rule thinks first of himself as an artist and last of himself as a citizen and a thinking, responsible part of his place and time.

ANITA BRENNER

OSWALD GARRISON VILLARD'S THE GERMAN PHOENIX

Mr. Villard knows Germany and its leaders thoroughly, and has been preparing material for this book for over two years. The information in it is as up to date as possible, but the book has far more than journalistic value. It is a serious and careful study of 14 years of effort of Germany's leaders to establish a true democracy upon the ruins of the Empire, and of the extraordinary progress toward a socialized state.

Music

Our Musical Diet

COMPLAINTS about the monotony of the programs of leading recitalists and conductors are no novelty to this column. They are, moreover, more or less useless, I suppose, as far as the individual artist is concerned. Violinists have their private reasons for never omitting the César Franck Sonata from a program, while most of Beethoven's ten remain so much paper and ink. Mr. Zimbalist will not be dissuaded by the columns of *The Nation* from playing with piano the Mendelssohn Concerto—a work which, away from the orchestra, loses half of its excuse for being, and which everybody knows by heart anyway. There is no use in pointing out to pianists that Beethoven wrote thirty-two sonatas, not six, for their instrument; or to singers that Schubert's songs fill seven published volumes. And yet a plea to them would not have to be based only on the highest considerations of art and taste. It might be offered to them as practical business advice—in some such terms as these:

There are a few artists who shed a new and revealing light even on the most familiar music they play: Toscanini, Kreisler, Casals, Busch, Menuhin, Schnabel, Myra Hess, Rachmaninoff—the list is not much longer. From them, even though one may at times feel that their repertoires are unnecessarily limited, one must be grateful for whatever one gets. And, indeed, their function is partly to infuse new life into those greatest and most familiar masterpieces which too frequent inadequate performances have done their worst to kill. But the fact that several of them stick close to a fairly limited repertory makes it more important and should make it easier for the somewhat lesser (and the much lesser) to follow two simple and often coinciding suggestions: (1) Don't play the most familiar music; (2) Don't play the music which we know through the performances of artists with whose interpretations yours cannot escape being unfavorably compared.

One imagines that the purpose of recitalists in competing with one another as they do is to show that they can sing or play a given work as well as or better than their rivals. It seems almost unnecessary to point out to them that what one notices and remembers is not that A sings "Was ist Sylvia?" better than B, or less well than C, but that one has no desire to hear any lesser singer touch it at all until the memory of Lotte Lehmann's singing of it grows less vivid.

But although this sort of advice is lost on recitalists, it should be put in some much stronger form—a subscribers' petition, perhaps—to the management of the Philharmonic-Symphony Orchestra. As New York's only permanent orchestra it has a duty to perform which no individual artist need feel, and—since an orchestra's repertory may be practically unlimited—no excuse for not performing it. Mr. Downes of the *Times* recently wrote a Sunday article to insist that Mr. Toscanini is not the only Philharmonic conductor worth listening to. But, rightly or wrongly, Mr. Toscanini is New York's favorite conductor; and the way for Mr. Dobrowen and Mr. Walter to correct the exaggeration of his popularity to the exclusion of his colleagues is certainly not to play his favorite works. For it is not insulting them to say that we do not expect their readings to improve on his, and that we should in any case prefer that they lend their talents to works of which we had heard moving interpretations less recently. Mr. Dobrowen's choice of the Brahms Second Symphony, the Schumann First, and "Tod und Verklärung" was bad enough; the Third "Leonore" Overture was worse, Mr. Toscanini having played it no more than four

weeks earlier. But Mr. Walter adds insult to injury when he repeats the proverbial "heavenly lengths" of the Schubert C-Major Symphony—which takes nearly an hour to play—after an interval of exactly six weeks. If I were a Philharmonic subscriber, I should feel like asking for my money back.

It is not as if there were anything inevitable about these repetitions. If the Philharmonic management, or board of directors, wished to avoid them, there would be nothing impossibly difficult about doing so. First a list could be made of the hundred or so standard orchestral works of Bach, Handel, Haydn, Mozart, Schubert, Schumann, Mendelssohn, Brahms, Wagner, Strauss, Debussy, Stravinsky, and so on. From this list any conductor might be allowed or obliged to draw a certain proportion of the works on his programs; provided that no work on the list (with certain possible exceptions) might be played twice until all had been heard once, and that no work not on the list might be heard more than once every other season, perhaps—except novelties. A certain proportion of the programs could be reserved for novelties; a certain proportion, perhaps, for American music; a certain proportion for conductors' favorites. It might be a rule that only a new or unfamiliar work might be played twice in one season. That the resulting balance on the Philharmonic's programs might have beneficial effects on the box office at non-Toscanini concerts is certainly hinted by the success of the Boston Orchestra concerts in New York. Mr. Koussevitzky is not chiefly a greater conductor than the Philharmonic's guests; he is a wiser and a more considerate program maker.

Mr. Arthur Judson, manager of the Philharmonic, wrote to the *Times* a year or two ago, in answer to complaints about the programs, to explain that he had always kept entirely away from program making, believing that the program, as well as its interpretation, was the proper concern of the conductor. From the manager of the Boston Orchestra this would be a good answer, for the Boston Orchestra is in the hands of one conductor during the entire season. But from the manager of the Philharmonic, where the guest-conductor system prevails, the answer is inadequate; and nothing could have made that fact clearer than the programs of Messrs. Dobrowen and Walter.

ARTHUR MENDEL

Drama

The Victim

THROUGH a reversal of the usual order "Girls in Uniform" (Booth Theater) reaches Broadway some time after the moving picture based upon the same story. The history of this widely exploited tale is decidedly complicated, but it appears that a novel came first and that the present version is adapted from an English stage adaptation of the original. In any event it reveals itself in its present form as a simple and rather affecting little drama, but one which, nevertheless, has something of the sketchiness as well as something of the angularity of a dramatization. Perhaps its air of being watered down is the result of the fact that the dialogue passed through too many uninspired hands before it finally reached us. Perhaps much of the credit for the film should go to the director who saw in it possibilities unrealized in the stage version. But whatever the cause, "Girls in Uniform" is distinctly thin, and would hardly have been a sensation had it not been for the preliminary advertising which it received from the film.

In Germany the play doubtless had a certain social significance. The story of the sensitive child whose spirit was crushed by the deliberately brutal discipline of a Prussian school

is pointed directly at a lingering tradition which may yet reassert itself and dominate the nation. The portraits of the headmistress and of Her Royal Highness, the patroness of the institution, are heightened almost to the point of caricature in the effort to render as unlovely as possible the inhuman rigidity of the military ideal. But in America, where all this local color has no direct relevance, and where the leading figures are hardly more than legendary, the drama reduces itself to a study in pure pathos. The poor little creature who is abandoned to the merciless mercies of the school is the victim of two phenomena, neither of which she can possibly understand. The "ideals" of the school are to her merely meaningless cruelties, and the fatal love which she feels for the remote but kindly instructress is an emotion without outlet or utterance. Even in death she is ineffectual, because the death of the weak is taken for granted by the system which destroys her. Hence she is pure victim, and therefore the play is pure pathos.

To the play's distinct credit must be set down the fact that it does succeed admirably within its own narrow limitations. A certain almost mathematical rigidity of outline, a direct unrelieved simplicity, keeps it moving, and it is never—as it might so easily be—mawkish. There is great tenderness in the treatment of the central figure and a delicate understanding in the portrayal of her love, but there is an absence of that gush which would have made the whole sickening. Part of the credit for this fact should go to the sincere playing of Florence Williams as the girl, and to Rose Hobart, whose stern beauty fits so well the role of the beloved instructress. The rest probably belongs to the direction, which succeeds often in supplementing the poverty of the dialogue with bits of restrained but eloquent pantomime. All in all, "Girls in Uniform" may be set down as a successful performance in a very minor mode.

"Twentieth Century" (Broadhurst Theater) belongs, on the other hand, to a noisy and typically American variety of topical farce. Its authors, Ben Hecht and Charles MacArthur, probably began with the realization that the club car of an express train racing from Chicago to New York had not yet been exploited as a background, and then set about to imagine what might happen there. What does happen is a series of extravagant occurrences involving a temperamental actress and an equally temperamental producer of Russian Jewish extraction whose general resemblance to a recently spectacular Broadway figure the authors are at no pains to conceal. The result is a wild melange of farce, burlesque, and disorderly conduct which it would be hard to praise soberly but which does manage to be frequently laughable in a reckless sort of way. Eugénie Leontovich, formerly of "Grand Hotel," puts on a fine show as the actress who never forgets to act, and Moffatt Johnston is uncannily clever in his take-off of the melancholy egomaniac who discovers vast possibilities in two stranded German peasants with a passion play in their valise. "Twentieth Century" combines the scandalous interest of the gossip column with farce at its loudest, but it serves its purpose.

JOSEPH WOOD KRUTCH

"Goodbye Again," at the Masque Theater, is continuously amusing. Most of the lines are footless, but they are spoken so briskly, by players so well selected, that the comedy seems better than perhaps it is. Osgood Perkins, sardonic and scrawny as ever, is funny both in and out of bed; the calm-browed Sally Bates is an effective foil to him; a scion of The Adams Family impersonates an injured husband with amusing indifference to his injury; and two rosy-cheeked Princeton boys play a chauffeur and a bellboy with credit to their Alma Mater. On the other hand, the part of the wife whose wandering affections provide the complications of the piece is burlesqued so unskillfully by Katherine Squire that the comic balance is often endangered.

Films**More Celluloid**

IF you do not like the kind of literature that is published in the so-called pulp magazines, you just do not like it, and that is the end of it. You do not rush into print to expose the pathetic ineptitude of these weekly or monthly outpourings. With films, unfortunately, the situation is different. Not only are there woefully few that are worthy of serious consideration, but if you happen to be a film critic you are obliged to stop and analyze the incessant flow of bilge issuing from the film factories of Hollywood and elsewhere as if it were really to be measured by the standards of intellectual and artistic achievement. The whole procedure becomes unspeakably grotesque, resembling in a way what the Russians describe as shooting sparrows with cannon balls. Worse still, it becomes wearisomely repetitious, for in the films originality is found in virtues, not, as in real life, in sins.

Yet once more I have to devote this column to the exploration of moving-picture vices. The worst offender to come under review is "Rasputin and the Empress" (Astor Theater). Although one does not expect historical accuracy from Hollywood, the falsification of well-known facts as exemplified in this film goes far beyond the limits of tolerable license. In fact, it is nothing short of political partisanship to represent Czar Nicholas, a shallow-minded weakling who paid with his life for his unfitness to occupy the throne of Russia, as a kindly ruler whose only thought was the well-being of his people. And the portrait of the Czarina as drawn in the film is an extremely prettified version of her true character. In spite of the irrefutable evidence of scheming, ruthlessness, and neurotic megalomania supplied by the Czarina's own letters, the film shows her solely as an affectionate wife and mother whose only concern in life was the happiness of her family. In the attempt to whitewash her memory the author of the film story represents the Czarina as abetting the murder of Rasputin, whereas her letters show that the death of the lecherous monk moved her to bitter cries for vengeance. Aside from such historical inaccuracies, which are too numerous to be cited here in detail, the film does not even stand up as good melodrama. It neither grips one by dramatic suspense nor impresses by any display of histrionics. Lionel Barrymore, who plays Rasputin, never succeeds in suggesting the powerful and magnetic personality which Rasputin undoubtedly had and which largely accounted for his rise to power. John and Ethel Barrymore are no more than colorless ciphers in their respective parts of Prince Paul and the Czarina.

There is little that can be said about "Cynara" (Rivoli). Innocuous in its story and no more than slick in its acting and direction, it might have been fairly entertaining as comedy. As a romance with a touch of tragedy it is merely nebulous.

"The Half-naked Truth" (Mayfair), which relates with considerable gusto the adventures of a high-pressure publicity agent, has many loose ends in its story. Being only a farcical comedy, it goes merrily on without bothering to pick these up—which perhaps does not really matter one way or the other.

There were fascinating possibilities in the story of "Silver Dollar" (Warners' Strand), based on the amazing career of the once famous silver king, H. A. W. Tabor, which might have been realized had the episodes been treated with more imaginative feeling for the details of the background. With its conventional characterization, the film, though it tells an interesting story, fails to rise above the average.

THE NATION, No. 20 Vesey Street, New York City, Cable Address: NATION, New York. Muriel C. Gray, Advertising Manager. British Agent, Miss Gertrude M. Cross, 23 Brunswick Square, London W. C. 1, England.

THE ANNOUNCEMENT that President-elect Roosevelt has indorsed the action of the Department of State reaffirming the Stimson doctrine is strategically timed. It comes at a moment when Japan is engaged in a new aggressive campaign in China and just prior to the meeting at Geneva of the Committee of Nineteen. That Mr. Roosevelt, by this act of collaboration, has deviated sharply from his hands-off policy in national affairs gives the announcement added weight. We have no doubts regarding the moral value of this move. The rightness of America's position in refusing to lend its assent to the violation of existing treaties to which it is a party is undeniable. The whole structure of international cooperation has been undermined by the reckless conduct of the militarists who at this hour control Japan's destinies. The immediate results of the recent announcement, however, will probably be no more striking than those which followed Stimson's original statement. The Japanese will be annoyed and perhaps disturbed; but will their armies withdraw from Jehol and Manchuria? The whole situation would be greatly clarified if the United States, in addition to reaffirming its position, would call a conference of the signers of the Pact of Paris to consider an international embargo on arms, ammunition, and credits for any nation violating that treaty.

SENATOR HUEY LONG'S FILIBUSTER has about put the finishing touch to the present hopeless session of the dying Congress. We do not regret that he has compelled an extra session—that in any event should be called to meet at the earliest possible moment. We only regret that this pestiferous Senator, by paralyzing the Senate's conduct of its business, has injured the prestige of that body before the country, which all too often fails to understand that, despite the occasional abuse of unlimited debate, that privilege is what makes the Senate so extraordinarily valuable. But the general chaos in Washington gets worse. Congress drifts; the President is ignored by it or violently opposed. He himself, incredible as it seems, is merely making a record on which to base his preposterous campaign for renomination in 1936, which he still believes possible because of his continuing control of the Republican National Committee. The foreign diplomats in Washington are at a loss to know to whom to turn for a hearing in the innumerable pending issues of moment. The Democrats continue to urge the President-elect to keep his hands off entirely, especially since his fingers were badly burned in his one experiment in the matter of the proposed increase in income taxes. Meanwhile, the flood of dangerous proposals for curing our evils—all of them calling for inflation or for fresh raids upon the Treasury—mounts steadily. We shall be lucky, indeed, if we do not bleed to death because of the extension to the farmers and to business men generally of the protectionist philosophy that the government must guarantee the profits of the manufacturers. All of which ought to be a clarion call to Mr. Roosevelt to be ready for prompt and aggressive action both in national and in international affairs the minute he takes office.

TO THE INNOCENT OBSERVER it might have seemed impossible to make the so-called farm-parity bill less defensible than it was, but the House, before passing it by a vote of 203 to 151, succeeded in reducing it to an even greater travesty. As originally proposed, the plan would have attempted to fix the price of four relatively "basic" commodities—wheat, cotton, hogs, and tobacco. The theory was that if the consumer were forced to pay a tax of 100 or 200 per cent on these products, they would be consumed in smaller quantities, and consumers would substitute other products. The substitution of these other products, it was argued, would create an increased demand for them and so raise their price; and hence all farm products would tend to be helped by raising the prices of these four. It will immediately be seen that this argument was a double-edged one, for if raising the price of the four selected commodities really did reduce the demand for them enough to lead to substantial substitutions, then the parity plan would help the producers of the selected four commodities far less than its proponents claimed; it might even seriously injure them. The House, by throwing into the list of selected commodities rice, butter fat, and peanuts at the last moment, makes any serious defense of the bill impossible. No answer, on any ground of principle, can now be given to other agricultural producers who want special

bonuses paid for lima beans, artichokes, asparagus, cantaloupes, tomatoes, carrots, onions, potatoes, apples, pears, cherries, strawberries, sheep, guinea-pigs, chickens, turkeys, and ducks. From the collapse of the Farm Board experiment, not to speak of the Brazilian coffee-valorization plan, the Australian wool plan, the Japanese silk plan, the Stevenson rubber plan, we have learned absolutely nothing. We continue the attempt to subsidize our way out of the depression.

LITTLE IS TO BE EXPECTED of the present lame-duck session of Congress, but at least it is to be hoped that it will act upon President Hoover's special message calling for an immediate revision of the national bankruptcy laws. Even if general conditions should take an immediate turn for the better, we are certain to witness bankruptcies on an almost unparalleled scale: in one way or another, our debt structure must be scaled down. Hitherto the way of scaling it down has been through individual receiverships lasting from two to six years, in which every effort at adjustment could be blocked by a small minority of creditors seeking special privileges for themselves and often able to postpone adjustment until they were satisfied. There have been endless "protective committees" whereby each class of debtor sought mainly to protect itself from other classes of debtors; and the net result has been that lawyers have benefited more largely from receiverships than the creditors themselves. President Hoover has proposed that the bankruptcy laws be now amended so that voluntary adjustments may be reached between individuals, corporations, and creditors whenever majority agreement among creditors may be obtained, and that whenever two-thirds of the creditors in each class approve of a settlement, the remaining creditors shall be obliged to accept it. Some such first step as this in the revision of our antiquated bankruptcy laws is urgently necessary.

THE \$50,000,000 Kreuger and Toll loan of 5 per cent secured sinking-fund gold debentures was "secured," according to the bond-house circulars, by a variety of collateral including "bonds or notes issued or guaranteed by any sovereign state or political subdivision thereof." "Securities to be pledged initially" were to "have a total par value . . . equivalent to 120 per cent of the par value of such portion of the loans as was issued [\$23,700,000]" as well as "annual income at rates of interest and guaranteed dividends . . . equivalent to not less than 120 per cent of the annual interest requirements." By an agreement between Ivar Kreuger and the American bankers' syndicate, substitution of collateral was to be permitted—a circumstance thus vaguely stated in the syndicate's prospectuses: "In view of the nature of the business of the company, the debenture agreement will contain certain broad provisions in regard to withdrawal and substitution of pledged securities." Testimony before the Senate Banking and Currency Committee has disclosed that for the unexceptionable French bonds "pledged initially" Ivar Kreuger substituted bonds of Yugoslavia and other principalities now in default or of dubious value. That the responsibility for safeguarding the investors in such an exchange rested squarely upon the banking sponsors of the loan would seem undeniable unless American high finance frankly reverts to the discredited doctrine of *caveat emptor*.

THE AMERICAN PUBLIC has been taught to have confidence in great names, of individuals and firms. Neither the shrewd business man nor the traditional "widows and orphans" can fathom the facts beneath the smooth phraseology of a bond or stock offering. Nor have they been expected to. The one bit of discrimination required of a prospective investor under the prevailing code was that he should be able to distinguish between the fly-by-night concern and one of established repute. It was to this end that newspapers censored their advertising columns, that better business bureaus were established, that blue-sky laws were enacted. In floating the Kreuger and Toll bonds all the hall-marks of respectability were present. The underwriting syndicate consisted of Lee, Higginson and Company, the Guaranty Company of New York, Brown Brothers and Company, the National City Company, Dillon, Read and Company, the Union Trust Company of Pittsburgh, Clark, Dodge and Company. Legal matters were to be "passed upon" by Messrs. Ropes, Gray, Boyden, and Perkins of Boston, and Messrs. Carter, Ledyard, and Milburn of New York. It was confidence in these illustrious names that extracted the dollars of the American public. Just how, in the ultimate results, it fared materially better than it would have with a Ponzi, a J. Rufus Wallingford, or similar promoters is yet to be shown. Difference in intent may be cited in defense of these leaders of American finance. But the law has often established bounds beyond which negligence becomes criminal. It has done so in England, where, as Dr. Max Winkler suggested to the Senate committee, the issuance of misleading prospectuses or other financial statements is a criminal as well as a civil offense.

IN HIS DOUBLE ROLE of public mentor and president of Columbia University, Nicholas Murray Butler has appointed seventeen distinguished persons in and out of academic life to undertake at once an investigation of the economic crisis with particular reference to methods of production and international exchange. It is not to be merely a fact-finding commission, but is to make recommendations for "corrective action." Seven members of the commission are professors at Columbia, four are from other universities, and the rest are students of economics and public affairs. The group will consider especially the whole question of technological advance, and the study may thereby shed some light upon the new "science" of technocracy. This is an excellent enterprise, and the high quality of the members of the commission, comprising as it does such men as John M. Clark, James W. Angell, A. A. Berle, Jr., Wesley C. Mitchell, James H. Rogers, Benjamin M. Anderson, Alvin Johnson, Walter Lippmann, George Soule, and Harlow S. Person, insures a report which may easily prove as valuable as the recent study of social trends.

LOUIS FISCHER wrote in *The Nation* of January 11 that unless the Russian peasant "receives a very firm assurance that he will not have to submit to procurements again next autumn and winter, he will not plant this coming spring, and the Soviet Union will have another bad harvest. On this point the Kremlin must speak quickly—in January preferably, in March at the latest. March is the final term in Russia for effective agrarian reforms." The Kremlin chose the second week in January as the time for announcing

that it had yielded to the increasingly hostile pressure of the peasants. It is interesting, however, that the announcement came not from Stalin, the dictator, but from Molotov, president of the Council of People's Commissars. While Stalin had spoken out a few days earlier, his speech does not appear to have been designed to reassure the peasant. He declared that the collectivization of agriculture must go on unceasingly—"while small peasant individualism remained," there would always be "danger of a capitalist restoration"—and he asserted in quite unmistakable language that there could be no compromise with capitalism. He added that although "we did not succeed in satisfying all the needs of workers and peasants, and it is improbable that this can be done in the next few years," nevertheless, a solid foundation for industrial and rural socialism had already been laid. And with considerable meaning he said: "Our own camp is being increased throughout the world by the successes of the Five-Year Plan."

AS HEAD of the Russian state Stalin probably considered it imperative that he take this firm position. He may have felt that any show of weakness would be interpreted at home as betraying a lack of confidence in his own policies and abroad as indicating a departure from the program of socialization. In any event it was left to Molotov to make the necessary concessions to the peasants. The reforms proposed follow very closely the changes Mr. Fischer said must be adopted to avoid further trouble. Grain procurements are to be abolished. A grain income tax similar to that which Lenin instituted in 1921 will take the place of the procurement system. This should have the effect which Lenin foresaw: "The exact amount of the tax is known in advance, that is, as early as spring, to every single peasant. This will mean less abuse in the collection of the tax. This will mean that every peasant will be more interested in increasing his acreage, in improving his household, and in striving to increase his harvests." Of course, the peasant will have to have access to the free market in order to dispose of his surplus produce and so derive an advantage from the reform. That may seem like a return to private capitalism, but at the same time Stalin has warned that there will be no let-up in collectivization, which means that this compromise with private capitalism will probably be temporary.

IT IS NOW APPARENT that the League of Nations does not even intend to propose a meaningless compromise solution of the Manchurian question for the sake of saving its own face, but will elect rather to drop the matter quietly, leaving Japan undisturbed in its ill-gotten gains. For this outcome, which must eventually prove disastrous to the League, the smaller Powers have France and England to thank. The policies laid down at Geneva have always been dictated by Paris and London. In the Manchurian crisis these two Powers were especially anxious that nothing should be done to offend the Japanese. There has long been a tacit understanding between Paris and Tokio with regard to Far Eastern affairs. Neither has been particularly enthusiastic about the Open Door policy, not only because of its American origin and support, but because it has hindered the imperialistic expansion of both countries on the Asiatic mainland. Moreover, there is plenty of evidence pointing to financial, if not political, cooperation between France and

Japan in the handling of the Manchurian question. For one thing, the Japanese have needed extensive credits with which to buy munitions for use in Manchuria. The bulk of the imported munitions has come from French factories or from the French-controlled Skoda Works in Czechoslovakia. It is more than reasonable to suppose that the necessary credits have been extended by French bankers and munitions makers.

ENGLAND, TOO, has wanted to remain on good terms with Japan. In a recent issue of *Current History* the intimate relationship between the foreign offices in London and Tokio was described in the frankest terms by Commander J. M. Kenworthy, a member of Parliament and former Cabinet minister. Commander Kenworthy declared that the Anglo-Japanese alliance, which was formally renounced at the Washington Conference, is actually still in force. The British continue to use Japan for their own purposes in the Far East. They have not changed their policy in this respect since 1895, when, as a result of the Sino-Japanese war, they decided they must use Japan rather than China to keep the Russian bear in check. So far international communications are concerned, Japan occupies a strategic location, and England is naturally unwilling to make an enemy of a country which is in a position to cut its inter-imperial communications in time of war. In this connection Japan's mandate over the island of Yap has special significance. Yap is a cable center and as such is important to all countries interested in the Far East. So long as Japan holds this island by mandate, the British can retain a definite measure of influence over its administration. But if Japan quits the League, as it has several times threatened to do, the Japanese will unquestionably make short shrift of the mandate and simply annex the island. These and several kindred factors explain the French and English attitude toward the Manchurian question. They do not justify it.

THE LATE CHARLES W. MORSE was another one of the captains of industry who found his way behind the bars. His friends were always certain that it was really a bit of bad luck, since, they maintained, he was convicted on a technicality, whereas plenty of others much guiltier went unwhipped of justice. He was not only the ice king of America but was also on the way to becoming the steamboat king as well, and heaven alone knows where he would have stopped had he not been caught up with. But the Morse case will be longest remembered because of his devoted and beautiful wife who left nothing undone to rescue him, and—by means of certain pieces of soap—succeeded in getting her husband released. She herself carried his case to the White House; the pieces of soap when eaten produced in Morse a condition which fooled a board of three army surgeons into informing President Taft that Morse had only a short time to live. He was pardoned by Mr. Taft—not, as the doctors expected, to die at once, but to live on for twenty years, surviving both his faithful wife and Mr. Taft. A second time he went on trial, with his sons, in 1922, only to be acquitted. Surely there is plenty of material for romance in this story, and not only in the feminine element. If anybody doubts that Morse's role called for amazing determination and fortitude let him try a diet of soap.

An Open Letter to Technocracy

MR. HOWARD SCOTT, Director
CONTINENTAL COMMITTEE ON TECHNOCRACY
1 EAST FORTY-SECOND STREET
NEW YORK CITY

DEAR MR. SCOTT: Technocracy has performed a genuine service by focusing public interest on the two central problems of capitalist society—machines and money. Unless the present system can give the people jobs and the means to buy the essentials of life it is headed for drastic change. Your survey, more than any other economic research in recent American history, has captured the attention of the country. It has dramatized the problems involved in the displacement of men by machines and the inadequacy of the present system of currency and credit for balancing production and distribution. *The Nation* has so far refrained from editorial comment on the findings of Technocracy. We should have preferred to wait until the publication of your research reports and of your more considered conclusions. Unfortunately, however, the beans have been spilled before they were fully cooked; while your research is only partially complete, you have allowed certain limited data to be published. On this material, which is obviously *ex parte*, you and certain sympathetic commentators have based sensational statements; other less friendly critics have drawn from the same fragmentary data very different conclusions. Your release of this material and the public interest it has aroused lay upon you a vital obligation to make all your findings available for consideration and appraisal.

The Nation, in common with all thoughtful people, wishes to know the answers to two questions: First, are your facts essentially accurate? Second, what bearing do they have on current problems of economic policy?

There is urgent need of an appraisal of Technocracy based on an impartial examination of its figures and their implications. Such a survey should be conducted by a group of persons who command the respect of the community for their integrity, their independence, and their ability. It should include persons professionally qualified to pass upon the facts, who through wide political and social experience are also capable of making an informed judgment on questions of practical policy.

The Nation has asked such a group whether they would be willing to conduct an audit of Technocracy, provided they were allowed access to its records. It is striking evidence of the public importance of the problems with which Technocracy is concerned that the following persons have accepted *The Nation's* invitation:

M. C. RORTY, engineer and statistician.

Formerly vice-president, International Telephone and Telegraph Company; chief statistician, American Telephone and Telegraph Company; president, International Telephone Securities Company; and president, American Statistical Association.

DEXTER S. KIMBALL, engineer and university professor.

Dean of the College of Engineering of Cornell University; formerly designing engineer, Anaconda Copper Company; president, American Engineering Council.

LEONARD S. HORNER, electrical engineer.

Chairman of the Committee of Census of Manufacturers of the United States Department of Commerce; formerly president of the Niles-Bement-Pond Company.

ALVIN S. JOHNSON, economist.

Director, New School for Social Research; assistant editor, *Encyclopaedia of the Social Sciences*; member, editorial board, the *New Republic*.

LEO WOLMAN, economist.

Professor of economics, Columbia University; research director, Amalgamated Clothing Workers of America; chairman, Interstate Commission on Unemployment Insurance.

HARRY W. LAIDLER, economist.

Executive director, League for Industrial Democracy; chairman of the board, National Bureau of Economic Research; author of "Concentration of Control in American Industry," etc.

ERNEST GRUENING, editor.

Member, editorial board, *The Nation*; recently editor, Portland (Maine) *Evening News*; author of "The Public Pays," etc.

EVANS CLARK, foundation official.

Executive director, the Twentieth Century Fund, Inc.; formerly special industrial writer, the *New York Times*, and director, the Labor Bureau, Inc.; author of "Financing the Consumer," etc.

In asking this group to serve we have made but two suggestions. We have urged them first to give their attention to the immediate fully as much as to the ultimate implications of your findings. *The Nation* believes that the spokesmen of Technocracy have shown too great a readiness to deal with the final destinies of "capitalism" and "the price system." Such wide generalizations obscure precise thinking and raise barbed-wire entanglements in the way of a unified advance upon our common problems. It will of course be necessary to pass judgment on the implications of Technocracy's theories, but that should be merely the starting-point for the formulation of specific recommendations for action by public and private agencies which will apply whatever may be sound in your findings to the problems of here and now in the interest of lasting economic recovery and the equitable distribution of wealth among all sections of the population.

Our second suggestion concerns a question which has been too generally ignored in current discussions of Technocracy. The very name of your group implies government by technicians. It has been widely rumored that Technocracy is in part an organization designed to assume power in the event of an economic collapse. It would be valuable if the auditing committee might also be allowed to explore this aspect of your program.

We sincerely hope that Technocracy, in its own interest as well as that of the general public, will accept our suggestion of an audit and appraisal of its findings by an impartial committee of experts. We should like to have your reply for publication in our next issue.

THE EDITORS OF THE NATION

Suicide Is Confession

"WE have sinned—and the wages of sin is death!" Thus, in effect, do the officials of the National Electric Light Association solemnly confess and announce its formal execution. That great trade organization of the light and power industry, devoted for years to the dissemination of its own variety of light and to the perpetuation of its vast power, is to be extinguished. From its ashes a brand-new trade association, purged and purified, the Edison Electric Institute, is to spring. This organization, its sponsors announce, "is looked upon as providing a definite answer to demands made by public-utility leaders" at the convention last June "that the industry divest itself of all semblance of propaganda activities and that it assume an attitude of frankness and ready cooperation in its dealings with the public and regulatory bodies, that complete financial reports be made by all companies . . ."

It certainly comes under the head of "good news, if true" that the light and power industry is to stop disseminating its propaganda at the public's expense; that it will no longer attempt to prostitute the press and pollute the wells of learning in kindergarten, school, and college; that it will not again secretly subsidize "experts" to make "impartial" reports detrimental to public operation in Ontario and in our municipal-ownership cities and power districts; that it will no longer broadcast these falsehoods; that it will cease pinning the Bolshevik tag on those few courageous and faithful public servants and publicists who for years have sought to make the light and power industry conform to its own professions; that it will substitute frankness for dishonesty and deceit in its public relations.

While welcoming any move by the privately owned utilities to cleanse themselves from within, the public may well maintain a certain prudent reserve in its approval. The new enlightenment appears a bit like flight from the wrath to come. The nation will wait to see whether the fruits brought forth shall be meet for repentance, whether, indeed, to paraphrase Scripture still further, the pyramids shall be brought low and the crooked made straight.

For obviously the penitence comes late. The uncovering by the Federal Trade Commission of the most gigantic deception practiced on the American people in peace time came in 1928. At their various conventions in 1929, 1930, and 1931 National Electric Light Association officials, the executives and spokesmen of the industry, vied with each other in proclaiming the righteousness of their existing policies and practices. The perfection of existing control and management was perfervidly proclaimed. But then Hoover was in the White House, Insull was in Chicago, and all was well with the world. Now within a few weeks will be ushered in the Presidency of Franklin D. Roosevelt, with his most positive and unequivocal campaign pronouncements on power reform, and his evident guidance on that issue by those aware of the need of control in the public interest of that fundamentally important energy—electric power.

Moreover, the lone voices which foretold the weakness of the utility holding-company pyramids, which decried their iniquity as "masterpieces of designed confusion"—designed to mulct both consumer and investor—these voices now have

the ring of authority. The Insull empire is in ruins about the heads of hundreds of thousands of innocent investors, the very "widows and orphans" in whose behalf, allegedly, the power interests have so doggedly fought and resisted all effective regulation. And so, although practices wholly analogous to those of Insull exist throughout the dozen surviving great holding-company systems which control 80 per cent of the nation's power resources, it is not surprising that their overlords desire to disassociate themselves from the taint of that neo-Athenian. But how fundamental will be the reform which is implied in the reorganization of the N. E. L. A.?

Examination of the executives furnishes ground for some skepticism on that score. The officials of the new Institute are the same as those of the old Association. The president of the Edison Electric Institute is George B. Cortelyou, president of the American Gas Association. Although no extinction and rebirth of that trade association has been announced, it was the Siamese twin of the N. E. L. A. in its now decried activities. Indeed, it was at the convention of the American Gas Association in Chicago in 1920 that the first meeting of the directors of State utility information bureaus—the propaganda units—was held. And five years later, at the Gas Association's annual convention, it was the vice-president of the United Gas Improvement Company, P. H. Gadsden, who declared that the "educational" movement had "assumed such proportions that it is almost monopolizing the program of the American Gas Association." The present president of the United Gas Improvement is one of the trustees of the new Edison Electric Institute.

Mr. Cortelyou likewise became chairman in 1927 of the newly formed Committee of National Utility Associations, a high-pressure committee to integrate the propaganda activities of the National Electric Light Association, the American Gas Association, and the American Electric Railway Association. Mr. Gadsden became vice-chairman. Controlling investments totaling at that time seventeen and a half billion dollars, the chairman announced a nation-wide campaign backed by these potent forces "to demonstrate that the entry of government, whether national, State, or local, into this field [public utilities] is constitutionally unsafe, politically unwise, economically unsound, and competitively unfair."

Another of the officials of the new reformed institute is C. E. Groesbeck, long one of the two dominating officials of the great Electric Bond and Share Company, and now its president. It was that mammoth superholding-company system which declined to furnish information to the Federal Trade Commission on the expenditures of money to influence public opinion on the matter of public or municipal ownership, and on the fees charged to its subsidiaries. These were produced only after a prolonged court fight in which every resource of legal ingenuity was utilized and vast sums were expended. Included in the information thus extracted and now a matter of record is the fact that Electric Bond and Share derived from its subsidiaries service-fee profits of 73 per cent. It was the Electric Bond and Share Company also which secretly issued to its officers stock at far below market prices, and later, when the unexpected decline in values had brought prices even below this level, permitted these insiders to get their money back out of the company's treasury.

Perhaps the imminence of a "new deal" in Washington may have brought about the determination of the electric

light and power magnates to deal from the top of the deck henceforth. But it should not be forgotten that they have all sat in the same game and played it in the same way from the beginning, and that the performances of many years are to be weighed against the professions of a day, a day which bids fair to be one of reckoning.

Mutual Loot

THE "Kent plan" for reviving employment has been presented to the Senate Committee on Manufactures by Charles A. Miller, president of the Reconstruction Finance Corporation. This plan is the brain-child of Fred I. Kent, a banker of New York City. It proposes in brief that industry, with a view to reemploying as many workers as practicable, shall resume operations "on a 1927 scale." The various industrial corporations would purchase enough raw materials and other necessary goods to enable them to increase their production to a point approximating their output in the year 1927. They would obtain the credit required for these purchases from their local banks, which in turn would be guaranteed by the Reconstruction Finance Corporation "against loss for such proportion of the loan as was not covered by the sale of the increased production." This on the surface is a plausible scheme; it would probably revive employment to a certain extent, at least for a time. But the principle underlying the plan is vicious beyond words.

If the scheme has no merit at all, that is to say, if it should prove economically unprofitable, it would simply pile up still higher the huge losses we have already incurred as a result of the depression, and these losses would be thrown in their entirety upon the government and taxpayers. But even if the plan has real merit in the sense that the industrialists and bankers would stand to make a profit from the contemplated increase in production, why should the taxpayers be required to underwrite it? Why should not industry and the banks also be called upon to shoulder whatever losses may be involved? Until February, 1932, the entrepreneur invariably took this risk. In that month, however, the Reconstruction Finance Corporation was set up, and through this agency the government began pouring funds into private institutions. It is true that the banks, railroads, insurance companies, and building and loan associations have been helped by the government on the ground that they are endowed with a special public interest. But this governmental aid represented, nevertheless, a definite "socialization of losses."

Now Mr. Miller proposes that we shall extend this principle to help purely private interests as well. He timidly suggested when he appeared before the Senate Committee that he might be denounced as a Socialist for advancing this proposal. The most complete answer we have seen to this ridiculous assertion, as well as to the Kent plan itself, has come, not from any radical source, but from the financial editor of the conservative *New York Evening Post*. Mr. Miller, the financial editor said, "need have no fears on this score. He proposes a plan of private ownership of business in which during periods of prosperity the stockholders take the profit, but during the periods of difficulty the government pays the losses. No mere Socialist would be guilty of making such an unjust proposal."

Poets and Playhouses

SOME years ago one of the comic journals published a picture of two noble Romans leaving the amphitheater. "These gladiatorial combats are very amusing," says one, "but they are going to ruin the legitimate stage." The theater's golden age, like other golden ages, has always been in the past and something has always been destroying the legitimate stage. Said Hamlet of a chief member of his audience, "He's for a jig or a tale of bawdry, or he sleeps"; and a century later Pope wrote:

What dear delight to Britons farce affords,
Always the sport of crowds but now of lords

Nevertheless, new reasons are always interesting, and when the person who invents them happens to be so distinguished a worker as Arthur Hopkins he is worth listening to. According to him the real reason for our empty playhouses is neither the depression nor the overbuilding of theaters, but Henrik Ibsen. Writing on *The Lost Theater* in the *New Outlook*, he bewails the good old days of Booth and Irving, when the theater was a place of illusion, and lifts up his voice against those who have tried to make it a place of realism and controversy. Let us, he says, stop jeering at people who complain of the ugliness of the theater on the ground that there is enough ugliness in everyday life. They are right. Realists have had ample opportunity to justify their methods. Yet, despite their talents, none of the English or American playwrights of the last thirty years will survive, and that alone is enough to prove that they have been attempting the impossible. Let the dramatists tear up their notebooks and look into their own hearts. "When the theater touches everyday life let it bring some new illumination, some new understanding. Open all doors to the poets. The theater hungers for them."

Mr. Hopkins is half right. The business of all drama, and of all literature as well, is with "illumination" and "understanding." Whether it be frankly fantastic or ostensibly literal, it must be, in some fashion or other, "better than life," or we would not gladly exchange life for it. One of the major defects of the dramatists of the last thirty years undoubtedly is their helplessness in the face of the facts they have observed, their inability either to resolve the discords they have struck or to wring beauty out of the tragic predicaments they have invented. They state the problems but they do not give the answers, and the business of great art is always with answers, with some emotional adjustment to the situations presented.

But Mr. Hopkins is wrong in assuming that the situation is so easy to rectify. The theater is not suffering from the results of some perversity of its own. It is suffering, together with all modern literature and all modern life, from the fact that no satisfactory answer has yet been found to the situations which the restless inquisitiveness of the modern mind has uncovered. The old solutions will not do and new ones have not been invented. The success of Mr. O'Neill's more imaginative plays is proof enough that neither the producer nor the public will reject high and serious beauty when there is anyone to offer it; but it is very seldom offered. Open the door to the poets? Let them knock and it shall be opened unto them.

Issues and Men

A Cabinet for Mr. Roosevelt

JUST now everyone is busily engaged in making a Cabinet for Mr. Roosevelt. It is a pleasant game, hurts no one, and probably disturbs the President-elect not at all. One hears many rumors of what our next President is going to do. Only one story, however, seems to me to bear the marks of authenticity. It is that he has said that he proposes to put no one into his Cabinet who has his political future behind him and that he is looking for new material. It is to be hoped that this is true, for it would not help him to appoint left-overs of the Wilson regime or men who have become stale in the public eye or are wedded to outworn traditions. If Mr. Roosevelt could bring into public life a new group of young and vigorous executives eager to make their reputations, eager to solve the unparalleled problems that will confront them, eager to demonstrate their own and their party's fitness to govern, that in itself would be a genuine public service.

Mr. Roosevelt's is an extraordinarily difficult task because the Democratic Party has been out of power so long that there have been few opportunities for new leaders to develop. There are no new outstanding figures in the House of Representatives, and hardly any who have made records as governors, with Albert Ritchie of Maryland the chief exception. Especially in the West has there been a dearth of outstanding Democratic leaders. Stop and think: Is there any Democrat between the Mississippi River and the Pacific coast who at once suggests himself as Cabinet material? There may be such; I cannot call them to mind—unless we think of sitting Senators or Senators-elect. Yet, since the rule that the Cabinet must represent the various sections of the country will doubtless still hold, we are bound to attach significance to the visit to the President-elect of ex-Governor Woodring of Kansas. Here in the East we forget this rule when it comes to Cabinet-making and so we invariably people the Cabinet with men whom we all know in the East. With the West seething with unrest and suffering as perhaps never before, the embattled farmers are certainly entitled to a spokesman in the Cabinet. Who shall it be?

Even before Mr. Roosevelt considers geographical questions he must settle in his mind what his own theory is of what a Cabinet should be. Does he wish department heads who are to be merely yes-men and have no policies or ideas of their own? Or is he looking for outstanding personalities, men of aggressive vigor and clear-cut opinions? Mr. Wilson could not tolerate men of this type around him. He clashed early with Secretary Garrison and he made it clear that he wanted opinions only when he requested them. Mr. Roosevelt's personality is so different from that of Mr. Wilson that there is no danger of his taking this attitude; if anything he will be swayed too much by the opinions of others. A President may well demand of his Secretaries that they shall conform to his policies or retire. It was one of the scandals of the Coolidge Administration—at least from the European point of view—that some of his Cabinet made speeches or wrote reports in which they favored policies directly contrary to those

of the President; and there has often been a great lack of coordination between Mr. Hoover and his Secretary of the Navy—to cite only one case. Once a President has laid down his program he has the right to expect complete adherence to it. After that he would seem to be best served by surrounding himself with striking personalities and frank counselors.

Today there seems to be agreement that one appointment has been decided upon, that of James Farley, Mr. Roosevelt's campaign manager, as Postmaster-General and general distributor of the patronage in cooperation with Louis Howe, Mr. Roosevelt's Fidas Achates. Against this appointment objection ought to be made at once, not on personal grounds—I wish to leave the personality of Mr. Farley out of the matter because I have never met him and do not know how able he is—but on principle. It is time somebody made a protest on behalf of the Post Office Department and its hard-working and underpaid employees. Why should every President unload his political Man Friday on the long-suffering Post Office Department? In all the years in which I have been writing on politics, there has been only one first-class business man in charge of the Post Office Department and he was John Wanamaker, by appointment of Benjamin Harrison. Mr. Cortelyou since his retirement from the Cabinet has made the reputation of being the able head of a tremendously powerful public-service corporation, but when he was Postmaster-General he, too, was in charge of the President's political fences. Mr. Wilson put the unspeakable Burleson from Texas into the Post Office Department without, of course, realizing that a war was coming, and that this man who was so destitute of any real understanding of American traditions and principles would become the censor of the American press. He, too, was chosen because he had been for years in the House of Representatives and therefore knew the political game of which Mr. Wilson was so ignorant. Meanwhile, critics of government ownership and management are always talking about the inefficiency of the Post Office Department as proof that the government must not go into business.

For the rest it is to be hoped that Frances Perkins is to be either Secretary of Labor or of Commerce. She would distinguish any Cabinet and it would be a magnificent thing to recognize her sex by appointing so able, so socially minded, and so remarkably efficient a woman to the Cabinet. But the most important appointment will be, as always, that of Secretary of State, and here everybody is at sea. There still persist rumors that the appointee will be Norman Davis. I do not believe it, and I sincerely hope that it will be a man as eminently fitted by character, legal training, knowledge of the world, and general right-mindedness on the issues of the day as Frederic R. Coudert of New York.

Dwight Garrison Killard

Is Divorce Worth the Price?

By DORA RUSSELL

THE legal records for the past year in England show the highest number of divorce petitions ever filed in one year. At the same time it is asserted that the divorce rate in the United States is no higher, and indeed is possibly lower, than it used to be. Divorce, to which unhappily married English people and other Europeans are increasingly turning, is, so some say, increasingly being rejected by the Americans, who have had fuller and longer experience of its inadequacy as a solution for matrimonial difficulties. The economics and the psychology of marriage and divorce are certainly not identical in Europe and America, and it is interesting to speculate as to whether the attitude of men and women on either side of the Atlantic is changing, and if so, what may be the outcome.

Economic questions bulk largest at the present time in the minds of us all. Some people may not be securing divorces because, like the proletariat, they cannot afford to. In England, among the poor, the victim of a really unhappy marriage receives considerable tolerance from neighbors if he or she forms an extra-legal union. It is assumed that a divorce is not for the "likes of him" but only for the rich who can pay for the law and thread their way through its mazes. But a marriage makes everyone feel more comfortable, so that bigamy, though a crime, is in England quite a common one among the poor, and is winked at even by those responsible for legal morality unless it is forced upon the notice of the police; or unless it has flagrant features such as marrying one partner after another to extort money.

Only recently in England a man came before the court charged with the crime of bigamy; his legal wife went to plead for him so that he escaped penalty. The judge asked her if she still wanted her husband. She replied: "Do not put it like that. I wish to see him happy with the woman he loves." She added that she would now try to divorce him. This conduct earned her a compliment from the judge, who went so far as to add that the person who had informed the police of the bigamy was an interfering woman who would have done better to mind her own business. The generosity and moral values shown in these bigamy cases, both by judges and contending parties, are frequently far in advance of those that prevail or are even permitted in the divorce courts, where revenge rather than compassion is still in most cases the dominant motive not only of the petitioner but of the judge as well.

It seems to me quite possible that poverty is a deterrent factor influencing the divorce rate. Men and women may well decide that the expense of the law is one that may be spared and postpone a legal solution of their problems until better times, meanwhile living with new partners without legal sanction. Or it may be that economic reverses make men and women disinclined to be quitters. They prefer in bad times, perhaps, to patch up their quarrels and stand by their children jointly. One may safely say that in the United States during the last twenty years divorce has been entered upon for lighter cause than in Europe. There are several reasons for this: the most obvious is the easier divorce laws;

then there is the consequent smaller social penalty; and lastly there is the fact that it has been easier for men and women to make a living in America, so that the legal expense or the cost of alimony or the necessity in which a divorced wife might find herself of earning her own and perhaps also her children's bread has not been a serious deterrent. In this time of economic panic people's first thought is how to keep themselves and their children alive. Sexual frustration or maladjustment, under such circumstances, is apt to go by the board.

But, it may be argued, how is it then that the divorce rate in England is still rising, since English people, like everyone else, must be feeling the pinch? In the first place, the English rentier class are still more secure than the same class in most other countries, or they believe themselves to be so, which is the more important from the point of view of psychology. In the second place, English divorce law and custom have lagged so far behind those of other countries—except those under Catholic dominance—that the English are only now beginning to make up for lost time. The recent changes of the law in England that make it possible to divorce a husband for adultery alone have caused a great increase in arranged divorces. There would probably have been a much more rapid increase in the divorce rate if we had now been richer.

What is more, the judges have been at pains to try to snatch away the greater latitude that the law has given by severely scrutinizing the "hotel-bill" divorce, demanding in such cases both the name of the woman correspondent and evidence that there has been not one act but continued adultery with her. Nor does the petitioner—the so-called innocent party—escape. He or she is closely cross-examined and must, if there has been a lapse into adultery on his or her part, confess it to the court and ask for its mercy and discretion. If such confession is not made, any person who has information as to the petitioner's private life may carry it to the King's Proctor, who then intervenes in the suit and prevents the divorce decree from being made absolute. The petitioner is then left bound for life, with the costs of the King's Proctor to pay in addition to those of the ordinary lawyers.

Emissaries of the King's Proctor make it their business—in the interests of what is called public morality—to spy upon and shadow people engaged in securing divorces. It is said that the King's Proctor's department intends from now on to investigate thoroughly every undefended divorce. Quite simply this means the harrying of all people who are trying to get decently out of an unhappy marriage. These discretion cases are at the present time the scandal of our divorce courts, not by reason of the immorality of the unfortunate people who have to face them, but because of the way in which they are used to provide interesting sexual histories for the judges and additional fees for the lawyers who thrive on divorce cases.

Not long ago a woman asked the discretion of the court in divorcing her husband, admitting adultery with one

other man. The King's Proctor intervened because his department discovered that the woman had not disclosed the full nature of the adultery, which had not been limited to one or two casual incidents, but had been continued over a period of two years or so. The judge did not quash the divorce, but ordered the woman to pay the costs of the King's Proctor within six months. It is difficult to see how public morality was served in this case except in so far as more money went into the pockets of the state officials appointed to maintain it.

In the face of such humiliation and expense the English are none the less getting more divorces. This certainly implies a change in our attitude. The English are not only a sentimental but an incurably obstinate people. They have tried hard to cling to the romantic ideal that people marry once for all time. The Englishwoman is in far greater subjection to the family than might be supposed from the outward signs of feminism in English politics. English wives have been willing to allow a good deal of latitude to their husbands, provided open scandal was avoided, and of recent years husbands have often extended similar tolerance to their wives. Both have made real efforts to prevent the breaking up of family life even when sexual impulses led to temporary infidelities. Romantic friendships probably lead to sexual intercourse more frequently in England than in the United States just because a divorce is less likely to ensue. Roughly speaking, the English have thought it more indecent to break a marriage than to have affairs *sub rosa*, while Americans on the whole have thought that it was more indecent to be unfaithful without accepting the consequences of a fairly prompt divorce.

Lately the idea that it is right to set one's partner free when he or she really wishes it has gained ground in England. In order to give freedom to each other, men and women possessed of a higher standard of morality than is allowed for in our law have been increasingly willing to go through real hardships and disgrace to comply with the law's absurdities when cheating it by subterfuge no longer avails. At the same time, Americans seem perhaps to have been discovering that there may be greater disadvantages in insisting on the break-up of a pretty good home at the bidding of an uncertain romance than in mutual tolerance of infidelity.

If this is so, then the American and English views have come nearer together, and there may be ground for hope that a new family morality built upon practical experience rather than on taboos is being evolved. The complications of human personality and emotion both in children and in adults are more honestly faced and better understood in both countries than they used to be. In consequence, the bankruptcy of legal solutions and the legal mind is more fully revealed. The law may bind or set free, divide property and split up the lives of children between separated parents, but the emotional tangle remains and can never be resolved except in the hearts of the men and women and children caught in its meshes.

No man or woman is free of a marriage until love and hate have been softened into friendship or indifference; no child is free of his parents' concerns until he is old enough and strong enough to have made a real life of his own. For some adults a new love wipes out an old one; for others it brings added riches without destroying the value of old ties. Some parents can let parental affections be dimmed by new

sexual love; for others the conflict between new love and old parental ties provides half a lifetime of sorrow. And there are few children who escape some psychological harm when parents who have been closely united quarrel and go apart. Though the modern child may be independent enough to spend only a little time with his parents, his instinct is still to take each by the hand and keep them united. The relation of his blood parents is his psychic home. He feels endangered by its disruption whether that disruption is the result of quarrels at home or of divorce.

But it must be stressed that this is a psychological matter—it is the image of the parents' relation in the child's mind that counts. Thus it is possible to imagine divorce conducted in such a manner as not to break or seriously disturb this image. Emotionally mature people should be able to distinguish between sexual and parental love. Divorced husbands and wives should be capable of maintaining friendship and co-operation over their children's welfare. Even when one partner is left alone, without remarriage, is it unthinkable that he or she should be generous enough to preserve at least some kind of mutual parenthood with the one who has broken up the home? Indeed, would not many husbands and wives naturally be ready to part without rancor, and equally naturally continue to act together in the children's affairs? Too often it is the bitterness engendered by the delays and conventions of the divorce court that comes between them. Sometimes, it is true, this is intensified by the desire of their new partners to insure a complete break with past associations. Is all this bitter quarreling necessary, and do not our obsolete laws play a greater part in creating it than do the jealousies of husbands and wives?

Many of these difficulties might be overcome or at least mitigated if divorce were both swifter and less expensive, and given never upon grounds of adultery, cruelty, or desertion but solely because of a serious desire on the part of one of the couple to cease to have a joint home; and if, furthermore, the so-called guilt or innocence of the parties were wiped out as a consideration in allotting the custody of children. The law should become a method of peaceful solution between all the parties concerned instead of remaining, as it is now, a dangerous weapon in the hands of whichever person can snatch the legal advantage.

Divorce, as it must be conducted at present, cannot fail to appear to any sensitive man and woman as scarcely worth the emotional cost or even the monetary outlay. Though many people may have cause to be grateful to sound and conscientious lawyers, how can the legal profession as a whole help having an economic interest in maintaining difficult and expensive procedure? The expense and slowness of procedure in all sorts of civil cases in England led just lately to a plea for reform on the part of some of our lawyers on the ground that clients were impatiently settling their differences out of court! The divorce situation is worse; on all sides the new wine of modern morals is bursting the old legal wine skins and more and more men and women are driven to be outlaws. One remedy might be to live by private agreement, boycotting divorce and, logically, the marriage that must precede it. The prohibition racket became intolerable and one may now hope that it will have brought the end of prohibition. The divorce racket may go the same road. There seems to be no other way out except a social revolution.

The Secret International

By MAURITZ A. HALLGREN

Washington, January 16

IS the Secret International—the ring of munitions makers who profit by war—too strong to be smashed by public opinion or by the governments concerned? Two decades ago a campaign was launched to render the munitions industry harmless by bringing it under social control. The campaign had many ardent supporters, among them Philip Snowden, who revealed in the House of Commons just four months before the World War began how intimate was the relationship between the armaments industry and the British government. “It would be impossible,” he declared, “to throw a stone on the benches opposite without hitting a member who is a shareholder in one or another of these firms.” He mentioned by name several of the members of Parliament who were financially interested in the manufacture of armaments and therefore in the promotion of war. Other aspects of the ring’s operations were brought to light by such writers as G. H. Perris, author of “The War Traders,” and by such organizations as the Union of Democratic Control, which published its findings under the title, “The International Industry of War.” The movement was measurably advanced by the Women’s International League for Peace and Freedom, which in 1915 adopted a resolution declaring:

This International Women’s Congress sees in the private profits accruing from the great arms factories a powerful hindrance to the abolition of war. It urges that by international agreement each country should take over as a state monopoly the manufacture and control of arms and munitions as a step to complete and final international disarmament.

By 1919 the movement had become so strong that the peacemakers at the Paris Conference were persuaded to write into the League Covenant a section looking definitely toward international supervision of the munitions industry. And in 1921, in compliance with this provision, a special committee of the League inquired into the activities of the armaments ring. Although the facts uncovered by the investigators were never published, the committee announced that it had arrived at the following conclusions:

That armament firms have been active in fomenting war scares and in persuading their own countries to adopt warlike policies and to increase their armaments.

That armament firms have attempted to bribe government officials both at home and abroad.

That armament firms have disseminated false reports concerning the military and naval programs of various countries in order to stimulate armament expenditure.

That armament firms have sought to influence public opinion through the control of newspapers in their own and foreign countries.

That armament firms have organized international armament rings through which the armaments race has been accentuated by playing off one country against another.

What is the situation today? The munitions makers are still at their frightful business of fomenting war scares, coercing governments, and poisoning public opinion in order

to find markets for their wares. They are still hiring propagandists—witness the Shearer case—to block disarmament. They are still delivering implements of destruction without fear or favor to governments which are likely, often with the subtle help of the arms manufacturers, to engage in quarrels with their neighbors. Munitions were pouring into Bolivia and Paraguay long before war began in the Gran Chaco; Argentina has been buying armaments in the United States under the terms of two secret loans made in 1923 and 1926; Persia has been a heavy purchaser of war materials; up to 1930 more than 99 per cent of the munitions exported from Japan went to the Chinese Nationalist armies, some of this material later being used against the Japanese invaders of Manchuria. The European munitions makers have been no more patriotic than those of Japan. The Schneider-Creusot firm of France has been just as generous in supplying arms to a former and probable future enemy as to some of France’s allies. Nor does any government seem disposed to break up this international ring. Indeed, we still find government officials financially interested in corporations making war materials. To name only two, Sir John Simon and Neville Chamberlain, members of the present British Cabinet, are stockholders in Imperial Chemical Industries, Limited.

The peace societies have been trying against extraordinary odds to uncover a few facts about the activities of the munitions ring. A few months ago some of this information was published by the Union of Democratic Control in London under the title, “The Secret International.” But the peace societies find themselves blocked at almost every turn. Even the League of Nations has had little or no success in getting a true picture of the operations of the munitions industry. Four years ago the League Assembly set up a commission to draft a convention providing for international supervision of the traffic in arms. As a preliminary step the commission debated the question of whether it should ask the member governments to publish periodical reports concerning armament manufacturing in their countries. The British delegate said his government could not comply. By way of explanation he declared:

In the first place my government could not give this information; they have not got it. Secondly, it is only the manufacturers—the licensees themselves—who could furnish it, and they would certainly refuse to do so. Thirdly, we have no power to compel them to do so; and, fourthly, very few governments would have the courage to introduce legislation to make them do so.

A year or two later Elisabeth Waern-Bugge of Sweden set out to gather for the peace societies all the information she could find concerning the activities of the munitions ring. She consulted all the available statistical reports of the League of Nations and individual governments. She talked with or wrote to government officials, peace workers, other interested persons, and even army officers in many countries. While she managed to assemble some statistical information, she learned that “the most dangerous facts can never be found in any official report. The secret manufacture of and the

masked trade in armaments only in a very few cases slip out of the well-guarded circles of the initiated and economically interested persons. And the reliability of what leaks out is very difficult to confirm."

The national budgets of some countries often provide for smaller expenditures on armaments than the value of the armaments actually imported by these countries. In other cases the varying methods employed by different governments in listing articles exported and imported make it difficult to obtain satisfactory information. The Swedish records show that in 1923 Sweden exported to Norway munitions valued at 491,000 crowns, but the Norwegian records show that in the same year Norway imported from Sweden munitions valued at only 139,400 crowns. In 1925, according to American trade figures, 32.2 per cent of this country's total exportation of powder went to Poland, but nowhere in the Polish trade statistics is there any record of gunpowder imported from the United States in that year. There is reason to believe that a great deal of war material enters into international trade in the guise of "sporting arms" and "fireworks," and there is plenty of evidence at hand that munitions have been shipped as "pianos," "machinery parts," and "farm implements." Contributing to the complexity of this problem is the fact that many articles adaptable to war purposes are articles of everyday use.

An interesting discovery made by Mrs. Waern-Bugge is that while Article 170 of the Treaty of Versailles forbids Germany to make or to export to foreign countries arms, ammunition, or war material of any kind, "the nations which forced on Germany the said Article 170 are themselves among its customers." Great Britain, Italy, Belgium, and even France have been buying munitions from their former enemy. The same article forbids the importation of armaments by Germany, but this has not prevented the English firm of Vickers-Armstrong from advertising its latest and most efficient type of big gun in the official magazine of the German Reichswehr. Even more startling is the discovery that the bulk of the munitions entering into world trade in the last ten years has been shipped to countries in the Pacific area. This is at least understandable in the case of China, which has suffered from perennial civil warfare, but Canada, Australia, and the Dutch East Indies have also been increasing their purchases of war supplies. Of the countries in the Pacific area only the United States has not been importing munitions, but it must be remembered that in this respect the United States is virtually self-sufficient.

More than 35 per cent of war materials in world commerce is sold by British firms. Recently Sir John Simon, British Foreign Minister, declared: "In approving the issue of licenses to export arms and ammunition to foreign countries, the Foreign Office is entirely actuated by the consideration as to whether such action would in any way affect the friendly relations of His Majesty's government with the foreign Powers concerned." In other words, the English armaments trust can sell its products wherever it pleases so long as the sale does not conflict with British foreign policy. Another large proportion of these products is shipped through Hamburg, which happens to be the free port of Czecho-Slovakia. And Czecho-Slovakia is the home of the famous Skoda works, which are a part of the French Schneider-Creusot ring. A good share of the munitions used in the Manchurian war has been—and still is being—shipped through

Hamburg. The *New Statesman and Nation* of London described this traffic some months ago in the following words:

The names of the ships with their dates of sailing are given. They show that large freights of explosives, bombs, machine-guns, airplane parts, and revolvers have left the harbors of the Elbe, bound for Japan, during February. The Skoda factories in Czecho-Slovakia sent 700 boxes of munitions via Hamburg to Japan, and on the following day a Norwegian steamer, Zoward, took 4,000 boxes of explosives from Germany on its way to Japan. And so on from day to day. . . . The Japanese Military Commission was in Czecho-Slovakia in February, and this visit was probably not unconnected with the big contract for bombs to be shipped via Trieste, on which the Skoda works were busy shortly afterwards.

But not all the munitions of war used by the Japanese have come from Czecho-Slovakia. England has had a share of this traffic; the German chemical industries have sent huge quantities of acid for making explosives; an automobile factory at Dijon, France, has been making heavy airplane bombs for the Japanese; the Schneider works at Creusot have been turning out heavy tanks. Still the sources are not exhausted. American companies have been participating in this profitable commerce, to what extent it is impossible to say.

The United States government has given some indication that it may adopt a more progressive and intelligent policy with respect to the traffic in munitions. After having contended for years that governmental supervision of the munitions industry would be unconstitutional, the State Department recently decided that the government might after all have that authority, and the League of Nations was so informed. Again, the action of Mr. Hoover in asking Congress to confer upon the President "authority in his discretion to limit or forbid shipments of arms in cases where special undertakings of cooperation can be secured with the principal arms-manufacturing nations" increases the hope that the United States may eventually be induced to meet the munitions problem honestly and squarely. But apart from these suggestions of a change in policy, the American record is as black as that of any of the European Powers.

In December, 1931, Representative Fish of New York introduced a resolution to prohibit the exportation of arms to nations at war. This was the same bill that the late Representative Burton of Ohio had for years been pressing without success. The House Committee on Foreign Affairs at first refused by a vote of six to five to hold a public hearing on the Fish resolution, on the ground that it might offend the Japanese! Later the committee was prevailed upon to grant such a hearing. Representative Fish asked Dorothy Detzer, executive secretary of the American section of the Women's International League for Peace and Freedom, to invite witnesses to testify on behalf of the resolution. The hearing was set for February 10, 1932. At the appointed hour Miss Detzer appeared with the people who were to testify, including representatives of the National Council for the Prevention of War, the Society of Friends, and the American Legion. Numerous press correspondents were also at hand. Members of the committee were clearly disconcerted by this unexpectedly large attendance. Instead of opening the hearing, they went into executive session, which was scheduled to last five minutes but actually continued for an hour and a half. After the long secret session the committee announced that no hearing would be held. The official

reason given was that "additional information was wanted on this question." The committee members showed resentment when they were asked "whether the munitions interests in some of the Congressional districts were behind this move." Privately the members explained that public hearings might irritate the Japanese and annoy the State Department.

The reference to the State Department was new [Miss Detzer later explained], so that I went immediately to inquire as to the part it was playing in the suppression of the hearing, and learned that on the Sunday before, Hamilton Fish had had a conference with the President, the Secretary of State, and one of the assistant secretaries. Mr. Fish had urged the Administration at this time to support his resolution, which they had finally decided not to do. It was thought, apparently, that Mr. Fish would present his own resolution at the hearing, and that there would be no general interest in it. But when such a large group appeared before the Foreign Affairs Committee, and such a representation of the press appeared, the committee members were disturbed, and upon going into executive session called the State Department to ask for instructions or advice. The State Department requested that the public hearings be suppressed.

It was subsequently learned that conversations had taken place between France, England, and the United States with regard to possible regulation of munitions shipments to the Far East. France and England, it was stated, refused to cooperate with the United States in a munitions boycott. Legal experts in the State Department offered other reasons why the government could not prohibit such shipments from this country, but the real defense for suppressing the hearing was based on the assertion that "practically no munitions are being shipped to the Far East."

This statement was, of course, untrue. There had been

plenty of evidence that arms were being sent to Japan. On February 11, the day following the suppression of the public hearing, the *Washington News* carried the following dispatch under a Richmond, Virginia, date line:

Large quantities of nitrates believed to be for the Sino-Japanese war are being loaded this week in three ships at the wharf of the Atmospheric Nitrogen Company at Hopewell, Virginia. A Japanese ship of 10,000 tons' capacity and a British ship of 5,000 tons are expected to sail in a few days for destinations not yet announced. A German ship of 3,500 tons will be ready to sail shortly, while a fourth ship, a French boat of 6,000 tons, is expected to land later in the week to receive a cargo.

Some days later, according to a Washington dispatch to the *Baltimore Sun*, Representative Fish "published figures from the Commissioner of Customs showing that fifteen ships, mostly Japanese, had cleared from Hopewell, Virginia, loaded with nitrates, since the outbreak of hostilities in the Far East. All but two ships were destined for Japanese ports." One might in this connection also look into the unusual activity of the Winchester Repeating Arms Company, Remington Arms Company, and other munitions firms, which have even taken on extra workers during a period of general depression.

It is also interesting to note that on March 28 of last year Pierre and Lamot du Pont conferred for several hours with Assistant Secretary of State Rogers and Stanley K. Hornbeck, chief of the Far Eastern Division of the State Department, and that within a few hours after this conference the word was flashed over numerous stockbrokers' tickers that the American munitions policy would not be changed. There is no way of knowing what was discussed at this conference, but it is significant that from that day to this American companies have been permitted to ship munitions to Japan.

Behind the Cables

By E. D. H.

Paris, January 2

THE gentlemen in Washington and their representatives in Europe who are wont to talk glibly though vaguely about the relation of debts and disarmament may be launching a boomerang which may land eventually on the White House lawn. Europeans are getting somewhat bored with being scolded for what they spend on arms. Doesn't the United States spend a pretty penny, too? And it is a little odd that America, still officially blind to any "connection" between war debts and reparations, should be so eager to detect a relationship between debts and disarmament. Jurists in various chancelleries here are working on a line of argument in answer to the American thesis. The conclusion is that the United States cannot demand reduction in armaments as a price for debt-cutting unless it accepts a profound modification of its own foreign policy.

The argument goes like this. Say what you will, there will be no disarmament in Europe until there is security too. Security means at the very least the organization of mutual-aid or non-aggression pacts into a thoroughgoing structure capable of offense if necessary, that is, through an interna-

tional armed force. Now, no such structure can exist without British help, because the British fleet would be the chief weapon in any blockade against an eventual aggressor. And the British will not promise their help unless they are helped by the United States. Thus we reach the old, old dilemma of "sanctions" that arose with Article XVI of the League Covenant, though now it is disguised as the problem of the "elimination of neutrality." Suppose the United States should claim the conventional neutral right of trade with a belligerent. This would bring the United States into conflict with the British fleet enforcing a blockade. And instead of preventing war, the system would threaten to bring on war between Great Britain and the United States.

On the other hand, if we agree to implement the Kellogg Pact not only with a promise to consult, as Mr. Stimson has already done, but with formal renunciation of our rights as a neutral in the event of war, then disarmament becomes a practical possibility. We need not fight, or even join an economic blockade; we need merely to promise not to break the blockade which the rest of the world will presumably have set in operation against the aggressor. I imagine there will be more and more talk about this in the near future.

Remarkable things continue to happen to the remarkable French. A fortnight after refusing to pay the United States of America \$19,000,000, France agreed to lend the Republic of Austria \$14,000,000. No one here thinks this is as funny as it surely is. But a little bit of secret history helps to explain it. For one thing, the loan is

COOLING OFF IN FRANCE

granted to Austria by the Powers so that they, the Powers, will not have to pay service on Austria's defaulted League loan, which is guaranteed by the governments of France, Britain, Italy, and so on. For another, it is intimately tied up with that good old bit of blackmail, the Austro-German threat of *Anschluss*. Had France refused to ratify the new loan protocol, presumably Austria would have regained to some extent its freedom of action in negotiating a customs union with Germany, since the new protocol reiterates the clause forbidding Austria to jeopardize its independence. Anybody who whispers *Anschluss* loud enough, in other words, can shake down Paris for \$14,000,000. It has cost France slightly less to bribe its erstwhile enemy, Austria, to stop making eyes at Berlin than what it should have paid its former ally, America. The French look upon the Austrian loan as the final catastrophe of a catastrophic year. The Happy Results of 1932, according to the *Journal des Débats*, are that Germany need not pay but receives the right to arm; that France must pay and is going to be compelled to disarm. It's a grand thing to win a war these days!

The French default has, of course, proved beyond doubt that the Almighty Himself has returned to the Wilhelmstrasse. Nothing could have played better into Schleicher's calm, patient hands. It will probably keep him impregnable in office for two years or more. What was all that talk about the "sanctity of written agreements," about the "validity of those instruments which preserve the status quo"? Let the French whisper about German treaty repudiation and what an answer they will get.

Please note that Pierre Comert has given notice of resignation of his League job. This is the sort of small item which scarcely gets into the papers and which it is the special function of this correspondent to report. On the individual tastes, emotions, sympathies, and predilections of single isolated personalities—many of them semi-

COMERT OUT, anonymous, tucked away inconspicuously in SWEETSER IN. the upper civil services of various capitals—a great deal of inner political history may ir-

rationally depend. Pierre Comert is chief of the information section of the secretariat of the League of Nations. He was certainly not incompetent, and the technical machinery he created for his job is admirable, but he was not an international civil servant; he was a Frenchman, and a Frenchman in a crucially important post. Comert fell victim to a strange deal. The Germans had balked at Avenol as Drummond's successor as Secretary-General until some exceedingly bright member of the German delegation changed the German strategy to acceptance of Avenol, a nonentity, provided that Comert, a powerful personage, went. Publicly, it was simply said that if a Frenchman became Secretary-General, not too many other Frenchmen should have topflight posts. Thus the struggle over Drummond's job was a smoke screen behind which Comert was virtually dismissed. Comert's first assistant and presumptive deputy is Arthur Sweetser, an

American. If Sweetser gets the permanent post, and almost everyone at Geneva hopes he will, he will take rank as the first American "cabinet minister" in the League. Sweetser's great power at Geneva has been his unofficial pipe-line to politicians and philanthropists in New York and Washington. As to Comert, he gets a pretty plum; he becomes director of information in the office of the French Premier.

I find here in Paris that the new eight-Power "bloc of democracies" is taken with some seriousness. This bloc, comprising the Geneva delegations of Spain, Switzerland, Holland, Belgium, Norway, Denmark, Sweden, and Czechoslovakia, all democratic Powers, is mostly a product of those fertile little busybodies, Señor Madariaga and M. Eduard Benes. It came into THE EIGHT-POWER BLOC being largely to support the Herriot security plan. By no means officially cohesive, it may nevertheless exert a good deal of healthy pressure at Geneva. These Powers have been behind what counter-attack there has been against the Japanese. Three of them, with Ireland, forced Matsuoka into an almost open threat to leave the League. Madariaga and Benes are likely to get into serious trouble if they continue to be bold, honest, and decent.

It is difficult these days to leave the debts alone. One item puzzles Europe more than almost any other thing. In the British note of December 1 and in Chamberlain's later speech in the House of Commons it was stated flatly enough to make your head ache that "the initiative in devising a settlement of reparations was taken by the creditor DEBTS AGAIN governments at Lausanne with the cognizance and approval of the United States government." Yet Washington continues to deny any connection, even morganatic, between debts and reparations! Why no protest, then, at this slander? Has the White House risen in wrath to smite its defamers dead? It has not—for the very good reason that the White House knows that the defamers speak the truth.

This, I imagine, may explain one of Europe's greatest mysteries, namely, the complete disappearance from the normal habitats of human life of Hugh Gibson, once known as a Hoover diplomat. Mr. Gibson has been swallowed up without trace. I can find no one in Paris who has seen or heard of him for three months. Let us recall that romantic meeting on the evening of June 20, at Morges, a little village between Lausanne and Geneva, when Mr. Gibson ventured to talk to M. Herriot about "disarmament," later continuing his discussions with MacDonald and Papen at Lausanne. The talk may have been only on disarmament. But it is commonly said that Papen, arguing at the time for a clean slate on reparations, was dissuaded from this view because someone, possibly Mr. Gibson, told him that the United States would do what it could to "scale down" the debts if reparations in turn were simply scaled down, and not canceled. Certainly since that time the Powers have assumed an inevitable correspondence between the final reparations figures and the eventual debt figures. This goes to explain Europe's feeling that it was "betrayed." No one knows, of course, or will tell, exactly what Mr. Gibson said or promised. But whatever it was, it seems to have been of such a nature that ever since he has had to be most carefully put on ice, salted down, and hidden.

Our Mangled Compensation Laws

By HELEN BUCKLER

IN a multiplicity of plans for erecting a bulwark against economic instability, attention has somehow passed over one extremely pregnable spot. If, even when times are good, we have half a million unemployed, we have also two millions, or four times as many, thrown violently out of work each year for shorter or longer periods, many of them forever, by injuries received on their jobs. Despite compensation laws in forty-four States, the fate of these workers and their dependents remains largely fortuitous and a definite source of trouble in our national well-being. The wage loss of injured workmen in this country each year totals \$1,000,000,000; of this sum, representing the livelihood of a host of families, only \$150,000,000 is restored through compensation and medical aid. Besides the pain and the suffering, most of the cost of industry's hazards is borne by the victims. The burden is passed on in part to their children, 14,000 of whom are annually left fatherless. Every ten years the number of industrial orphans reaches a figure great enough to populate the city of Nashville, while the security of an even larger group is threatened by accidents which disable the family breadwinner and render precarious his future chances of earning a living.

Before we contemplate any further forms of social insurance in this country, we should examine critically our first abortive attempt in that direction. What we see is a chaotic series of illogical provisions, at once unscientific and unethical. The existing statutes embrace but falteringly the accepted principle that "the risk of economic loss through personal injury in the course of production should be borne by the industry." Indeed, so insufficiently do they reimburse the injured that they scarcely merit the designation "compensation" laws. In the first place, millions of workers still stand outside the pale of legal relief, inadequate as it is. In four States the worker must depend for redress entirely upon the expensive and uncertain damage suit. And not one of the other forty-four States protects *all* its workers. Exemptions are made for certain industries on grounds of too much hazard, or not enough hazard, or for equally contradictory and unsound reasons. There is no protection for men in cotton-ginning in Texas, in logging in Maine, in distilling in Kentucky.

Office workers are unprotected in twelve States. Interstate transportation workers have no coverage anywhere in the Union. In more than half the States relief is denied to workers in shops employing less than a stipulated number; in Georgia the minimum is ten, in Alabama sixteen. Yet the smaller concerns outnumber the larger ones in this country and employ most of the workmen. Still other exemptions are made. Casual employees, who probably need protection more than any other class, indirect employees working for subcontractors, home workers in the sweated trades, the army of self-employing workmen—all of these suffer omission under the statutes; while the farm laborer who loses his hand in a threshing machine and the domestic servant who loses her in a clothes-wringer must seek redress as best they can.

There is, however, no more distressing provision in the

laws than the insistence that an injury must be sudden if the victim is to be compensated. The man who drives a truck may fall off his seat into a pool of water, contract pneumonia, and die, and his family will receive compensation without question. But let him work all day in the rain, contract pneumonia, and die, and there is no recompense. Let a man break a bottle and splash acid on his hands, and he is compensated for his burns. But let him work with the same acid over a long period, gradually contracting the same sort of ulceration, and the law allows him nothing at all.

Only five States and the federal government where it has jurisdiction require without reservation compensation for occupational diseases as well as for sudden injuries arising out of employment. Six other States go less than half-way in establishing official lists of certain illnesses caused by specific substances and declaring that these and these alone must be compensated for—a compromise resulting in both bizarre and tragic miscarriages of justice. All other States refuse compensation for disease, mainly through fear of imposing too heavy a burden upon industry. Yet Wisconsin firms pay for complete insurance coverage not a penny more than firms in other States pay for accident coverage alone.

What of the workers who remain eligible after all these exclusions are made? To what sort of relief are they entitled? Before answering the question it should be pointed out that a sincere, reasonable, and effective compensation act should contain these two essential provisions: the wages of the injured workman should be paid so that his family may be cared for while he is incapacitated; the injured man himself should receive the best possible therapeutic attention in order that he may be restored to his former productive capacity as quickly and as completely as possible. Instead, investigation discloses that the legislatures have imposed limitations so numerous and so onerous as largely to defeat these purposes.

New Mexico grants a man medical attention for only ten days, no matter how serious his injury. New Hampshire and Vermont allow him fourteen days. Alabama and Tennessee require an industry to spend no more than \$100 on an injured man for restorative purposes. Only fourteen States impose no limitation on time or money. Nobody knows how much permanent crippling has resulted from the failure to allow sufficient funds for the best treatment for broken bones, amputations, and internal injuries, or from the refusal to realize that operations are often needed a year or more after the injury to relieve adhesions, malformations, or ankylosis. Yet unlimited curative relief, according to the late E. H. Downey, would cost only a bagatelle in proportion to the pay roll.

The amount of recompense for the wage loss itself has been affected by the suspicion, sincere or not, that malingering may occur. As a result, instead of the whole wage only a percentage is allowed, with the single exception that Wisconsin favors its school teachers with full pay during disability. In the most generous States, sixteen in all, the allowance for injury is no more than two-thirds of a man's pay.

This proportion is variously decreased in other States. In fifteen of them only half the wage is paid. In other words, the great majority of injured workers are penalized on account of a small, undefined minority. Insurance companies themselves testified to Professor Lindsay Rogers, investigator for the Governor of New York State, that they had encountered fewer frauds in workmen's compensation cases than in other forms of insurance.

These wage percentages, ungenerous as they are, tell only part of the story. It must be added that an injured man may draw one-half or two-thirds of his pay only up to a certain sum. In several States this maximum is as low as \$12 a week. Nowhere in the country is it higher than \$27, the sum allowed to injured volunteer firemen in Michigan. As large a sum as \$25 is allowed only in New York, California, the District of Columbia, and in the case of longshoremen working for the federal government. By setting up these arbitrary maximums, by requiring waiting periods of from three days to two weeks, by limiting the benefit period, and by figuring earnings on unjust bases, such beneficence as existed in the acts has been vitiated more and more. In reality the worker is bearing as much as 80 per cent of the cost of injury in the least generous of our States and fully half the burden in the better-disposed States. Yet if these starvation maximums were removed from the laws, if the percentage were increased to 75 per cent of the wage, and if a waiting period of only three days were required, the injured man's actual loss would still amount to one-third of his pay.

Even greater injustice is suffered in cases of death. The dead cannot malingere. Yet only seven States, and the federal government in the case of civil employees, pay compensation to the widow (or dependent widower) until her death or remarriage. All other States limit the total amount of compensation, or the number of weeks it shall run, or both, while Oklahoma pays no death compensation whatever. Pennsylvania, Delaware, Idaho, and Wyoming continue payments to children through the period of compulsory school attendance, although they terminate the widow's compensation after six or eight years. In two-thirds of the States the same compensation for death is paid to the widow with seven children as to the widow with none. The monetary value placed upon a man's life by the different States varies widely. Most of them set the figure no higher than \$4,000, \$5,000, or \$6,000. South Dakota places the amount as low as \$3,000. Just over the line, however, North Dakota grants \$15,000 to the family deprived of its breadwinner; Vermont withdraws compensation from the victim's family after five years. Other States extend the period only a little more. Comparatively considered, the limit of 500 weeks, or almost ten years, set in Massachusetts is liberal.

What do these laws mean when translated into actual experience? A study made of fatal industrial-accident cases in California and Ohio shows that 57 per cent of the children left dependent are not over ten years old when their fathers are killed. A four-year study in Pennsylvania shows that the majority of children orphaned by industry are under eight, more than a third are under five, and nearly a sixth are under two. In most cases, then, these children are not yet self-supporting when death benefits cease. Indeed, many of them have not even entered the public schools.

Or consider the widow of fifty—and one-fifth of indus-

trial widows are this age. Usually her entire adult life has been spent in housekeeping, so that she is untrained, if she is not too old, for outside work. To limit the period of her compensation is to hasten the day when she must go to the almshouse. Even funeral costs are only partially borne by the industry to which a man gives his life. Not a single State allows enough for this last sad purpose. Kentucky and New Mexico grant only \$75, although the average cost for industrial policy holders the country over is \$308.

Perhaps the cruelest situation of all obtains, not when a man is killed, but when he is rendered helpless and still lives on, a suffering burden to the family deprived of his support. Here again there can be no question of malingering, or very little and that easily discernible. But in only nine States is compensation paid to a totally incapacitated man as long as he lives, and even in those the sums are too small to care for the injured, with no provision for his family. California, Idaho, Illinois, and Utah provide that payments shall continue during total disability, but shall be reduced after from four to eight years to lesser amounts, in the case of Idaho to \$6 a week. Some States give with the right hand only to take away with the left. South Dakota, for instance, states that benefits shall be for life, and then limits the amount payable to \$3,000. The typical compensation act provides only partial support for about one-third of the remaining life expectancy. In eighteen States a minor's compensation expires before he is thirty.

It is, however, in cases of permanent partial disabilities that the American compensation measures are most irrational. Instead of awards based on age, occupation, and adaptability for rehabilitation—logical considerations, which the French, for instance, have recognized—we have in every State except Wisconsin, California, and New Hampshire flat-rate schedules that are as unscientific as they are inequitable. In most cases a young man will manifestly suffer less wage reduction from the loss of a member than will an older man. He has greater powers of adaptability. A finger is worth more to a violinist than to a salesman. Yet all are paid alike. The rate of compensation is usually the same as for total disability, but the duration of the payments, in spite of the fact that the injury is permanent, is limited to so many weeks for an eye, so many for an arm or leg, so many for a hand or a foot. In these matters the States maintain a wide diversity. Massachusetts values an arm and a leg equally and places the limit for compensation at 50 weeks. Alabama, on the other hand, judges the loss of an arm to be greater than that of a leg by 25 weeks and values the latter at 175 weeks. Indeed, compensation for the loss of a leg may continue for from 50 to 381 weeks, depending upon whether the injured has the luck to reside in Massachusetts or Oregon, and this same remarkable variation is found in all the schedules for loss of limb.

Minors and learners who are permanently maimed, either partially or totally, are in particularly distressing situations in many States. Twenty-seven States award compensation to minors which is based merely on their actual wages when injured, regardless of the fact that they had not yet reached their full development and that the injury means they never will reach it. As for the illegally employed child, sixteen States refuse him any compensation whatever. Only eleven States reverse this medieval position and penalize the employer.

This, then, is a brief picture of how the principle of

compensation has been circumscribed and distorted on our statute books. Translated into terms of actual experience the results are no less than tragic. A study made of industrial-injury cases in four States—New York, Wisconsin, Massachusetts, and Pennsylvania, two of them comparatively liberal, the other two less so—shows that over half the injured workers had been earning \$30 a week or less. In Massachusetts and Wisconsin 70 per cent of them had earned this small wage. In other words, the man who is hurt or killed at his work is, in most cases, the very man who earns less than the income which sociologists have set as the necessary minimum for healthful and decent standards of living for a family of five in our American cities. This income allows no margin for savings or insurance, so that in the case of the larger proportion of injured workers, the family needs aid and needs it immediately. It is to people so situated that this inadequate compensation has been granted.

Analysis of fatal industrial cases in two other States, California and Ohio, revealed that 27.1 per cent of families carrying on a separate home life were unable to do so after the breadwinner was killed. "Children were scattered in orphanages, boarded out by public agencies, sent to live, often unwelcomed, in the families of relatives, or adopted by strangers. . . . Before the death of the family supporter only 1.5 per cent of these families were dependent on charity, private or public; when investigated this number had in-

creased to 17.6 per cent." A similar study in New York, a comparatively if not a genuinely generous State, leads to the conclusion that "the injured workman, in spite of compensation legislation, still bears so much of the cost of the injury that in many cases he completely loses his economic foothold."

Must these things be? Who can say so when it has been estimated that adequate and just scales of compensation would add but 10 cents to the cost of a \$60 suit of clothes, 35 cents to the cost of a \$14-ton of anthracite coal, and \$200 to the cost of a \$10,000 home? To complete this story there should be added the shortcomings of administration of insurance, a chapter in itself, for the principle of compensation has been as much nullified in practice as it has been mangled in legislation.

Is it at all surprising that the railway brotherhoods have remained indifferent, if not actually hostile, to the compensation laws? They prefer, under the circumstances, to take their chances with a liability suit. Meanwhile, the federal Bureau of Labor Statistics has received so many letters from workmen throughout the country asking, "How is it that this man is compensated and I am not?"—"How is it this factory is covered and mine is excluded?"—and so on, that Ethelbert Stewart, former commissioner of the bureau, declared that "in the minds of a very significant percentage of the working people the whole compensation scheme and theory are skidding, and skidding very rapidly."

Oakland's "Sewer-Pipe City"

By JAMES MUNSEY

TWO months ago I heard that there was going to be plenty of work at Oakland, California. Two huge bridge projects had been authorized, and were almost ready to be started. I was at that time in Everett, Washington, about nine hundred miles away.

The Everett mills for a long time have been running at from 5 to 25 per cent of capacity. The majority of the mill workers are out of work. I have had nothing to do, except odd jobs, for two years. I have tried for work in the East and in the South. Finding no work anywhere, I had come home. It is somehow easier to starve among friends.

The Oakland bridge project looked like a good chance to get work. I started south, setting out in a driving rain. (It rains almost every day in western Washington.) By the time I had traveled a mile, I was soaking wet. I made seventy-six miles, thumbing my way, the first day. The next day I made about a hundred and twenty miles. Then forty miles. I counted thirty-eight people living under a bridge between Tacoma and Seattle. There were several hundred under Portland bridges.

Oregon police told me that it was against the law to hitch-hike. "Grab a handful of box-cars," they ordered. At Hornbrook, California, the fourth night, I caught a nine-o'clock passenger train south. Hopped it as it pulled out of the station. Rode on the entrance steps of the last car, huddled up under the iron trapdoor. Snow was on the ground. The wind and the iron were icy. After two hours I was afraid I might lose my hold. (The tips of your fingers

catch the edge of the topmost stair; any unusual jar would make you let go after your fingers lose their sense of feeling.) About eleven o'clock, when I got off to shake the kink out of my spine at a little station, I looked up at the windows to see if everyone was asleep. The lights were all out in the Pullman. So I jumped the tail end of the car when the train pulled out. I had been there for about half an hour, feeling much more comfortable, standing up instead of crouching over in a tiny space, when the brakeman came through. He jumped back when he saw me. He was very angry; said the train was a special mail train with five mail coaches, and I could get ten years for boarding it. He backed into the car; it happened to be slowing down just then getting into Dunsmuir; I jumped off.

Down in the jungle south of Dunsmuir I came on a crowd of about thirty men waiting for a one-o'clock freight south; it was freezing, but no one wanted to light a fire for fear of being driven away. Soon the word came that the freight would not pull out until three o'clock. So some of us climbed into box-cars on the sidings and slept a couple of hours. Of course, you really couldn't call it sleep. In our box-car we had only one layer of newspaper between us and the floor, and the sliding door had to be kept open so we wouldn't miss the freight. Only one fellow had a roll with him. The freight actually went out at seven in the morning, by which time we were all thoroughly chilled. Negroes, Mexicans, Scandinavians, Indians, and native whites made up our particular bunch. No one had any food.

We rode that freight train to Gerber, a town about two

hours north of Sacramento. There the police drove us out of town. We met other men bound for the Bay region. There were about a hundred of us at the edge of town. The police harried us constantly, driving us here and there. When the next freight went south, we all hopped it, and rode in the ice holes of the refrigerator cars. These holes are about three feet wide, ten feet long, and seven feet high. You get into one through an entrance trapdoor in the top of the car. There is no light and no ventilation. The walls are of perforated zinc and wire mesh. Whenever the smell of urine, or of the dirty melted ice, makes you nauseated, you climb out. In and out, in and out, all the time for air. There were about three fellows in each compartment on our freight train.

At Davis—a junction point between San Francisco and Sacramento—we heard of a fast freight that would be pulling out of the yards for Oakland. We waited and jumped it. It was traveling very fast. The fellows' legs would trail out like flags in the wind, and their arms would be jerked almost out of their sockets when they grabbed the little iron ladders. Cinders and sparks flew low over the train, and the wind was blowing a gale, so it became increasingly difficult to come up for a breath of fresh air.

Just before we boarded the car we were told that the police met every train that arrived in the Oakland freight yards, and that numbers of men were sent off to work camps, where the conditions were very bad. And so, to avoid that possibility, the fellows in our compartment and the next one determined to get off before we reached the terminal. Approaching the edge of the yards our train was traveling rapidly (a "fast freight" travels about as fast as an interurban train); it began to slow up and we jumped off just as it reached the entrance to the yards. We all took headers. In falling I broke my right wrist and skinned one side of my face on the surface of a parallel rail. Another fellow tore the front of his only shirt to shreds. Another sustained a wrench in the back that probably will be with him for years to come.

There were six of us in that group. We separated at once and went off in different directions. I walked about six blocks down to San Pablo Boulevard. There a restaurant man gave me a hamburger and a cup of coffee and phoned for a doctor. I got fixed up in an emergency hospital—X-ray, treatment, splints, and sling. The nurse sent me to the home of a friend of hers, where I stayed for a couple of days. Then I went out to enter my name for the bridge work. But I was unable to make connections with anyone who was doing or going to do any of it.

That night I went to the "Woodpile"—a sort of local welfare and relief place. I got a ticket that entitled me to one night's lodging and three meals. That was all I could get. Being a "transient," I was told to move on, to go to the next town. But fellows were coming in from the south and the east and the north, and they brought word that things were quite bad everywhere else, so I saw no reason why I should travel from place to place if I could possibly make a go of it here.

I met a man who told me about "Sewer-Pipe City." I walked down to the foot of Fifteenth Avenue, and knew at once that I would join the fellows there.

Sewer-Pipe City has upwards of two hundred residents just now. I think it likely that it will have five hundred

before the winter is over. Everyone lives in a section of sewer pipe. "If the city owned this property," one of the men said, "we would have been driven off long ago. But the man who owns it insists that he can let us stay here if he wishes, so the police have been obliged to let us alone. He pays the water charge—he runs that sewer-pipe factory over there—and doesn't mind if we live in his pipes."

I picked out a pipe to live in, collected a few stones, and made a little stove. Then I went along the docks and picked up pieces of wood. My fire didn't work very well until I got a smokestack. I found a rusty old metal smokestack, rotten and full of holes, lying near a shed. I got wrapping-paper and gunny-sacks and tied them with wire at one end of the pipe to keep the wind out. The first day the fellows who had food invited me to eat with them. That night I had a blanket, lent me by a man who could spare it. The next day I went out and bummed a quilt and blanket. Then I got into the regular life of the city.

We all work together for the common good. One fellow goes out and cuts grass or picks up a man's yard or cleans up a garage, for meat. Another fellow goes out and works at any little thing to get some potatoes. A third gets bread; a fourth, coffee and salt and sugar. There are some stores that will give you a little food if you ask them. Eight or ten of us eat around one table, made from planks nailed together. About half of the fellows are out looking for work; the other half look after the city and go for food. We have not organized and we're not going to. The police would drive us out of town if we organized. The reason is that any organization at all would have to be Communist, because that's the way the fellows feel; and any Communist organization as big as that would be broken up by the police even though its members were living peacefully on private property.

In the Driftway

IN recording the death in Memphis the other day of Captain George Peters Lee, the newspapers noted that his passing removed the last of a famous steamboat family to follow the Mississippi River. The historic Lee Line itself came to an end more than two years ago when its sole surviving vessel, the Valley Queen, was sold for excursion purposes. That disrupted finally the sailings of a company started soon after the Civil War by James Lee, grandfather of the captain who has just died. Three vessels bore in succession the name Robert E. Lee, the first passing into history as the winner of the race against the Natchez from New Orleans to St. Louis, when for half a week the vessels fought their way up the swirling current, sending the roar of their engines throbbing out across low, muddy banks and filling the sky at night with a trailing cloud of embers coughed out of wood-devouring furnaces. For years the Lee Line's vessels were in the van of elegance and speed, though there were others with more religiously imposing names, such as those celebrated in the roustabouts' rhyme:

Oh, de Golden Rule and de Golden Crown,
De Golden City and de Paris C. Brown;
You takes de Rule and you meets de Crown,
And gits ter Memphis on de Paris C. Brown.

But although he was the last river man of a noted steamboat family, Captain Lee was not a veteran of the great days on the Mississippi. He was only fifty-seven years old when he died, and even his adolescence did not reach back to the magic era when a swashbuckling America nobly gambled and blasphemed and ate and drank and shot its way up and down the Father of Waters. Perhaps the last of the skippers whose experience stretched back to the great days was Captain L. V. Cooley, who lived until less than a year ago.

■ * ■ * ■

THE Drifter counts it among his pieces of good fortune that he knew this kind and wise and full-flavored old philosopher of an earlier America and made a voyage with him in 1930. At that time Captain Cooley, then in his seventy-fifth year, had spent a little trifle of three score years on the Mississippi and its tributaries. His memories extended back to Mark Twain, whom he esteemed as a steamboat man in considerable moderation.

"River men don't think so much of Mark," was Captain Cooley's verdict. "The way he wrote, you know, you wouldn't think there was ever anybody on a steamboat except the pilot."

"Was he a good pilot?"

"Oh, not so good, not so good. There never was a good pilot could do anything but pilot a steamboat. Mark Twain could write, couldn't he? Well?"

* * * * *

WHEN the Drifter traveled with him, Captain Cooley was taking the steamer Ouachita (you pronounce it Washitaw after you've heard somebody else say it) over the longest route of any river boat out of New Orleans. He went up the Mississippi, Old, Red, Black, and Ouachita rivers to Camden, Arkansas, nearly 700 miles. It took five to six days upstream, less for the return trip. The steamboat was still making the run when the Drifter last heard—as delightful an inland trip as could be found in America, through a country still as primitive in all essentials as it was fifty years ago. Captain Cooley's business was way freight, and the Ouachita stopped to leave a barrel of flour here, take on a few bales of cotton there, and again for a load of wood for its furnaces. Nothing could be simpler. The pilot merely pushed the steamboat's pug nose into the mud bank, and the landing stage—suspended like a guillotine above the deck—was swung ashore, the roustabouts swarming after it in their famous "coonjine" step—a cross between a walk, a run, and a clog, the father of jazz dancing, it would seem, in all its variations.

■ * ■ * ■

IS such steamboating only an echo of the past, a vestige of former romance doomed soon to extinction? The Drifter happens to think not. His guess is that the craze for speed has about spent itself. For business purposes speed will continue in demand, but for pleasure, is not a return to more leisurely transit a probability of the future? If so, inland waters will see a return of the steamboat, for there is no means by which one can get more rest, more satisfaction, or more beauty in travel.

THE DRIFTER

Correspondence

A Neat Distinction

TO THE EDITORS OF THE NATION:

In your issue of December 21 Paul Y. Anderson exposes himself to criticism of the most serious kind. In discussing the Washington hunger march, his evident dislike of the Communists seems to have led him to the same type of biased, smug assumptions that we have come to expect from the editorial pages of the *Chicago Tribune*. In the most astonishing of these statements he confesses that he had a great deal of sympathy for the bonus marchers but very little for the Communists. A very neat distinction for a professed liberal! If you happen to be a flag-waving bonus man you may starve with the sympathy of Paul Y. Anderson; if you're a Communist, starve and be damned—or go back where you came from. He also implies that the Communists were cowardly in not allowing themselves to be slaughtered by thick-skulled but fully armed cops. "The American Communist," he says, "is not a natural fighting man."

Last but not least, he characterizes the whole thing as "foolish and futile." It has surely been demonstrated by now, and admitted in your own columns, that the few benefits received by the unemployed have been the result of militant agitation engendered by the Communists and other organizations. On what grounds, then, could this demonstration, bringing the plight of hungry men and women directly before the country, be deemed "foolish and futile"? The only apparently justifiable grounds for this assertion were the danger of a slaughter by police and military, and the privations suffered in the capital. The first of these contingencies was taken care of by the Communists themselves, who refused to be drawn into a slaughter. The privations suffered were real enough but nothing that a true Communist would not gladly go through for his cause.

Chicago, December 23

PETER A. LEVINE

One Remedy

TO THE EDITORS OF THE NATION:

The most obvious and practical step toward a rational economic readjustment is the limitation of the hours of labor. Clearly, in this competitive era limitation by the forty-eight States would not be effective. Such a plan as the following would be flexible and would work a minimum of hardship.

First, there should be an amendment to the Constitution of the United States empowering Congress to regulate hours of labor (without regard to its power over interstate commerce and so forth). Second, the following legislation should be passed by Congress:

1. Assuming the maximum working week to be now sixty hours, that figure to be reduced by two hours each month whenever the Department of Labor shall report more than one and a half million workers unemployed. (The reduction of the working week will therefore be gradual.)

2. Reduction to continue as stated until a legal working week of thirty hours has been reached.

3. Whenever the Department of Labor shall find that less than one million workers are unemployed, the legal working week to be increased by two hours each month until a maximum of forty-six hours has been reached.

Machinery has yielded large dividends in leisure and wealth. Concentration of leisure is as dangerous as concentration of wealth. A shorter week is one remedy.

Washington, January 1

WILLOUGHBY WISE

Remonstrance

TO THE EDITORS OF THE NATION:

This remonstrance concerning free speech and freedom of religious belief is addressed to a certain school of American literary critics.

Why should *The Nation* place a ban
To bar the truths of Goethe-Haus,
Expelled by Mr. Fadiman
Wer nie sein Brod mit Thränen ass?
Why must Miss Willa Cather write
The thoughts of Mr. Dreiser?
What if her thoughts be more complex,
Original, and wiser?
Should readers exorcise her,
Taboo her and despise her?
Must truth be hushed in earth's sex-college,
Except for Mr. Dreiser's knowledge?

Suppose that Mr. Hemingway
Is not my god,
Why must I stay
To wreathe his shrine with garlands gay,
Nor let my pious footsteps stray
To wander on the rich-hued strand
Of worship down that wide-flung way
Ibáñez strewn with blood and sand?
If Mr. Ernest Hemingway
Is not my god
Why must I pray
Before his shrine the livelong day,
Although my eyelids nod,
And popped slumbers on them sink
As heroes take their millionth drink
Beside the bull-pen's sod?

Once, in the days of William James,
We entered the Olympic games
Of thought. We prized the spacious room
We gave to Contrarities
Of Speech, and to Varieties
Of Views about our Doom,
Salvation, Improprieties,
Our Faiths and our Dubieties
From Cambridge to Khartum.
But we have changed all that today!
"No longer write in your own way!"
Dictator Critics firmly say—
"Nor keep your own Religion!"
"You must not be an Anglican,
"A Catholic, a Lutheran,
"Nor have your own opinion
"On Science, Sex, or God, or Man,
"Or even Prohibition!"

Let Mr. Dreiser keep his creed,
If that creed be his pleasure.
Let Mr. Hemingway his meed
Drink, and be drunk at leisure.
But do not ask that I should read,
That I should think, that I should heed
Only their thoughts on life; or need
Nothing beyond their measure.

Chicago, December 10

EDITH FRANKLIN WYATT

The Film Forum

TO THE EDITORS OF THE NATION:

In answer to the need for an organization that will present unusual, experimental, and important films the Film Forum has been established in New York and will be extended to other cities in the next few months. The Film Forum will depart from the "good box office" standard of the commercial movie house and the "arty" standard of the little theater. It will show to its membership pictures of social and cinematographic importance—foreign and domestic films that are now neglected because they differ with the social, political, and moral status quo; films that represent an artistic advance in movie making; newsreels that reflect social events customarily suppressed by commercial newsreel organizations. Typical feature films will be "Kühle Wampe" (Hooverville), a German story of an unemployed and evicted family, called the best film of the year in Germany although it was drastically cut by the censorship; Dovshenko's latest film "Ivan," a drama of the workers on the Dnieperstroi project; "Festival of St. Jorgens," a Russian farce satirizing religious superstition.

The Film Forum hopes to encourage projects for making similar pictures in this country, and will dedicate all proceeds above expenses to such enterprises, notably to workers' newsreel organizations. The New York meetings will be held at the New School for Social Research on Sunday afternoons and evenings beginning January 22, and will be open only to members and their guests. Inquiries about the Film Forum should be addressed to the secretary at 125 West Forty-fifth Street, New York.

Nation readers in other cities who are interested in seeing the plan extended should communicate with the Film Forum at the same address.

New York, January 18

SIDNEY HOWARD

Humor and the D. A. R.

TO THE EDITORS OF THE NATION:

It was my privilege a few weeks ago to listen to a particularly oratorical orator orate upon the excellences and virtues of his ancestors who had played important parts in the American Revolution. The descendant waxed eloquent as he recounted the trials and tribulations which had beset his revered forbears. He paid a splendid tribute to those men who had faced bitter struggle, who had suffered loss of prestige, of fortune, of life itself, in furthering the rebellion which led to the founding of these United States. But it was the peroration of the mellifluous address which especially fascinated me, which indeed left me staring at the speaker in open-mouthed wonder and bewilderment.

Think of it! [concluded our orator]. Our ancestors saw their kinsmen, those they loved, shot down at their sides as rebels! Those glorious ancestors of ours, men of the noblest purpose, men of the greatest integrity, men of ideals, men of vision, those men of heroic stature were looked upon in their day as rebels! Therefore it behooves us, their descendants, to make sure that no rebels are suffered in this land of ours. We must make it our solemn duty to see to it that this nation which our ancestors helped to found must not be disintegrated and split asunder by rebels. We must keep our country for those who believe in liberty and opportunity for all!

The speaker was entirely in earnest. That he was giving voice to one of the most exquisite jokes of this day and genera-

tion never crossed his mind. For both the D. A. R. and the S. A. R. are motivated by this very conviction—that since their glorious ancestors were rebels, it behooves them to wage a war of extermination upon all rebels.

And yet, in view of the heritage of the members of these organizations, might not the orator have spoken somewhat as follows?

In their day, our revered ancestors were regarded as rebels, treated with suspicion and contumely. We, their descendants, must regard with sympathy all who are so looked upon today. Furthermore, we shall consider it our high privilege to keep the sacred flame of rebellion aglow in the heart of man, and bend every effort toward the recognition that dissatisfaction and discontent are the distinguishing mark of the true patriot, while contentment and acquiescence are the brand of the smug and unthinking.

If this were the creed of our "Sons" and our "Daughters," the three letters which stand at the head of this article would no longer bring a smile to the lips of the average citizen. Instead, they would stand as a flaming warning against intolerance and bigotry. It really does not seem too much to expect. I am a "Daughter" myself, and tolerance is the creed by which I try to live. I am certain that it is the creed of many who form the minority within the association.

New York, January 10

ANNIE NATHAN MEYER

For Tom Mooney

TO THE EDITORS OF THE NATION:

The Governor of California says the Tom Mooney case is closed. Eighteen thousand Californians, in a recent mass-meeting, shouted "No!" The Wickersham Commission report, revealing that the Mooney prosecution was a frame-up, should declare an even louder no, but unless financial support is immediately forthcoming, Governor Rolfe may be proved right.

Tom Mooney writes us from his cell in San Quentin: "If my plans fail now there is no telling when I will have another chance to leave here alive. There is a possibility, at this time, of forcing the courts and the Governor to act, if the aroused and aggressive mass pressure of public opinion for my pardon is crystallized immediately. I make this desperate appeal to you for immediate help. I beg you not to fail me."

Please send some contribution today to the Tom Mooney Molders' Defense Committee, P. O. Box 1475, San Francisco, California.

ARTISTS' AND WRITERS' COMMITTEE FOR TOM MOONEY
San Francisco, January 10

Anna Garlin Spencer

TO THE EDITORS OF THE NATION:

The Anna Garlin Spencer Memorial Committee sends out a request for letters, clippings, and other material relating to the late Anna Garlin Spencer, lecturer in social science, Teachers College, Columbia University, whose long career in social reform included leadership in movements for social hygiene, suffrage, peace, training of social workers, liberal theology, religious education, international organizations of women, race equality, divorce and family solidarity, and social education. I shall greatly appreciate loans of material which will contribute to a fuller knowledge of Mrs. Spencer's active career, which lasted from 1870 to 1931. Such material should be sent to me at Teachers College, Columbia University, New York.

New York, January 1

BENJAMIN R. ANDREWS

Letters of Oscar W. Firkins

TO THE EDITORS OF THE NATION:

The University of Minnesota Press in Minneapolis is planning to publish a volume of letters of the late Oscar W. Firkins. The editors of the press will appreciate it if readers of *The Nation* having any of Mr. Firkins's letters will communicate with them.

UNIVERSITY OF MINNESOTA PRESS

Minneapolis, January 1

Contributors to This Issue

DORA RUSSELL will shortly publish a book, "In Defence of Children," which includes material on the economics of marriage and divorce.

HELEN BUCKLER, formerly a member of *The Nation* staff, is a free-lance writer.

JAMES MUNSEY is the pseudonym of an unemployed worker.

RAYMOND LARSSON is the author of "O City, Cities."

LIONEL TRILLING is a member of the English department of Columbia University.

S. K. RATCLIFFE, British publicist and lecturer, is a regular contributor to the *London Spectator*.

C. K. BAUER is working on a book on housing and modern architecture.

HORACE GREGORY has recently published a translation of Catullus.

Technocracy

When an exciting new idea sweeps through the press, the thinking man demands a lucid, an authoritative exposition. The source of it all is contained in one brief, readable volume which the *Herald Tribune* calls "The original gospel from which the theories of Technocracy have been developed." **\$1.50**

Brought as a Sheaf

By RAYMOND LARSSON

*And yet
these mists slide windward like ■ sigh*
Leaves fade
and are ■ drifted waste—
shift
and are the wind's word, sifted sighs.

Here where were voices now are cries.

Eyes
turn to leaves adrift: the ■ ■ ■
burns. The heart is wind's for its
unleafing, and the tongue
is winter's.

Here leaves
fade and are a drifted waste
paced by the sharp wind's gusts—the
season's hounds.

Now these with empty hands have come
among the leaves here, and have brought
the little of breath left in their flesh—
grief, brief—and drifted grief.

Lord:
were the days gone so among us—
leaf-drift in a crispened heap? Whence? wherefore? how?—
Now! as a sheaf!—here! mixed of grief—these
to Thy garnering—these! these!

Lord: Thy sun sprung up among us as great grain,
here we have come as evening comes
who has brought peace
in sheaves—our darkness, our dark grief
brought as our sheaves.

Lord: Thy sun—O sun! sun! sprung up among us
as great grain! now come! come to our need as
peace, to peace as need! Bring grief
to humble us!

And yet these mists slide windward like ■ sigh

Lord:
here in the midst of our lives
we are weary of death, of dying, crying "Breath!"—
the smile wreathed by spiders and the eye
giving the scene, the season and the leaves
as a winding-sheet
who labor in darkness at the edge of light,
who labor through darkness to the rim of sight,
come among light in darkness,
garnerers who glean in light a sheaf of griefs.

Wherefore we ask Thy mercy. Wherefore we ask Thy
peace, asking a brief
deliverance—

as light in these dim forests of our days

as rain on the desert like a grain

as hosts who shall answer most of our sighs

as praise which shall come among
our cries.

Prophet into Historian

The Bulpington of Blup. H. G. Wells. The Macmillan
Company. \$2.50.

NOWADAYS Mr. Wells does not bother to vary greatly the pattern of his fictions. When he feels ■ novel coming on he chooses either ■ Utopia or an imaginary biography, and after that choice has been made there remains only the task of recombining the characters and situations which he has used again and again. The result, even when it is more or less entertaining, as "The Bulpington of Blup" undoubtedly is, remains, nevertheless, perfectly familiar. One has met this decent but bewildered young man many times before. One knows how the preliminary stirrings of sex are going to affect him, and just how he is going to feel when he meets the inevitable young woman of emancipated habits. One knows, also, how the war is going to disrupt the seemingly stable world in which he finds himself, and one has listened before to these same conversations about science, religion, and politics. It is all amazingly fluent, amazingly perspicuous and reasonable. It is also remarkably clever and studded with phrases so neat and so conclusive that one would have to single them out for applause if one had not come to take them for granted in this particular author. But somehow or other the enthusiasm of Mr. Wells is more nearly tireless than that of his readers. He can rise again and again to the same situation, but we cannot. The writing may be as good as ever, and it is certainly not perfunctory, but the reading is. The mind will not follow what it has followed so many times before. If it has not taken in all this several novels ago, if it has not already agreed with Mr. Wells at least as far as he goes, it never will.

Theodore Bulpington was the son of a literary dilettante who came near to flourishing during the nineties. Theodore himself grew up in a somewhat preciously "advanced" atmosphere, and was accustomed from childhood to retire from reality into ■ dream world where he was not his own undistinguished self but a legendary figure known as The Bulpington of Blup. His early adolescence was troubled somewhat by the discourses of ■ fat Catholic convert suspiciously like Mr. Chesterton, and troubled still more by the son of an eminent biologist. Then he went off to London, attended the meetings of the Fabian society, and met there an ardent young Jewess who introduced him to the amorous mysteries of which his real love remained ignorant. Theodore was delighted but upset. Then came the war—but why go on? It is, perhaps, more interesting to note that Mr. Wells has changed in one subtle way, but in one only. Gradually, quite imperceptibly, he has become less and less the prophet of his chosen generation and more and more its mere historian.

When he first told the story here repeated he told it to encourage the others. These earnest young men and these brave

young women were models for imitation, groping heralds of the new dawn. When they argued, they were solving problems that had to be solved; when they went to bed together they went, not merely as individuals, but as New Men and New Women destined to show the way to a freer and a brighter life. Mr. Wells was their apologist and advocate. He pointed out the inner significance of what they did, and enlarged upon the promise inherent in their attitude. In no small measure he invented the Wellsian hero and the Wellsian heroine in order that life might imitate them, and he had the satisfaction of seeing young people make every effort to live the biographies he had already written about them. But in these later novels the strain of prophecy has run out. It is no longer what that generation is going to do; it is merely what it did, and, by consequence, the tone is less confidently hopeful. Mr. Wells has not changed his opinions. He has not, like Mr. Shaw, become a pessimistic mystic with a penchant for Strong Men. But he does seem ready to confess that the results of the Research Magnificent were not as magnificent as the research itself, and he shows little inclination to advise contemporary youth as he advised the youth of twenty years ago. Instead, he returns to the epoch of which he was the major prophet, and concerns himself less with what it ought to have done than with what it did do. Theodore Bulpington was a failure. Perhaps that is how Mr. Wells has come to think of the Wellsian hero.

JOSEPH WOOD KRUTCH

Victorians and "Moderns"

The Great Victorians. Forty Essays Edited by H. J. Massingham and Hugh Massingham. Doubleday, Doran and Company. \$3.

"IT is our deprecatory claim," its editors write, "that this volume is a summing up of one generation by another." Without examination of the theory of "summing up" a past age by turning loose upon it a "representative company of moderns," it may be said that in this instance the technique has failed. The reason for the failure is that most of the "representative company of moderns" represent nothing or, if anything, nothing that is modern. To gaze back upon Trollope through the medium of Hugh Walpole can scarcely be helpful, for Mr. Walpole, in spiritual time, is really Trollope's contemporary. Nor has one's modern outlook been served when Professor Muirhead summarizes F. H. Bradley's philosophy with scarcely a mention of the important political implications of that philosophy. There is something essentially Victorian in St. John Ervine's account of General Booth, which ignores the momentous social significance of the Salvation Army and treats it only as the picturesque background of Booth's personal struggle. When the poet Edmund Blunden writes of Matthew Arnold from a poetic vacuum, and all of Arnold's political, religious, and even critical thought fades away, he is being considerably less modern than Arnold himself. Nor can it be said that modernity is investigating the past when A. Wyatt Tilby and R. H. Wilenski, writing about Carlyle and Ruskin, do, indeed, see the political importance of these men, but describe it in terms so remote that it is impossible to think of Carlyle as a fascist or of Ruskin as a communist, which they were.

It is, however, not merely from a kind of deadness to political realities that the book suffers. In purely literary criticism the same deadness prevails. Frank Swinnerton discusses the fact that Thackeray was a gentleman and no martyr, and H. M. Tomlinson grows petulant over the relegation of Stevenson to the ranks of juvenile literature. The writers more immediately in the current of modernity are scarcely more illuminating. Rebecca West on Charlotte Brontë, Charles Morgan on Emily,

and V. Sackville-West on George Eliot are so sensitive, so talented, that one feels almost sure that something is being said, but actually they have produced only meaningless advertising copy for their authors in Mr. Walpole's manner.

However, there are a few exceptions to the general poverty. There are three essays on scientists—G. P. Wells's Darwin, G. Elliot Smith's E. B. Tylor, and J. W. N. Sullivan's Clerk Maxwell—which are admirable. H. J. Massingham contributes an attack on Huxley for betraying Darwinism to the predatory philosophies of capitalism which, though pyrotechnic in style, has real, if not original, point. J. Middleton Murry's rehabilitation of William Morris in the light of Marx is an illuminating piece from which Marxism seems to have routed his usual muddle and mysticism. W. J. Turner and Martin Armstrong supply sound essays on Swinburne and Burne-Jones respectively.

But the book as a whole is not the summing up of one generation by another. It is rather the summing up of one group of English writers by a very similar group of English writers.

LIONEL TRILLING

Winston Churchill Again

Amid These Storms: Thoughts and Adventures. By Winston S. Churchill. Charles Scribner's Sons. \$3.50.

SOME four years ago, when reviewing in *The Nation* the concluding volume of "The World Crisis," I said it was hard to believe that the author of that astonishing work could be kept out of the first place in British affairs. He is today, seemingly, farther away from that place than at any time (except for the interval just after the tragic Gallipoli campaign) during the past twenty years, and the fact is not less remarkable now than it was in 1929. "Winston Churchill," said a member of the last Labor Government to me, "is the most highly endowed man in English public life"; and I think, on the whole, we have to agree with that estimate. He has the energy and mastery of genius. He has far more intellectual power than any member of the present National Government, or perhaps than any two of them combined. During the past year he has made a number of speeches near the highest level of his best time, and as anyone can see, he is chafing at the spectacle of old colleagues and opponents in coalition failing to govern England at a time of supreme crisis. And yet what does all this amount to? Winston Churchill has filled more Cabinet offices than any other man in the history of England, but when Cabinets are made nowadays it is taken for granted that he will be left out. There is, however, one form of government possible in England for which he is altogether fitted. He is awaiting the development of a British variant of Fascismo; and I should not care to assert that he will wait in vain.

The twenty-three chapters making up this miscellaneous volume are extremely diversified in theme and are most unequal in treatment. They have one characteristic in common—the Churchill vitality; and those that deal with the life of action are greatly superior to the rest, which contain the author's reflections and guesses. The adventures, in other words, are far better than the thoughts. There are here, for example, two chapters on the U-boat warfare which combine narrative and criticism with a skill and force that no living English writer could surpass. Mr. Churchill writes with an inside knowledge almost unapproached. He gives a vivid sketch of the conflict between politicians and naval men over the crucial question of convoys, a question in regard to which the politicians were not only right but victorious. Equally good in their different ways are Mr. Churchill's memories of Parliament and his election fights, particularly the story of his connection with Dundee, for which city he sat in the House of Commons for fifteen years.

This is one of the most singular episodes of British party warfare. A certain fundamentalist prohibitionist evangelist, named Scrimgeour, who labored in the horrible slums of Dundee, marked Mr. Churchill down at the first of his elections and kept at it until he turned him out. Scrimgeour began by polling 300 votes, and eventually topped the poll with 35,000, just after Mr. Churchill had lost his place in the Cabinet and had undergone a serious operation:

And all this, mind you, at the close of a year when I had been by general consent more successful in Parliament and in administration than at any other time in my life. In the twinkling of an eye I found myself without an office, without a seat, without a party, and without an appendix!

He is usually quite candid. After the terrible failures of the Dardanelles campaign he joined the western front as a major, and he describes with the utmost good humor the shocking manners of certain British officers with whom he was associated and the personal humiliations to which they subjected him. He tells with impertinent gusto the story of the battle of Sidney Street in East London, the most amazing example of Churchillism in action with which London is acquainted. In 1910 he was Home Secretary, and when certain violent anarchists who had shot a squad of unarmed policemen to death were cornered in a small house, he called out the troops and staged a siege which ended with the burning of the house and its inmates, himself looking on. He admits that his right place was in Whitehall, but adds that his visit was well repaid.

Mr. Churchill, one may note, is always right. He has changed over more often than any other English politician, but in each case, as he contends, he was never at any given moment on the wrong side; hence he can write an eloquent defense of political inconsistency. Parliament, he argues, has been wonderfully efficient as a political instrument, but the master movement of these times is economic, and for that Parliament is of no use. The question now arises whether, while time remains, there should not be created "a new instrument specially adapted for the purpose," and whether we should not "delegate to that instrument all the necessary powers and facilities." Ah, quite so: what did I say about Mr. Churchill's hopes and aims? He would persuade us, again, that democracy and the mass process have made an end of the powerful personality, thinker or man of action: "the great emancipated nations" seem to have become independent of all such. But what curious nonsense is this! Ours is the age of Lenin and Stalin, of Mussolini, Gandhi, and the new despots of the Moslem lands. And what, we may ask, would be the excuse for a Winston Churchill in a world of flat mediocrity? True, the multitude in England has shown an odd unwillingness to follow one particular great man. But that is another question.

S. K. RATCLIFFE

When Is a House Not a House?

Housing America. By the Editors of *Fortune*. Harcourt, Brace and Company. \$2.

The Disappearing City. By Frank Lloyd Wright. William Farquhar Payson. \$2.50.

THE first half of "Housing America" deals with Housing As It Is, and presents an exceedingly valuable analysis of contemporary methods of providing shelter in this country and a sharp and damning picture of the results obtained by these methods. The first chapter, which surveys the famous American standard of living and finds deficient hygiene, non-existent amenities, and the worst slums of the Western world—all at an exorbitant price—could alone serve to erase the word prosperity from histories of our post-war period.

But the second half of "Housing America," which deals

with housing America from now on, is an incomplete and even a misleading exposition of the subject. The first part shows conclusively that our bad dwellings are the inevitable compounded result of inflated land values, speculative cutthroat development methods, wasteful financing, lack of control of land use, discriminatory taxation, vested interests in slum properties, a chaotic building industry, and habitual thinking in terms of one house rather than of a unit community. Then in the second part everything is hopefully solved by Industry's Answer, which is the prefabricated individual house to be set up on individual lots by individual owners at—necessarily—a price which will still make it available only to the upper income group. Fortunately, no one who has read the first part carefully will be very badly taken in, although he may well be sorely disappointed.

Mr. Wright's solution is more attractive, but it is also even more disappointing. For Frank Lloyd Wright, as a romantic revolutionary and an artist with a well-trained imagination, offers a picture which must be judged by Utopian standards—that is, by whether it would be an ideal place to live in or not. And although there never was a moment when a good emotional picture of what we want was more needed, Mr. Wright's Utopia won't do.

Mr. Wright hates cities, loves the country, and believes in the freedom of the individual. So far we will gladly go with him. These qualities of his have already produced some excellent buildings and a magnificent "Autobiography." But Wright's ideal society seems to live in a sort of endless Road Town; its entire social structure and its ideal of individual freedom are based on the intensive use of the automobile. Each house is set in its own acre or more of land. Factories and schools are equally isolated. A few skyscraper office buildings and apartments are set in parks. A minimum of communal facilities—shopping centers, clubs—is clustered around the gas station. Communication is achieved only by a network of super-highways. The rich will live in highly individual and luxuriously self-sufficient and self-expressive villas. The poor will live somewhat less so. Presumably they will both have to drive wells, dig cesspools, and pay taxes for miles of pavement.

But, alas, it is just not possible to spread the town all over the country and preserve the virtues of either. Community and solitude, civilization and nature, mutual aid and individual freedom, are equally defeated; and what does one find but something not unlike our present upper-class suburbs? For the automobile is not a bodyless, magic means of transportation. It does not eliminate time and space. It is still true that it is simpler, pleasanter, cheaper, safer, and more convenient to walk a quarter of a mile to school or shop than to drive fifteen. It is also still true that you cannot cut up the countryside with highways and dot it with private estates and gas stations, and maintain much of its value as countryside. Moreover, and truest of all, almost everything implicit in the idea of culture or civilization—whether it be art, or security, or economy of effort, or liberated individuals, or mutual good-will—has its roots in some sort of organic social grouping. Exchanging slaves for machines does not transform a feudal society into a modern Utopia.

Both of these books (or at least the parts of them which I have perhaps arbitrarily chosen for emphasis) are inclined to be romantic about the machine as an instrument of progress—which has something to do with the fact that as studies in the future of housing they are both weakened at the start by an incomplete definition of a house. A house to the editors of *Fortune* is primarily something which is now very badly and wastefully produced, and therefore offers an obvious opportunity for new industrial enterprise. A house to Frank Lloyd Wright is a place where a man puts his car in the garage and is king of all he surveys.

But meanwhile the Germans have been evolving a somewhat different definition of a house. A house, to most good German planners, is an integral part of a planned and equipped community unit; it has a garden, rents for what an average man can pay, and is situated not more than twenty minutes away from a good place to swim and a large stretch of forest or mountain permanently preserved from gas stations. This idea seems to me to have the merit of being both a more practical approach to the housing problem than that of *Fortune* and a more attractive ideal than that of Mr. Wright. Moreover, it has been tried and it works.

C. K. BAUER

A History of Religions

Religion in Various Cultures. By Horace L. Friess and Herbert W. Schneider. Henry Holt and Company. \$5.

THE authors of this book have made every effort to "promote a more direct and varied acquaintance with religion as a factor in the life and organization of particular cultures," and the result has been most interesting and most successful. Their treatment is completely unbiased and thorough, and very compact. Moreover, their book differs from previous works on the same subject, not only because of its superiority in the organization of the material, but also on account of its clear and vivid exposition of the relation between religion, society, philosophy, and art. A great deal is lost in studying religion as a realm sufficient unto itself. To separate religion, philosophy, and art is to prevent a possible comprehension of any one of them in its entirety, and this is one of the reasons that this book, which recognizes their interdependence, is a valuable contribution to the study of religion.

The authors have made no attempt to give an exhaustive or encyclopedic history of any one religion, yet they have avoided the mistake of making their descriptions and analyses too brief or too general. Nor do they deal with all the religions, but with the aim of illustrating a significant variety in the growth of world culture, center their attention on Shintoism, Hinduism, Buddhism, the Greek religion, Judaism, and Christianity. There are also two brief introductory chapters on primitive religions. In their answer to the question: What has religion contributed to culture? they include a study not only of mythologies, theologies, cosmologies, and ethical codes, but also an evaluation of the various religious rituals, festivals, and works of art. For example, much space is devoted to a description of the Shinto religious festivals and the rural Dionysia; the architecture and symbolism of the Shinto, Hindu, and Buddhist temples, the Jewish synagogues, and the Christian cathedrals; and the Greek and Christian religious dramas. Moreover, the life of the members of the various religious communities with their numerous customs and duties is clearly and concretely depicted—not only for lay religious groups, but also for the monastic orders, in both the West and the East.

Special mention should be made of the structure of the history of Hinduism. Most historians have made something of a muddle of the organization of this very complex material, but the authors of this book are an exception. With remarkable brevity and clarity they arrange the subject under the headings Hindu Society, Mythology and Cosmology . . . , Rites, Sects, and Movements of Modern Hinduism. The history of Christianity is only about two hundred pages in length, yet in addition to an account of the early life of the church, Eastern Orthodoxy, Roman Catholicism, and the rise of Protestantism, it contains a short history of all the important Protestant sects, including the Moravians, the Swedenborgians, and the Mormons, and a section on modern humanitarianism, Unitarianism, church federation, and modern Catholicism.

LIVINGSTON WELCH

O'Brien's Tales of Horror

The Diamond Lens. By Fitz-James O'Brien. Introduction by Gilbert Seldes. Illustrated by Ferdinand Horvath. William Edwin Rudge. \$4.

FITZ-JAMES O'BRIEN belongs to the small company of minor American classics that includes such names as Ambrose Bierce and Edgar Saltus. With them he shares an appropriate legend, and what few facts are known seem to support a glamorous superstructure. Mr. Seldes makes the most of an opportunity to retain the colors and materials of a vivid biography. In the early eighteen fifties O'Brien landed in New York, a handsome, well-read, well-educated Irishman. Before the decade ended he had published a number of remarkable short stories evidently written with great facility. He was said to have had his nose broken by a prize fighter and to have enjoyed a brief love affair with a popular actress. His work and social reputation lived in the shadow of Poe's legend, therefore it was said that he drank heavily and was excessively Bohemian in his habits. Unlike Poe, however, he had the reputation for being genuinely gay, a glorious drinking companion; and no matter how shabbily dressed, he carried himself with an air of elegance. He enlisted in the Seventh Regiment of the National Guard of New York, then went off to the Civil War, and died of his wounds in battle in 1861.

When we reread the stories that he left behind him, his legendary biography becomes even more convincing than the bare recital of fact. The stories show an inability to sustain an original intention, as though O'Brien, writing at top speed, had found himself too slow for the onrush of his imagination and had become impatient and bored before he reached the final paragraph. There is much of the actor's eloquence in O'Brien, the love of tinsel for tinsel's sake, and always the desire to bring his brief performance to a close by an unmotivated sword thrust of melodrama. O'Brien's rhetoric is completely justified in such stories as *The Golden Ingot*, *What Was It?* and the group of sketches in which the Chinese conjurer, Piou-Lu, is the protagonist. In these his imagination fits in with the florid style of his day—Walt Whitman's editorials, the speeches of Daniel Webster, and the familiar idiom heard across the footlights of romantic drama, the popular diet of the nineteenth-century New Yorker. He could do much in the opening paragraph of a short story, perhaps more than any who have followed his craft, but once his atmosphere was created, he tired of the game. His characters—they are more like lay figures than human beings—are less substantial than Poe's. Often they are young gentlemen of leisure looking for excitement, which is found by looking down the lens of a microscope or purchasing a haunted house. The bare dramatic incident is presented, and from then onward the story is left to shift for itself. In his horror tales O'Brien remains skeptical throughout, but the very fact that he alone is unconvinced by the testimony of his characters carries conviction to the reader. In the semi-humorous fantasies of Piou-Lu, O'Brien's rhetoric is a delight, and the sketches have the same charm that is revealed in Victorian bric-a-brac.

Special attention should be called to the illustrations in this edition of O'Brien's work, for they are among the superlative examples of their kind in modern book-making. Mr. Horvath recreates the period in which O'Brien lived; the suggestion of mystery and horror is in every line; but more than that he has caught the spirit of the old New York that O'Brien knew so well. Here again are the high-ceilinged interiors, the dim oil lamps, and the red-brick Dutch colonial houses dwindling in perspective down narrow streets and lanes.

HORACE GREGORY

Shorter Notices

Crime for Profit. A Symposium on Mercenary Crime. Edited by Ernest D. MacDougall. The Stratford Company. \$2.

This symposium, which includes essays by sociologists, lawyers, educational leaders, and clergymen, is interesting because of its emphasis on the economic interpretation of crime rather than on the superficial, passionate aspects of the disease. Most of the contributors conclude in effect that as long as American civilization is a case of dog eat dog, just so long will dogs eat dogs, and that the problem seems to be to make it unnecessary for men to behave like wild animals in order to support life in a highly competitive struggle. In many of the essays the banker ranks with the racketeer. By far the most interesting contribution is that of Jerome Davis, who suggests the only list of fundamental changes that is offered. Another contributor, C. Walker Hayes, gives this definition: "Crime is the pathological expression of individualism." However, as still another contributor points out, communism is capable of becoming mercenary crime by government. Jerome Davis offers as his thoughtful remedies: absolute freedom of speech, press, and association for all, even those who would overthrow the established order; human rights forever recognized as paramount to property rights; cooperative enterprise; a planned economic and social order; community ownership of things used in common; the curbing of individual interest within social bounds; and "recognition that we are living in a dynamic society. Consequently no matter what changes in the rules of the game are made, more will be perpetually needed." As in all symposiums some of the contributions are suggestive and many of them platitudinous. Harry Elmer Barnes has an interesting essay on the relation of war debts and reparations to mercenary crime.

José Clemente Orozco. With an Introduction by Alma Reed. New York: Delphic Studios. \$6.

This book consists of reproductions of Orozco's complete work—his frescos, including those in progress at Dartmouth, his water colors, oils, lithographs, drawings, and studies; among them are some of his earliest achievements. There is a brief and intelligent preface by Alma Reed. A magnificent draftsman, Orozco loses little in reproduction, and as his work is so scattered the book will give most readers a more vivid idea of his genius than they could otherwise hope to have. Those of us who have doubted him can no longer do so after examining it. He displays an astonishing knowledge of how to draw combined with a certain Michelangesque moral grandeur, and he has an amazing range of feeling—he is capable of the most aggressive and hilarious satire as well as of epic statement. One of his few defects is his use of transcendental symbolism. Though his witty intelligence makes his philosophic symbols interesting, they lack the force of his other figures. It is perhaps because his American frescos have been made from this less earthly subject matter that he has failed to gain whole-hearted American applause.

A New York Tempest. By Manuel Komroff. Coward-McCann. \$2.50.

Mr. Komroff has taken the accounts of a famous murder that stirred New York City in the 1830's and made them into a novel. With little attention to the nuances and complexities that enter into human relationships, he has spread out the details of the affair with a broad and almost too complete flourish. A gay young blade strangles his mistress, escapes punishment, and is finally forced to suicide through remorse. All this could have been told more effectively in half the space, but in spite of that it makes an interesting and fast-moving story.

A Second Questionnaire for Consumers

What are vitamins, how necessary are they, and what foods contain them?

What special hazards of infection or poisoning are involved in using certain bakers' goods?

Is Bond bread "the only food that gives you the extra vitamin D you need"? Do you need it?

Is it safe to use only canned foods and no fresh foods in the diet?

Are noiseless typewriters as sturdy as the standard models?

These are a few of the many questions answered for subscribers to Consumers' Research in the December, 1932, section of the Handbook of Buying which covers Food (in part) and Office Appliances.

Consumers' Research was organized as a membership corporation to provide unbiased information and counsel on goods bought by the ultimate consumer. It is not a business enterprise and is not operated for profit. Information by brand name is given on hundreds of different commodities in the subscribers to Consumers' Research in the December 1932, sections during the coming year, each section dealing with different subjects such as cosmetics, medicine and hygiene, automobiles and gasoline, textiles, etc. The data on which the listings of goods are based come from impartial, unbiased technical experts—not from manufacturers, merchants, salesmen or advertisements.

The service which is confidential, and available to private individuals only, is \$2 a year. Send for a circular which gives further details and contains an application form.

Architecture

A Radio City Architect's Economics

DO you frequently read the *New York Times*? Then you may have noticed one of its stock articles. In essence it has appeared in a regular rhythm during the past ten years, though the announcement it carries is always broached as a discovery totally new. It is signed always by an architect. The promise it contains is that architects are going to be good. The promise is made to business men, with apologies for the fact that in the past there was a time when architects acted high and mighty.

The architect who signs the piece being always, for the effect, one associated with a current large undertaking, there is today only one corner from which the announcement can come. No steel work worth mentioning has recently been erected except in Radio City. Hence it was not surprising to find the old message once more, as a bright gift released for Christmas Day over the signature, not of the usual Mr. Wiley Corbett, but of Mr. L. A. Reinhard. Mr. Reinhard qualifies as an architect of Radio City.

He apparently regards buildings as, first of all, a huge outdoor bookkeeping entry. He says it very clearly. "The fundamentals of architecture now rank as follows: (1) cost (2) time, governed by finance and investment, and (3) appearance." What is important here is evidently the "rank."

The statement has a good deal to commend it, and used to be believed with all its corollaries. The corollary of "time, governed by finance and investment," was skyscrapers and congestion. Unfortunately, today the order is reversed, and we are witnessing finance and investment called to account by time. Mr. Reinhard may not have noticed it. The sound of rivets is very loud, loud enough to drown out the quieter but equally emphatic rhythm of the auctioneer's gavel and even the crack of the policeman's nightstick on the heads of the only part of mankind desperately in need of these empty buildings—the dislodged unemployed.

There is a special interest today in theories of cost and finance issuing from Radio City. Cooperation, such as its architects propose, between the various workers who put up our buildings, is entirely to the good. But what if "finance," which this cooperation serves and by which it consents to be governed, were running wild? Specifically: here is the 6,200-capacity auditorium of Radio City Music Hall, presided over by the voluble Roxy, and here another mere little *bijou* of a new movie theater, also to be presided over by Roxy, calling for 3,700 visitors per show; and on the same stretch of the L here is the old Hippodrome, just sold for \$100,000 to satisfy a debt of \$2,600,000; and here a block away is the old Roxy, about which the great man keeps silent nowadays; and up at Columbus Circle was another large theater, the Century, suitable only to "Miracles," and it has totally disappeared, since miracles do not occur daily. And even though converted into a movie palace, the Music Hall must draw 12,400 people daily, if the program of four shows is to play even to half a house; add 7,400 for the other new theater, multiply by 300 days a year (throwing in the Sundays), and you have a total of 11,940,000. Need we suggest, a difficult problem in the New York movie world?

Beginning with the Tower of Babel, large monuments have frequently been landmarks of ambitious folly. The Pyramids arose as tombs not only for kings but for their slaves, and were abhorred in America's young days because of that fact. Who is certain that the same brutality did not underlie the marvel

of Taj Mahal, which for us is the seal of a sweet romantic love? Yet formerly patron and architect were at least agreed that there was importance in "art," and so despite the miscalculations that frequently liquidated the builder, we still have something left. Delight and sound social morals are not quite coterminous, for which we can be thankful, since otherwise we should almost never experience pleasure in the presence of large buildings. But our New York architects, who might afford with a clear conscience to indulge themselves and us with purely imaginative pleasure, since the venture is likely to go bankrupt anyway (the suggestion comes from Roderick Seidenberg), have decided instead to turn into mere bookkeepers themselves. And so, permitting "appearance" to take last place, there is nothing that they do not stand to lose.

Though buildings no tourist would miss have risen despite ill-considered purposes, the artist is safer when the scheme itself is sound—if he wishes his building is to be living architecture before it is dead scenery. In Radio City, for example, there is the Music Hall auditorium which, for all the architects' mousiness about "appearance," is sensually a delight. But even here the pleasure is not proof against disquieting afterthoughts—doubts mounting daily about the *scale*, wherever the building is discussed. Has not the mountain already brought forth mice? The curious conception of the scheme as a whole, which seems to have been based more on boom and congestion than on anything pertaining to the art of the theater, has entered every part of it, bringing even into this hall some embarrassing flaws that arise from having to reconcile huge with intimate. And this auditorium, let us remember, is Radio City at its best—not the part of it about which we need not speak.

Centuries ago Sir Henry Wotton offered a triad of requisites for architecture that absorbs and transcends Mr. Reinhard's flat "(1) cost, (2) time . . . (3) appearance." "Well-building hath three conditions: commodity, firmness, and delight." As a technologist, that is, one who reasons in the arts, the architect should find his main interest in the connection or relation or interdependence among these three.

DOUGLAS HASKELL

Drama

Some Actors Who Act

FEW American actors have done so much for so many bad plays as Osgood Perkins. It is true that his efforts have usually been unavailing, for the simple reason that fate has commonly put him to work in dramas which even he could not redeem, and it is with difficulty that one can remember anything about them except, perhaps, a scene or two in which the playwright had given him so little to do that he could make up the action as he went along. It is therefore a delight to see him at the Masque Theater laboring under disadvantages no greater than those imposed by a rather amusing farce-comedy entitled "Goodbye Again." The funniest moment of the evening is, to be sure, that upon which the curtain rises—a moment during which nothing whatever is said, while Mr. Perkins slowly regains consciousness after what was evidently a long and convivial evening. But the farce is solidly built, it is amazingly well played throughout, and it deserves the success to which it appears destined.

Mr. Perkins would be a good actor no matter whom or what we were used to seeing. Yet the fact that one finds oneself surprised to realize that he is adding something to the script is enough to remind one how little real acting is done on our stage. Surely it is not too much to ask of an actor that he do more

□ JOSEPH WOOD KRUTCH says □

ALICE IN WONDERLAND. Civic Repertory Theater. It will fascinate children and adults alike by the reality of its unreality and the sense of its nonsense.

ANOTHER LANGUAGE. Booth Theater. Hilarious perennial exposing almost anybody's family.

BIOGRAPHY. Guild Theater. An intelligent and sinewy comedy about what happens when a cultivated woman of the world tries to choose between a pompous opportunist and an unmanageable idealist.

DINNER AT EIGHT. Music Box Theater. Trick melodrama about what happened to the various guests invited to a dinner party. The general public likes it very much better than I do.

GOODBYE AGAIN. Masque Theater. Reviewed in this issue.

THE LATE CHRISTOPHER BEAN. Henry Miller Theater. Light comedy from the French completely rewritten by Sidney Howard and charmingly played by Pauline Lord and others. All things considered, it is much the most enjoyable comedy of the season.

H. L. Mencken's

EDITORIAL

*in the February issue of
The American MERCURY*

WHEN American taxpayers gather to rub their wounds and howling one hears is always against the forays and extortions of the war veterans, the vast cost of the Federal bureaucracy, the burden of the tariff, or the outrage of the income tax. Why does everyone forget the greatest hold-up of them all? Not once in ten years, so far as I can recall, has it wrung a tear from either the *Nation* or the *New Republic*. No candidate for public office, East, West, North or South, has so much as mentioned it. Yet it costs the people of the good old U. S. A. twice as much as the income tax, three times as much as either the war veterans, real and bogus, or the service of the national debt, and ten times as much as the Smoot-Grundy tariff. Do I allude, perhaps, to the national booze bill? Far from it! What I allude to is the cost. . . .

Mr. Mencken continues with a slashing analysis of the most astonishing "racket" in American government, the cost of which is a burden upon the average taxpayer which is already beginning to crush him. . . . *A fearless, outspoken editorial on a subject which few have dared to discuss, typical of Mr. Mencken's comments on "What Is Going On In the World" every month in The American MERCURY.*

On sale everywhere on January 25th

*The American Mercury and The Nation \$7.50 a year
(Regular Price \$10.00)*

than merely read, with more or less intelligence, the lines of his part. Surely it is part of his job to invent the gestures appropriate to a particular type of character, to fill the pauses with eloquent expressions, and even to discover bits of business which will heighten the effectiveness of the scene. And yet when one comes across a player who really does just that, one realizes how seldom it is done, how commonly our players are content merely to walk through a part with such natural grace as God has given them. Minor roles often give the effect of being reasonably well played because the card index of the casting director is sufficiently elaborate to enable him to locate the type which is called for. It is rare, however, that the harassed critic can say more of the leading players than that they are, in the familiar phrase, "adequate." And that means merely that they have not come between him and the playwright's intention. Charming ladies and graceful gentlemen add the interest of their own personalities for a year or two until one is weary of them. After that one comes to prefer purely negative persons whom one does not remember from play to play. But even moderately good actors are rare. Last season something over four thousand persons appeared on the New York stage. Hardly a dozen of them took the trouble (if they had the ability) to create a character.

Strangely enough, Mr. Perkins does not struggle alone in "Goodbye Again." The whole cast, in which Sally Bates is co-featured with him, really acts, and one Leslie Adams in particular makes the Detroit husband into a real person by endowing him with a kind of slow amiability which gives the key to his words and deeds. Since Mr. Adams is new to Broadway, I have no way of knowing whether or not he happened merely to fit, but if he really created the part, then he too is an actor. As for the play, there is nothing really original about the story of a silly woman who insisted upon believing that she and a college beau had been waiting for each other for seven years—except, perhaps, the fact that the young man is a popular novelist on a lecture tour. Nevertheless, it is competently written, and thanks to the playing, it becomes a very satisfactory evening's amusement.

"A Good Woman, Poor Thing" (Avon Theater) fails for the lack of just the things which save "Goodbye Again." The situation—that provided by a sophisticated couple who cannot get along because each is too ready to allow the other his "freedom"—is hardly more conventional than the situation in the other play. It is, however, played for the most part in a slovenly, undistinguished way probably caught, in part at least, from the slovenly writing and slovenly construction. There are, to be sure, six or seven lines probably wittier than any in "Goodbye Again." Yet most of the time the author is obviously fighting for time, and he does not seem to know exactly either what style he is writing in or what kind of people he is writing about. Sometimes the piece seems a rather realistic and sentimentally moral comedy. At other times it appears to be struggling to achieve the complete artificiality of Congreve or Wilde. But the indecision of the author plus the indecision of the players results only in a blurred impression. No one cares very much what is going to happen and no one will remember very long what did happen.

JOSEPH WOOD KRUTCH

"Late One Evening" at the Plymouth is well acted, well produced, and manages, through a movie technique and a series of tense episodes, to hold one's interest. As a play it is ridiculous, a miscellany of familiar situations loosely connected ending in bathos, with a denouement in which the announcement that the heroine is to have a child recaptures her errant author-husband—and changes everything. Ursula Jeans's acting and the scene in a low cafe give the audience something worthy of remembrance.

THE NATION, No. 20 Vesey Street, New York City, Cable Address: NATION, New York. Muriel C. Gray, Advertising Manager. British Agent, Miss Gertrude M. Cross, 23 Brunswick Square, London W. C. 1, England.

THE SECESSION from Technocracy of an important group of its recent adherents and members was an inevitable outcome of the confusion and divided counsels that have dominated its activities and obscured its more fundamental purposes. The split will doubtless be seized upon by unfriendly outsiders as proof of the weakness of Technocracy's theories and the inaccuracy of its findings, when its real significance is merely the obvious one—that prophets and fact-finders cannot lie down together. It is too early to discover what the effects of the break will be upon the research now in progress, but whatever develops, an impartial study of the findings of the group seems more important than before. The public will tend to dismiss the whole project, the good with the bad, unless an opportunity is offered to a qualified group to scrutinize the figures and conclusions already assembled and render a public judgment as to their value. The committee of economists and engineers whose names were published in last week's issue of *The Nation* stand ready to undertake such an inquiry. Meanwhile, *The Nation* will publish such individual discussions of the material now available as seem to bear upon the fundamental issues involved. None of these articles, however, will commit this journal to the opinions expressed.

WELCOME SIGNS of initiative emerge from the pre-inauguration activities of Franklin D. Roosevelt. Clearly, it is leadership that the country requires and for which it hungers. It is leadership alone, positive, courageous, vigorous, that can check the nation's accelerating tail-spin into economic chaos and complete demoralization. The futility of the present lame-duck Administration—the last, Senator Norris be praised—makes clearer than ever the need of a clear head and a strong hand at the controls. Walter Lippmann put it correctly when he wrote: "What is needed is for Mr. Roosevelt to convince this country and the world that in Washington there is a government that can govern." And we add that the aphorism of the *laissez tomber* individualists, that "he governs best who governs least," is obsolete and discredited in this crisis. The President-elect has made a good beginning in inviting, through the State Department, Great Britain and the other nations which paid their December fifteenth instalments to confer on the debt problem after March 4. There lies the hope of a sane international policy. Mr. Roosevelt has done no less well in pledging that the Muscle Shoals power development shall be operated by the federal government.

THE RECAPTURE of Muscle Shoals for the American people has far-reaching implications. Over that giant stake an epic battle has been waged for a decade and a half. On one side was the dogged leadership of one man, George W. Norris. On the other side were the heavy battalions of the nation's power and banking interests, entrenched behind the \$2,000,000,000 annual electric-current revenue and the additional billions of the public's invested funds, marshaled under the skilled direction of the power industry's hired men in the capital. They were determined that this greatest of water-power sites, on which the nation had expended \$150,000,000, with its potential annual generation of four billion kilowatt-hours, should be turned over to private exploitation. Twice Senator Norris brought a modified Muscle Shoals bill through Congress. Twice it was vetoed—once by Coolidge, once by Hoover. Now an even better measure—designed to provide power development at honest cost, and the consequent distribution of cheap power to the consumer—is assured. Not only will the people of thirteen States—those within a 350-mile radius of the development—benefit directly, but the establishment of a "yardstick" for power production, transmission, and distribution on a gigantic scale brings nearer the prospect of equitable light and power rates throughout the nation. An annual saving of at least half a billion dollars to the consumers of electricity and a vastly increased use of current are realizable in the not distant future if President Roosevelt carries out a power policy consonant with his initial move at Muscle Shoals.

JAPAN HAS NOW DECLARED that it means to establish a virtual protectorate over the whole of Asia. The rest of the world, Foreign Minister Uchida said in effect in his recent speech before the House of Peers, must

leave to his country the important task of preserving the peace of the Orient. "Any plan for erecting the edifice of peace in the Far East," he asserted, "should be based upon recognition that the constructive force of Japan is the mainstay of tranquillity in this part of the world." In short, the League of Nations and the United States are warned to keep their hands off the Asiatic problem, leaving it to Japan to act as policeman for that continent. This doctrine, if accepted by the other Powers, would automatically scrap the Nine-Power Treaty and perhaps also the Open Door policy. That Count Uchida was not dealing in pointless rhetoric may be seen from his reference to conditions in Asia outside of Manchuria. He said, for example, that the spread of communism in the Yangtze valley, if unchecked, would "be a serious menace to peace in the Orient, against which Japan must certainly be on guard." He also warned China that there would be "unfortunate eventualities" if that country continued its preparations to defend what it considers its sovereign territory against Japanese aggression. Looking beyond Manchuria and the province of Jehol, Uchida significantly said that, "viewed historically, there is no room for doubt as to the fact that the Great Wall marks the boundary separating China from Manchuria and Mongolia."

TO THE REST OF THE WORLD there is considerable doubt on this point. Several American Secretaries of State, the British Foreign Office, and the spokesmen of other Powers have repeatedly declared that Manchuria at least must be considered an integral part of China. But the Japanese, taking it for granted that Manchuria has now been permanently severed from China, are laying plans for action in more distant fields. Count Uchida pointedly asserted that the Japanese intend to add Jehol, a border province lying between Manchuria and Mongolia, to their puppet state, Manchukuo. Will they then extend their "protection" to Mongolia itself? Chinese students have charged that at the Imperial Conference which met in Tokio five years ago, Baron Tanaka, then Foreign Minister, presented a secret memorandum setting forth in detail a plan to conquer not only Manchuria but Eastern Inner Mongolia as well. The Japanese have emphatically denied the existence of both the memorandum and the plan of conquest, and their denial has been generally accepted by neutral observers. Yet virtually every move the Japanese have made in the last few years coincides with the Chinese allegations. In the Uchida speech the Japanese went farther than they ever had before in defying the Western world. They may, however, be overreaching themselves. Great Britain has extensive interests in the Yangtze valley which it would not care to have disturbed; France would hardly look with equanimity upon an extension of Japanese "protection" over its sphere of influence in southern and southwestern China; Eastern Inner Mongolia lies next door to the Mongolian Soviet Republic. A Japanese protectorate over Asia would not sit well with some of the Powers which have taken a more or less neutral attitude in the Manchurian controversy.

A THOROUGH INVESTIGATION of the activities of the Reconstruction Finance Corporation is essential. While a Senate committee which recently inquired into the corporation's loans reported that it had found "nothing to criticize," it added that lack of funds had prevented any-

thing more than a superficial examination. If it had been able to dig a bit deeper, it should have had no difficulty in establishing the facts in cases like that of the Union Indemnity Company of New Orleans. This company underwrote the bonds of contractors employed in public construction work in Louisiana. It obtained a loan of \$850,000 from the Reconstruction Finance Corporation, which was used, according to a New Orleans dispatch to the *New York Journal of Commerce*, "to finance a technical sale of State highway bonds through the Pyramid Securities Company, a subsidiary, in order to provide funds to pay highway contractors so they in turn could pay creditors and so prevent suits against the surety company." But the story does not end here. The Union Indemnity Company and three affiliated corporations have now gone into receivership. W. Irving Moss, president of the company, has explained that "outside of total loans due banks, amounting to \$240,000, *amply secured by municipal and other liquid collateral*," all loans of the companies involved "are due to the R. F. C., *whose fine cooperation insures an orderly liquidation*." In short, the public treasury is left holding the bag. But this is only one case. In the January issue of *Harpers Magazine* John T. Flynn raises many pertinent questions bearing on R. F. C. policy that have not yet been answered, and other evidence of questionable practices is also available. Might it not be an economy rather than an extravagance for Congress to spend a few thousand dollars to determine just what this agency is doing with the \$3,500,000,000 of the public's money which Congress placed at its disposal?

THE MILLS OF G. O. P. may grind slowly, but he grinds exceeding large. If anyone doubts it, let him read in Paul Anderson's dispatch elsewhere in this issue how our Secretary of the Treasury refunded himself three times his annual salary. Public service, we know, is performed at great personal sacrifice by the truly great, and it is owing to their financial independence that men of vast wealth can serve the public with a disinterestedness less certain in those who depend on their salaries for a livelihood.

THE PIONEERING DAYS of birth-control agitation are past. Although the fight is not yet won, the slow processes of nullification through changes in customs and in public opinion have shifted the front and altered the tactics of the leaders. At its twelfth annual convention, held on January 19 in New York, the American Birth Control League announced that the emphasis in its propaganda would henceforth be laid upon "birth selection" (eugenics, to most of us), and that it would campaign for sterilization laws in States where they were needed. Legal limits on the spread of birth-control information still exist, but in many States they have become practically obsolete. An exception to this is Connecticut where a fight is now pending over the fantastic law which makes the use of contraceptives illegal, although the dissemination of information is not barred. The shift in attitude is nowhere more evident than among the medical profession. Five years ago scarcely a medical school in the country allowed the subject to enter into its curriculum. Today, according to Dr. Eric Matzner, medical adviser of the Birth Control League, medical schools apply to the league itself for speakers. It was also reported that thirty new clinics have been opened during the past

year in the United States and its territories. In Grand Rapids, Michigan, a clinic has been set up by the municipality in the City Hall itself, and mothers on the city's relief list are sent there for birth-control information six weeks after the birth of a child. Here is economic determinism in its simplest form. Birth control is held to be a sin as long as it limits the numbers of babies whose support would fall upon their own parents, however inadequate that support might be. But when the responsibility for their care is dumped upon the authorities, how speedily official attitudes change! Let us be grateful for this small silver lining. It will be hard, we suspect, for Grand Rapids hereafter to adopt a repressive attitude toward the spread of birth-control information, even if the cloud of depression finally lifts.

THERE COULD BE no better example of the threat to education which lies in the movement for economy in this crisis than the report from North Carolina that the budget bureau of that State is proposing to cut the appropriation for the University of North Carolina from the \$504,000 of last year to only \$390,000. This would mean a 56 per cent cut since 1929 in the appropriation for an institution which should be the glory of the State, one to be upheld and preserved in its functions as long as the State can keep anything going. We have repeatedly referred to the value of the work done by this university, which in the productivity of its scholars, in its public spirit, in its service to its State is certainly unexcelled by any similar institution. More than that, it has been marked by a liberal spirit quite beyond praise. It is the home of freethinking scholars because they are upheld in their freedom. Its president, Frank P. Graham, is in himself the best guaranty that this policy will continue, for he has not allowed his university presidency to prevent him from speaking out against social injustice. It would be not only a social tragedy to cripple so great a university at this time, but a genuine economic waste, and would mean a dispersal of the happy society of scholars which has distinguished Chapel Hill. Should this happen, there will not, we are sure, be a single academic community, North, South, East, or West, which will not be outraged by the news. We wish that the authorities in North Carolina might take note of the admirable attitude of the new Governor of New York State, Herbert Lehman, who has just told the representatives of industry who appeared before him to demand big cuts in the appropriations for the educational system of the State that he would not lend himself to the crippling of this great educational machine.

"PRINCE MIKE ROMANOV" (otherwise Harry Gerguson) is going to be let off. The romantic impostor who graduated from various orphan asylums into the Russian imperial house cannot be sent back where he came from for the embarrassing reason that he came from right here, and apparently he is going to be given a suspended sentence, in exchange for a plea of guilty to charges arising out of his latest mysterious entry into the United States. But the real hero of the trial is less Prince Mike than Federal Judge John C. Knox, the only man in the country, it seems, who has not yet heard about unemployment. The prince, with no other means of support except the wits which he uses all too well, has a perfectly good vaudeville engagement said to carry a salary of \$500 a week; but Judge Knox

has ruled that he must not accept it. "This man," said the judge, "should go to work *like all the rest of us* [italics ours]." Judge Knox should be made chairman of a National Take-Away-a-Job Week.

THE DEATH OF DR. J. FRED WOLLE, founder and director of the Bethlehem Bach Choir, which occurred on January 12, threatens the loss of a second great opportunity for hearing the works of Bach, at a time when general interest in them is perhaps greater than ever before. The first opportunity is, for the moment at least, already lost. Carl Weinrich, pupil of Lynnwood Farnam, and his successor at the organ of the Church of the Holy Communion in New York is no longer there. When Farnam gave the complete organ works of Bach in a series of recitals, he found it necessary to give each recital three times in order to accommodate the public that wished to hear them. The explanation that Weinrich's Bach recitals occupied a disproportionately prominent place in the church's activities carries implications which are its own answer. Unfortunately, the scene of an organist's activities is important: organs vary, as do church acoustics, and those of the Holy Communion were exceptionally favorable for the music of Bach. But there are other auditoriums with organs, and institutions like the Juilliard School, or Columbia University, for example, would be doing themselves and the musical public a service by making possible another complete Bach series. It is almost unthinkable that the impetus which Dr. Wolle gave to the Bach Choir should be lost, although no one could step at once into his place. Years of devotion to Bach's music and its performance, comparable to his, would be necessary for that. But it ought to be possible to find someone who could grow through that devotion as he did, and lead the Bach Choir farther along the road he laid out for it.

THE SUDDEN DEATH of George Moore at the age of nearly eighty-one removes a distinguished writer and an amusing personality. He was not only witty himself but the cause of wit in others. Apropos of his enthusiastic discovery of the masters it was said that he "conducted his education in public," and apropos of his indiscretion in confessing possibly apocryphal adventures it was remarked, "Moore doesn't kiss, but he tells anyway." Perhaps, however, the most remarkable thing about him is the fact that he was a literary man pure and simple and that he filled a long life with art alone. Leaving politics, sociology, science, and morality to others, he was content to record the passions and follies of mankind without, usually, troubling himself to make explicit comment. As a youth he determined to shock Victorianism out of existence, but that was the only time he ever really devoted himself to a cause, and during his later years he lost his enthusiasm even for that. Good as his realistic novels are, it is dangerous to predict immortality for any novel, but the three volumes of his "Hail and Farewell" will be read as long as anyone is interested in graceful and vivid gossip. Characteristically, he left England for Ireland because he could not stomach the Boer War and then returned suddenly to England because he could not remember a single great artist produced by Catholicism since the Renaissance. It is appropriate that the Free State should have banned his "A Story Teller's Holiday" the night before he died.

Inflation—or What?

AS the economic crisis continues, the inflationists in and out of Congress gain adherents steadily. How many Congressmen and Senators are directly in favor of currency inflation in one form or other is not precisely known, but certainly the overwhelming majority in Congress are indirect inflationists. Their attitude is that summed up last winter by Representative Crisp of Georgia: "The House is against reducing expenses, is in favor of increased appropriations, and is against taxation." Every member of Congress who holds these three attitudes is an inflationist in effect, whatever he may imagine his opinion on currency inflation to be. For while it is certainly not necessary to balance the federal budget to the last penny either in the present or in the next fiscal year, the gap between federal revenues and federal expenditures must be kept within reasonable limits if the credit of the government, in a period when confidence is everywhere so low and so easily shaken, is to be sustained. A prospective deficit of approximately one billion dollars in the next fiscal year represents a good deal more than a reasonable gap. It cannot continue at this rate for long without imperiling the government's credit, and compelling us to resort to inflation by default.

It would be difficult to predict in any case precisely what the effect of currency inflation would be, and it would be particularly so until we knew just what kind of inflation was proposed. The more naive inflationists reason quite simply: Business is depressed, they say, because people are not buying. They are not buying because they haven't any money. Therefore what the country needs is more money. Therefore the government should print more money, and it is a matter of relative indifference whether it forces it into circulation in the form of bonuses to veterans, bonuses to farmers, or through the payment of any of its current bills. This naive argument is supported also by the belief that the increased currency in circulation would raise prices.

The first half of this argument is entirely fallacious. The depression was not brought about by any lack of currency as such. On the contrary, after the depression set in, the amount of hand-to-hand currency began to increase very sharply. What caused this increase was partly hoarding by individuals, and partly the thousands of bank failures in the country. As a result of these failures hundreds of communities found themselves without banking facilities of any kind, without bank credit, so that they were forced to make all payments, otherwise made by checks, in hand-to-hand currency. Normally nine-tenths of all the business of the country is conducted by checks, and only one-tenth by currency. What we have witnessed has been a great displacement of check payments by money payments. Direct inflation of the kind contemplated by the Huey Longs would at first not essentially alter this process. The first effect of a billion dollars of fiat currency would be to drive approximately a billion dollars of Federal Reserve notes and gold certificates out of circulation. These would be retired, and the process would go on until the retirement had been virtually complete. Only then would new currency add to the total amount of hand-to-hand money in circulation. But probably long before that

point was reached there would be a raid on the gold supply, not merely by foreign countries but by our own citizens, which would grow to such dimensions that the government would be obliged to suspend gold payments.

Until the government abandoned the gold basis, currency inflation would have none of the results hoped for by its advocates. It would not raise the level of prices, because gold prices are controlled internationally and not nationally. The price rise would not begin until the gold basis was abandoned, and then the rise would begin to reflect the discount on the currency in terms of gold. If we attempted later to return to the gold standard with the same gold content for the dollar as before, the price level would drop by as much as it had previously risen.

It will be seen that currency inflation by this method—and that is the method that inflation would be most likely to take—would be the most disastrous possible form. Public advocacy of inflation in Congress, as soon as it was taken seriously, would undermine confidence; it would permit individuals and speculators, recruited mainly from the wealthiest groups, to profiteer at the expense of everyone else by taking gold before gold payments were suspended. When those gold payments were suspended, no one would know from day to day what the value of the currency was, because no one would know whether or not the currency would later be made redeemable in gold or in silver, or in what amount of gold or silver, or at what time. Until such questions were settled, the dollar would become the football of speculation as the pound has become. Its daily variations would further disorganize foreign trade, already demoralized to so large an extent by the daily fluctuations of the pound. And as in Great Britain, the lack of confidence would prevent an internal rise in the price level commensurable with the fall in the value of the currency itself, as reflected either in terms of currencies still on the gold basis or in terms of the premium on gold metal inside the country.

If currency inflation should ever be considered as a final expedient, there is only one form that deserves serious consideration. This is devaluation—the reduction in the gold content of the dollar. An inflation of this sort is controllable; business would know immediately at what level it was proposed to bring a relative stability of prices; and the lack of departure from a gold basis would prevent uncertainty in foreign trade. If such an inflation were adopted, it would have to be adopted with as little preliminary public discussion as possible if damaging raids on the gold supply were to be prevented.

Devaluation of this sort would, it is true, ultimately reduce the burden of those debts not payable in gold. By bringing a rise in prices it would tend to permit a margin of profits and a resumption of activity. But it might also bring, at the beginning, a serious further collapse in confidence to offset its advantages, and it would do nothing to cure the fundamental maladjustments that brought on the depression in the first place. Those maladjustments are largely international, and can be cured only by action that affects international relations. No permanent recovery is

possible until tariff barriers, and particularly those of the world's greatest creditor nation, our own, have been reduced to reasonable levels, and until war debts have been amicably cut down to a fraction of their present theoretical amount. Not until these two measures have been tried, and only if they fail to bring the substantial recovery that should in all reason be expected of them, ought we seriously to consider so desperate and perilous a measure as inflation.

Cheating the Filipinos

CONGRESS has decided to let freedom ring for the Philippines—but under antecedent conditions that may so impair the economic position of the Islands as to make independence a doubtful blessing. Moreover, the United States proposes to keep a string securely tied to the Islands by maintaining a military base there after “freedom” is achieved.

The Nation has always advocated unqualified independence for the Philippines. Let there be no mistake about that. In criticizing the bill which has now been passed over the President's veto, *The Nation* is in no sense taking the position assumed by the Hoover Administration. Mr. Hoover and his Cabinet are frankly imperialistic in their opposition. They do not want the Philippines freed now or at any other time. To their minds, it is necessary that the United States continue to carry its share of the white man's burden so that the united front of imperialism in Asia will not be broken.

Although our reasons diverge sharply from those advanced by the Administration, we consider the present measure thoroughly unsatisfactory. It possesses the single virtue of looking toward ultimate independence for the Philippines. The conditions on which that independence is granted, however, are cynically devised to undermine the economic position of the Islands instead of strengthening it. After the new constitution has been written, accepted by the Filipinos, and approved by the President of the United States, a ten-year interim begins, during which, in the view of Congress, there is to be a gradual adjustment in the economic relations between the Islands and this country. The law requires the Filipinos during these ten years to admit all American goods without duty. They are thus denied the right to protect their home market. At the same time their exports to their principal market, the United States, are to be subject to increasingly severe restrictions.

It is no secret that domestic beet sugar and American investments in Cuban cane sugar are the interests that directly inspired this legislation, if they did not actually write it. They wanted to bar Philippine sugar from the American market, which it was entering without payment of duty, and so for selfish reasons they suddenly became advocates of freedom for the Philippines. They were, of course, instrumental in having Philippine exports to the United States placed on a quota basis during the period of adjustment, for the quota system will automatically restrict the amount of Philippine sugar entering this market. Some sort of adjustment is probably necessary. But why must this adjustment be entirely one-sided? And why perpetrate a piece of tariff porkery in the name of liberty? Why, if we desire to pro-

tect one section of our export market during the ten-year interval, should American exporters be permitted to continue unhampered their exploitation of the Philippine market to the very end of that period? Would it not be better to set up a Filipino-American tariff commission to regulate the necessary adjustment in our economic relations and to be the determining body for both nations' tariffs in relation to each other in the pre-independence interim? Such a commission could determine whether or not the quota system was working satisfactorily and fairly, and make necessary changes if it was not. It could also help the Filipinos by supporting measures to protect their market against American exploitation, and might even assist them in seeking new foreign markets for their products. That much at least we owe to the Philippines.

No less objectionable is the section of the present bill which provides for the retention of a military station in the Islands. Why we should keep troops there after we withdraw political sovereignty is beyond all understanding. They could be of no earthly use either defensively or offensively. Surely no one will argue that a handful of soldiers or marines can defend the Islands against a determined attack by the naval forces of some other large Power, and just as surely no one can picture such a unit as the vanguard of an American army of invasion should the United States become involved in a Far Eastern war. If it is intended that the American troops shall maintain peace and order in the Philippines, then independence will be a meaningless fiction. It has been proposed that the Islands be neutralized by international convention. We consider this an essential step. It would be ridiculous for the United States to free the Philippines only to have some other Power take them over for its own purposes. Of course, neutrality conventions are not always observed. Belgium offers a case in point. Nevertheless, the mere fact that the Powers interested in the Far East had formally promised not to violate the Islands would serve as a check upon any plan of conquest they might have. But it is farcical to talk of neutralizing the Islands as long as the United States maintains a military base there. The troops and the governor-general should depart together.

The Rise of Barter

FARMER exchanges cow for aeroplane lesson.” So runs a news item. When cash currency and individual purchasing power disappear, barter of goods and services returns. The barter movement is well under way at Yellow Springs, Ohio, in the region of Salt Lake City, Utah, in Seattle, and elsewhere. In New York City a beginning has been made in the Eastern seaboard States by the Emergency Exchange Association, which is attempting to set the unemployed to work and to arrange the exchange of their labor for the necessities of goods, clothing, shelter, medical services, and the like. The local retailer who cannot sell his supplies for cash may need the services of a painter, a plumber, or an electrician in his store or home; the association endeavors to find an unemployed member of one of those trades to do the job in exchange for groceries or clothes. Four “locals” of the unemployed have been set up in various parts of New York City, and others are being formed inde-

pendently in Syracuse, Rochester, Albany, in New Jersey cities, in Philadelphia, and elsewhere. These locals will, it is hoped, be grouped into a mutual-exchange system to handle food supplies in bulk and arrange for the processing and distribution of goods by the component locals.

Direct barter of goods and services between two individuals is seldom contemporaneous; multiple barter, a succession of operations between a number of individuals, is the necessary process in a complex economic society. To avoid complicated bookkeeping between the many individuals involved in such a flow of material and labor, credit tokens are put into circulation. The worker who has done a job on credit receives a certificate expressed in dollars to use in payment for goods received by him or for other services from the members of the local. Ready acceptance of this certificate in circulation depends upon inclusion in the system of many types of goods and services. The more highly specialized is the economic life of the community, the more difficult does it become to set up a new system of exchange.

The out-of-work plumber is ready to accept payment in the form of a credit token, but to do his job he must have tools and materials; so the retailer and in turn the wholesaler of plumbing supplies must be brought into the system. To get coal on credit at mines the output of which cannot now be sold for cash, or potatoes from the farmer in the same situation, you must at the same time furnish services or goods in exchange or persuade the miner and the farmer that credit tokens issued in New York or Yellow Springs will have exchange value in West Virginia. To bring coal from West Virginia and potatoes from Maine, the railroad carrying the goods demands cash for freight and so does the filling station which puts gasoline into the trucks. In order to start the idle city factory making overcoats by the labor of the unemployed, for exchange against coal and potatoes, power must still be purchased for cash. The extent to which barter can effectively supplement the cash system which has so badly broken down, depends entirely upon the acceptance and use of credit tokens in lieu of currency by all who fill an essential role in the chain of production and distribution, from mine and farm and forest through manufacture and transportation to the ultimate consumer. Where any unit in the cycle retains "purchasing power," the barter process breaks down and must be supplemented by the use of actual cash.

Another difficulty is the presence on the market of "distress" goods in quantity, goods which are offered for sale at less than production cost. If serviceable overcoats can be purchased for \$5, it is excessively difficult to persuade a farmer to give \$7.50 in potatoes at their market value in exchange for an overcoat produced by the unemployed at an estimated actual cost, without profit, of \$7.50.

In spite of difficulties in putting the barter theory into effective operation in the cities, the interest shown on the part of the unemployed and their willingness to try it out are extraordinary. The swift rise of a variety of such schemes throughout the United States is evidence of an impulse toward self-help which should be watched and encouraged. More detailed discussions of systems now in effect will be contributed to subsequent issues of *The Nation* by Malcolm Ross and Ralph Borsodi, both of whom have been actively in touch with developments in various parts of the country.

Broadway Cuts Its Price

LAST week the League of New York Theaters held a meeting at which it was decided that nothing could be done about the wave of price-cutting which has broken over Broadway. With approximately half of the legitimate theaters dark and with only five of the thirty-five current productions enjoying conspicuous prosperity, some steps had to be taken and a return to something like pre-war prices seemed an obvious move. Eight attractions cut the price of orchestra tickets approximately in half, and George M. Cohan opened his new comedy, "Pigeons and People," with a top price of \$2—said to be the lowest price charged at any opening since the war. The Lunt-Fontanne-Coward "Design for Living" is regarded as a predestined hit and opened at the customary \$4.40 rate, but other more moderately priced plays are promised.

Other amusement enterprises had already led the way. Nearly all the moving-picture houses reduced their scale some time ago, and in the dubious world of night clubs and dance halls Coney Island prices have been prevailing. According to *Variety* there are seventeen "taxi" dance halls between Forty-second and Fifty-seventh Street where "hostesses" are supplied at from one to five cents a dance, and at the Majestic Danceland "you can hoof-wrastle until unconscious at 40 cents admish." The Montmartre, which formerly had a cover charge of \$5, now sells dances at five cents each, and some restaurants offer a table d'hôte dinner with cabaret entertainment for less than \$1. This tendency of the once famous White Way to degenerate into a shabby midway is used as an argument against the lowering of theater prices, but it is fantastic to suggest that there is any necessary loss of dignity in adjusting prices in accordance with what is a universal tendency.

Without question the cost of theatrical production has been decreased and the economic distress of the theater is due simply to the fact that most plays cannot get an audience. Actors' salaries have been reduced and so have other items of expense, but the reduction of theater rentals is not less than sensational. A few years ago \$4,000 a week was the minimum guaranty, whereas at present most theaters can be had on a straight percentage basis and one well-known house is reported to have been offered recently for a straight rental of \$350 a week. With good attendance many plays would prove profitable at a much-reduced scale, and it is only common sense to find out whether or not the disappearing audience can be lured back at lower prices.

So far the results have not been conclusive. Though attendance has jumped at the theaters where the admission price has been cut, the gross receipts have not so far been greatly increased. But if the new policy cannot fill the available theaters, nothing else can. Last season sixty-three theaters with a combined seating capacity of nearly 64,000 were open at one time or another. Under present conditions there is not a sufficient number of people able to pay the post-war prices to fill them. If first-rate productions cannot be made to pay at lower prices, then only two things are possible. A certain number of the houses will either have to be abandoned or they will have to be given over to popular-priced entertainments of a different sort.

Issues and Men

The Philippines Set Free

THE Philippines voted free? It seems incredible. I know there are strings attached to it; that the final step was dictated by selfishness, by greed, by a narrow nationalism, and that there was little sincere desire to live up to our national pledge and give the people of this small country their independence. How many still recall that Woodrow Wilson in his war message declared on April 2, 1917, that we fought "for the rights of nations great and small and the privilege of men *everywhere* to choose their way of life and obedience"? As I write, it appears that the Philippine legislature may reject the present offer of independence. Perhaps this will be for the best and make possible a better bill in the new Congress. For all that, I am exulting as I write, for my mind runs back thirty-four years to the days just after we took the Islands from Spain and then proceeded to conquer them and kill their inhabitants by the thousands, merely because they thought that the Americans they welcomed and with whom they cooperated meant what they said when they declared that all peoples should be free and self-governing.

We of the New York *Evening Post* fought hard then against the whole bloody business, and so did the editors of the *Springfield Republican*, the *Boston Herald*, the New York *World*, *Harper's Weekly*, and other journals, daily and weekly, which have long since gone to the place where good and honest newspapers go when they die. Indeed, we and the *Springfield Republican* struck so hard against the McKinley government that one of the sessions of the Cabinet was devoted to the question whether we should or should not be prosecuted for treason. And curiously enough, the man who wrote the most fiery editorials was not Edwin L. Godkin, the masterful editor of the *Evening Post*, but Rollo Ogden, the present editor of the New York *Times*—who now bewails the granting of freedom in the way in which it has been given. One of his articles in the *Evening Post*, *Why We Cannot Conquer the Filipinos*, was one of the most brilliant and moving editorials ever written for an American daily. Of course we were accused of "stabbing our soldiers in the back," and encouraging the Filipinos to renewed resistance, and there was much indignation when we and others exposed the fact that our army had adopted the horrible water-cure torture of the Spaniards in order to make captured Filipinos confess the whereabouts of their armed forces or their hidden guns. In view of the bitter outcry against the Germans in 1914 as baby-killers and destroyers of women, a picture I have in my desk of the scene just after our soldiers took one of the mountain-top forts in the Moro country soon after the turn of the century is not without its significance. For here stand American soldiers looking down upon the victims of their rifles, and among the dead are mothers with bared breasts and their babes who had just ceased to suckle.

Is it any wonder that some of us have fought ever since for freedom for the Filipinos? Unfortunately, there are only a few of us left of the old anti-imperialist group to rejoice, as far as we can, at what the Congress has just done. George

Foster Peabody still survives, besides Mr. Ogden and Alice Stone Blackwell and a few others. But the great leaders have all gone—Senator George F. Hoar, whose white hair and long public service could not save him from endless contumely and personal abuse; Moorfield Storey, the Harvard rebel, once the private secretary of Charles Sumner; Charles Eliot Norton of Harvard; Thomas Mott Osborne of Auburn; Horace White, also of the *Evening Post*; Erving Winslow, long the secretary of the Anti-Imperialist League of which Storey was president; Samuel Bowles of the *Springfield Republican*; Carl Schurz, himself a major general in the Civil War, whose loyalty and courage in battle no man could question; ex-Governor George S. Boutwell and Gamaliel Bradford, Sr., of Massachusetts—these were some of the men who never quailed before the bitterest attacks; who were lampooned and derided, vilified and scorned, but never yielded their faith that liberty is the just due of all peoples whether they be black or brown or yellow or white. If they are in Valhalla today, they must be having a triumphant reunion! How they must be rejoicing that the solemn pledge of every President since 1898 has had this partial fulfillment! How they must chortle when they recall the bombast of their opponents, the imperialists—such a statement as this of the late Senator Albert J. Beveridge: "The Philippines are ours forever . . . and just beyond the Philippines are China's illimitable markets. We will not retreat from either. . . . We will not renounce our part in the mission of our race as trustees under God of the civilization of the world. . . . Almighty God . . . has marked us as his chosen people [page Kaiser Wilhelm!] henceforth to lead in the regeneration of the world!"

They must be outraged, of course, at the sordid motives of many Senators who voted to override the President's veto, at the retention in perpetuity of naval and military reservations, at the tariff provisions written as if to invite disaster for the new nation. Still, that noble band of pure and brave and high-minded and unselfish American patriots as ever lived must feel that they neither lived nor fought in vain. The Philippines are to be free! Whatever the future has in store they are to be free, and if again enslaved they will be freed again.

In reviewing my latest book in the *Herald Tribune* the other day George N. Shuster paid me the compliment of describing me as "famed as the world's champion writer of obituary notices for lost causes." I am more than that. I am a veteran chronicler of the triumph of many causes pronounced lost years before they triumphed—woman's suffrage, the economic and educational freedom of women, civil-service reform, the direct primary, freedom for the Filipinos, any number of others. Herein lies one of the great rewards of growing old in reform journalism.

Scrambled Ergs

An Examination of Technocracy

By HENRY HAZLITT

I

THE American public, which loves slogans and hates thought, has now found a new toy to play with—Technocracy. With this magic password you open everything. Small wonder that the Greenwich Village studios and the Broadway theater lobbies buzz with the subject; it has driven out communism as communism drove out humanism, with the inevitability of Gresham's law. For to be a humanist implied not merely that one should speak of the Will to Refrain, the Via Media, and the Inner Check, but that one should read a little of Aristotle, Sophocles, and the Third Earl of Shaftesbury. To be a Communist, as the band-wagonists soon learned, did more than merely entitle one to shout "bourgeois"; it obliged one to plow through the horrible abstractions of Karl Marx, not to speak of an immense critical and historical literature. But one can become a Technocrat merely by reading two magazine articles and one newspaper clipping, and believing everything one hears. And is not Technocracy, also, brand-new?

I regret to begin by reporting that I have been unable to find in Technocracy a single new idea. What I find mainly is a confirmation of Santayana's aphorism that those who cannot remember the past are condemned to repeat it. Three-fourths of the new technocratic literature is given over to proving the thesis that machine labor is displacing human labor, that it is reducing the number of available jobs at an accelerative and appalling rate. If you read the Technocrats, you will get the impression that they are the first ones in history to believe this, and that the orthodox economists have wholly ignored the question. I direct the attention of the Technocrats to a curious volume I have come upon, called "The Wealth of Nations," written by one Adam Smith, and published in 1776. The first chapter of this remarkable book is called Of the Division of Labor, and on the second page of this first chapter the author tells us that a workman unacquainted with the use of the machinery employed in pin-making "could scarce make one pin a day, and certainly could not make twenty," but that with the use of this machinery he can make 4,800 pins a day. So already, alas, in Adam Smith's time, machinery had thrown from 240 to 4,800 pin-makers out of work for every one it kept. In the pin-making industry there was already 99.98 per cent unemployment. Could things be blacker?

Things could be blacker, for the Industrial Revolution was just in its infancy, and I direct the attention of the Technocrats to some of the incidents and aspects of that revolution. Let us take what happened in the stocking industry. New stocking frames as they were introduced were destroyed by the handicraft workmen (over 1,000 in a single riot), houses were burned, the inventors were threatened and obliged to fly for their lives, and order was not finally restored until the military had been called out and the leading rioters had been either transported or hanged. Now it is important to remember that in so far as the rioters were thinking of their

own immediate or even longer futures their opposition to the machine was entirely rational, for William Felkin, in his "History of the Machine-Wrought Hosiery Manufactures" (1867), tells us that the larger part of the 50,000 English stocking knitters and their families did not fully emerge from the hunger and misery entailed by the introduction of the machine for the next forty years. But in so far as the rioters believed, with the present Technocrats, that the machine was permanently displacing men, they were grossly mistaken, for before the end of the nineteenth century the stocking industry was employing at least a hundred men for every man it employed at the beginning of the century.

Arkwright invented his cotton-spinning machinery in 1760. At that time it was estimated that there were in England 5,200 spinners using spinning wheels, and 2,700 weavers—in all, 7,900 persons engaged in the production of cotton textiles. The introduction of Arkwright's invention was opposed on the ground that it threatened the livelihood of the workers, and the opposition had to be put down by force. Yet in 1787—twenty-seven years after the invention appeared—a parliamentary inquiry showed that the number of persons actually engaged in the spinning and weaving of cotton had risen from 7,900 to 320,000, an increase of 4,400 per cent.

If the reader will consult such a book as "Recent Economic Changes," by David A. Wells, published in 1889 and now out of print, he will find passages that, except for the dates and the absolute amounts involved, might have been written by our own Technocrats. Let me quote a few:

During the ten years from 1870 to 1880, inclusive, the British mercantile marine increased its movement, in the matter of foreign entries and clearances alone, to the extent of 22,000,000 tons . . . yet the number of men who were employed in effecting this great movement had decreased in 1880, as compared with 1870, to the extent of about three thousand (2,990 exactly). What did it? The introduction of steam-hoisting machines and grain elevators upon the wharves and docks, the employment of steam power, etc. . . .

In 1873 Bessemer steel in England, where its price has not been enhanced by protective duties, commanded \$80 per ton; in 1886 it was profitably manufactured and sold in the same country for less than \$20 per ton. Within the same time the annual producing capacity of a Bessemer converter has been increased fourfold, with no increase but rather a diminution of the involved labor. . . .

The power capacity already being exerted by the steam engines of the world in existence and working in the year 1887 has been estimated by the Bureau of Statistics at Berlin as equivalent to that of 200,000,000 horses, representing approximately 1,000,000,000 men; or at least three times the working population of the earth. . . .

And so Wells concluded, pessimistically, that "under such circumstances industrial overproduction . . . may become chronic."

We are now ready to look at the supposed figures for

our own day as the Technocrats breathlessly give them out. They tell us, with a great air of mystery and secrecy, that they have been engaged for years in working on an "Energy Survey of North America," and that they are not yet ready to reveal their dynamitic figures. Yet they have published magazine articles teeming with such figures; and the statistics so far published are certainly not such as to inspire confidence in those still to come. Wayne Parrish, in an article in the *New Outlook* on Technocracy, announced that "in pig-iron production one man working one hour can do what it took him 650 hours to accomplish fifty years ago." John H. Van Deventer, the editor of the *Iron Age*, has shown from actual census figures that the output per worker has grown in fifty years, not 650 times, but 23 times. The Technocrats tell us that in 1929 the steel output per man was 9.3 times the output in 1887, and that "a photograph of a modern steel-rolling mill in full operation will show a large plant without a human being in sight." The implication of this is that the progress of the machine has been displacing men from the steel industry at an appalling rate. The editor of *Iron Age*, again by consulting the census figures, found that in 1887 there were in the country 24 steel workers for every 10,000 of population, while in 1929 there were 32 steel workers for every 10,000 of population.

Simeon Strunsky, in the New York *Times* Sunday magazine section, has demolished other technocratic statements, again by the simple process of looking up official figures. The Technocrats have stated that one man with a machine in 1929 could produce 9,000 times as many electric-light bulbs as he could by hand in 1914. Mr. Strunsky, unearthing a bulletin published by the Bureau of Labor Statistics in July, 1927, found that machinery had increased the rate of productivity 30-fold, not 9,000-fold. In other words, barring a terrific increase in productivity in one and a half years, Technocracy has overstated the electric-bulb situation 300-fold. The Minneapolis flour mills, the Technocrats tell us, turn out 30,000 barrels a day per man. Mr. Strunsky finds that the figures at Washington show that in 1929 we produced in this country 154,000,000 barrels of flour. At the alleged Minneapolis rate this flour could have been produced by the labor of seventeen men. Actually, Mr. Strunsky finds, the milling industry employed in that year 27,028 men. He finds a similar discrepancy in Technocracy's figures for the brick industry, and he is forced to conclude that "American industry is operating with a labor force anywhere from 350 times to 1,500 times too big, if Technocracy's machines are realities instead of being only magnificent dreams."

This part of the ground has been covered so well by Mr. Van Deventer, Mr. Strunsky, and others, that there would be little point in piling up more figures of the same kind. Moreover, some of the statements they have refuted do not come from Howard Scott himself and are perhaps not "authoritative" in that sense. Further, it is sometimes alleged by the Technocrats that what they are discussing is not production as actually carried on, but production as it might be carried on if all industry used the best capital equipment and the most efficient machines yet conceived. But that is a tremendous *if*. Where is the capital to come from to effect this colossal change—to scrap, for example, all factories and machinery except the strictly 1933 model factories and machinery? There is no possible way of effecting such an immediate change, even if we neglected the produc-

tion of consumers' goods entirely. And if there were, it would not be economically desirable. The rate at which it is economical to scrap old machinery and build new machinery is strictly limited—and I am talking here from the standpoint of social costs and social utility and not at all from that of individual money profit. One must balance the labor hours saved over a long period by more efficient machinery against the labor hours immediately required to build that machinery.

But I wish here to deal with two factual questions that seem to me to go to the heart of the matter. Mr. Scott, in *Harpers Magazine* for January, makes the flat statement that the rate of replacement of men by machines has exceeded the expansion of industry. He asserts, in other words, that since 1918 there has been an increasing *net* decline in employment in the country:

A careful examination of available statistical information reveals that the high point in the number of industrial workers employed in this country in all industries was reached in 1918 and has with fluctuations declined more and more rapidly since that time.

Now if one concentrates one's attention on *factory* employment, this appears to be true. But it becomes increasingly doubtful when one surveys the whole field. What appears to have happened, as indicated by the census figures, is that workers laid off from or drawn out of factories have drifted into "service." Estimates based upon census compilations indicate that the number of persons employed in "service" industries increased from 35 per cent of the total number of persons gainfully employed in 1920 to 42 per cent in 1930. James S. Thomas, in an article in the *Nation's Business*, citing Department of Commerce figures, has pointed out that while 917,000 men were displaced from industry in the period from 1920 to 1928, 800,000 from agriculture, and 240,000 from the railroads—a total of 1,957,000—this decline was more than offset by the employment in the same period of 750,000 additional workers servicing and driving automobiles, by 100,000 more insurance agents, by 100,000 in electric refrigeration and oil heating, by 100,000 in construction work, by 232,000 more teachers and professors, by 125,000 in motion pictures, by 170,000 more barbers and hairdressers, by 750,000 more in personal service, hotels, and restaurants, by 200,000 more in radio.

Even without the census figures of employment, ■■ should still have the significant barometer of wage-rate figures. If there had been increasing unemployment from 1918 to 1929, one thing would have been practically certain to happen: the unemployed would increasingly have competed with the employed for their jobs, and there would have been a fall in hourly wage rates, particularly for unskilled and non-union labor. Now if we turn to the figures of the National Industrial Conference Board on this matter, we find that the "real" hourly earnings (money earnings after allowance has been made for changes in living costs) of unskilled male labor increased 17 per cent in the decade from 1920 to 1930, when there was supposed to be increasing unemployment. The real hourly wages of all labor, skilled and unskilled, men and women, increased by 27 per cent in the same ten-year period.

The figures are all the more striking if we turn to the volumes, just published, carrying the report of the President's Research Committee on Social Trends. The follow-

ing table, based on the figures of Paul Douglas, gives the index number of "real" annual wages over a series of years:

1890.....	96	1918.....	104
1900.....	97	1919.....	105
1905.....	101	1920.....	106
1910.....	101	1921.....	108
1911.....	98	1922.....	113
1912.....	99	1923.....	119
1913.....	100	1924.....	118
1914.....	100	1925.....	119
1915.....	102	1926.....	126
1916.....	104	1927.....	128
1917.....	101	1928.....	132

Now the remarkable fact revealed by the foregoing table is this: that in the whole period of twenty-seven years between 1890 and 1917 the index of real earnings moved up and down within a range of 8 points; but in the ten-year period beginning with 1918, *the very year set by Howard Scott as that in which net technological unemployment at an accelerative rate set in*, real wages rose at a rate with which we have no comparable record.

This brings us to another point of even more central importance in its bearing upon the validity of the technocratic contentions. When anyone points out to a Technocrat that we underwent some pretty rapid technological advance in the century and a half prior to 1929 without its throwing us all on the sidewalk, the Technocrat invariably replies that the rate at which machines displace men and grind out goods is accelerative, and is now growing by leaps and bounds. But here, too, we happen to have real figures. At the height of the boom period, in February, 1929, when everyone was certain that we had entered a "new era" in which comparisons with the past were meaningless, B. M. Anderson, Jr., economist of the Chase National Bank, undertook to compare the "new era" of the seven years from 1921 to 1928 with another "new era," that of the seven years from 1896 to 1903; and one of the points in which he compared them was that of the increase in physical volume of production. He found that in this respect the old "new era" actually outstripped the new "new era." The physical volume of production in 1903 was 43 per cent greater than the average volume in 1894-95-96, whereas the physical volume of production in 1928 was only 35 per cent greater than the three-year average of 1919-20-21. The comparison might have been even more favorable to the old "new era" if Mr. Anderson had included a railroad-transportation index; this rose 77 per cent in the 1896-1903 period and only 35 per cent in the 1921-28 period. He omitted this, however, because it was impossible to know just how much traffic may have been diverted from the railroads by automobiles and motor trucks.

II

Perhaps this is enough so far as Technocracy's facts and figures are concerned. Yet Technocracy's figures, unfortunately, seem to be the only original thing about it. Several of its theories are just as fantastic, but none of them appears to be fresh. Mr. Scott's idea that wealth must be measured in terms of energy, as well as his intense aversion to "debt," seems to be derived from Frederick Soddy's "Wealth, Virtual Wealth and Debt," published in 1926: John Macrae, president of E. P. Dutton and Company, Soddy's American publisher, has drawn some deadly parallels here in quotation. Mr. Scott's idea that the country ought to be run by engi-

neers and technicians, as well as his intense aversion to "the price system," is clearly derived from Thorstein Veblen's "The Engineers and the Price System," published by the Viking Press in 1921. His fear of the machine, or technophobia (if I, too, may coin a word), is, as we have seen, as old as the Industrial Revolution. His theory of overproduction and crises goes back to Karl Marx, who in turn derived it from Karl Rodbertus, who published it in the 1840's.

Mr. Scott gives insufficient credit to his predecessors, and he does not appear, unfortunately, to have improved upon their ideas. Let us take the Rodbertus theory of crises. Rodbertus begins with the thesis that labor receives a constantly decreasing share of the social product. As the great mass of wage-earners have a diminished purchasing power, consumption fails to keep pace with production. A contraction of production follows, with unemployment and a further decrease in purchasing power, leading to an intensification of the crisis. Now the defect of this theory is that it is too good: it makes it difficult to explain why we are not always in a crisis, and impossible to explain how we ever surmount one. If the theory merely asserted that some crises were produced or aggravated by a temporary relative decrease in the distribution to labor as compared with capital, or by a temporary overinvestment, it would be quite defensible; but that would be another theory. Moreover, there is a very strong statistical reason for doubting the Rodbertus-Marx-Scott theory. If workers were getting a decreasing return, so that their purchasing power was growing smaller and smaller, while capitalists were taking an ever larger return, which they were practically obliged to reinvest in new capital plant, regardless of demand, because they did not know what else to do with it, then there would be a constant fall in the interest rate paid for long-term capital. But the average yield on fifteen railroad bonds, as compiled by Standard Statistics, actually rose from 4.05 per cent in 1900 to 4.34 per cent in 1928. In Great Britain, interest rates, as reflected by the yield on consols, have never since been as low as in 1894. This does not indicate an excess of capital.

Let us ask what the answer of orthodox economics has been to the contention that machinery displaces men. It admits that it may do so for a period and in a specific industry, but never permanently and over the whole field. For machinery that displaces men also radically reduces costs of production, and reduces them roughly in proportion to the percentage of men it displaces. If the demand for the product to which the labor-saving machinery has been applied is elastic (as it was for years for motor cars and as it may still be assumed to be for oil heaters, house-cooling devices, etc.), then a halving of the price will cause, say, a doubling of the quantity demanded; and so, though half the labor force would otherwise have been laid off, it will be retained or re-employed to make the added quantity. If the demand for that product is inelastic—that is, if cutting the price in half, say, does not increase at all the quantity sold—it will still remain true that buyers, by having to spend so much less for that article, will have again as much added purchasing power left to spend on all other articles; and other industries, consequently, will absorb the labor dropped from the industry into which the labor-saving machinery has been introduced.

This shorthand statement of the orthodox economic answer to the contention that machinery finally displaces men has to be supplemented in one very important particular.

The orthodox economists tell us that human wants are indefinitely expansible and virtually insatiable, but this is true only because, beyond a certain point, increase in wealth expresses itself through *qualitative* improvement rather than in merely quantitative terms. When a man's income increases from \$2,500 to \$25,000 a year he does not buy ten times as many hats, shoes, and suits, or buy ten Fords instead of one. He goes to swankier restaurants, more fashionable tailors, takes a much more expensive apartment and a country place, buys a Lincoln and a Packard. Part of this is merely snobbish display, but this is not true of a man whose income rises from \$1,000 to \$2,500 a year; the qualitative improvement is here an improvement in real comfort. And this is the answer to all those who, in the last decade, have been telling us so often and so glibly that we already have the industrial equipment to turn out everything we need, and that "the problem of production has been solved." It is true, for example, that we already have a roof of some sort over nearly everybody's head, but the overwhelming majority of Americans are still miserably housed; and while this condition lasts, it is fatuous to fear permanent and general "overproduction."

III

Even if the Technocrats were reasonably accurate in their figures, even if they were right in their theoretic interpretation of them, their program would still be impractical and irrelevant. They propose to abolish not only the gold standard, but the whole "price system," and to rate everything in terms of "energy." "It is the fact that all forms of energy, of whatever sort, may be measured in units of ergs, joules, or calories," Mr. Scott tells us (and the passage is all in italics), "that is of the utmost importance. The solution of the social problems of our time depends upon the recognition of this fact. A dollar may be worth—in buying power—so much today and more or less tomorrow, but a unit of work or heat is the same in 1900, 1929, 1933, or the year 2000." I beg to remind Mr. Scott that a dollar is 25.8 grains of gold, and that 25.8 grains of gold is also the same in 1900, 1929, 1933, or 2000. Of course the value of this gold may change, but so, also, may the value of an erg. I should like to remind Mr. Scott further that energy has no economic meaning except on terms of value. The energy that pours over Niagara Falls is the same, harnessed or unharnessed, but what concerns us is whether it is harnessed, and for what purposes. Man cannot create energy; he can merely transform it. What he attempts to do is to transform it into forms of higher and higher value. That being so, it is the value that matters, not the amount of the energy. If it were only energy that was important, we should all want to live on the sun, which discharges 3.79×10^{33} ergs every second, of which all the planets taken together get only 1/120,000,000 part. "Value," Mr. Scott tells us, "cannot be measured; it has no metrical equivalent." If that were so, it would be extremely regrettable, for it would be impossible to measure the relative values of goods against each other, and it would hence be impossible to know how much of each thing to produce in accordance with the social cost of producing it. Would it be possible to base a currency on ergs? Well, recently someone suggested an "electric dollar" based on kilowatt-hours. One wonders what this gentleman imagines "based on" to mean. In the case of the gold standard it means redeemable on demand in gold. Therefore

an electric dollar would be one redeemable in kilowatt-hours. If you became nervous, and thought that the country was going to be driven off the kilowatt-hour basis, you would rush around to the local government power-house and demand your kilowatt-hours, whereupon, presumably, you would be electrocuted. If there were a lack of balance in foreign trade, would England ship us kilowatt-hours? One might as well propose a currency based on Pi—on the ground that this never varied, but was always 3.1416—and that it be made redeemable in diameters, because there is an infinite number of them in every circle.

Finally, Mr. Scott, following Veblen, wants the engineers and technicians to control us. But the first job of an engineer is to find means to realize ends, and Mr. Scott and his associates have still to reveal any technique for realization. Apparently they expect to say to the politicians and captains of industry: "Come on, boys, you're incompetent; we're the ones with the brains; hand it over." Mr. Scott, I observe, finds that "economists" are "things of the past," as well as "the bankers, the industrialists, the Marxists, the fascists, and the soldiers." Now if I may presume to remind a disciple of the words of his master—or at least of his source—I beg to point out to him that Veblen, in originally suggesting his "soviet of technicians," remarked that the production engineers would require "the services of an appreciable number of consulting economists," for "the technical training that goes to make a . . . production engineer . . . is not of a kind to give him the requisite sure and facile insight into the play of economic forces at large." Mr. Scott reveals how much an engineer may lack this economic insight.

I have devoted all this space to examining the statistics and the ideas of the Technocrats, partly because the group has attracted so much public attention, and partly because its ideas represent a *reductio an absurdum* of many of the fallacies and misconceptions that have been rampant in the last decade. The problem of technological unemployment demands attention; the suffering caused by that unemployment, while it lasts, is grave and widespread. But it is far from the major cause of our present difficulties. When car loadings are 57 per cent of normal, when steel production is 17 per cent of normal, it is obvious that the men laid off by the railroads and the steel companies were not displaced by machinery. The remedy for technological unemployment lies in the assumption of social responsibility for it—in compulsory unemployment insurance, government employment agencies, perhaps governmental industrial training schools. And when we come to that millennium when everything in the world will be produced by one man's pressing a button, even that total unemployment will be perfectly satisfactory if each man owns his proportional part of the machines or gets his proportional usufruct. If capitalism cannot assure this ultimate distribution, we shall have to try something else. In the solution of this problem, one fears, little help is to be expected from men who have grossly misrepresented the current facts, and whose theoretical ideas are so hopelessly vague and muddled. We have had an economic panic; let us at least head off an ideological one.

In our next issue we shall print a second, more favorable article on Technocracy, by Archibald MacLeish.—EDITORS THE NATION.

Capitalist Confiscation

By ERNEST GRUENING

PRIVATE property is the cornerstone of our economic order. Whether we refer to it as capitalism, the profit system, or the price system, the existing economic structure rests on the sanctity of private ownership. Subject only to the police power of the state, the rights traditionally implicit in personal possession have been deemed inviolate. The profit and enjoyment of what I own, the determination of its usage, belong to me. If I want to shut down my business, halve or double its activity, regardless of the consequences to employees or community—that's *my* business. Such is the concept underlying our contemporary society. Attacks from the "left" designed to stress the superiority of human over property rights have thus far made small impression on the intrenchments erected through the centuries. Neither the theory nor the practice of private ownership has in America yielded appreciably to the assaults of collectivism.

Yet private ownership in America is being destroyed. Paradoxically, the fundamental change in the nature of ownership comes from the citadel of capitalism, has arisen from the ark of acquisitiveness itself. It is the corporation, that creature of our complex society, which is sounding the doom of long-cherished ownership concepts. It is, moreover, the actual implement of destruction. The change has stolen upon us unaware, greatly accelerated in the late era of conservatism. The myth of private ownership with all its appurtenances persists. But the stark fact has become demonstrably otherwise.

This transformation, lucidly exposed in an epoch-making volume by Adolf A. Berle and Gardiner C. Means of Columbia University,* is revolutionary. For individual ownership, personal property rights, and economic autonomy "a corporate system has been substituted—as there was once a feudal system," which is still headed toward its zenith.

How did this change come about? It is, first, a product of the industrial revolution. It is, next, the concomitant of great and rapid growth. The joint-stock company became noticeable three hundred years ago for the pursuit of overseas exploration and exploitation. It was still a relatively unimportant and feeble institution one hundred years ago. Ownership of the means of production originally spelled a three-fold relationship—ownership, management, and labor—which persists today only in the case of the small independent farmer. The labor participation was the earliest to disappear. Ownership and management, however, long continued one and inseparable, a status not materially changed by the delegation of management. Management was merely hired—like any employee.

In the corporations of the early nineteenth century, the number of stockholders was small and the structure of the company simple—a division of the capital actually "put up" into one class of shares—so many shares for so many dollars. Ownership determined a company's policies. Such officials as were intrusted with control were in a very true sense both

trustees and employees of the capitalists. Little by little the owner has become widely separated from control, and today receives in exchange for his capital a token of dubious value dependent for its worth on factors wholly beyond his power to affect. And whereas the original delegated control was not only supposedly, but actually, functioning in the interests of the owners, ownership and control have through their wide separation become actuated not only by different, but often by radically opposed, interests.

Over three-quarters of all the wealth in the United States today is corporate. Three-quarters of the possessions of the people of the United States are represented today not by tangible goods, but by pieces of paper. And of this, 200 great organizations control 38 per cent. There were in 1929 over 300,000 non-financial corporations in the United States. The largest 200 of these, fewer than .07 per cent of the total, control an amount which is rapidly approaching half the people's corporate wealth. In 1929 this amounted to over \$81,000,000,000. At the 1924-25 rate of change they will control 85 per cent of the national wealth by 1950.

The shifting of ownership from the original owner or investor to a "remote control" comprises many steps. Each step has spelled a weakening of the stockholder's position, a lessening of his power to determine the disposition of his property. The "control" of a corporation, exercised by relatively fewer and fewer men, has little by little encroached on the supposed rights of the owner-shareholder and diminished the value of his holdings. The power to issue additional classes of stock is one method of diluting the value of shares already outstanding. Directors may insert class after class of stock with rights prior to those of an earlier investor. Stock-purchase warrants, a recent innovation, carry this process farther. A warrant is an option permitting the holder to purchase one or more shares at a price stated in the warrant. In the event of diminished earnings the warrant is presumably not exercised. But if the prospect is favorable, the additional flotation of stock diminishes proportionately the existing stockholders' equity.

"No-par-value" stock brings about a similar result. In practice it represents a gross discrimination against those who have bought other classes of stock at par. "Blank stock," another recent artifice, is nothing other than a blank check for the directors. Moreover, securities of a corporation may, through the original—or easily amended—charter provisions, become convertible at the option, not of the holder, but of the corporation management. "Paid-in surplus" is available today at the will of the directors for the payment of dividends—a disbursement of the stockholder's potential participation. Other analogous devices exist.

Bookkeeping, developed into a fine art, and court decisions—or the absence of court decisions to prevent unprecedented encroachment—are permitting these changes. The courts have held that a non-cumulative preferred dividend passed need not be made up. A company earning a handsome profit may, at the option of the directors, pay no dividends for years on either preferred or common stock, and then with

* "The Modern Corporation and Private Property." By Adolf A. Berle, Jr., and Gardiner C. Means. New York: Commerce Clearing House. \$2.50.

the accumulation of a vast surplus, begin paying its limited 7 per cent on the preferred, and 50 per cent on the common. The preferred stockholder has no redress. The "control" may manipulate the stock in half a dozen different ways to the detriment of the individual shareholders. It can—despite the much-invoked "due-process" clause of the Fourteenth Amendment—virtually confiscate his property.

Fixing the price at which securities are floated is a right exercised by the inside "control," which in practice often works out to the outside shareholder's disadvantage. If the price was too high, and the stock's value shrinks, he loses. If the price is destined to rise, others closer to the control than he may first drain the potentialities of profit to their own advantage. In theory they are not supposed to do this; in practice they may, can, and do. Into the question of price and salability of the stock certificates—the one visible token of ownership—enters a variety of factors in which the investor is helplessly dependent on the "good faith" of others, whose judgment may first of all be awry and, more important, whose interests do not coincide with his. Brokers' statements, on the basis of which securities are sold at the price fixed, may be truthful as far as they go, but seldom are the whole truth. Accounting manipulation for the purpose of showing abnormal profits is not uncommon practice. Unless direct fraud—deliberate, conscious misstatements—can be demonstrated, the investor has no redress. Abjurations of responsibility and disclaimers of guaranteeing the validity of statements—appearing in small type in the circulars and seldom observed by investors, or, if observed, disregarded by them—give the banking-promoter group a legal loophole.

What has become of the theoretical safeguards of the stockholder? Steadily they have diminished almost to the vanishing-point. The control of the corporation vaguely resides in an inner group which can, with increasing difficulty, be held to effective accountability for mismanagement or erroneous judgment. The control is almost universally exercised, not merely by a minority stock ownership, but increasingly by a fraction so small as to be fantastic when contrasted with the supposed rights of ownership. Even a 1 per cent actual investment is no longer essential for the control of millions, indeed billions, of dollars of other people's money. The proxy system, in theory the opportunity to voice approval or disapproval, has become a snare and a delusion as far as the individual stockholder is concerned. Actually, it has been perverted into a means of perpetuating existing control. Voting trusts produce a similar result. "Pyramiding," the repeated subdivision of controlling stock through a system of superimposed holding companies, is an increasingly common method of securing control of more and more with less and less!

Only 5 per cent of our 200 largest corporations and only 2 per cent of the billions which they represent are today controlled by majority ownership. Against such a set-up the individual stockholder, however aggrieved, is essentially helpless. Seldom does he possess the means to engage successfully in a legal contest with a corporation. Even in those rare cases when he wins a suit, he is apt to be a victor in principle but a victim in fact.

The new power exercised by the "control," originally a purely delegated power, a responsible trusteeship, has become responsible not to ownership but to itself—that is to say, to no one. Existing legal machinery cannot cope with

it. "The concentration of economic power separate from ownership has in fact created economic empires and has delivered these empires into the hands of a new form of absolutism, relegating 'owners' to the position of those who supply the means whereby the new princes may exercise their power."

It follows that the shareholder in the modern corporation has "surrendered a set of definite rights for a set of indefinite expectations." How ironical is the conclusion of Messrs. Berle and Means that "the only example of a similar subjection of the economic interests of the individual to those of a group . . . is that contained in the Communist system"! Thus the American property-"owner" has become simply supplier of his savings to an economic super-state. He is hopeful of receiving a wage on that capital. What that wage shall be or whether, indeed, he shall receive any wage at all, is a matter determined wholly by others. He bids fair to be a capital-wage-slave!

Who exercises this startling confiscatory power? Who really controls the wealth of the nation? For whom do 125 millions labor and save? The "control" is centered in fewer than 2,000 individuals, those who dominate the great corporations that in turn dominate American economic life. Actually, this control is far more concentrated than even the number 2,000 implies. The interrelation of great industries, the interdependence, for instance, of the fuel supply—coal, oil, and electric energy—with the utilities and the manufacturing industries, makes for even greater actual concentration of power. The largest corporations are growing the fastest. They are steadily waxing by merger and purchase, engulfing mammoth but lesser units and vesting more power in the individuals at the top.

It is scarcely necessary to cite specific examples of the disastrous consequences of this new irresponsible control. The financial history of the last three years is replete with them. Fill in the names of the "securities" which you "owned," and reconstruct your personal relation to what has happened in America!

The implications in this capitalistic confiscation of property are far-reaching. We may confine ourselves here to the conclusion of those who have with admirable scholarship clarified this trend—Messrs. Berle and Means. With private ownership in process of abolition, the control groups are unwittingly clearing the way for the claims of a group far wider than either the owners or the control. They have placed the community in a position to demand that the modern corporations serve not only the owners or the control but all society. This is a wholly new concept of corporate activity and motivation. But it follows logically.

Sing us no song of property rights! Where have they been less sacred than in America in the last three years? When has economic security been more ruthlessly trampled under foot? When before in our national life has confiscation been so extensive and intensive? And today, in seeking to recover some measure of stability, the people (not to mention the corporations) look as never before to the state—but to the state merely as an agency for economic resuscitation. How inevitable, therefore, that in a self-governing democracy the people will proceed from control of the political state, and by means of it, to control also of the now uncontrollable economic super-power, a conquest essential if we would make "life, liberty, and the pursuit of happiness" other than a travesty.

Filibusters and Futility

By PAUL Y. ANDERSON

Washington, January 21

NOW that the tempest of denunciation aroused by Huey Long's filibuster has subsided, will one of the more fiery denouncers oblige by stepping forth and naming a few of the "vital measures" which were impeded by it. The suggestion is advanced not as an excuse for the filibuster—I do not excuse it—but to expose the hollowness of the general hue and cry against it. The filibuster focused attention on a disgraceful situation. But the disgraceful fact was not that a few men blocked consideration of a general program of relief and rehabilitation, but that no such program existed. From a practical standpoint it is no exaggeration to say that the Senate might just as well have been occupied with a filibuster; there is nothing to show that it would otherwise have been more usefully engaged. All plans for a new tax bill at this session have been abandoned. Prohibition repeal is hopelessly bogged. Senate committees are dallying half-heartedly with the beer and farm bills, convinced that Hoover will veto them if passed. Despite the appalling picture of misery, sickness, demoralization, and general degradation of body and spirit which witnesses have painted before the Senate Manufactures Committee in recent weeks, party leaders in both houses have manifested but faint interest in the La Follette-Costigan bill for direct relief or in Senator Wagner's demand for a broadening of the relief activities of the R. F. C., and the Administration has manifested none whatever. The general disposition is to leave everything to the special session under the new Administration. It is even questionable whether all the appropriation bills will go through before March 4. At the most critical stage in its peace-time history the government has virtually ceased to function, save for the discharge of routine duties. Little serious blame can be laid on the men who delayed action on the Glass banking bill for a week or ten days. The grave indictment lies against an Administration which delayed relief for two years. Huey's offense consisted in furnishing an excuse for renewed propaganda against the Senate rules. However, those Treasury officials who have been digging into Huey's income-tax returns had better beware lest they make a martyr of him. A large disaffected element in this country is waiting for just such a leader.

THROUGH the murk of executive futility and Congressional procrastination a single ray of light has begun to shine. It originates in the determination of organized labor, represented by the railway brotherhoods and the American Federation of Labor, to exert every ounce of its influence to obtain relief legislation during the present session. Any politician can testify that this is not an influence to be ignored safely. The program embraces measures for permanent recovery in addition to emergency relief, and it is interesting to observe that labor, instead of business or the economists, has taken the initiative. Labor men know from practical experience that such measures can be achieved only through political action—a fact which it might profit the

economists to learn. Under the head of emergency relief, labor demands enactment of the La Follette-Costigan bill appropriating \$500,000,000 for direct aid to States and municipalities from the proceeds of a federal bond issue. As permanent measures it urges passage of the Costigan-La Guardia bill establishing a corporation similar to the R. F. C. except that it would finance unemployed workers instead of banks and railroads, thus stimulating increased consumption and production; and a civil mobilization of national resources for the inauguration of economic planning under the leadership of the President and the Cabinet. After the interminable pouring of public funds down the rat hole of bankrupt railroads and one-way banks, these proposals have a refreshing novelty. I am informed that local labor-union officials throughout the country have been ordered to turn the heat on their Congressmen and Senators, so it is possible that we may see some action. Not expressly included in the labor program, but vigorously favored by labor and by many employers, is the admirable bill introduced by Senator Black of Alabama, which would prohibit the interstate shipment of commodities produced by workers employed longer than six hours a day or more than five days a week. An interesting phase of the hearings on this measure has been the appearance of several enlightened employers who told the Senate Judiciary Committee that the salvation of their businesses depended on the adoption of the thirty-hour week.

* * * * *

IT is apparent from his conversations here that Roosevelt remains soundly wedded to his idea that farm relief should come first in the program of recovery, and, accordingly, we may look for the enactment of the domestic-allotment bill early in the special session. Although it is open to obvious objections, I cannot escape the impression that widespread misconceptions prevail concerning it, and that it offers more hope than any plan yet advanced. It has this great advantage over the equalization fee and the export debenture, that it places a premium on crop reduction, whereas the others would have encouraged further overproduction. It is true that the plan offers bounties to the producers of certain commodities, but so does the tariff. It is true that consumers of these farm products will have to pay the increased prices received by the farmer, but who else should pay them? If it is admitted that the country cannot be prosperous until agriculture prospers, and that the farmer cannot make a living selling his wheat at thirty cents a bushel, then it seems to follow that we must pay more for bread. It is significant, to this writer at least, that such a mature student of the problem as Dr. Edwin G. Nourse, agricultural economist on the staff of the Brookings Institution, considers the plan the best that has been devised. However, he has repeatedly stated that in the beginning its application should be restricted to not more than two commodities (wheat, if one; wheat and cotton, if two), and I note that Roosevelt has adopted that identical position. If anyone has a better plan, let him produce it.

DURING the boom years it was impossible to excite much indignation over the billions which Uncle Andy Mellon's subordinates were shoveling out of the Treasury in the form of tax refunds. From time to time your correspondent emitted feeble howls on the subject in this place, and Jack Garner publicly charged that refunds were being made to persons who had contributed to Republican campaign funds. But the goose hung high in those days, and the average man was satisfied if he felt he was getting his. However, when it was disclosed a few days ago that the Treasury had granted an abatement of \$5,870,000 and a refund of \$45,000 to the estate of Ogden Mills, father of the Secretary, a shudder of horror ran through Congress. Inquiry revealed a truly amazing set of facts. In the first place, Secretary Mills is executor of the estate, and as such made the return upon which his subordinates based the original assessment. Afterward a claim was made, and the assessment was revised. Consequently, as described on the Senate floor, the procedure was as follows: Executor Mills, acting on behalf of Taxpayer Mills, made the original return. More than a year later Taxpayer Mills lodged a claim with Secretary Mills, representing that Executor Mills had overvalued the estate. Secretary Mills, through his subordinates, examined the claim, decided that Executor Mills had been in error, and ordered that a refund be made to Taxpayer Mills. So far as I know, this is the first recorded instance in which a man won a large amount at solitaire. It seems a pity that those who need it more are not as lucky.

RECENT developments in the Senate "investigation" of the stock market, including the abrupt resignation of Irving Ben Cooper as chief investigator for the Banking and Currency Committee, make it abundantly plain that the committee is prepared to abandon the inquiry with a minimum of ceremony. Cooper's discovery that he was not to have a free hand in investigating the New York Stock Exchange was but the latest in a series of such discoveries by the investigators who preceded him. I see no need to mince words: the fact is that the committee is unwilling to unearth additional facts. Despite the curious light which later evidence has shed on the original testimony of President Whitney of the Stock Exchange, he has not been recalled or asked to explain. Michael J. Meehan, radio "specialist," who was conveniently absent from the country when the committee was looking into the radio pool last year, has returned home, but no effort has been made to subpoena him. When it meets at all, the committee pokes idly into such thoroughly investigated matters as the Kreuger and Toll crash, under the guidance of "counsel" consisting of a former newspaper reporter who is not even a member of the bar but who managed Chairman Norbeck's campaign for reelection last year. Someone has torpedoed the inquiry well below the water line. Discredited and derided, kicked and mauled all over the lot for three long, sorry years, Wall Street still knows a trick or two. But what have such men as Glass, Couzens, Blaine, and Wagner—all members of the committee—got to say for the performance?

The "Revolt of the Masses" in Spain

By BAILEY W. DIFFIE

SPAIN'S subsiding revolt is the fourth strong revolutionary movement since the establishment of the republic in April, 1931. The first of these, promoted by the Anarcho-Syndicalists and the Communists, broke out in Seville in the summer of 1931. The second occurred in Barcelona and Catalonia in the first days of 1932. It too was promoted by the Anarcho-Syndicalists and Communists. The third struck principally in Madrid and Seville, but this time it was a movement led by the Monarchists with General Sanjurjo at its head. The recent uprising centered mainly in Madrid, Barcelona, and Seville and was the most determined move yet made by the proletariat. There have been, thus far, three strong efforts to replace the present government with another more responsive to the worker's needs.

Revolts, however, have not been confined to these four movements. A reading of the American papers fails to discover the fact—which is apparent when the Spanish papers are followed closely—that from the day it was declared the Spanish Republic has been confronted with a constant and unceasing revolt. Borrowing the title from one of the most famous of Spain's revolutionaries, José Ortega y Gasset, we may characterize it as the "Revolt of the Masses."

Revolution by the Monarchists was to be expected, for no privileged class has ever given up its power without a struggle. But some explanation is needed to show why the people—the workers—of Spain have carried on an unwavering campaign against the "democratic republic of workers of

all classes." To say that the original rising of April, 1931, merely began the revolution would be to say only what can be said of every revolution. Furthermore, it is the first and most persistent claim of the present government. Every statement and every interview given out by its members reflect the belief that Spain's revolution is marching along at a satisfactory pace, or at least as fast as is consistent with the difficulties of the situation. But there are thousands among the "masses" who do not believe the speed to be fast enough.

Two chief reasons may be cited for the continuance of the disorders: the existence of a small but well-organized proletarian opposition with a theory of government different from that of the present regime; and a general economic *malheur* among the lower classes which the republic has not yet been able to cure. Proletarian opposition to the present administration is centered in a sort of "Triple Alliance" of Anarchists, Syndicalists, and Communists. This paradox needs an explanation, since the Anarchists believe in no government, the Syndicalists in a control by labor unions, and the Communists in the maximum amount of regulation.

Spanish Anarchists have been followers of Bakunin since 1869; anarchism became the first powerful class movement in Spain. Syndicalism entered later by way of France, and finding its natural environment in the industrial region of Catalonia, already occupied by the Anarchists, settled there. These two movements, with the common ground of opposition to all government and the common belief in "propa-

ganda by deed," naturally grew together. Another factor that served to unite them was their stand against political action. The result was that while each continued to have its separate organization, the members were frequently identical, and when the Confederación Nacional del Trabajo was formed, it was in a sense an alliance of the two movements, since its form was Syndicalist and its members were both Syndicalists and Anarchists.

Communism entered Spain after the Russian Revolution. In 1921 the Spanish Socialists sent a delegation to Russia to consider affiliation with the Third International. This delegation rejected the Russian program, and the Spanish Socialists remained outside, but a small group of dissenters joined with the Third International and organized a Spanish section. The gulf between the Anarcho-Syndicalists and the Communists was wide, but both hated the Socialists. When the Republican revolution threw the Socialists into the government as the strongest single element, the differences between the Anarcho-Syndicalists and the Communists dwindled and they have worked in concert in opposition to those at present in power.

The Communists have used their well-known infiltration tactics; they pointed out to the Anarchists and Syndicalists that while their bitter and far less numerous opponents, the Socialists, were conducting the government, the Anarcho-Syndicalists were still outside facing the guns of the dreaded Guardia Civil, now at the service of the Socialists. The Communists argued that the votes of the combined Anarchists and Syndicalists would have elected a strong delegation in the Cortes and that it would have been easy to seize control of the state. This argument has not been without its effect. The Communists have shown increasing strength, and they have been at the center of the numerous strikes and revolts. While carrying on the propaganda of deed they have also been able to convert many workers from socialism and syndicalism to communism, in preparation for the time when, in accordance with their methods, a crisis would permit them to overthrow the government.

The first cause of the revolts, then, has been the presence of well-organized and well-directed proletarian masses who have followed a policy of violence at all times, and who have not missed a single major opportunity to strike at their enemies in the government—the Socialists as represented by Prieto, de los Rios, and Caballero, and the bourgeoisie as represented by Prime Minister Azaña.

The second cause of the revolts is the presence of general and widespread poverty and unemployment among the masses. Unemployment is relatively small in Spain (the highest estimates are about 2 per cent as against 10 per cent in the United States), but urban poverty and subsistence farming are endemic. The industrial worker in Catalonia, the small farm-owner in Asturias and Castile (Señor Madariaga says that "out of 1,026,412 landowners paying taxes, 1,007,616 'enjoy' incomes below eight pesetas a day; of these, 847,548 landowners have incomes below one peseta"), and the landless peasants in Andalusia have suffered for centuries. They accepted these conditions in comparative silence until the inauguration of the labor movements in the last century. But they were prepared to welcome a new movement, as is demonstrated by the two million members that labor organizations now have.

The republic promised them a "new deal." They have

not got it. The farm peasant of Andalusia expected to receive the land. "The peasant," said Francisco de Cossío, noted writer of Spain, "full of confused ideas, does not distinguish between republicanism, socialism, communism, and syndicalism. They are to him all synonyms. They are reduced to the idea of the *division of the land*, or still more, to the idea that the present owners will become workers and they proprietors." So hundreds of peasant farm workers sought to divide the land, and frequently gathered to survey and allot the lands of their employers. They were prohibited by the Guardia Civil, and it was no comfort to them to know that a Socialist government commanded the soldiers.

Poverty and misery continued in the rural sections. Some efforts were made to raise wages and much was accomplished, but not enough. Soon after the coming of the republic, it was pointed out by Indalecio Prieto, now Minister of Public Works, that the Andalusian farm worker received but three and one-half to four pesetas (now about thirty to thirty-five cents) a day. This wage has been increased somewhat since then, but the standard of living is still entirely too low. Urban workers, too, were bitterly disappointed. They expected to man the factories, take possession of the mines, and reap the benefits formerly accruing to the owners. Instead, they were shot down by the Civil Guard as they were before the republic was set up. Their living costs rose with the fall of the peseta, for much of Spain's food comes from abroad. Fanciful tales of a 40 per cent reduction of house rent were spread and believed, and when no reduction came the people drove rent collectors off with sticks and stones, and for this the police arrested them. The worker of every class had welcomed the republic as the rocket by which he might be propelled from the mire to the millennium, but instead he found himself little, if any, better off. It was impossible for him to understand that Spain, caught in the world depression, was powerless to achieve all the benefits promised.

In the meantime the unemployed saw the budget for armaments increase, while they were told that there was not enough money to carry out the agrarian reform. It is the same story repeated so often before in other countries: to a new government three months, or even three years, is much too short a time to remedy social abuses and economic ills already centuries old. The men of the new order thought the pace terrific, but to the unemployed and underpaid three months or three days was a long wait for a "new deal."

The words of a Seville political leader, Martinez Barros, explain the cause of unrest. "Hunger leads to desperation and violence. For the hungry worker a few inflammatory phrases are a call to arms which leads them to protest although the protest may mean death." The "Revolt of the Masses" in Spain has only begun. If the present regime can solve the economic problems it will maintain itself; but if not, it will fall before the people as Alfonso XIII did. The Spanish Revolution is a people's revolution. The people want economic justice. If it is not given them by Azaña and the Socialists, they will instal the Communists and Syndicalists. It may be said that as long as the army and the Guardia Civil are faithful, the government cannot fall. That is true, but the lower ranks of both come from the proletariat. They refused to fire on the people to support the Monarchists. The time may come when they will refuse to fire on the people to maintain the "Workers' Republic."

Want to Make a Revolution, Missus?

By ANN WASHINGTON CRATON

I CLIMBED wearily to the top floor of a Bronx tenement to inquire for the Capucci family. There were several women in the halls and on the stairs, and all the doors were open to let in a little air on that breathless August day. From the few words in English and Italian which I overheard I was aware that they were discussing me. "An investigator," they were saying to each other with unmistakable scorn, and they all trailed upstairs after me. Mrs. Capucci could speak no English but Mrs. Albertini was ready. She was the official translator of the tenement. Already she had answered the "same old questions" eight times for Mrs. Capucci, but still her man had not been given a job. She was skeptical now. Had she not answered questions twelve times for Mrs. Giovannini and was not her husband still waiting for his chance to work in Bronx Park?

"I never get time to do my work," Mrs. Albertini stated with pardonable pride. "It's either an investigator or the people who want to make a revolution."

I professed interest in the "people who want to make a revolution." She explained volubly that a committee came to your door. "'Missus, missus,' they say, 'do you want to make a revolution, missus? Sign your name to this paper.'"

"I no want to sign," Mrs. Albertini explained to me. "My man has a job. He is a motorman on a one-man street car. It is a hard job. His pay is cut. He works four days a week. He is tired all the time. But if I make a revolution, maybe he will lose the job. I no want to make a revolution. Now I don't have to get relief and be investigated. Some day, if he loses the job, I'll make a revolution."

"The committee no like it. They say, shame, shame, shame, everybody on this street wants to make a revolution but the people in this tenement. So I say shame, shame, shame, let's go see Mrs. Capucci, maybe she wants to make a revolution. But her man works two days in Bronx Park for the relief. The Work Bureau used to give him three days and pay him \$15. Now he gets \$10 a week. Her children starve and suffer. They cry for bread. But Mrs. Capucci is afraid maybe he'll lose his two days so she no wants to make a revolution."

"The committee says, shame, shame, shame, what's the matter with the people in this house? So I say, shame, shame, let's go see Mrs. Lo Casale. Mrs. Lo Casale no open the door. She says the Home Relief paid her gas bill and promised to pay her rent, she no want anybody making a revolution at her door."

"The committee gets mad, mad. So I say come quick and see Mrs. Farino. Last week she wanted to make a revolution. But Mrs. Farino was washing the clothes and the baby burned his fingers on the stove and she says, 'Get the hell out, I no want to make a revolution today.'"

"After that the committee says everybody in this tenement deserves to starve, but they give me papers and they tell me to listen to speeches in the street. They no come back any more. But every day the children in this tenement cry more and more for bread. What are the poor people

going to do, missus? Missus, do you want to make a revolution?"

Despite the heat and the fact that my next call was ten blocks away, I decided against it. She shrugged her shoulders indifferently. "You have a good job, maybe, all the time bothering the poor people, who haven't got bread for their children."

The neighbors gathered around were indulging in excited, angry conversation. It seemed that they were discussing the tactics of making a revolution. Mrs. Capucci believed that it meant going to street meetings and reading papers. Mrs. Farino, who had joined us by this time, disagreed. You registered for the Democrats so that your man did not lose his job, but you voted for the Communists. Mrs. Albertini insisted that you threw milk bottles at the police. Mrs. Giovannini, whose man had never got a relief job and who had had no home relief despite being investigated twelve times, wanted to go to the Home Relief Bureau and chase out the investigators and take the food tickets.

It appeared to be time to intervene. I suggested that if it were to be that sort of revolution, Mr. Hoover might call out the troops as he had done in Washington against the bonus marchers. Their faces were blank. No one had heard of Mr. Hoover's making a revolution. Some of them could read Italian newspapers, but who had pennies today for newspapers? The children brought home American papers picked up in the streets but they only read jokes to their mothers. All the women became indignant at their children for reading jokes when the soldiers and Mr. Hoover were making a revolution. They lapsed into more excited Italian. As I went downstairs their voices followed me. Mrs. Farino had again decided that she wanted to make a revolution.

In the Driftway

TO the average urban American, the body is a lump of flesh to be deposited at a desk at nine in the morning and taken home again at night, bundled up in overcoats, laced into shoes, and poured into stiff shirts. The nerves and the mind (such as it is) make all the decisions, run all the races. The body, battered into insensibility by the unrelenting pressure of noises, sights, and smells, drags through the days and sinks at night into a sleep of exhaustion that eight years, let alone eight hours, could not wipe away. The Victorians, in their most prudish days, never achieved a more complete separation of body and mind than modern city civilization has unwittingly produced. The urban American is never aware of his body until it gets sick and causes pain. The play of muscles, the satisfaction of controlling and using a delicate, coordinated physical machine—these are pleasures quite remote from the temper and tempo of our life. And D. H. Lawrence was not mistaken when he told us, in no uncertain terms, that even the sex life of moderns is a mental affair. It has more to do with the theories of Freud than with the satisfaction of physical emotions. The fact that we have made no provision for allowing the body to function as it should does not mean that we have done away with the need for it. Since we have no time for any pursuit which does not pay a living wage, those of us who are not professional athletes must get the pleasure of physical control

vicariously, through watching the acrobats who crowd our vaudeville stages or, more rarely, the dancer who uses his body as a medium of art as well as a physical machine.

* * * * *

TO Shan-Kar and his group of Hindu dancers who are one of the current exotic sensations of New York, the body is an instrument more various and subtle in its possibilities for artistic expression than the keyboard of a Steinway or the range of colors available to a painter's brush. To watch Shan-Kar as he moves through the ritualistic dances of an ancient civilization is to be made aware of the body as a beautifully tempered, perfectly controlled medium of complicated expression. For the harried Westerner, fresh from the raucous depths of a modern subway, it is no easy matter to slip into a world so alien as Shan-Kar's. Indian music—subdued, stylized, minor, and unhurried—falls on the strenuous Western mind like rain on a raging torrent. It is said that the Western ear is incapable of hearing certain notes in Chinese music. Certainly in Shan-Kar's dancing there are half-notes and quarter-notes of physical movement which the Western eye is not capable of seeing. But the spell grows. The dance of the snake charmer, which opens the performance, though it is elementary and explicit and obviously designed to lead the observer by an easy stage into later subtleties, is not simple enough. The mind is not engaged. And yet, so persuasive is the art of Shan-Kar that by the time he dances the Gandharva, which is perhaps the most subtle, the most stylized, and the most completely alien in mood and significance to the Westerner, since it is purely religious, his audience is completely under his sway.

* * * * *

THE body, as a friend of the Drifter's recently remarked, is all we have. To have created a civilization which is inimical even to mere physical health, not to mention the more subtle satisfactions of physical expression, is surely one of the less amusing ironies in the history of human achievement.

The Sales Tax

TO THE EDITORS OF THE NATION:

I am a little surprised to see that your article on the sales tax in the issue of January 11 shows that diabolical iniquity in a more favorable light than the facts warrant. The sales tax does not "amount to a repudiation of the principle of graduation of taxes," as you state. It simply reverses the principle, placing the highest rates on the lowest incomes and the lowest rates on the highest incomes, while it especially penalizes those who have to support families or other dependents. The sales tax has no other object than to lift the burden from Dives and place it on the back of Lazarus in the hope that he will not know what is being done to him.

With an ambiguous use of the word rate, you state: "It would tax the poorest at the same rate as the richest." The same rate of what? Certainly not income. If my income is \$30,000, and if I spend \$3,000 of this for goods taxed at 2 per

cent, the tax rate on my income is 0.1 per cent. But if my income falls to \$1,200 and my outgo for taxed goods to \$600, the rate of tax on my lower income will be 1 per cent, which is exactly ten times as high a rate as when my income was \$30,000. This point you did not make clear.

I am in the merchandising business in a State whose racketeering legislature taxes the commodity that I sell, and I can assure you that the consumer pays the tax, which is added to his bill as a separate item and also as a contribution to his education.

Bradfordwoods, Pa., January 12

WILLIAM SCOTT

Mr. Thomas and the L. I. P. A.

TO THE EDITORS OF THE NATION:

Norman Thomas's slighting references in your issue of December 14 to the activities of the League for Independent Political Action impel me to request space for an account of our work.

In the first place, our Cleveland convention with its indorsement of Norman Thomas received exceptional publicity over the country. This outstanding boost to the Thomas campaign is acknowledged by many thoughtful Socialists. This was followed during the course of the campaign by over 1,000 newspaper releases. A host of clippings are on file at our office. After the convention the national office of the L. I. P. A. sent letters to its 10,000 dues-paying members requesting them to join the Thomas Committee of Ten Thousand. Hundreds responded and without question contributed hundreds of dollars directly to the Thomas campaign.

Next, we asked our more than 200 branches and local representatives to stage at least two large public meetings, one on the issues of the campaign and the other on Thomas or Roosevelt—For Whom Shall a Progressive Vote? In addition to the large public meetings we stressed meetings in private homes and shops and on street corners. I personally spoke at over fifty and I believe several hundred were held. We sent nationally known speakers into every one of the Congressional districts where candidates were indorsed. John Dewey, Oswald Garrison Villard, Paul H. Douglas, and others of our leaders gave generously of their time, and at least 500 addresses were delivered during the campaign. We also pushed the distribution of literature and a quarter of a million pieces were issued.

Mr. Thomas is apparently not aware of the many contacts of the L. I. P. A. with trade-union elements or he would not have written as he did. One indication of this connection is the fact that the league has several trade-union leaders on its national executive committee.

Norman Thomas was one of three who signed the original call for the conferences that led to the formation of the L. I. P. A. For the first year he served on the executive committee but resigned on March 6, 1931, feeling that there was some danger of confusion in the public mind about his position as a spokesman for the Socialist Party and his position on our executive committee. It was a confusion, he said, that he could always clear up when he explained it, but he couldn't reach everyone to make the desired explanation. "Sooner or later," he wrote us, "the day is coming when we shall all get together in a more unified and aggressive action than we are now undertaking."

This is the time to stress those things on which we agree. Events are rapidly leading toward a united new party. We hope Mr. Thomas and other Socialist leaders will cooperate in the building of a unified political movement based on the immediate demands of the Socialist and L. I. P. A. platforms.

New York, January 1

HOWARD Y. WILLIAMS

Lo, the Poor Farmer!

TO THE EDITORS OF THE NATION:

I have just read the excellent article *The Farmer's Bootstraps*, in your issue of January 11. In considering the plight of the farmer the city reader is very likely to overlook the fact that when wheat is quoted at 48 cents in Chicago, freight and commission will reduce this figure by a half. My town is served by two railroads and is only 750 miles, airline, from Chicago. The following table of prices in this town is taken from the local paper.

Thursday, January 5, 1933

No. 1 Hard Northern Wheat.....	.27
Red Durum	.19
Flax	.88
Oats	.04
Barley	.09
Rye	.15
Butterfat	.18
Butter	.16
Eggs	.20

Of course, nobody expects to make the grade, No. 1 Hard, any more. That is produced only in the Yukon territory and points north. Again, there is the little matter of dockage and short weight. If you have no storage room on your farm (dunnage grade lumber is still \$25 a thousand) and the grain is hauled to town by hired help, these items are likely to become notable. And should the farmer elect to store his grain for a possible rise of the market, it will cost him 2 cents per bushel per month.

Naturally, all this sudden concern for the grain farmer is anything but disinterested. The railroads are itching for permission to raise the carrying charges on cereals, which are exempted from the recent rate boost. The farmer is paying no taxes, buying no gasoline, defaulting on mortgages. There are several reasons for the government's sudden compassion for the farmer.

Wilton, N. D., January 12

SELWYN A. ANDERSON

Joe Abrantes, Cigar Worker

TO THE EDITORS OF THE NATION:

The article on Tampa by Anita Brenner which appeared in your issue of December 2 indicated that the activities of the tobacco workers there have not ceased. Nor have the methods employed to suppress them changed. From one of our representatives recently returned from Tampa comes the following story of Joe Abrantes, who was born in 1895 in Cuba. He was brought to this country by his parents a month later and had never been out of it until he was deported last month as an "undesirable alien." Always active in the struggles of the workers in Tampa, he was arrested on January 2, 1932, only to be released a few months later. In September, however, he was again put in jail and after three months deported. He left behind him a wife and three small children aged six months to eight years.

For \$40 Mrs. Abrantes and her children can be sent to Cuba. This sum may seem small. To the Abrantes it is gigantic. Perhaps some of your readers would be interested in helping us to transport this starving family to a worried father in Cuba. Contributions for this purpose will be gratefully accepted by the International Labor Defense, 8 East Eleventh Street, Room 430, New York City.

New York, January 3

ALFRED HIRSCH

What *The Nation* Needs

TO THE EDITORS OF THE NATION:

I am puzzled at a failure on the part of the editorial staffs of two of our liberal journals, the *New Republic* and *The Nation*, to apprehend this fact—that a deeply valid, unshakably tenable central attitude toward the problems of our day should be maintained by those journals at all costs. I do not mean by this an adherence to any such concepts as justice, or the highest good for the most people, or equality, fraternity, or the like. That central attitude must be the product of more than a philosophy, more than a science. It must be rooted in instinctive as well as intellectual understanding. Now that may seem to be a paradoxical conditioning of that attitude. It really is not. A scientific determination of the present best possible institutional forms is not at all impossible. A rudimentarily scientific approach to economic problems, say, would reveal, in the world of economic processes, the utterly fallacious reasoning behind recent British financial policy, in which unlimited foreign "dumping" without being particular about credit risks has been advocated in the highest financial quarters as a solution for the British unemployment problem. Taking this sort of problem—this particular one, say—I am puzzled by the fact that *The Nation*, supposedly a leader of intelligent thought, praises or condemns such a course without reference to any fundamental social-economic truth. If you are for it, the reason you would doubtless give is that it would help the unemployment problem; if against it, your reason would probably be that it would hurt the credit structure, or some equally irrelevant statement. You might even say that it was foolish, overlooking the undeniable gains to the unemployed.

Develop a philosophy that your reason can approve and that your instincts will support to the death. Only by so doing can you rightfully expect to lead. Find out what the really fundamental problems of the times are, then hammer away at them. Stop wasting our time and your own with lengthy pros and cons of utterly minor problems. We and those problems will be "overlaid and lost in the general drift" of events if we don't get busy and try to shape the course of those events. I have but briefly touched on attitude, on philosophy; I have not taken up issues or methodology. But regarding issues, the fundamental ones stare us in the face—capitalism, war, free speech, and so on. The methodology should be founded on works of synthesis by our most competent and public-spirited scientists. Your part is the part of presentation; and if you have any convictions, persuasive presentation. But presentation, as somebody or other has said, is a matter of art. That means you must improve the physical make-up and the contents of your magazine. Forget your past emphasis on the reasoned presentation. Remember that emotional responses are as valuable as intellectual ones; that a right feeling must be present among your readers before they will act along the lines you suggest; that action, ultimately, is what you want. In other words, get contributors who are better artists, who can stir your readers.

You are covering, in short, too wide a field. Your multitudinous news notes, book reviews, and so on, serve to absorb the fighting energy of your readers, rather than concentrating their energies on the vital issues of our time. They distract, they confuse; like the howls of a hundred scattered dogs at night, the voices of the proponents of these hundred minor issues disturb the listener but do not arouse him to any specific, any vital attack, defense, or creation.

Begin leading! Find out what you can stand up for, and then stand up for it through thick and thin—loudly, vehemently, if necessary; at any rate, effectively. And make it basic.

Hollywood, Cal., January 1

M.

The Militant Atheist

TO THE EDITORS OF THE NATION:

I was shocked and surprised at the prominence given in your issue of January 11 to the advertisement of the *Militant Atheist*. Naturally I don't deny your right to print the advertisement, but I do question your good taste and consideration for your Christian readers in allowing such license in abuse of their church and faith. The prohibitionists declare that anyone who drinks a glass of beer or wine is a drunkard; the atheist decides that all who hold religious beliefs are fools and liars.

Why this mania to take from others a privilege which we ourselves do not want? If everyone adopted the precept, "Do unto others as ye would they should do unto you," life would be easier and happier for all of us.

New York, January 12

MRS. HEYWOOD BROWN

The Beechers

TO THE EDITORS OF THE NATION:

I am at work on a book on the Beecher family to be entitled, "Saints, Sinners, and Beechers." I would greatly appreciate any pertinent information about the family or suggestions as to where such information may be found. My address is 1 Beekman Place, New York City.

New York, January 13

LYMAN BEECHER STOWE

University Teachers

TO THE EDITORS OF THE NATION:

An Association of University Teachers has recently been formed in New York, with affiliated members in other cities, to promote: (a) freedom of teaching, research, and publication; (b) freedom to participate in social and political organizations inside and outside the university; (c) protection and, where possible, increase of salaries; (d) better tenure rights; (e) maintenance of the size of teaching staffs. Teachers who are interested are requested to communicate with the chairman at the address given below. An open meeting will be held at the New School for Social Research at 8:30 p. m. January 30, with Mr. Roger Baldwin as guest speaker.

MARGARET SCHLAUCH, Chairman

New York, January 12

A Point of Law Misstated

TO THE EDITORS OF THE NATION:

In my article in your issue of January 11 on Owen D. Young and Samuel Insull I stated that under the Bankruptcy Act, "if a bank makes a loan to a corporation which goes bankrupt in less than four months thereafter, such securities as may have been deposited as collateral for the loan become not the property of the bank in particular but of the creditors in general." A lawyer and friendly critic calls my attention to the fact that I misunderstood and stated incorrectly the nature of that four-months clause. It does not, as I said, give the trustee in bankruptcy the absolute security for new loans contracted within four months prior to the bankruptcy. It does, however, give the trustee the right to recover for the benefit of general creditors new collateral put up during those four months to secure old loans.

In my opinion, this correction does not affect the validity of the criticisms made in my story, but of course I am eager not to misstate a point of law. Mr. Young was questioned on the date of bankruptcy because of his collaboration with the bankers. The creditors' case for recovery of collateral put up with the General Electric is that Mr. Young and Mr. Swope knew that the Insull companies were virtually insolvent when they lent them \$2,000,000 from the General Electric, and furthermore that they knew or should have known that the Insull collateral was already pledged to debenture holders.

Equation

By CLIFTON CUTHBERT

Always the threat of darkness lies
Across the roots of growing things.
Always the patterned shadow hides
Against the under sides of wings.

Gentian or autumn crocus, lifting
Its slender-pointed diadem,
Presses a spearhead pyramid
Of shade along the bursting stem.

The stride that cuts the brilliant day
Incites a valor of the mind,
And none disputes what sources feed
The eye that does not see behind.

Sinclair Lewis, Campaigner

Ann Vickers. By Sinclair Lewis. Doubleday, Doran and Company. \$2.50.

WHEN we arrive, as in Mr. Lewis's case, at the twelfth novel of a well-known author, it is almost impossible for us to know what we should think of the book if it had appeared under another signature or were thrown to us as the first work of a new talent. Our inescapable tendency is to view it always in terms of the author's preceding novels, and to plot a sort of fever chart: Is this book better or worse than the last? Does it reveal new and previously unsuspected talents in the author, a steady decline, or a complete collapse? Such questions are always difficult to answer with any precision, not only because of the dubiousness of this ranking system itself, but because, even if the reviewer's judgment were otherwise reliable, it is unavoidably influenced by the order in which the novels appeared and by the vagaries of his recollections. But if I were obliged to pigeonhole the present novel in answer to a direct question, I should say that it ranks below "Main Street," "Babbitt," and "Arrowsmith," but above "Dodsworth," that it is, in short, safely in the upper half of Mr. Lewis's work.

And this is to say that it is solid, workman-like, honest, socially significant, and likely to start up another healthy row about the subject with which it deals. "Ann Vickers" is Mr. Lewis's first novel since "Main Street" to take a woman for its central character. It is not merely repetitive in pattern. It does not rely, to the extent that "Main Street," "Babbitt," and "The Man Who Knew Coolidge" did, on Mr. Lewis's unequaled gifts for verbal mimicry or on his amazing ear for intellectual clichés. In this respect, and in its effort to avoid the mere "type" character, it is closer to "Arrowsmith." It approaches "Arrowsmith," too, in the thorough work of research and documentation that has evidently gone into it. It does for the social worker and penologist what "Arrowsmith" did for the doctor and medical research worker, and "Elmer Gantry" for the ministry. It is not only a novel, in brief, but a vivid and passionate tract. And one more example that, in the hands of a skilful enough writer, a book may quite adequately be both.

True, like "Dodsworth" it gets off to a bad start. For the first hundred pages or so it seems uncomfortably synthetic. The characters fail to come alive, and the figure of Sinclair

Lewis is always among them, delivering little speeches in his own right, the Nobel Prize winner, the self-conscious American Spokesman. He cannot tell us that Ann was a little ashamed of her American provincial origin without adding, "as a British Prime Minister is of his Scottish village birth, or a French Premier of Provence." When he tells us that Ann broke her "cords" with her native village and even her family, he must generalize the statement to apply to "American girls," and add: "If they thus lose the richness and security of European family solidarity, equally they are free from the spiritual and social incest of such nagging relationships." And he cannot tell us what Ann thought as a college junior in 1910 without writing a little editorial on how different and how clear-headed juniors have become now, and how foolish were the "wrecked Odysseuses of the Great War," who "from 1919 to 1929 unceasingly piped, 'Let us eat, drink, and be nasty, for the world has gone to hell, and after us there will never again be youth and springtime and hope.'"

All this embarrasses the reader, but once Mr. Lewis is really launched, his story takes hold of him, and we follow the career of Ann Vickers, as suffragist, settlement worker, prison reformer, mistress of a Tammany judge, with unrelaxed interest. The novel reaches its highest point in the chapters devoted to Ann's experiences as a matron in Copperhead Gap Penitentiary, a prison vaguely situated in the South. The horrors of that prison, from its stinks of sweat, old food, oil toilets, slops, cheap pipe-tobacco, crushed cockroaches, and disinfectant, to the intriguing, dishonesty, cynicism, and criminal cruelty of its jailers, are conveyed to the reader with unrelenting vividness and passion. And yet beneath this passion there is a fine restraint, which keeps the events and the motivation always within the realm of credibility; no one who has read of the Georgia chain gangs and the Florida tortures can feel that this picture of legal savagery in our own day and country is exaggerated.

"Ann Vickers," in brief, is a powerful social document. It is propaganda. It compels the lay reader, who would not dream of opening an official prison report or the essay of a professional penologist, not only to feel that our actual prison administration is desperately in need of reform, but to question afresh, or for the first time, the wisdom of the prison system itself, the very possibility of giving one set of human beings so much power over another without degrading both. "Ann Vickers" is not, perhaps, "literature" in the narrower sense. Certainly there are no caressing cadences in it; the writing, as such, is no better than competent journalese. But it remains an admirable novel as well as a powerful indictment, because, once Mr. Lewis gets past his early tendency to make asides to the reader in his own person, what he has to say becomes implicit in his story, and that story is enacted by a gallery of characters that are varied, credible, and alive.

HENRY HAZLITT

Post-War Germany

The German Phoenix: The Story of the Republic. By Oswald Garrison Villard. Harrison Smith and Robert Haas. \$2.50.

THERE are few Americans as well qualified as Mr. Villard to tell the story of the German Republic. Descendant of German stock, a frequent visitor to the country, a powerful critic of the "wrongs" of Versailles, Mr. Villard brings to his subject not only a deep knowledge but a first-hand intimacy and a warm sympathy which make this book of real importance to those who desire a general survey of the present-day life of the German people.

Mr. Villard is frankly disappointed that the revolution of 1918-19 has been so barren in political and economic results. Today the country is overwhelmed by the problem of unemployment; the eight-hour day has disappeared; the labor unions are losing their members. The old reactionary caste is back in power. He is concerned with the growth of private armies because they threaten internal order; he detests Hitlerism.

At the same time there are encouraging signs. Communism is not making the expected gains. Despite the present setback, Germany has advanced farther toward the state-socialism ideal than any other country save Russia. The gains of the revolution, Mr. Villard feels, are perhaps more noticeable in the social than in the economic-political field. "Beyond doubt the greatest of the German people's gains from the revolution have been the breaking down of the numerous castes which made life in Germany stilted, rigid, and privileged." This change is most evident in the police, who have actually "learned manners and extraordinary patience." The revolution has produced a far more humanitarian outlook in the handling of crime. A new penal system clearly differentiates between professional criminals, who are confined in special prisons, and more innocent offenders, who are treated in institutions with a view to their restoration as self-respecting citizens. Although the revolution produced no change as far as alcohol is concerned, nevertheless the youth movement has set itself against the abuse of drink, and many of its members are entirely abstinent.

Perhaps the most discouraging feature of German life is the fact that the universities, far from supporting the republic, are hotbeds of reaction. "Eighty per cent of the German students may be counted as against the existing government." This situation is partly due to the fact that there are 40,000 university graduates, thoroughly trained, who have no chance of finding employment in their chosen professions. On the other hand, Mr. Villard is encouraged by the German youth movement. "It is hard to recall another movement which as nearly approximates the Spartan ideal without, however, the warlike aspect of the Spartan training. If the youth of Germany survives with ideals untarnished and with sound minds and sound bodies, the youth movement and the school hikes will deserve a preponderating share of the credit." Inevitably the condition of woman has changed; she has obtained greater freedom while at the same time she is exposed to greater hardship. Economic conditions explain why there were 30,000 fewer marriages in the first half of 1931 than in the first half of 1930. Despite the efforts of the government to strike at commercialized vice, prostitution and sexual perversion are widespread; 200,000 children are annually born out of wedlock. Undoubtedly these conditions are the product of an unhealthy social existence, which has produced widespread disillusionment concerning any code of morals. Nevertheless, Mr. Villard states that the tendency "is to return finally to a regular and monogamous mode of life." Culturally, Germany continues to be prolific. Although no great play has been written in the post-war era, the Berlin theater is the center of a powerful intellectual and artistic ferment. A genuine revolution in architecture has taken place. German prose and German movies have become articles of export. The book concludes with an interesting chapter on the German press, which the author criticizes for its lack of attention to foreign news.

In an attempt to be fair Mr. Villard does not relieve the German people, or at least the German leaders, of responsibility for their present distress. In his view the revolution of 1918 was not "destructive enough." The leaders "should have torn down more of the old structure before building up. One of the first acts should have been the breaking up of the great estates, the dispossessing of the great landlords, who . . . had been the real rulers of Germany. . . . So, too, with the captains of industry. Against them the weapon of socialization lay close at hand. It was not used. . . . And then there was the Reichswehr.

Had the builders of 1918-19 been wise they would have appointed to it no man above the rank of captain in the old army. . . . They should never have tolerated the rise of uniformed private armies."

At the same time Mr. Villard is inclined to hold the Treaty of Versailles largely responsible. "It needed but one thing in order to recreate Germany along democratic lines—a just and honorable peace, a Christian attitude of good-will and friendship toward the people of whom Woodrow Wilson had repeatedly said that they were but the innocent pawns and victims of their guilty rulers." But how can anyone have expected that the Allies would suddenly become angels of benevolence after the most venomous war in history? This is about as reasonable as to ask the German people, in true Christian humility and submissiveness, to dissolve the Reichswehr, stop cruiser construction, and forget about Article 231 of the Treaty of Versailles. Mr. Villard's book would have been more complete had it pointed out that the German problem will not be solved merely by the return of Danzig or the granting of military equality. It will be solved only when the vice of nationalism is eradicated from every country, including Germany. The institution of war inevitably intensifies unreasoning nationalism, and this institution will only disappear with the development of a new international attitude and the establishment of a genuine world order.

RAYMOND LESLIE BUELL

Chaliapin's Autobiography

Man and Mask: Forty Years in the Life of a Singer. By Feodor Chaliapin. Translated from the French by Phyllis Mégroz. Alfred A. Knopf. \$3.50.

RECOLLECTION and introspection become this artist, who has the faculty of presenting himself and his accomplishments in a perspective distorted neither by vanity nor by adulation accepted at its face value. Conscious of his shortcomings and his merits, he writes about them both dispassionately, reserving his enthusiasms for artistry itself. His own severest critic, he knows how to value the criticism of others. He has attained eminence by incessant reaching for the ideal, never deluding himself into the belief that he has touched it. "Mephistopheles is considered one of my best parts. . . . My interpretation has in a sense become a classic. I must admit, however, that it has been one of the bitterest disappointments of my career. I carry about in my heart a Mephistopheles I have never been able to incarnate, and when I compare this dream-figure with the figure I have made of it, it literally sets my teeth on edge."

Creative imagination is the quality to which Chaliapin attributes his success. Ambitious singers may read with profit the nine chapters in which he shows how he applies that quality in the preparation of his roles, disheartened though they will be to discover that he memorizes an entire opera while studying his own part therein. "I can have no definite idea of the character until I have thoroughly studied the environment in which he moves and the atmosphere which surrounds him." This is only the preliminary step—the intellectual realization of the character—after which the imagination takes charge and "creates" the personality from the material data.

Pertinent to the mask are these chapters in a book which fulfils the author's expressed intention of being "an analytical autobiography of the man and the mask." Many other chapters show the man in his acts, his opinions, and his emotions. The last aspect is perhaps most strikingly revealed in the account of the author's long friendship with Maxim Gorki and the severance of that tie by disagreement over the Soviet regime. "I persist in thinking and feeling that man's liberty in his life and

work is the highest good. Happiness must not be imposed by force. No one knows what constitutes another's happiness. I still love that liberty which Gorki and I once so ardently worshiped."

As soloist to the Czar and as premier singer to the Soviet people, Chaliapin has been honored by both the old Russia and the new. It is with these two Russias, and not with his incidental wanderings from stage to stage, that his reminiscences are mainly concerned. For the mujik, grown to the stature of the artist, is still at heart the mujik who can say unaffectedly: "I sometimes suffer from the homesickness of the simple peasant."

RAY C. B. BROWN

An Artist in War

Sherman: Fighting Prophet. By Lloyd Lewis. Harcourt, Brace and Company. \$3.50.

GENERAL SHERMAN was a rare man among those whose activities have taken a public form: he refused to regard consequences when he believed either a course of action or an ideal to be right. His military career was therefore a series of successes, for men adore to be led by a ruthless leader, and his civilian life was a confusion of embarrassments, for men hate to be told the truth by a forthright person. It was only in his last years that he became acceptable to the general public, whose opinion he never valued except in so far as it afforded satisfaction for the vanity he shared with his fellow-men. General Sherman was born an eccentric and died a popular after-dinner speaker. Lloyd Lewis has written the account of his career with admirable thoroughness, with clarity of insight, and with sympathetic understanding.

Sherman grew up in the Northwest Territory, which was a creation of the national Congress where people felt collectively under the control of the national government and individually free from any control. His foster-father, Thomas Ewing, had been a staunch Federalist, and Sherman accepted respect for the Union in his youth. In 1836, when he was sixteen, his foster-father, then United States Senator from Ohio, gave him an appointment to West Point. The whole idea had been Ewing's, but young Sherman did not object. He went through the academy and married Ewing's daughter, Ellen, who worshiped her father and had great affection for her husband. When the Civil War broke out, Sherman was oppressed with a sense of failure, his own personal failure and the failure of the country to solve its problems. He had been unsuccessful in business in St. Louis, and with a large and growing family had gone to Louisiana to be head of a military academy. At the outbreak of war he felt the bottom dropping out of his effort to train young cadets. But, more important than that, he saw the Southern States sacrificing the Union for animosities capable of compromise. Sherman was fanatical in his devotion to the Union.

In the early days of the war Sherman had hesitated to kill men by sending them into battle, but he soon realized that since war was hell, it was necessary to make it as terrible as possible to the enemy. It then became his fixed policy to ravage the South and to starve its inhabitants into submission. War as a teacher of obedience to law was Sherman's principle, and he offered violence and destruction as an example of the need for order and right. "I would not coax them or even meet them halfway," he wrote for Lincoln's eye, "but make them so sick of war that generations would pass away before they would again appeal to it." Sherman, who was an artist in war, was as sensitive as an artist to its horrors and as ruthless as an artist in his thoroughness. He would have been willing to see the entire South, which he loved, bare and stark rather than not to finish the colossal job for which he was responsible. His justifi-

cation was that the Confederates had appealed to arms, and his answer to the appeal was the most terrible punishment it was possible for him to mete out with all the force of his technique. In that endeavor he proved himself one of the greatest generals who ever lived.

Sherman commanded an army of Westerners, in whose ranks discipline was lax and courage great. His jolly, ruthless, raw, and vigorous troops were not only the scourge of the South through which they marched, but the terror of the more effete East and of the timorous politicians in Washington. In Sherman and in his hordes they did not know what they had released. And after the war both the Easterners and the government at Washington were afraid of the Westerners who had played such an important part in the domination of the South. There were rumors that after subduing the Confederacy the Western armies would turn on the effete Easterners and make General Sherman the dictator—the Napoleon—of the United States. But Sherman—though he was a monarchist and distrusted democracy—had no monarchical ambitions. When the armies came to Washington for their grand review, there were many fist fights in saloons between the Eastern soldiers in their neat paper collars and the ragged, boisterous Westerners, who felt capable of conquering the earth, and willing to try if their Uncle Billy would say the word. But Uncle Billy was wise, shrewd, and humble. It was found impossible to make him President of the United States, even less a dictator, and he countered an attempt at a stampede with the celebrated telegram: "I will not accept if nominated and will not serve if elected."

As well as a portrait of Sherman, one of the most superb characters the United States has ever produced, Mr. Lewis's book reveals the confusion, the horror, and the pattern of the Civil War. In it there is excellent material which gives one a picture of how men lived through the chaos and the trouble.

M. R. WERNER

Shorter Notices

The A B C of Technocracy. By Frank Arkright. Harper and Brothers. \$1.

This volume, as its name implies, is a mere primer on technocracy. In its ideas, and even in its phraseology, it follows closely the article on the subject by Howard Scott in the January issue of *Harpers Magazine*. As the book is somewhat longer than the article, it cites more figures and examples.

Never Ask the End. By Isabel Paterson. William Morrow and Company. \$2.50.

Orchestrating the brittle gaiety of the dialogue in her novel with a running accompaniment of retrospective flashes in the minds of her three characters, Miss Paterson has built up, in effect, three typical American biographies. For Pauline, Marta, and Russell, who—no longer young—meet accidentally in Paris, the past, though differing for each in its particulars, represents a common struggle and a common victory. They have each escaped from the economic and cultural poverty, the moral dualism, of their native Midwestern environment. They have all three survived unhappy marriages. By one means or another they have achieved material well-being, and gravitated inevitably to Europe to purchase a cultural background and moral freedom. Obviously ideal material for success stories in their hometown newspapers, they are, nevertheless, inwardly at sea, wearied by the struggle and disillusioned in the victory. It is, however, part of Miss Paterson's skill that the sense of disillusionment is not the ultimate mood of the novel. Though she constantly conveys it to us with a subtle and civilized irony, it is in the behavior of the three characters themselves that the moral of the

tale must be read. Desperately gallant in the routine of passion, "game" and playful in the wearisome adventure of Europe, they have at last hit upon the expedient of substituting wit for emotion. And this, one feels, is not merely the technique of the novel, but a solution that Miss Paterson offers us—a complete philosophy for living in these times.

Out of the Past of Greece and Rome. By Michael I. Rostovtzeff. Yale University Press. \$2.

Professor Rostovtzeff leads us away from the centers of Greek and Roman civilization to those borderlands which played an obscure part politically but an important part economically. In writing that is pleasantly informal he describes the Greek colonies on the Black Sea in whose ports was loaded the corn on which Greece lived, which was paid for with Greek products that were to deposit a layer of Hellenic civilization over the Scythian barbarians; he shows that the Olympian games persisted because they happened to be the only institution of national unity developed in Greece; he dilates from a more human viewpoint than the merely archaeological upon the significance of the ancient cities now being disinterred at Pompeii and Herculaneum; he pictures the old Greek city of Messina in Sicily, whose history, as well as the psychology of its inhabitants, was in large part the creation of Mt. Etna, on whose unstable slope it was set; he traces the sudden, casual prosperity of the two caravan stations at Petra and Palmyra in the Arabian desert, which grew to metropolises and even to empire after trade called them into existence, and which decayed as quickly when trade took other roads. In his final chapter Professor Rostovtzeff reads us some newly discovered papyri, the letters of two big business men, which show the part played by big business in the Greek empire established by the Ptolemies in Egypt. In essays like these the reader feels brought as close to the realities of ancient life as a historian can lead him.

Etruscan Places. By D. H. Lawrence. Viking Press. \$3.75.

Tracing out one corridor in his very complex nature, D. H. Lawrence was persistently interested in the recovery of human consciousness as it existed previous to, or outside, the Graeco-Christian tradition. He was uncannily adept, through the medium of the geographic site, a few artifacts, or (as in the case of the Southwestern Indians) some surviving ceremonies, at reconstructing such states of mind. "Etruscan Places" is an item in a series of such reconstructions. It is not so fine as "Mornings in Mexico" or "Sea and Sardinia," perhaps because the author had less to go on. But it makes an interesting case for certain values of unselfconsciousness, and for what Santayana would call "animal faith," which Lawrence would attribute to the Etruscans. Twenty reproductions of tomb paintings and urn modelings in their lively naivete fairly enough credit his thesis. To what extent the volume is accurate archaeology is perhaps irrelevant; it is representative Lawrence and valuable for its own kind of insight.

A Charter for the Social Sciences in the Schools. Drafted by Charles A. Beard. Charles Scribner's Sons. \$1.25.

Mr. Beard here acts as the mouthpiece of a commission of the American Historical Association investigating the teaching of the social sciences. The present preliminary report is offered as a "charter," but it may be more accurately described as a cry of the perplexed. First of all, says Mr. Beard, the teacher of the social sciences is a scholar. As such he must pursue the ideal of objectivity. He must study the American, French, and Russian revolutions "with the same control over emotions which the geologist exercises when he traces the transformations registered in the great book of nature." He must do so especially since he deals with problems that are enormously complicated. Yet the social scientist cannot turn his back upon current social

realities. The present, indeed, is the greatest era of transition in human history. "We are passing"—Mr. Beard here quotes President Hoover—"from a period of extremely individualistic action into a period of associational activities." Yet the teacher of social studies cannot simply conduct a forum for the discussion of "current problems." He must rather attack fundamental tendencies. In this task he must remember "the climate of American ideas." The fact is that "nowhere is the predominating ideal of a progressive society set forth more cogently or with greater authority than in the Constitution of the United States as written and as interpreted by legislative enactment, judicial exposition, and political practice." To break down special privilege is an American ideal. Yet this purpose must be accomplished "without unduly burdening industry or diverting too much capital from productive enterprise."

The Cambridge Medieval History. Volume VII: *Decline of Empire and Papacy.* The Macmillan Company. \$12.

Roughly, this volume is a history of Europe in the fourteenth century. Some of the subjects have their beginnings earlier and some run far into the following century. The period witnessed the decline in power and prestige of the Papacy, which contributed to its own defeats by playing petty European politics as an Italian state, and also of the empire, which in the previous century had dueled with the popes. Concessions by the candidates at each election reduced the emperor's power, which was weakened further by the strong, national dynastic kingdoms developing in England, France, and Spain. Feudalism was also in decline, the nobility being squeezed between the bourgeoisie of the free towns and the increasing might of the king. Europe was ripe for the Renaissance and the Reformation; the Lombard cities and the Hansa towns were inaugurating the bourgeois economy which in time was to become the basis of life throughout the Western world. On the whole this volume maintains the high scholarly standard of the Cambridge series of histories, though it is uneven in quality, as a book by several hands must be. The twenty-seven sections are the work of twenty-three contributors, of whom W. T. Waugh (three articles), Hilda Johnstone (two articles), A. Coville, Prince D. S. Mirsky, Cecil Roth, and Eileen E. Power may be read for pleasure as well as for information. Three of the contributions are mere conglomerations of names and dates, and should not have been included in the volume. The rest are careful pieces of historical scholarship, passably written. This general criticism may be made—that in most of the articles the political point of view is too dominant, to the relative neglect of social and economic factors.

Music

Selling Symphonies

THE nonsense that commonly accompanies broadcast music as explanatory talk has annoyed discriminating listeners ever since music was first sent out over the air. Their charges against the broadcaster have nowhere, to my knowledge, been so well stated as by B. H. Haggin in the *New Republic* for December 7. But simply to blame the broadcasters for not knowing better, and to suggest that all they need to do to improve their ways is to be intelligent men of good-will, is to indulge, I think, in an optimism not justified.

What is the substance of the charges? Briefly: that the broadcasters "sell" the music to the radio audience instead of letting it speak for itself; that they talk about biographical or other extra-musical details instead of concerning themselves with

the music itself, and so hinder the listener, instead of helping him, in concentrating upon the music; that the substance of what they say is often inaccurate or worse.

To those of us who need no salesmanship to make us listen to music, the broadcasters' efforts in that direction are, of course, revolting. That is because we are primarily interested in music and not in broadcasting. But to the broadcaster, highbrow music is simply one of a dozen different kinds of sustaining program from which he gets no direct return; it represents a substantial investment which must pay for itself in habitual listeners who will buy the products his advertisers wish to sell them.

It is doubtless true that if the Philharmonic Orchestra broadcasts were accompanied by no comment at all, the people who really wish to listen to symphonic music would listen just as readily. But if thousands who otherwise would not be interested can be persuaded to listen to highbrow music by salesmanship of one kind or another, the broadcaster cannot afford to neglect this opportunity—especially since those who really want to hear Mr. Toscanini will in most cases not forgo hearing him because they dislike Mr. Downes.

It is a mistake to think that this salesmanship does not work or that the high-toned nonsense the announcers read, the highfalutin accents in which they read it, and even more the enthusiastic indorsements of the critic of the *Times*, do not carry weight with the audience. The pompous nonsense that the broadcasters love is not something they foist on a public that has no preferences; that public is not unlike the personnel of the broadcasting companies themselves, and has similar preferences. If the broadcasters have reason to think that salesmanship in the shape of music-appreciation talks enlarges their audience, they are, as business men, obliged to use it; they can hardly be expected to give the public what it should have, whether it likes it or not.

And is it so easy to say what it is that the public should have? "The remedy follows inevitably from the difficulty," says Mr. Haggin. "For one thing, it consists in setting the music before him phrase by phrase, so that he has detailed knowledge of the work. In addition, as one goes along, one can point out relations among phrases—the fact that something here is derived from something there." I am not sure it can be assumed that the radio public is much interested in relations between phrases—anything like as much as in Mr. Downes's legend, for example, about a theme in the Brahms First Symphony and its derivation from the chimes of Cambridge. And when Mr. Downes attributes the derivation of a theme to Cambridge chimes, he says something which happens not to be correct, but which could easily be, without in any way changing our attitude toward the music. But great theorists often disagree on the relations between phrases, and one conception or another of this sort may definitely affect our listening attitude—for better or worse. Moreover, "setting the music before him phrase by phrase" does not give the listener "detailed knowledge of the work." Only repeated hearings can do that. Unless he has heard the work already, I doubt that an oral analytical foreword is of any benefit to him. It may enable him to recognize a bit of material here and there—but that takes him away from rather than toward the kernel of musical experience.

The Columbia System, in connection with a current series of broadcasts of Bach's entire Well-Tempered Clavichord, has gone so far into musical structure as to announce that "a real fugue is one in which there is no real answer"; that a "tonal fugue is one in which the subject is merely transposed"; that "the counter-subject is used as an answer"; that the C-sharp-minor Prelude in the First Book "does not modulate." Each of these pronouncements is about the opposite of the truth. And yet no spontaneous protest has arisen to force Columbia to talk sense instead of nonsense. Of course not—how many people

OSWALD GARRISON VILLARD'S THE GERMAN PHOENIX

"A pulsing, live canvas of present-day Germany. Mr. Villard has that genius for participation which is of the essence of great reporting; he is no aloof, philosophical observer, but an intensely excited, sometimes emotional, occasionally eloquent man-on-the-street, excited by what he sees, communicating to the reader his own intense excitement. And Mr. Villard, a recurrent visitor to Germany through all the sixty years of his active life, sees present-day Germany in long perspective."—LEWIS GANNETT, *N. Y. Herald Tribune*.

COVICI FRIEDE • PUBLISHERS • New York

□ JOSEPH WOOD KRUTCH says □

ALICE IN WONDERLAND. Civic Repertory Theater. It will fascinate children and adults alike by the reality of its unreality and the sense of its nonsense.

ANOTHER LANGUAGE. Booth Theater. Hilarious perennial exposing almost anybody's family.

AUTUMN CROCUS. Morosco Theater. Sentimental English comedy with Dorothy Gish and a new matinee idol named Francis Lederer.

BIOGRAPHY. Guild Theater. An intelligent and sinewy comedy about what happens when a cultivated woman of the world tries to choose between a pompous opportunist and an unmanageable idealist.

DESIGN FOR LIVING. Ethel Barrymore Theater. To be reviewed next week.

DINNER AT EIGHT. Music Box Theater. Trick melodrama about what happened to the various guests invited to a dinner party. The general public likes it very much better than I do.

GOODBYE AGAIN. Masque Theater. Fine performances by Osgood Perkins and others make this farce comedy very funny.

FOOLS CAP. Times Square Theater. Moderately amusing satire in which Shaw and Pirandello collaborate on a play for an insane asylum.

THE LATE CHRISTOPHER BEAN. Henry Miller Theater. Light comedy from the French completely rewritten by Sidney Howard and charmingly played by Pauline Lord and others. All things considered, it is much the most enjoyable comedy of the season.

care what the difference between a real and a tonal fugue is? And why should the radio audience be burdened with a distinction it is not qualified to understand? The plain fact is that talking about music is a very difficult business, and the more one confines oneself to biographical and historical material, the less serious harm one is likely to do. Nothing, at any rate, can tell us the most important things about music except music. If the broadcasting systems belonged to the state, as they do in England and Russia, they would, of course, be able to do serious and valuable work. Inaccuracies could be made the exception instead of the rule; pomposities could be deflated. But even if broadcasting were rendered independent of the public's immediate favor, it is not demonstrated that the remedy would follow inevitably and simply from the difficulty. There would always remain basic questions: Shall music be presented for the public to take or leave? Or shall one assume that there are people who don't know that they could like music, and bribe them by comment of one sort or another into finding out that they do? And what form shall such comment take? Difficult questions at best, they are impossibly so as long as program-making remains dependent on fan mail and the whimsical tastes of captains of industry turned "showmen."

ARTHUR MENDEL

Films

Noel Coward's "Cavalcade"

PSYCHOLOGICALLY we shall be affected by the film at the Gaiety whether or not we have any sentimental attachment for the British Empire (which would be factitious enough in a metropolitan American audience) or whether our minds can accept all of its episodes as being quite true to human experience as we know it. Here again is the old mesmerism of the theater, which at its best has a way of lulling to rest the finest resistances of our mind and experience. For the time that we spend watching "Cavalcade" we are so carried along by its speed and intensity and cumulative richness of imagery that our judgment is suspended; we are completely immersed in the experience. It answers therefore to at least one of the essential conditions of good art: it is so persuasive as to make us forget its assumptions. The eye is as helpless before its fast-moving procession of images as the ear before the strains of some vast symphony, let us say, whose fundamental emotion may not be valid for us. And all this is but another way of saying that in "Cavalcade" are realized to their full the peculiar artistic elements that we have come to recognize in the cinema medium—the enlarged scale, the increased tempo, and the dramatic symbol.

In a film which undertakes to give us a panorama of English society from the Boer War to the singing in a London night club of a Noel Coward ballad entitled "Twentieth-Century Blues," the most obvious of these elements to look for is of course scale. If Mr. Coward did not actually write his play with a screen version in mind he must be pleased to discover how much his conception gains in every way through the greater enlargement and acceleration of the newer medium. But since neither of these effects was after all lacking in the play, it is probably more to the point to remark on one particular type of effect which is definitely more realizable on the screen than on the stage. Altogether the most perfect scene in the film is the one in which we are given a glimpse of a young married pair leaning over the railing of a ship, their eyes lowered to the water beneath and their voices murmuring of happiness and death and the passingness of love. It is not until they have

moved away that the camera closes down upon the word painted on the lifesaver against which they have been standing. The word is the name of the ship—the Titanic. Here, of course, everything derives from the fact that the scene is resolved without anything being said or done. Through a single visual symbol the whole obvious sequel is eliminated; and by means of the camera this symbol is given an emphasis that it could not have received on the stage. It is unfortunate that the director was unable to substitute such a symbol for the inferior war scenes, which suffer in comparison not only with those in "All Quiet" but with the more recent frieze-like stylization in "A Farewell to Arms."

For such a picture as this credit must be pretty equally distributed among the author, the director, and the players. There is nothing novel or otherwise arresting in the direction of Frank Lloyd, but rather a competent synthesis of elements that have been developed in Hollywood in the last three years. The acting of Diana Wynyard, however, is more than competent: an unerring tact saves her time and again from the easy bistrionism to which her situations lend themselves. As for Mr. Coward, it is no longer possible to dismiss him as a young man in whom cleverness approaches pretty close to genius. The writing in "Cavalcade" is uneven, but the best of it is good dramatic writing from any standard.

"The Island of Lost Souls" at the Rialto hastens the degeneration into the grotesque of the current macabre tradition and represents a further waste of Charles Laughton's fine talents as a character actor. And while "Der Hauptmann von Koepenick" (Europa) is one of the better German films, its humor would be more potent if its director had been less insistent about it, and had emulated René Clair's rapid tempo as well as certain of his minor devices.

WILLIAM TROY

Drama Not Pretty

ONE must not be misled by the title of "Big Night" (Maxine Elliott's Theater). It does, to be sure, concern itself largely with that peculiarly modern institution, the "party," but it is written in no festive mood. Indeed, it is a long time since I have seen so bitterly unflattering a picture of human nature or come away from the theater with a darker taste in my mouth. This is not exactly "passion recollected in tranquillity" but it is a kind of debauched counterpart—namely, the "big night" seen through the eyes of the morning after. Perhaps men and women never seem quite so contemptible to an unjaundiced eye; perhaps even the stupid drunk is not quite so disgusting unless one is indulging the prejudice naturally engendered by a moderate hang-over; but "Big Night" is undoubtedly impressive in its own disagreeable way. It may be a libel on advertising men and buyers, as well as upon the typical American for whom they are made more or less to stand, but it is, at least, a libel uttered with real conviction, and the play is not one which will be easily forgotten.

I am not unaware of the faults which may be urged against it as a work of art or of the fact that the author, Dawn Powell, has overwritten many of her scenes and overexplained much of her action. The advertising solicitor about to lose his job almost forces his unwilling wife into the arms of the "prospect" whom she has always hated, when the whole would have been vastly more effective if she had only caught and accepted a hint which the husband would not make overt even to himself. Time and again one all but loses one's faith in the entire proceedings because the author insists upon making perfectly ex-

THE ever deepening social crisis has made the American people more and more concerned with the future of their civilization. The play-boy attitude of the twenties is dead, as are the magazines dedicated to that philosophy. Serious, radical analysis is what is needed today, analysis of the American scene in American terms that the American people can understand.

It is such analysis that The Modern Monthly will present from month to month. It will be uncompromisingly radical, but its radicalism will spring from native and not foreign sources and its conclusions will be dictated by the logic of the situation and not by the dead hand of dogma.

The school-teacher, the doctor, the architect, the engineer, the artist, the writer, in fact all of the professional workers and the intellectuals in general, are faced with problems today that have to be faced, and can only be faced honestly and courageously from a radical point of view. To face them thus is the task that The Modern Monthly has set out for itself in these days when an old America is being buried and a new America is being born.

licit things which in real life would probably be felt only below the surface, and thus makes monsters out of persons whose vileness would reveal itself only in ways less open. Yet the capital fact remains that I did sit through "Big Night" in the grip of a horrid fascination, that its realities triumphed definitely over its unrealities, and that its truth hurt more deeply than its incidental falsities.

Theoretically, I have no great admiration for the merely unpleasant play. Usually those dramas which profess to do nothing except tell the disagreeable truth about thoroughly disagreeable people inspire me with only a desire to escape. But this one is mordant enough and original enough to hold one almost against one's will, and to generate a kind of pleasure which is less merely misanthropic than actually masochistic. These vulgar people have gathered ostensibly to make merry. Yet each, hating the other, has his own mean plans to further; and as gin makes each less skilful in hiding his own soul, as well as less capable of judging another, the vilenesses rise one by one to the surface. It is not pretty and it is not pleasant, yet I, for one, could not choose but hear.

Much of the effectiveness of the play may be set down to the acting of J. Edward Bromberg. The whole production is competent and creditable to the Group Theater which put it on, even though Stella Adler seems somewhat miscast as the wife. But Mr. Bromberg's performance as Bert Schwartz, owner of the Fortune Stores, rises far above the level of all the others. Some years before, he had pursued the ex-cloak model with dumb determination and got his face clawed for his pains. Now, when he meets her again at the party, his eyes follow her with what Aldous Huxley so vividly described as the "imbecile earnestness of lust." But as the evening wears on and one appreciates the stubborn, changeless, unconquerable persistence of his desire, one begins first to pity him and then, almost, to admire—at least by comparison with these others whose vices are so much more trivial and transitory and weak. Somehow or other the actor manages to make this lust impressive, to suggest how completely the big clothing-store man has set his heart—such as it is—upon this thing, and thus to give him a kind of dignity. As played by Mr. Bromberg, "Schwartz" is a memorable figure, and one almost regrets the vulgar irony which condemns him to be unable to remember next morning whether or not he had really got what he had so long wanted. "Big Night" is not a play which one likes to recommend without letting one's hearers know just what kind of dubious pleasure they are in for if they accept the recommendation. But I repeat—it will at least not be easily forgotten.

"Foolscap" (Times Square Theater) is a fairly amusing comedy but one which, nevertheless, does not quite live up to the hopes one forms during the promising first act. The author sets Pirandello and Bernard Shaw to collaborating on a play to be performed by the inmates of an insane asylum and that sounds like the beginning of an amusing satire. But only the beginning is really there, and after some fairly obvious fun at the expense of the two famous authors the play ends nowhere in particular. Frederic Worlock, Eduardo Cianelli, and Geoffrey Kerr are good.

"Two Strange Women" (Little Theater) is the kind of play about quaintly sinister mountaineers and wicked city folk which little theaters used to love to give. There is the old grandmother who has not spoken for twenty years, and there is the handsome youth to whom the town-bred vamp says mockingly, "I believe you are afraid of me." Contrary to my custom I left early, and so I do not know who it was that got pushed out the door and down the cliff. But the fact that the cliff was talked about so much and that its height was so frequently emphasized makes me reasonably sure that somebody was disposed of via that route. None of them would be missed.

THE AUTOMOBILE WORKERS in Detroit have at last decided to meet the wage-cutting policy of the manufacturers by calling a series of strikes. At first glance it would appear foolhardy for labor to attempt to use this weapon at a time when so many workers are unemployed and in need, but the Auto Workers' Union apparently has organized its campaign with more than ordinary skill. It struck at the very heart of the motor industry by calling out the mechanics in the body plants—workers who are relatively few in number and can be organized quickly and easily. Without a continuous supply of bodies the larger factories must close down. At the time of going to press this strategy had tied up more than half of the industry in Detroit, the Ford plants being completely shut down. Though the strikers did not number more than 6,000, probably as many as 100,000 workers were idle as a result of the walkout. Henry Ford's charge that the strike in the Briggs plant, which makes bodies for his company, was a part of a bankers' conspiracy to ruin him seems to us wholly incredible. The Auto Workers' Union has for months been preparing for this test of strength. It is no secret that the union has been led by Communist Party members, though in the present strike the leadership seems to have been shared by members of other radical and labor groups. The Communists had already won

two or three minor strikes before this latest walkout. If the Auto Workers' Union wins the strike at the Briggs plant, its victory is likely to have important consequences throughout the country. For the indications are multiplying that American workers have about reached the end of their patience.

THE BRITISH REPLY to the Roosevelt-Hoover invitation to discuss the war debts is, on the surface, a disappointing one, particularly its final paragraph. That paragraph was no doubt partly inspired by a desire to reassure British opinion at home that debt reduction would be obtained without costly concessions. Apart from this, the paragraph admits of a dual interpretation. It is obvious that no final "decisions on matters which constitute the subject of the approaching world economic conference and which affect other states" can be reached "before discussions take place at that conference between all the states represented there." From this standpoint the British note states a simple fact. There is no reason, however, why tentative and provisional agreements between the two countries cannot be reached before the general conference; nor should we assume that the British reply bars them. So far as a quid pro quo for debt reduction is concerned, the question is more complicated. A year ago a promise of reduction would have had a high trading value. Our irreconcilables and last-red-centers refused to take advantage of it. Given the new frame of mind to which we have driven our debtors, this trading value now amounts to very little. We want tariff reductions on the part of Great Britain and her dominions, but it is even more necessary that we grant them reciprocal tariff rates. For if the British Empire opens its markets to our goods while we refuse to open our markets to Empire products, then we can only sell goods to the Empire by resuming again our old game of selling on credit, that is, of making more foreign loans which will never be repaid.

INSTEAD of any move to reduce our tariff, however, there is a widespread sentiment in the lame-duck Congress and in the repudiated Administration in favor of raising it even farther. A bill has been introduced to levy a "compensating tariff" with adjustable rates to be used against countries whose currencies are depreciated more than 5 per cent from gold parity. Such a tariff would be certain to discriminate against those countries unduly. For all external currency depreciation there is always some compensating internal rise of prices and production costs, and this compensating rise is greatest in the particular articles which enter into foreign trade. It is ridiculous to ascribe our ills to a "flood of imports" when our total imports last year amounted in value to only \$1,323,000,000, compared with \$2,090,000,000 in 1931, \$3,060,000,000 in 1930, and \$4,400,000,000 in 1929. Imports from low-exchange countries have declined as have imports from all others. In the eleven months ending in November, 1932, imports from the United Kingdom amounted to \$70,000,000, compared with \$126,000,000 the year before; in the same period imports from Japan amounted to \$122,000,000, compared with \$187,000,-

000 the year before. Moreover, the drop of almost 40 per cent in commodity prices has meant an automatic rise in the burden of all specific tariff rates, which cover more of our imports than do ad valorem tariff rates.

THE DEPRESSION, like Scripture, can be cited by almost any Congressman in defense of any pet piece of extravagance. When a majority in the House of Representatives reinserted an appropriation of two and one-half million dollars to maintain the citizens' military training camps at full blast, the unemployment argument was movingly invoked. Congressman Barbour of California thought that in "this year of all years" something should be done "for the young men who have no work and many of whom have no homes." Candidates for the training camps are doubtless not profitably employed—being chiefly boys just out of high school. Most of them have never been at work. They scarcely fit into the picture of the 12,000,000 former wage-earners who are in need of assistance. Giving the boys a month's drill in snappy uniforms at Uncle Sam's expense would be both costly and ridiculous as a gesture of "relief." However sincerely advanced, this type of argument is mere camouflage, either of a national-defense complex or, more important, of the Congressman's individual pork barrel. The existence of a citizens' military training camp in a community means local purchases. A Congressman who permits abolition of a camp without laying an oratorical barrage risks the antagonism of the merchant princelings in his home town. When the real emergency is on the domestic economic front, it would seem obvious that true patriotism lies with the Congressional minority who have been seeking to eliminate these useless expenditures.

CONGRESSMEN eagerly searching every cranny for additional sources of tax revenues reacted none too favorably to the Treasury Department's income-tax refunds of \$80,000,000 for the past fiscal year. These included a refund of nearly \$3,000,000 to the United Fruit Company and four others exceeding \$1,000,000 to such corporations as the National Aniline and Chemical Company, the Reading Company, and the Botany Worsted Mills. The Aluminum Company of America got \$91,495, and its owners, Andrew W. Mellon and his brother, R. B. Mellon, also received personal refunds. It is clear that despite eleven years in office the former Secretary of the Treasury has never quite mastered the intricacy of an income-tax return. Former Postmaster-General Frank H. Hitchcock, long an active wire-puller behind the Republican scenes, and J. Henry Roraback, utility magnate and Republican national committeeman from Connecticut, also received refunds. The Senate thereupon provided for Congressional scrutiny of all refunds over \$5,000; the House raised the limit to \$20,000. But President Hoover vetoed the bill on the ground that it was unconstitutional, attaching an opinion by Attorney-General Mitchell that the proviso constituted an encroachment of the legislative branch upon the executive. The mere layman will be more apt to conclude that the reverse process has taken place and that it is the legislative power which has been trespassed upon by the executive. The Constitution gives to Congress the sole power to levy and collect taxes. Obviously Congress should have the right to know and pass upon the reasons for making tax refunds.

THE IRISH REPUBLICANS were the real victors in the elections of January 24. What they failed to achieve through successive rebellions they now seem likely to accomplish through the more orderly processes of democracy. It is not that Eamon de Valera is likely to proclaim a republic immediately on the strength of his party's surprising success. He is too much of a politician to make such a mistake. During the campaign he frankly declared that the people of Ireland must be "at liberty to determine freely their own governmental institutions and the extent of their cooperation with Great Britain in matters of agreed concern." This is the position he has taken for years, and he has said that this goal can be reached only by establishing an independent Irish republic. England's attempt to check De Valera by raising the tariff rates on imports from the Irish Free State has hurt the Irish people, especially the farmers, but despite the growing economic distress De Valera refused to deviate in the slightest degree from his program. That he had the support of the people is now abundantly clear. Even his chief opponent, William T. Cosgrave, appreciated the strength of the nationalist sentiment and sought to cater to it by making extravagant promises. But the temporary nature of these promises revealed that Cosgrave was simply following an opportunist course for the purpose of catching votes. Having obtained a majority, so that he need no longer depend even upon his allies in the Labor Party, De Valera can now proceed with his patient and considered efforts to free Ireland from the last vestige of English control.

NATIVES IN KENYA owning land in the recently discovered gold fields are to lose their homes and farms without compensation. That is the fact, although it is concealed beneath heaps of rubbish in the form of ordinances and amendments to ordinances and memoranda and proposals by the Colonial Secretary. Basing its comment on early dispatches from Kenya, *The Nation* reported some weeks ago that dispossessed natives were to be compensated by other lands—lands without gold! The Native Land Trust Ordinance, adopted in 1930, provided for such compensation. Adopted at a time of general unrest and apprehension in the native population, after white settlers had gradually usurped their best land, the ordinance guaranteed to the natives permanent possession of the reserves left to them. It also promised that in case of necessary alienation—for public purposes only and after full inquiry—the owner should be paid in land of equal area and if possible of equal value. These guaranties have now been cynically abandoned. The Kenya Legislative Council has opened the country in question—highly cultivated, overcrowded farm country—to a multiplying horde of prospectors who are permitted to seize the land, dig out the gold, and tear down the native huts. The owner of land, meanwhile, continues theoretically to be the owner. But his farm is in the hands of white outsiders who hold it on renewable leases which may run as long as twenty-one years. He receives no compensation; he gets no gold. He is advised merely to move over to some neighbor's land and wait for his own to be turned back at some indefinite time in the future. Naturally the natives are fearful, and angry. A situation which was tense when the Land Trust Ordinance was passed is made doubly dangerous. By law, the minerals are the property of the state. It would seem obvious sense, even from the point of view of enlightened

imperialism, to develop these fields under government control with an honest observance of the rights explicitly granted the natives. Only in this way can certain conflict between blacks and whites be avoided, and the remnants of British honor in East Africa be retrieved.

THE POLITICAL CRISIS that brought down the Paul-Boncour Cabinet in France probably cannot be finally resolved by ordinary political methods. It has already been suggested in dispatches from Paris that while another stop-gap government may succeed that of Paul-Boncour, eventually a non-party government will have to be formed. The Radical Socialists led by Edouard Herriot have the largest representation in the Chamber of Deputies. Therefore they constitute the logical nucleus of any party government. But to form a majority they must bargain either with the center parties on the right or with the Socialists on the left. Both Herriot and Paul-Boncour tried working with the Socialists, and both fell because at critical moments the Socialists withdrew their support. Numerically it is possible to arrange a coalition between the Radical Socialists and the parties of the center, but actually such groups as the Popular Democrats and the Center Republicans are much farther removed in a political sense from the Radical Socialists than is the Socialist Party. The French have in the past remained patient through seemingly endless Cabinet crises. On the other hand, there are significant indications of popular dissatisfaction with the financial policies of the Radical Socialists which may finally crystallize in a demand for a government of "national concentration" similar to the National Union which Raymond Poincaré headed in 1926. The French people remember that Poincaré stabilized the franc in that year after Herriot and the Radical Socialists had failed. Faced with another financial crisis, they are being persuaded, with the help of the press, that the Poincaré methods may have to be resorted to again.

INNUMERABLE LITERARY STUDENTS suffered a real pang when they read the news of Professor Saintsbury's death. Most, of course, knew him only through his many books, but he was that very rare thing, a scholar who managed somehow to convey the flavor of a vivid personality even through the opaque medium of a textbook. Few men of any time had read so much or so enthusiastically. The forgotten books of the past were almost as familiar to him as the surviving classics, and, indeed, he once declared that no book was uninteresting if only the reader brought a proper equipment with him. Scholars of the specializing type sometimes accused him of inaccuracies which only the most special specialist could note, and he wrote in a lumbering style full of parentheses and side remarks too numerous to be fitted easily into any sentence, however long. But even that style suggested the amiable though crotchety old Tory he was.

IT IS A SORRY COMMENTARY on the state of civilization in America that a fair judicial opinion on any case involving a Negro is so rare as to merit special mention. But that fact does not detract from the credit due to Mr. Justice Maxey of the Supreme Court of Pennsylvania for his admirable decision granting a new trial to William Brown. In February last the body of Dorothy Lutz, eight years old, was found in an empty house in Philadelphia. A

few days later William Brown, a mulatto, sixteen years old, was taken into custody. He was indicted for murder on the basis of circumstantial evidence and a signed confession. At the trial the chief issue was whether the confession had been made voluntarily or under duress. The tale of torture related by Willie Brown was not new—it included curses, a hot room, threats of "a mob," blackjacks, hunger, and thirst. The decision was not new either. The police were given a clean bill and Willie Brown was sentenced to lose his life. The claim for a new trial was based on excerpts from the charge to the jury of the presiding judge, Harry S. McDevitt. One of these, with Justice Maxey's reply, follows:

JUDGE McDEVITT: In the procuring of confessions sometimes nicety of details must be governed by the necessity of circumstances. Circumstances create conditions that justify methods that are employed.

JUSTICE MAXEY: This is error. No principle of the law is better settled than that confessions secured by brutality or by any other form of duress are vitiated.

These two quotations are typical both of the palpable bias of the judge's charge and the "genuine, tender, and reverent solicitude for the dignity and majesty of the law" which distinguishes the overruling opinion.

THERE ARE VERY REAL REASONS for regretting that the Group Theater has ceased its activities for the season and, quite possibly, forever. Most of the other non-commercial theatrical enterprises in New York are excessively unimportant and the Group was the only one which promised to play the role filled from about 1914 to 1925 by such organizations as the Washington Square Players, the Provincetown Players, and the Neighborhood Playhouse. Now that it is gone there is no vigorous organization definitely committed to experiment. The immediate reason for its collapse was the prompt failure of its most recent production, "Big Night," which was not only disliked by most of the critics except *The Nation's* own, but was damned with unusual and not wholly understandable ferocity. Whatever may be thought of that production, however, it can hardly be denied that the Group's record is an extremely honorable one. Several years ago it contributed "Red Rust," last year "The House of Connelly," and this year "Success Story." Each would have been definitely missed from any list of the plays of the year.

AMONG THE DISREGARDED VICTIMS of the depression are some hundreds of lions, tigers, elephants, and other wild animals which were dragged from their native forests to be shut up in municipal or circus zoos that are now no longer willing to feed them. They can't be sold because no one will buy them, and the city of Spokane, for example, has decided simply to slaughter a collection which includes polar bears, buffaloes, and grizzlies. Cincinnati has a better plan, which consists in setting school children the task of selling tickets of admission to the Zoo, but almost any solution is better than that adopted by a showman who sold two lions to a St. Louis eccentric who used them to stage a lion hunt for his own amusement. The spectacle of this man vainly attempting to make the tame beasts leave their cage in order that he might imagine himself a mighty hunter as he shot at them furnished one of the most revolting of the minor grotesqueries of our civilization.

Weak Knees and Strong Banks

SHALL we have pawnshops or real banks? That was the question put before Congress and the country by Senator Glass of Virginia in defending his banking-reform bill which has now been passed by the Senate. Eighty per cent of the 11,000 banks that have failed in recent years, he declared, have been institutions capitalized at less than \$25,000 each, "pawnshops set up over the country, miscalled banks, that have toppled over like tenpins in an alley at every disturbance of business." Senator Glass might have phrased this question differently and so come closer to the heart of the problem. For the real quarrel lies between those who believe we ought to preserve our anarchic system lest by changing it we deliver ourselves into the hands of a few rich men, and those who favor a strong, centralized banking system under adequate public regulation or control. The first group holds that it would be dangerous to allow either Washington or Wall Street to encroach any further upon our tradition of economic freedom and individual initiative. The second is interested primarily in stable and efficient banking. The Glass bill takes an important though modest step in this direction.

Among the difficulties now threatening the American banking structure, two stand out. The first is that instead of one uniform banking system we have forty-nine conflicting and competing systems. In his article in *The Nation* of April 13, 1932, H. Parker Willis recommended "the transfer of power over banking legislation to the federal government" either by means of a constitutional amendment or by agreement between the States. "Without this step," Dr. Willis asserted, "we shall go on with the conflict between grades of government, with the attempt on the part of the States to tempt banks away from their federal charters, with the effort of national administrators to draw them back by laxity in law or in administration, with the craven fear on the part of the Federal Reserve system lest it lose members through uprightness of administration, and with other elements of profound weakness that must ultimately bring even more complete disorganization than that now existing." The Glass bill does not directly touch this important aspect of the general problem, though it seeks to strengthen the Federal Reserve system and thereby overcome some of the difficulties mentioned by Dr. Willis.

Secondly, there are too many banks in the United States, of which the vast majority are small, independent institutions which for the most part are undercapitalized. Under competent management they may survive in times of prosperity, but they fall very quickly in times of depression. When these houses close their doors by the hundreds and by the thousands, not only are the communities they serve deprived of their banking facilities and huge sums in deposits lost or tied up for indefinite periods, but the shock of such waves of bank failures disturbs business and finance throughout the country. A highly centralized system, such as may be found in England or Canada, could afford to absorb the smaller, independent institutions when they are in trouble. It is significant that despite the depression England and Canada have had very few bank failures. In the United

States, on the other hand, we have had failures by the thousands. Here there is no bank or group of banks strong enough to take over the smaller houses and guarantee their deposits. And fear of the power of Wall Street thwarts every effort to strengthen or centralize our banking system.

It is probably true that the public is not prepared for the concentration of banking power in the hands of relatively few houses, especially since we have not yet had sufficient experience with regulatory methods to insure public control of banking that would be adequate to prevent abuse of power. The sensible approach to the problem is through the development of branch banking, leading naturally to centralization. At the same time, by meeting each new problem as it arose, a technique of governmental supervision could be developed. The Glass bill seeks to encourage precisely this sort of evolution. It lays down new rules for banking practice in the national field. It would also permit national banks to open and maintain branches in the States in which they are themselves located, "if such establishment and operation are at the same time expressly authorized to State banks by the law of the State in question." True, only nine States have such laws at present, but others are likely to adopt them in the near future.

It is, however, not sufficient merely to encourage branch banking. There must also be intelligent and expert supervision, and the government body charged with this task must be given punitive power to compel the bankers to abide by the rules and regulations adopted. The Glass bill is designed in part to prevent another stock-market explosion and to stabilize the national banking system generally by restricting Federal Reserve credit in order to keep it out of speculative channels, by compelling national banks to divorce themselves from their security affiliates, thereby preventing these banks from gambling in stock-exchange securities, and by controlling holding companies for bank stocks. But the bill would also broaden the supervisory and punitive powers of the Federal Reserve Board by granting to that body authority to remove officers and directors of member banks who in its judgment engage in unsound banking practices. That is an important step forward.

The weak-kneed position assumed by many of our Western and Southern politicians with regard to branch banking is altogether natural. It is true that the failure of the big bankers in the present crisis has been among the greatest of the tragedies attending the depression. But the people of the South and West should remember that their small local banks, being inherently weak, appear to be doomed in any event if the depression continues much longer. Would it not be better for these communities if the larger banks were permitted to take over the local institutions for the purpose of keeping them open and serving their communities? Obviously this would place tremendous power in the hands of relatively few banks. But with adequate public control, particularly with respect to the activities of individual bankers, this would constitute no great menace to our economic structure. Of course, if public control broke down, as it would do if the bankers were allowed to capture the Federal

Reserve Board, there would be no alternative left except nationalization of the whole banking system. No one will seriously argue that it would be easier to nationalize our banks under the present relatively chaotic conditions than it would be if the banks were drawn together in a strong, centralized system. That is the direction in which we are moving. We have it within our power to decide whether the road toward a uniform and sound banking system is to be strewn with the wreckage of innumerable small, independent banks. The new system could as well be built upon strong branch banks operating in every community and serving the interests of the country as a whole.

Mr. Roosevelt Must Lead

FRANKLIN D. ROOSEVELT'S statesmanship will be tested immediately upon his taking office. Not since the Presidency of Abraham Lincoln has the need for effective leadership and prompt and vigorous action been more imperative. It may fairly be said that today's problems are more complex and difficult than those of 1861. So steadily has the economic crisis been aggravated that measures which conceivably might have checked the downward trend two years ago will no longer be adequate. The country faces the gravest crisis in its peace-time history.

Within a few hours after inauguration the nation should be able to gauge fairly well whether Norman Thomas's taunt that the political star of Franklin D. Roosevelt would begin to set on March 4 was justified. The selection of his Cabinet, for one thing, will be highly significant. If it is composed of great names—great in the dear departed past—it will indicate that Mr. Roosevelt's policies and program are to be merely a slightly warmed-over Republicanism. His major appointments will provide an acid test of his understanding that we are passing through, not a depression, but the end of an epoch. If, for instance, he appoints Miss Frances Perkins as Secretary of Labor, it will demonstrate that her superlative qualifications for that post outweigh political considerations, and that he has been strong enough to resist that type of pressure. If, on the other hand, he nominates Daniel J. Tobin, for many years president of the International Brotherhood of Teamsters, Chauffeurs, Stablemen, and Helpers, it will be evident that the same shortsighted and ineffective policies which have brought about the deterioration of the American Federation of Labor will shape the labor program of the Roosevelt Administration.

Similarly, the appointment of an Attorney-General with the public record and social viewpoint of Senator Thomas J. Walsh or Felix Frankfurter will serve notice that a few score corporation heads will no longer continue to be superior to law and government. A vigilant Attorney-General would have proceeded against Samuel Insull long before his flight to Greece. And there are "blue-sky" practices through which other utility magnates and financiers have robbed the public of millions, that cry aloud for prosecution, so that this plunder shall cease. The Progressives—who have borne the Republican label—should be represented in the Cabinet. It is they who, for a decade, have fought for a "new deal" for the American people. Philip F. La Follette, former governor of Wisconsin, or Bronson Cutting

of New Mexico would greatly strengthen Mr. Roosevelt's Cabinet.

The utter futility that has marked not merely the present lame-duck session, but the relations of President and Congress for the four years of the Hoover Administration should be a warning to Mr. Roosevelt that he must never relinquish the tiller. His chances of obtaining and preserving Congressional party harmony—essential for the prompt adoption of relief measures—depend largely on the vigor of his leadership, the definiteness of his program, and the speed with which he inaugurates it. The very gravity of the crisis and the need for action are factors in his favor, if only he will take advantage of them.

Measures which obviously require immediate action—settlement of the war debts, downward revision of tariffs, arms reduction, the recognition of Russia, banking reform, farm and unemployment relief, and necessary government economies. Reemployment is, of course, the overshadowing need. The often proposed several-billion-dollar bond issue for direct relief or for indirect relief through public works, slum clearance, and so on may be a "nostrum" to the spokesmen of the vanished new era who want at all costs to avoid higher income taxes, but their own remedies have been flat failures. The character and direction of the financial relief they extracted from Mr. Hoover need to be fundamentally altered. More important than the bolstering of bankrupt railroad securities and the dumping of large sums of the people's money into insurance companies and banks (which continue to close) is the relief of the hungry and destitute and of farm and home owners, thousands of whom have already lost their properties. Further dispossessions, either because of inability to pay mortgage interest or taxes, must be stopped at once.

For nearly three and one-half years Mr. Hoover and the giants of finance and captains of industry have been in charge of national affairs. The resulting debacle has been complete. Their fiscal and economic policies have been ruinous. The life of the country is at low ebb. Mr. Roosevelt need not fear to try new leaders and new ideas, and to venture boldly into untrodden paths.

Hitler in Power

A DOLF HITLER has at last reached his goal. His appointment as Chancellor of Germany is for him a supreme personal triumph. But does his ascendancy mean that the type of fascism he represents is to rule unchecked? Are the heads of the "republican traitors" of 1918 now to "roll in the sand," as he boasted at the famous Leipzig trial a few years ago? It seems unlikely. President von Hindenburg has conferred upon Hitler the honor of the chancellorship but he has taken pains to prevent any real power from slipping into the hands of the National Socialist leader.

Apart from the personal satisfaction Hitler may get out of the chancellorship, the change in the government brought only one distinct gain to the National Socialists. Hermann Göring, speaker of the Reichstag, was placed in charge of the Prussian Ministry of the Interior, an appointment which gives the Nazis control over the huge and important Prus-

sian police force of 150,000 men. And even this concession was hedged with numerous checks. Former Chancellor von Papen, who has remained on the most intimate terms with President von Hindenburg, was not only appointed Vice-Chancellor, but was also given the post of Federal Commissioner for Prussia. Thus Göring will be responsible to Von Papen, who is opposed to the use of the Prussian police for political purposes. The Nazis also sought control of the Reichswehr, but Hindenburg named one of his own advisers, General Werner von Blomberg, to the Ministry of Defense, which controls the army and is charged with maintaining general public order.

It appears improbable that the Nazis will be able to carry out any of their major economic or social policies under the new arrangement. Baron von Neurath retains the Foreign Affairs portfolio, which makes it certain that there will be no flat repudiation of the Versailles treaty or of other commitments in the foreign field. Count Schwerin von Krosigk, who was reappointed Minister of Finance, is not only conservative and therefore opposed to experimentation of the sort that the National Socialists advocate, but he has customarily acted as spokesman for the big Berlin banks which the Nazis have always denounced. Other members of the new Cabinet, who are no less nationalistic than Hitler but are hostile to his program and tactics, include Alfred Hugenberg, the publisher, and Franz Seldte, head of the Stahlhelm. Hugenberg was appointed Minister of Commerce and Agriculture, and Seldte Minister of Labor.

In the excitement attending the advent of a Hitler Government the fall of General von Schleicher seems almost to have been overlooked. Von Schleicher was the "man of mystery," popularly considered to be adept in backstairs intrigue. He is said to have boasted on one occasion that when he came into power he would remain Chancellor for twenty years. Yet he lasted only fifty-seven days. The cause of the sudden fall has not been satisfactorily explained, but it appears that in Franz von Papen he met his master at the game of political intrigue. Ever since Von Papen was compelled to resign from the chancellorship last November, he has been busy pulling wires. He seems finally to have accomplished his end by coming to terms with Hitler and pulling down Von Schleicher. There is little doubt that Von Papen, with Hindenburg supporting him, will be the real head of the Cabinet.

If the new government is tolerated by the Center Party it may survive for months, perhaps much longer. If the Centrists turn against it, it may fall at once, for no government depending on a parliamentary majority can be formed without their support. Of course, Hitler and Von Papen may choose to dispense with the Reichstag altogether, precisely as Von Schleicher intended to do, but it is more than probable that Hindenburg would not consent to such a frank violation of the constitution. Even if the new government should remain in office, with or without Catholic support, Hitler seems destined to lose much of his following unless he can prevail upon his colleagues to carry out some of his blood-and-thunder promises. That they will do so is entirely out of the question. A majority of them would be only too happy to see the National Socialist movement destroyed, or at least working in harness with the other forces of reaction, but on their terms, not Hitler's.

Back to the Land

IN a recent issue of the *Countryman*, a little English magazine bound in grass-green covers, appears an imaginary conversation between two Londoners. "At twenty," says the first, "you left the farm to come to the city. And for forty years you slave your inside out—for what?" "To make enough," replies the other, "to live in the country."

The movement to the city began no doubt when the second house in the world was built alongside the first; and the movement back to the land began soon afterward when one of the inhabitants of a primeval mud village began to feel crowded. Gregariousness and solitude, like war and peace, are one pair of the opposites of men's desire. History rewritten in terms of these two movements would be more amusing than economic determinism and not altogether fallacious. In this country, as everybody knows, the rush to the cities began when the last frontier was reached. (We suspect that like United States Steel common it reached its highest point in 1929.) The city, too, attained its highest development in the "new era." To men nourished on 1,000 per cent profits derived from an initial dollar borrowed from a bank and invested on margin, the slow increase of nature was unbelievably crude, an utter denial of progress. So they built themselves skyscrapers and hid the offending ground that lies beneath every city with a solid mass of brick and stone to proclaim the impregnability of man's handiwork.

The great wave of inflation, which reached its high-water mark in New York City, has already receded to the lower floors of numerous skyscrapers. Ten thousand empty offices high above the street are lighted at night only by the reflection from some passing airplane, and even at the street level chasms yawn where once the latest fashions or a solvent bank flourished.

Meanwhile the farm and the farmer rise in public esteem. Formerly anyone who stayed in the country when he could get a job in a factory deserved to starve. Now important people are discovering that the farmer must somehow be saved, and former skilled mechanics, when they are able to, are bartering their skill for the farmer's food. The intellectual return to the land began some years ago. From one end of the country to the other in sundry quiet places will be found bored or tired city intellectuals "annihilating all that's made to a green thought in a green shade."

We await the census of 1940, and we expect that it will show a movement back to the land. But we shall not look upon the news as final or expect the cities to fall into decay. By the time Russia completes its movement to the city and starts back again we shall have begun another urban inflation. We have just rediscovered certain lines by Thomas Randolph, from an ode to Master Anthony Stafford to hasten Him into the Country.

Come, spur away
I have no patience for a longer stay,
But must go down
And leave the chargeable noise of this great town
* * * * *

'Tis time that I grow wise, when all the world goes mad.
These lines were written before 1635, yet London persists.

Issues and Men

The Army and Navy Forever

WHY is it that the army and navy appropriations have become so sacrosanct in Washington? It is true that there have been some pay cuts in both the army and the navy, but the vast total of the outlay for army and navy remains untouched. It is as if a curtain of inviolability had been thrown around them, or as if there were evidences that the country was in danger. The Navy League representatives, of course, have been to Franklin Roosevelt to show him how rapidly we are dropping to third—or is it fifth?—place, while the Chief of Staff has solemnly informed the country that in the matter of land armaments we stand in seventeenth place. Some of the vital services of the government, such as education, are being sharply curtailed. Why is it that there is such hesitation about reducing the army or navy? The Appropriations Committee of the House of Representatives has reduced the new army bill by only \$60,000,000. Nominally the cut is \$110,000,000, but \$50,000,000 of this amount is accounted for by non-recurring emergency construction which is ending in the present fiscal year. The military side of the War Department's work is actually cut only \$31,584,000. Even this reduction was at once attacked, particularly the bill's suspension for a year of the citizens' military training camps, which have thus far been attended by 377,000 young Americans eager to learn how to kill other human beings and to be supported while doing so. But the bill does not even move to reduce the number of officers in the regular army from 12,000 to 10,000, as last year's bill did, and it does not specify that as vacancies in the lowest grade of the corps of officers occur, there shall be no fresh appointments. Yet the army is dreadfully over-officered compared to the number of men it actually has in the ranks. It has many more colonels than can possibly command regiments, far more generals than ever before in our history, and the retired list is stuffed with many of the temporary officers of the World War.

Now is this necessary? Let us leave aside the fact that for more than one hundred years of our national existence we never had a regular army larger than 25,000 men and officers, and that during most of that time we had one of only 10,000. Let us not dwell upon the facts that we were solemnly assured that we had won the war to end war, and that we have signed the Pact of Paris forever outlawing war as an instrument of national policy. Let us look at the world as it is. What nation could possibly go to war with the United States today? Not Germany certainly, nor Russia, which is obviously willing to let Japan go as far as it likes in Manchuria rather than endanger the very existence of the Communist system by getting into a war. And surely not France. The wildest jingo never suggests that we shall go to war with France. Nor does anybody suggest that Mussolini's fleet is a menace to the United States. England? Well, there is certainly no danger of that in view of the critical condition of Britain's industry, the prostration of most of its basic industries, and the financial debacle of last year which made it abandon the gold standard—to say nothing

of the historic friendship between the two countries and the pledges of eternal friendship we gave when we joined the Allies in 1917. There remains, then, only Japan, which would seem to have its hands full in Manchuria—Japan, whose adventures in China have made that nation so unpopular with the rest of the world that it could hardly expect anything but a united front against itself in the event of hostilities with a Western Power. But, we hear it said, is it not true that there exists an alliance between England and Japan, tacit, it is true, but none the less binding? Would not these two countries be glad to join forces against us?

Well, the answer is that 60 per cent of Japan's trade is with the United States and this would cease on a declaration of war; that the yen has steadily lost ground for the last two years; that nothing would so jeopardize the Japanese adventure in Manchuria and Jehol; and that it would be impossible for Japan to find the money necessary to finance a war with the United States. The first result for England of alliance with Japan would be the loss of India, which would certainly take the opportunity to throw off British control. The simple truth is that there is not a nation in financial condition to undertake a struggle with the United States, and certainly not one whose military officers and financial and economic experts could hold out the slightest hope of gaining anything whatever from war with the United States, whether that war should be successful or unsuccessful. Have we not learned the great lesson of the World War and its aftermath—that the victors are punished as much as the vanquished? But still the Congress acts as if we must not reduce the army by an officer or a man; as if we must not lay violent hands upon our obsolete battleships. And the militarists and navalists are crying out that if there are any reductions in the armed forces, the legions of the unemployed will only be increased. To this the answer is that the discharges could be gradual, and that if necessary it would be better and cheaper for the United States to give these men a bare living sustenance in civil life than to maintain them in barracks. Certainly if unnecessary pensions were cut off, there would be no difficulty in giving these discharged men a dole until such time as they were absorbed by the farm or by industry. As a matter of fact, there was more than one general in Washington last winter who admitted privately that the army would be much more efficient if it had several thousand fewer officers. Whether they were right or not there is today no sound reason why the army and navy appropriations should not be cut by several hundred millions of dollars, as a long step toward that disarmament for which even Senator Jim Watson of Indiana is apparently ready, now that he has introduced a bill for the United States to offer to the rest of the world a 50 per cent reduction in all armaments for a period of ten years.

Quincy Garrison Villard

Machines and the Future

By ARCHIBALD MACLEISH

NOTHING about the human race is more curious than its passion for believing prophecies of doom—unless it be its passion for destroying the prophets. Any oracle who cares to foretell the end of a civilization can make the front pages from Bushire to Nome. But God must defend him if the details of his divination err.

Mr. Howard Scott, augur of the Technocrats, is the latest example. Like all successful prophets Mr. Scott appeared in a time of tribulation. Like all successful prophets Mr. Scott foretold woe. And like all successful prophets Mr. Scott was widely and resoundingly and hysterically believed. With the inevitable reaction, the inevitable repudiation, and the inevitable relapse. Indeed, Mr. Scott differs from his predecessors among the ancients in one characteristic only. The Roman prophet could not be discountenanced until the event. But Mr. Scott, because he appealed to the great American belief in scientific truth and therefore expressed his dooms in scientific terms supported by scientific findings, was subject to immediate check. And when the check was made, when the devout discovered that the ratio of 1932 electric-bulb production per man to 1914 electric-bulb production per man was 550 to 1 instead of 9,000 to 1, the black ink of rage ran from one end of the country to the other. The customers had been sold. The facts were otherwise. Mr. Scott was a fake prophet. And nothing was necessary to a proper cinematic ending for the whole affair but the repudiation of Mr. Scott by his own disciples. Which obligingly followed.

If no one were concerned in the result but Mr. Scott, the situation would be innocuous and amusing. Mr. Scott would have had his day in the sun and no one but himself to blame for the precipitancy which threw him into the newspapers before he had tested his statistics. Unfortunately, however, Mr. Scott is very far from being the only person concerned. For his name, in part because of his own egoism, and in part because of the fumbling of editors who knew no word to express the corpus of ideas with which Mr. Scott was dealing, has become identified and synonymous with one of the most pressing problems our civilization has to face. Technocracy, whether we like it or not, now stands by substitution for the whole body of social and economic questions posed by the mechanization of industry. And the neglect of Mr. Scott as an individual and of Technocracy as a school ~~is~~ the neglect of issues which we cannot afford to neglect. As the published remarks of the last two weeks abundantly prove. It is not alone left-wing intellectuals, recently converted from Professor Babbitt to Karl Marx and unable with decency to afford a second removal at this time, who have breathed audible sighs of relief over Mr. Scott's discomfiture. It is also the bankers and the episcopal bishops and the societies of engineers and the chambers of commerce and the Professor Fishers. Mr. Paul du Pont put the case neatly when, with unintended irony, he remarked that United States Steel at sixty would put an end to the whole discussion. It would. And these gentlemen hope to see the day.

The rest of us, however, do not. And for two reasons.

Of which the lesser is the certainty that failure to deal with the problem now means a disaster—and a disaster beyond the profit of any revolutionary group—within this generation; and of which the greater is the conviction that the recognition of the technological trend and the acceptance of its significance offer the first ray of human hope since industrialism began. The Technocrats were journalistically clever but humanly obtuse when they made their cause a cause of fear. The real meaning of modern industrialism has no interpretation in terms of fear except for the banking class. For the rest of society it offers hope. Earlier in this century and throughout the latter half of the nineteenth century there was no hope in industrialism but escape. Poets turned aside from it. Philosophers transcended it. Even the Communists who plunged into it to the hair roots, accepting the human categories of economic class it imposed, worshiping the symbolic tractors it produced, and making a religion of the labor it compelled men to perform, were unable to find in industrialism a positive justification and were forced to express their Utopia in negatives—the end of capitalism, the end of exploitation, the end of injustice. But with the third decade of the present century the image changed. Industrialism turned another face. It became apparent that the goal of industrialism was not merely greater and greater production, more and more material, richer and richer bankers, but something quite different from these things. It became apparent that industrialism was moving toward a degree of mechanization in which fewer and fewer men need be, or indeed could be, employed. And that the result of that development must, of physical necessity, be a civilization in which all men would work less and enjoy more. For the alternative to such a choice was a state in which a half or a quarter of the adult population would be unemployed and carried as charity charges by the remainder of the population, and such an alternative was unthinkable. What political or social revolutions must intervene no man could say. But the probable and indicated outcome could be foreseen by any man who was familiar with the figures.

The statistical statement of that prognosis is the heart of Technocracy. And it is there, rather than on the pin's head of particular production figures, that the angels should be made to dance. Technocracy's brick and pig-iron figures may, and undoubtedly do, prove that the Technocrats are exceedingly careless engineers. But in the last analysis the important question is not whether a man can make 9,000 times or only 550 times as many light bulbs now as he could make in 1914, but whether it is or is not true that the mechanization of industry has reached the point where production can increase without a corresponding increase in the number of wage-earners. For if the answer to that question is in the affirmative, then the direction of growth of industrialism has changed, our civilization has turned a corner, and the ancient conception of human work as the basis of economic exchange and of the right to live is obsolete, since the work of machines and the conversion of non-human energy take the human place.

There is no doubt whatever that the answer is in the affirmative. Charts in the preparation of which the Technocrats had no part prove that from and after the year 1919, while the volume of production increased, the number of wage-earners employed in manufacturing leveled off and actually fell, with a loss by 1927 of 3 per cent. And this loss was reflected in actual unemployment totals. Dr. Leo Wolman, whose findings are not subject to the skepticism which meets Mr. Scott's, estimated a minimum of 2,055,000 unemployed outside of agriculture in the boom and booming year, 1927; and the reputable New York State Commissioner for Labor stated that in 1928, with no corresponding slump in factory production, unemployment was as bad as it had been in 1921. Comparison of the years 1923 and 1927, by industries, gives overwhelming support to the conclusion.

Industry	Change in output	Change in employment
Oil: petroleum		
refining	84 per cent more	5 per cent less
Tobacco	53 per cent more	13 per cent less
Meat: slaughtering, packing	20 per cent more	19 per cent less
Railroads, 1922-26	30 per cent more	1 per cent less
Construction, Ohio only	11 per cent more	15 per cent less
Automobiles, 1922-26	69 per cent more	48 per cent more
Rubber tires	28 per cent more	7 per cent more
Bituminous coal	4 per cent more	15 per cent less
Electricity, 1922-27	70 per cent more	52 per cent more
Steel	8 per cent more	9 per cent less
Cotton mills	3 per cent more	13 per cent less
Electrical equipment	10 per cent more	6 per cent less
Agriculture, 1920-25	10 per cent more	5 per cent less
Lumber	6 per cent less	21 per cent less
Men's clothing	1 per cent more	7 per cent less
Paper	0	7 per cent less
Shoes	7 per cent less	12 per cent less

These figures have never, so far as I know, been attacked. Mr. Simeon Strunsky makes much of the fact that the census figures for 1920 and 1930 show an increase in the latter year of 1,280,000 in "manufacturing and mechanical industries," but neglects to explain how these occupation figures are obtained. As Mr. Strunsky knows, the decennial census is a population census and not an employment census. A man will speak of his "occupation" as machinist if he was last a machinist, even though he have now no job. And the tabulator has no choice but to write him down as a machinist. Thus the decennial census throws little light upon the problem. One must turn to the census of manufactures where, on the basis of pay rolls, actual employment figures are given. This census shows a drop from 9,000,000 in 1919 to 8,350,000 in 1927 and 8,839,000 in 1929.

Another device of Technocracy's critics is the use of percentages presented in Chapter VI of "Recent Social Trends," which show the proportion of the population, sixteen years of age or over, gainfully employed to have been 52.2 in 1870 and 57.1 in 1930. But this presentation is a trifle disingenuous since it omits the intervening figures. The peak shown by these percentages was not 1930 but 1910, when 59 per cent were gainfully occupied. In 1920 the percentage fell to 58.1 and in 1930 to 57.1.

It seems impossible to deny the fact of the decline. And if the decline in number of wage-earners in the face of an increase in production is admitted, the case is proved. It would be no answer to argue, as many critics of Technocracy do argue, that the lost population of the factories was taken up in the "services"—the hotels and the bond offices and the gas stations. For a society which wished to take advantage of the potential benefits of the new industrialism would not force its displaced workers into these selling services to swell a new Coolidge-era expansion, but would decrease workers' hours to spread the leisure resulting from technological advance. It is only the present misfit distribution system which makes it necessary for one man to take to the road selling insurance while nine men left in the factory go on working ten hours a day. The "services" from this point of view are merely a buffer margin to enable the present system to frustrate its own genius in the interest of its creditors. And the benefits from swelling the services are, as the present disaster proves, temporary at best. But even were it otherwise, the opposition would still have failed to prove that the services will take up all the slack. Surveys have been made showing that 1,907,000 new positions were created in the twenties in medicine and hotels and restaurants and moving-picture theaters and banks and the like as against the 1,485,000 positions estimated to have suffered technological cancelation in industry. But this result neatly omits the population growth in the interval which should have increased the number of wage-earners by 2,000,000. And the only actual case studies so far made to determine how adequately men displaced as puddlers and cutters are really taken up in teaching and stock and bond offices have signally failed to prove the opposition point. The lag between jobs was found to be serious even when new jobs could be found at all, and the only conclusion to be drawn from these studies is that, however the individual components of the residuum of the unemployed may shift and change, the total body of unemployment remains. In the last analysis the opposition is left with the cold comfort of the orthodox economic theory that men displaced by the machine in one industry *must*, either because of reduced costs and greater demand or the deflection elsewhere of the consumer's money, find work eventually. That theory has never been proved.

If the opposition has failed to make its point on the basis of actual employment figures, it has also failed to make its point on the basis of the rate of change. The significant and fundamental fact which no one has denied is that productivity per wage-earner was almost constant for the twenty years from 1899 to 1919, whereas in the eight years following 1919 it increased by approximately 50 per cent. Critics have suggested that a similar or greater increase in productivity occurred at the beginning of the Industrial Revolution. But the eras are not comparable. Change from handicraft to machine production enormously increased output per worker and displaced thousands of men amid dire forebodings. But mechanization was still only an adjunct to human labor. As production increased with the manufacture of cheaper goods, employment also increased. Only now has man become an adjunct, and an increasingly less important adjunct, of the machine. Only in our time has an increase in production been possible with an actual decrease in number of men employed.

Technocracy as a group is far from invulnerable. Its

statistics are shaky. Its utterances have been half-cocked. And its philosophy is merely an infantile doctrine of technological determinism to take the place of the equally infantile Marxian dogma of economic determinism. "All social activity," according to the Technocrats, "must obey the laws of physics." Human responsibility for human action is canceled and nothing is required of a man but that he should submit to the laws of physics, measure his life in ergs, and discard all interests which cannot be expressed in

foot pounds per second. Technocracy, in other words, goes no farther on the philosophic side than to offer to an increasingly childish humanity another mechanical nurse, another external authority, and another absolute pattern. But for all that, the problem which the word Technocracy unfortunately defines is the vital problem of our time and the hope which the word Technocracy obscures is the first human hope industrialism has offered. Those who ignore the problem and those who discredit the hope do so at their peril.

"Buy American!"

By MAXWELL S. STEWART

"ARE you a good American? Are you moved by the distress of your fellow-citizens—twelve million of them unemployed—by the collapse of industry, the decline of trade, the spread of destitution, the halt of progress in your country?" If your answer is in the affirmative, then your duty is clear: "Americans must buy American goods to the exclusion of any other goods, of any other products, of any other services." Prosperity can only be restored by applying "our purchasing power to the resuscitation of the American market." Led by the chain of newspapers owned by William Randolph Hearst and ably seconded by the *Saturday Evening Post*, we are in the midst of a campaign of unprecedented proportions urging us to turn our backs flatly upon international trade and to seek to build a self-contained national prosperity. There is much in Mr. Hearst's plea that is deserving of sympathetic attention. Recognition of the fact that the roots of the economic depression extend beyond the boundaries of the United States has led many Americans to feel that a restoration of business stability is impossible unless this country severs, as far as possible, its economic ties with the outside world. The heavy losses sustained by investors in foreign securities and the strong presumption that the war debts will not be repaid have served to strengthen this view. Leading economists have taken the position that a serious mistake was made in developing a dependence upon world trade during the last decade, and have declared themselves in favor of durable adjustments which will restore the former reliance on home markets.

It is only natural, moreover, that we should be primarily concerned with the restoration of American prosperity. Since the onset of the world crisis the law of the jungle has prevailed in the international realm. Every nation has sought to protect its domestic market against the forces of world-wide deflation by erecting and strengthening almost prohibitive barriers against cheap foreign imports. Having found the protection that was afforded by such measures to be inadequate, some forty-five countries have abandoned the gold standard and thereby brought renewed pressure upon world prices. As the chief creditor nation, steadfast in its defense of the gold standard, the United States has, in a very real sense, been left holding the bag. Proportionately, this country has suffered a greater business decline than any other, with the possible exceptions of Germany and Poland.

But even a superficial glance is enough to disclose the fundamental fallacy in the "Buy American" campaign. For more than fifty years the United States has maintained a

"favorable" balance of trade. Even in the darkest days of the depression there has been a relatively substantial surplus of exports over imports. Foreigners can only purchase American products when they are obtainable at world prices and when they can secure the necessary American currency or its equivalent. If the United States should seriously curtail the importation of foreign goods, and in addition, as Mr. Hearst suggests, suddenly discontinue the annual mass pilgrimage to Europe, there would have to be at least a dollar-for-dollar decline in American exports. Moreover, it might turn out to be much worse. If it is patriotic and wise for all Americans to limit themselves to the purchase of American goods, it is only logical for the British, Chinese, and other foreigners to boycott all American goods. In fact, Mr. Hearst heartily commends the "Buy British" movement as a model for us to emulate.

The best that could be hoped for, consequently, would be the reshuffling of existing purchasing power. The producers for the home market would gain at the expense of those who are dependent upon the maintenance of our export trade—with the farmers, as usual, bearing the bulk of the burden. There would be no increase in the total purchasing power of the country. In practice, however, the effect of such a movement, if it could be successfully organized, would be far more serious than a mere reapportionment of the national income. It would give renewed impetus to the deflationary spiral and nullify all the efforts to check it.

Among the many factors which Mr. Hearst has not taken into account, our present position as a creditor nation is perhaps fundamental. For the first century and a quarter of our national existence we were a net debtor by a considerable sum. As such, our commercial policy had very little influence upon the international financial structure, upon prices, or upon the flow of world trade. While tariffs were strenuously debated as an internal issue, it really made relatively little difference whether a given commodity was produced at home or purchased abroad. Such differences as there were could be measured by comparative prices.

Since the World War, however, an entirely new situation has arisen. As the chief creditor nation we must provide for the receipt of interest and sinking-fund payments. International payments can be made in only three ways—by the transfer of goods (including gold), services, or securities. It follows, therefore, that a creditor must either maintain an import surplus of goods and services, or grant new foreign credits to cover the unpaid balance. As the United States

has been unwilling to increase its imports through fear of disturbing the home market and has been at the same time desirous of expanding its export trade, it became necessary during the period from 1919 to 1928 for this country to indulge in a veritable orgy of foreign lending.

The effect of the sudden termination of this lending at the time of the stock-market crash in 1929 is too well known to bear repetition. The pressure upon debtors to obtain foreign exchange to meet impending payments led them to throw large quantities of commodities on the world markets at reduced prices, and to curtail imports drastically. The latter was accomplished by raising tariff rates, by imposing import restrictions, and by the method now proposed for our consideration—buy-at-home campaigns. For the debtors some such action was imperative if they were to meet their obligations, but the contagion spread among creditors as well. The United States passed the Hawley-Smoot Tariff Act in June, 1930; France imposed drastic import quotas and called in her short-term foreign balances; Great Britain, suffering more acutely than the others at the time, abandoned her historic free-trade policy and suspended payments in gold. Each of these moves served to make the weight of existing debts more burdensome. With world trade reduced to less than half of its previous value and with international lending practically non-existent, the structure of international indebtedness became dangerously topheavy. Even after taking drastic steps to preserve solvency, many countries were forced to default; in others, such as Germany, default was avoided only by the tying up of short-term loans indefinitely.

To the dyed-in-the-wool isolationist this chronicle of the difficulties encountered in the past three years is merely an illustration of the pitfalls of economic internationalism. Why, he asks, should we be so concerned about foreign trade when even in good years less than 10 per cent of our total production is marketed abroad? Why not concentrate on the home market—the richest in the world? If we include Latin America and Canada in our economic sphere, there is no question that the United States could develop a high degree of national self-sufficiency.

While an excellent theoretical case may be made for insulating ourselves from the vicissitudes of the international market, the practical objections are unanswerable. Although this country is less dependent upon foreign trade than any other of the leading commercial Powers, there are many types of agricultural and industrial activity which rely largely upon foreign markets. We normally raise nearly twice as much cotton as is required for domestic needs, while a large portion of our annual production of tobacco, wheat, petroleum, and copper can only be disposed of abroad. Only about 8 per cent of the output of our factories is exported in normal times, but half of the motor cycles, one-quarter of the agricultural machinery, and 40 per cent of the typewriters are sold overseas. No doubt readjustment could be made, but thousands of men and women, skilled and unskilled, would pay a heavy price during the transition period and many of them would probably never find new employment. Moreover, even when a very small proportion of the total output is sold overseas, the price is determined by international conditions. Isolation would have to be complete to be effective. Halfway measures, such as are ordinarily proposed, would be far more destructive than a thoroughgoing system of "autarchy."

Very few of the advocates of national economic self-containment are aware, however, of the full implications of their proposals. Mr. Hearst certainly is not. Cessation of purchases from foreign countries would automatically deprive all foreigners of the means of payment of interest or principal of all loans, public and private, owed to the United States. This would involve not only the cancelation of eleven billion dollars of intergovernmental indebtedness, but of some fifteen billion dollars of private investments as well. Even dividends on direct investments cannot be paid except in goods or services. Offhand, we would say that neither Mr. Hearst nor the *Saturday Evening Post* has exhibited any notable enthusiasm for the cancelation of the war debts.

Various schemes have been suggested for permitting payment in something other than goods or services, but upon examination it will be found that they only defer or camouflage such payment. Even the receipt of gold would be of practically no value unless the gold were used for the purchase of commodities or services. The uses of gold as a metal are strictly limited: it cannot be eaten or worn; additional amounts are not needed for internal currency; and consequently it would lie idle in the vault of the Federal Reserve Bank, a mere shadow of its former glory. Similarly the transfer of ownership of foreign business enterprises or colonies would be useless unless we were willing to receive the benefits in some concrete form. If we were not allowed to travel abroad or even to purchase foreign periodicals in place of the Hearst publications, our economic empire would become worthless—as it is rapidly becoming through the pursuit of our present policies.

It is not likely that the "Buy American" campaign will in itself have any marked effect on foreign trade. Very few persons are willing to inquire regarding the origin of the goods they purchase. In these days, moreover, the average housewife is ruled by the thought of price regardless of other considerations. The fact that Japanese rag rugs can be landed in this country at a cost of six cents each, including duty, while the cost of production of similar articles in the United States is twenty-nine cents, if true, is in reality the best possible argument for buying the Japanese product. But even if the "Buy American" campaign should make more headway with the public than seems likely to be the case, the fact remains that no business concern worthy of the name would pass by a cheap foreign product in order to purchase an American-made article of the same quality at a markedly higher price. The steel industry, for example, is not likely to purchase inferior American manganese if it can obtain a higher quality of Russian or South American manganese for less money. One even wonders whether the pulpwood used in manufacturing paper for the Hearst press is entirely of American origin?

The chief danger of the campaign is not its direct effect, but the possibility that, by befogging the public mind, needed tariff reform will be rendered the more difficult. No lasting relief can possibly be obtained for the world's ills until tariff rivalry has been checked. With the World Economic Conference scheduled to meet before many months, it is important that the United States should be in a position to make drastic concessions to restore international business activity. Such a step is bound to be hindered, if not rendered impossible, if the passions of nationalism are unnecessarily inflamed. Good patriots will not "Buy American."

"Saving" the Theater

By LEE SIMONSON

DURING the last ten years New York's theater managers have turned a system of play producing into nothing less than a system of organized waste. They are at last beginning to realize how high the price of waste can be. Faced with a lack of easy money from "angels" who used to back almost any kind of play and from a public that was willing to pay \$6.60 to ticket-brokers for plays worth \$3.30 a seat—faced, in short, with a difficult business problem, the business men who pretend to manage the theater are indulging in a public exhibition of panic. They gather under a wailing wall to lament the fall of their Jerusalem. The theater is "ruined." It is the fault of everyone connected with the theater except, of course, the managers themselves. The theater has been ruined by critics who are genuinely critical and by stage hands who demand double pay for working on Sundays or until two or three in the morning. The cost of production is "ruinous." The latest villain to be discovered is Henrik Ibsen. The author of "Peer Gynt" and "Rosmersholm" started a vogue for realism; obviously that is the reason why the American theater has fallen from its high estate. It is quite irrelevant that Henrik Ibsen's poisonous realism was introduced in the 1880's and that the producers have been making money even in relatively recent seasons out of such hits as "The Jest," "Hamlet," "Richard III," "The Emperor Jones," "Marco Millions," "Mourning Becomes Electra," "Elizabeth the Queen," "Beggar on Horseback," "The Green Pastures," "What's in a Name?" the Music Box revues, and "Of Thee I Sing." If the public is not convinced, more villains will be discovered. The managers, however, who a few years ago pocketed individual profits from their "smash hits" of \$50,000 and up, are prepared to "save" the theater from its villains if only someone will kindly raise money for them and ask no questions. The latest scheme is for some sort of an association of theatergoers—300,000 paying \$5 apiece—who will provide \$1,500,000 for the theater managers to do with as they please.

Bernard Shaw is said to have flabbergasted a movie magnate by remarking: "You see, Mr. G., the trouble with you is you're an artist; I'm a business man." New York theater managers, although they have often encouraged artists and proved to be artists themselves, have seldom been business men. They have been quite as irresponsible as business executives in every other field. During periods of prosperity they connive at every form of speculation and inflation, create a maximum labor turnover, and sky-rocket prices, but fail to provide out of maximum profits enough capital reserves to stabilize their industry. Faced with falling profits they make a state of economic chaos still more chaotic by frantic price-cutting and an attempt to reduce wages to sweatshop levels.

The truth about the "show business" has been told many times. It needs to be stated again at a moment when concerted propaganda is being used to mislead the theatergoing public. Wages and cost of production are high in the theatrical business but the theater managers help to make them so. Every wage, whether of an actor or a stage hand, includes

unemployment insurance. It was only after a bitter strike that managers agreed to assure an actor even two weeks' pay in return for four weeks of free rehearsals. The Theater Guild, which accepted the Actors' Equity contract at the outset, later found that many able actors preferred to work for a lower weekly salary and a fair chance of some share of the profits, in return for an assurance of from twenty to thirty weeks of work a year. But how many managements offered to actors, except a few "stars" with an assured box-office value, a share of profits when there were profits to divide, or agreed to keep their theaters open thirty weeks a year? That would have meant accepting a responsibility. And the typical theatrical manager wants to be completely irresponsible. Stage hands, like actors, are expected to accept a 20 or 30 per cent reduction in wages in return for complete uncertainty as to whether they are to be employed for two weeks a year or twenty.

The cost of overtime is a heavy item in play production. Union men, who prefer to work only eight hours a day, have steadily raised the cost of overtime labor in an attempt to discourage it. But the managers as a body refuse to give them any help. Almost invariably they make up their minds at the last minute, with the result that settings can be got out on time only by having crews of scene painters work until ten o'clock night after night. The building and painting for productions is concentrated in two rush seasons—one in August and September for early openings, and another just before Christmas for openings aimed to get the holiday trade. In order to handle five or six shows at a time, contractors have to be equipped with a great deal of carpentering machinery and large painting lofts. And the managers make it as difficult as possible for the contractors to pay their rent and overhead between seasons on the necessary space and equipment. With a few exceptions, the producers either take months to make final payments or never pay in full. The outstanding debts to some of the principal scene-painting studios in New York are over \$256,000. Several studios have been forced out of business because they could not collect money owed them. One carpenter shop carried an unpaid balance of \$85,000 from one of the most successful managers on Broadway. If one includes the unpaid bills of all the carpenters and property-makers and the amounts due to scene designers—one is still owed \$10,000 and another \$11,000 although their fees average only \$1,000 a production—the outstanding debt of theater managers for productions made during years of prosperity is well over \$500,000.

Naturally the cost of building and painting scenery is inflated, not only by the cost of overtime labor, but by the necessity for carrying this staggering burden of uncollected and uncollectable debts. Carpenters and painters are paid in three instalments. Because they are rarely certain of collecting their last third, their contract prices must be high enough so that the first two-thirds will cover their costs and show some profit. Otherwise they would go bankrupt waiting for the next theatrical season to begin. In a short rush season they must make enough to cover their overhead and

rent for an entire year on the equipment and space necessary to handle the next rush.

The cost of settings could be cut almost a third if enough managers who were planning to open a show in September would start building and painting their productions in April and May and early summer. If they allowed eight weeks leeway during the winter instead of the usual four or less, almost all overtime charges could be eliminated. Will they do this? As a body they refuse. They wail in public over the cost of union labor, and make overtime unavoidable; they continue to demand cash prices while they abuse credit to a point that would have long ago wrecked any other industry.

The other great item in production costs is rehearsal labor. Theater managers have also forced this to a maximum by letting real-estate speculators build their theaters for them with stages so small that almost every piece of scenery has to be handled three or four times oftener than should be necessary. They have shown complete indifference to the idea of installing labor-saving machinery. Three separate systems for handling settings with a minimum of hand labor have been perfected in Germany and have been in use there for the past twenty years. At least two of these would be entirely practical here if stages were built twice as wide and twice as deep as they usually are now. Nevertheless, New York managers have never made the slightest organized effort to get either the stage space or the equipment needed if theaters are to be run economically. They prefer not to invest a cent of their profits either in land or equipment that would permit rehearsal or running costs to be cut. Here, as in every other department, they prefer to let someone else take the risk, and continue to rent stages so small and so inadequately equipped that in order to open a show a large crew of stage hands often has to work twenty-four or thirty-six hours at a stretch.

The typical theater manager persists in being irresponsible. He will do nothing to cut his expenses by improving theater architecture, installing labor-saving equipment, obviating overtime, reducing labor turnover, distributing production, eliminating waste, or minimizing the risk of unemployment. Theaters, carpenters, scene painters, scene designers, stage hands, and actors must keep going somehow until he gets around to using them. He will do nothing to organize the theater; he complains because other workers in the theater have organized themselves into unions and are able to resist his efforts to make them work either without pay or for inadequate pay under working conditions that are often intolerable.

Ten years of unbridled individualism have produced the same wreckage in the theater as everywhere else. The theater can never be wholly organized. With as little as \$10,000 anyone can put on a play which, if it is a "smash hit," may earn half a million dollars or more in a year or two. The lone individual playing his private "hunch" is a necessary figure in the theater and a desirable one. As often as not he brings new ideas and new methods into the theater, keeping novelty alive where stereotypes easily become a habit. But there is no reason why any producer could not experiment even more effectively in an organized theater than in a disorganized one. The insurance companies and trust companies, which now hold so many theaters, both in and out of New York, on which they cannot collect mortgage interest

or rent often enough to pay the taxes, could enforce a reorganization of the theater industry which might put it on a sound business basis. Otherwise they may be forced to liquidate their holdings at twenty cents on the dollar.

Planned and controlled production, with a maximum of social and economic responsibility to both labor and the consumer public, is the way out for the theater as for every other industry. The preliminary steps for the theater are approximately as follows: Demolish at least one-third of the existing theaters in New York and all but one or two in each of the principal "road" cities. Pool the losses, which will be far more quickly recouped by converting surplus theaters to other uses than by cutthroat competition for tenants who do not pay the present cost of housing them. Remodel the stages of the remaining theaters, instal labor-saving scene-shifting and lighting equipment standardized by a board of consultants composed of architects, scene designers, and engineers, and thereby cut labor costs. Instal this improved equipment in all road theaters, so that settings can be built for one system of scene-shifting and labor costs thereby be cut down everywhere. Support the road either by organizing out-of-town repertory companies of the permanent surplus of unemployed actors in New York or by sending New York successes on the road with the original casts after a four months' run in New York. In return ask for a guaranteed sale of seats in road cities, subscribed for in advance. Refuse to rent a theater except to an accredited managers' association which will require that all its members put more capital into their business than the cost of one production, every member either to put up a cash bond for the cost of building and painting scenery, as he now does for actors' salaries, or to agree, under penalty of being disbarred, to settle all bills within thirty days. Build and paint productions at least eight weeks in advance of the opening date and distribute a definite proportion over the summer months. In return get scenery built and painted on a cost-plus basis. Agree to keep all theaters open forty weeks a year, and in return ask for a lowered union wage scale. Instal air conditioning to encourage summer audiences. In return get a reduced scale of actors' and stage hands' salaries for the summer months. Set the scale of theater admissions annually and put the ticket speculator and the cut-rate agency out of business. (This can be done; it was almost done when the theater managers made up their minds to do it.) Resale can be reduced to a minimum by printing a ticket in two parts, the stub, not showing the location of his seat, to be kept by the purchaser. Offer tickets at reduced prices to people who will buy subscription books of tickets of five or ten or more, and give these subscribers preferred locations even on opening nights. Have both the costs and the running expenses of every production audited by a central auditing bureau. Provide funds for organization, experiment, technical research, and unemployment insurance by collecting a progressive tax on profits from \$50,000 up.

These suggestions are entirely practical if the men who pretend to run the theater really want to run it on an efficient and permanent basis. Their chief problem is to find a legal way of setting up some scheme for effective control which nine old men will not declare a conspiracy in restraint of trade or a violation of that amendment of the Constitution originally designed to protect the property rights of newly enfranchised Negroes.

The Farmer and the Tariff

By WAYNE GARD

THE farmer, apparently, has at last had his eyes opened to the realities of the tariff. The overwhelming defeat of the Republican Party in the last election indicates clearly that the farm vote can no longer be held in line by eloquent pictures of the benefits that agriculture receives from the protective tariff. It is true, of course, that Roosevelt promised to retain existing tariffs on farm products. But his definite pledge on this point was made in an Eastern city almost on the eve of the election and did not penetrate to many of the dirt farmers. As a matter of fact, most of the farmers who voted for Roosevelt would have voted for him even if he had threatened to remove farm tariffs. Prices talk louder than speeches, and with some farm crops selling at prices lower than at any time since Elizabethan days, the most persuasive high-tariff Republican would have had difficulty in proving to the farmer that the removal of tariffs on cotton, wheat, and corn would make the prices of these commodities any lower than they were at election time.

There were murmurings among the farmers even in 1928, but these signs of unrest were ignored by the G. O. P. As usual, party hacks were sent through the corn and wheat States dispensing the old Republican soothing-syrup—consisting of promises of higher tariff rates on farm products. And for the most part the farmer swallowed it once more, ■ he had been doing through a long series of Republican campaigns. In 1860, when the new anti-slavery party first swept into office, it tempted the East with promises of ■ tariff wall and it tempted the West with promises of railroads and homesteads. Soon afterwards it discovered that the tariff argument could be worked upon the farmers as well ■ upon the manufacturers. The farmer turned out to be an easy mark; a tariff policy that was upheld by the party of Lincoln, he thought, could not be far wrong.

The promises made in 1928 were made good. In 1930 President Hoover signed the Smoot-Hawley Tariff Act, which raised the rates on many agricultural products—as well as on almost every other commodity which conceivably might be imported. This tariff boost, together with a shiny new Farm Board, was to cure the farmer's troubles and make him prosperous again. The beneficent effects of the new tariff, the farmers were told, would be felt almost immediately. In June, 1930, Senator James E. Watson of Indiana declared: "I here and now predict, and I ask my fellow-Senators to recall this prediction in the days to come, that if this bill is passed, this nation will be on the upgrade financially, economically, and commercially within thirty days, and that within ■ year from this time we shall have regained the peak of prosperity we lost last October."

By the beginning of the campaign of 1932 the G. O. P. had junked the Farm Board, but it still defended valiantly the Smoot-Hawley tariff as an aid to the farmer, and the maintenance of this tariff was the principal point in the farm program which Hoover enunciated in his Des Moines speech on October 4. An abandonment of this tariff, he declared, meant "destruction at your own firesides." But when he pictured the danger of Argentine corn underselling Iowa corn

in this country, he apparently was unaware that on that very day corn in Argentine was selling at four cents a bushel higher than in Chicago. The farmers were not worried over the specter of being ruined by Argentine corn; their ruin was being accomplished in other ways. The President's alarmist picture of Mexican cattle trying to cross the Rio Grande was scarcely more convincing. "There are this minute," he declared, "two million cattle in the northern states of Mexico seeking market. The price is about \$2.50 per hundred pounds on the south bank of the Rio Grande. It is \$4.50 on the north bank—and only the tariff wall between." But the cattleman knew better than to compare the scrawny, mountain-grazed animals of Mexico with the fine Texas steers that are the result of many years of careful breeding. Moreover, he knew that not all American steers have been selling at \$4.50 a hundred pounds. Idaho ranchers have been getting from \$1.50 to \$2.

An Idaho woman, calling the attention of ■ newspaper editor to this last fact, went on to ask:

How much would a tariff of \$50 a head on steers help the Idaho farmers? Here I can buy the best onions in the world for 20 cents a sack and the best potatoes in the world for 25 cents ■ sack. How much would a tariff of \$5 a hundred on onions and potatoes help the Idaho farmer? With the apple crop estimated at one-third below normal, our farmers find it impossible to continue to pick their Jonathan apples. Neither could they pick their prunes. How much would a higher tariff on apples and prunes help out the Idaho farmer?

The Idaho woman's questions remain unanswered, as do those of Iowa farmers who have been getting from 4 to 8 cents a bushel for their corn. The Smoot-Hawley tariff of 25 cents a bushel on corn has not helped these farmers. Instead, it has led Canada to impose a retaliatory tariff of the same amount and to import large quantities of corn from the Argentine while American ears rot on the stalks. The highest agricultural tariff in American history did not prevent farm products in this country from selling at an average of only 56 per cent of the pre-war level on October 15, three weeks before the election. The tariff did not prevent the drop of wheat prices to new all-time lows and the slump of the prices of grains, fruits, and vegetables in general to new low levels for the twenty-two-year period covered by the records of the Department of Agriculture.

The present situation of the farmer is enough to make him more skeptical of political cure-alls. In 1931 alone the value of his land declined 15 per cent, while the value of his live stock dropped 40 per cent. From 1919 to 1931 the capital valuation of American agriculture dropped from \$79,100,000,000 to \$45,000,000,000, and the total farm income slipped from \$16,900,000,000 to \$6,900,000,000. Under such circumstances the farmer is not likely to believe that he would be even worse off if it were not for the beneficent Republican tariff. He may reflect that he was far better off when tariffs were low and there were duties on only a few agricultural products.

Take the case of wheat. This grain was on the free list during the eight years when it reached its highest prices, largely because of the World War. When the Republicans came back into power they immediately decided to save the wheat farmer by a protective tariff. The Farmers' Emergency Tariff Act imposed a wheat tariff of 35 cents a bushel in 1922. A few months later the rate was changed to 30 cents by the Fordney-McCumber Act, but in 1924 President Coolidge, by proclamation, raised it to 42 cents. This rate was preserved in the Smoot-Hawley Act of 1930.

When the wheat tariff was imposed, the market price was \$1.25 a bushel. For nearly two years now it has been below 50 cents, while the price actually received by the farmer has been, in many places, between 20 and 30 cents. Moreover, wheat exports have declined, and the wheat tariff has been a strong factor in the destruction of something like \$100,000,000 worth of American trade with Canada. On November 3, five days before the election, wheat sold in Chicago at a price actually below the tariff. This meant that the wheat farmer was "protected" by a 100 per cent tariff. But it also meant that at local elevators he was receiving only about 20 cents a bushel for the better grades of wheat, which cost him 80 or 90 cents to raise, and an even lower price for the inferior grades. With this 100 per cent tariff protection, American wheat and flour exports fell to 14,200,000 bushels for the period from July 1 to October 8, 1932, as compared with 43,900,000 bushels for the corresponding period of the previous year. At the same time Canadian wheat exports were running about 55 per cent ahead of those for 1931.

The wheat tariff was effective only as applied to Canadian wheat formerly imported by Northwestern millers. This annual import of Canadian wheat—12,000,000 bushels—constituted only 2 per cent of the American consumption and had practically no effect upon the price which American wheat-growers received. This wheat was largely non-competitive, since it was of a type not grown in this country in quantity sufficient for the millers' needs. It was desired because of its much higher protein content and was bought at a premium. The wheat tariff has served as a virtual embargo against this Canadian wheat, needed in the milling of American flour. Wheat imports from Canada have dropped to less than 1/20 of 1 per cent of the former figure. The American consumer of bread has been the loser, while the farmer has gained nothing. In fact, the farmer has lost, too. The wheat embargo has closed Canada to American corn and has led England to give preference to Canadian over American wheat.

Most of our agricultural tariffs are of the "gold-brick" variety. Since in the case of nearly every farm product the United States is an exporter rather than an importer, the tariffs on such products generally are ineffective; there are no imports against which they can be charged. Thus they are of no value to the farmer. In fact, they add to the irritation of other nations and spur them to erect retaliatory tariff walls against the American farm surplus. There are, of course, a few agricultural commodities of which we import more than we export, and on these the tariff theoretically is effective. The principal products in this category are wool, cattle, and sugar. Yet even on these commodities the value of the tariff is strongly disputed from the point of view of the farmer as well as from that of the consumer,

who may be forced to pay higher prices because of the duties.

The profitable raising of both cattle and sheep in this country has depended mainly upon the availability of cheap frontier land and public grazing ranges. The tariff has had little effect upon ranching, the number of sheep and cattle fluctuating only slightly in response to changes in rates; in fact, the number of cattle has declined under the recent high rates. The current low prices of cattle, sheep, and wool testify to the inadequacy of high tariffs on these products. The production of sugar in the United States has varied more with changes in tariff rates, but in this instance, too, the tariff has been of dubious benefit. The climatic and labor advantages of certain other countries give them a favored position in sugar production which the American high tariff on sugar has not been able to overcome. In the production of cane sugar in this country the development of a disease-resisting variety of cane with a high sucrose content has been far more important than the tariff rate.

Even so, where sugar production has been made profitable in the United States, the profit often has been obtained at the price of labor conditions little better than slavery. One of the supposed benefits of high tariff rates is the maintenance of high standards of living, but this benefit is not noticeable in the sugar areas of either Louisiana or Utah. The Utah sugar beets are grown largely by the toil of impoverished Mexicans and their children, under working conditions outlawed long ago in more civilized States.

The farmer's major grievance against the tariff, of course, is not that he fails to derive the promised benefit from the duties on agricultural products but that he suffers infinite harm from the high rates on manufactured goods. In an analysis of the Fordney-McCumber tariff several years ago, the American Farm Bureau Federation estimated that the farmers gained annually through the tariff \$30,000,000 but lost \$331,000,000, making a net loss of \$301,000,000. The net loss of the farmers from the Smoot-Hawley tariff is of course much larger. Even more important than this direct loss is the indirect harm the tariff brings them in curtailing the foreign market for what they have to sell. This is being done by retaliatory tariffs, embargoes, and favorable trade arrangements with rival nations. When we close our markets to the manufactured goods of nations like England and Germany, it is only natural that they should buy less wheat and cotton and pork from us and buy more from those nations which are willing to take goods in exchange. Here are some facts which the G. O. P. publicity machine failed to mention in the last campaign. From 1921 to 1923 Germany bought from the United States an average of 34,000,000 bushels of wheat a year. In 1929 it bought only 1,674,000 bushels from us. The United Kingdom of Great Britain and Ireland used to buy 30,000,000 bushels of wheat a year from us before the World War; in 1929 it bought here only 16,276,000 bushels. The British are now inclined to buy all the wheat they can from the dominions and as little as possible from us. And much of the bacon they formerly obtained from America they now buy from Denmark. American wheat must now hurdle a tariff of 37.2 cents in both Germany and France.

The falling off in American agricultural exports in recent years—despite increased production—does not result wholly from retaliation against our tariff. In some European countries there is a lessening of consumption or an in-

crease in domestic production or both. Yet our tariff, which shuts foreign goods out of the United States, is a weighty factor in closing the European market to the surplus products of the American farmer. Nations, like individuals, prefer to trade with friends. Thus Germany buys corn and wheat in the Argentine because that nation is willing to buy its toys, dyes, and cotton goods. Argentinian exports of corn more than doubled from 1923 to 1927, rising from 128,000,000 to 272,000,000 bushels. The current revival of barter in international trade may be an instructive lesson for some of those who have not yet learned that all trade, in the long run, must be an exchange of commodities. Nearly

forty nations now have barter agreements, and the use of this method of trade appears to be increasing rapidly. The resort to barter should be an indication that if our agricultural surplus is to be marketed profitably abroad, we must be willing to buy from other countries goods of equal value. The better-informed farmers have known all along that the talk of rescuing agriculture with tariffs was political hokum. And now this view has penetrated to the general run of farmers. True, these farmers realize that tariff reform will not in itself restore prices which will make agriculture profitable again. But they have had enough of high tariffs and are willing to try lower ones.

Behind the Cables

By E. D. H.

Vienna, January 15

IF things don't go to pot in Yugoslavia pretty soon, most of the political prophets of Central Europe will be out of jobs. An appalling situation in the Serb kingdom seems rapidly to be coming to a head. The country, like its neighbors, is broke, and has had to default on or put off its foreign debt. The new constitution, a

ITALIAN LIONS, fraud and a sham, has turned out to be JUGOSLAV LAMBS almost as unworkable as the overt dictatorship, and the Serb-Croat quarrel is

as bitter as ever. Police terrorism, a blanket censorship, and a gagged parliament blacken the country. The Slovenes and Bosnians, heretofore fairly tractable, have joined the Croats in their demand for federalism, and the king, the chief centripetal force of the state, is apparently no longer able personally to bridge the various widening schisms. It is time for a show-down—or a blow-up, in which all of Central Europe might easily be involved. For a whole series of perplexing foreign irritations has developed, doubtless in correspondence to the ascending domestic alarms. Some Dalmatian hotheads mutilated the old Venetian lions in Trogir. Mussolini bristled in answer. It seems a minor quarrel, until you remember that Italy has not given up its Dalmatian claims, which are chiefly based on just such reminders of old-time Venetian hegemony as the lions. Further south, Italy initiates a new series of commercial undertakings with Albania; Yugoslavia replies by charging an attempt to form an Italo-Albanian customs union. This is not a likely possibility, since Albania has practically no customs; the Yugoslavs used the idea as a trial balloon to alarm the Powers. Proceeding counter-clockwise, we find Macedonia as murderously agitated as ever, and the Bulgar-Yugoslav frontier closed even to peasants who own and have to work property on both sides of the border. Eastward, Rumania, theoretically an ally, is flirting with Italy because she was ditched by France and Poland in the non-aggression negotiations with Soviet Russia. Northward, in Hungary, reports mention squadrons of Italian airplanes arriving in Budapest for the use of the Hungarian army. In Austria a cache of 50,000 old rifles is discovered, Austrian arms captured by Italy during the war and now sent back for "repair," that is, for the use either of Hungary or of the Austrian semi-fascist Heimwehr.

Jugoslavia, thus encircled, succeeded in frightening the Little Entente into organizing a permanent secretariat at Geneva. Hungary answered at once with the appointment of a new Foreign Minister, Kolomann von Kanya, an appointment which the Yugoslavs consider as almost a deliberate insult. Kanya was the man who, as chief of the press department of the old monarchy, slandered the Serbs in November, 1912, by charging that the Austro-Hungarian consul at Prizren, Montenegro, a man named George Prohaska, had been attacked and mutilated by local Serbs. Kanya was also involved, my friends here tell me, in the Windischgrätz franc-forgery plot; he rented part of his Budapest house to the priest, Father Zadravetz, in whose rooms the forged francs were found. Also, the three Hungarians who were to circulate the francs in Holland received their laissez-passers from the Hungarian legation in Berlin, where Kanya was the minister.

King Alexander has, perhaps, a last card up his sleeve in dealing with the obstinate and difficult Croats. He may offer them separatism. He is described as being so fed up with his own country that he is willing to cut it in half. This sounds excessively sensational, since kings do not ordinarily reduce the territories of their realms, but I have it on exceedingly good authority that the idea has been broached. The king is saying, in effect: "If you Croats dislike us so heartily, get out and try to run a country of your own." Svetozar Pribitchevitch, the dissident Serb leader now in exile in Paris, writes that Alexander threatened as long ago as 1929 to "amputate" Croatia if the Croats continued to "misbehave." Pribitchevitch also says, by the way, that the Queen-Mother of Rumania and the Queen of Yugoslavia, in conversation with a man who was recently a cabinet minister in Belgrade, discussed quite openly the possibility that he, Pribitchevitch, might be removed, as was Raditch, by assassination.

Amputation of Croatia would produce a pretty situation. The horror of the French at such wholesale murder of the peace treaties can be imagined; but Alexander and the French are not getting along too well. Politically, it is a clever threat. The Croats could not survive alone, and they know it. They do not want complete independence. They want autonomy within a Yugoslav federation. This Alexander will not give them. He has tried to rule Jugo-

slavia so far through a policy of strict pan-Serb centralism. If he still resolutely refuses to consider what to outsiders seems the normal solution—that is, federalism—then separatism, or amputation, is a final alternative, although an extremely radical one.

I would call attention to the manifesto, which was recently published in England but which did not, I hear, get much attention in America, wherein a group of British publicists appealed to public opinion, and incidentally the British government, in behalf of intervention to force Alexander to modify the terms of his rule and accede to the Croat demands. Otherwise, say these gentlemen, disruption of the Yugoslav state seems inevitable. I do not know another case in recent history in which a group of private persons has similarly taken the initiative to urge international pressure on a foreign Power. But what is particularly amazing is the list of signatories. One would expect to see the names of such staunch liberals as Gilbert Murray, H. A. L. Fisher, G. P. Gooch, and H. W. Nevinson. But another signatory is Lord Cushendun, formerly Ronald McNeill. And two others are Wickham Steed and R. W. Seton-Watson, who were godfathers of Yugoslavia. Things must, indeed, have reached a pretty pass in Alexander's kingdom.

In view of the recent amnesty in Germany I hope that the case of forty-one-year-old Private August Jaeger has received some notice. The Christmas spirit of Von Schleicher is not quite all-embracing. Jaeger has just been sentenced to ten years' penal servitude by the Supreme Court at Leipzig on a charge of treason—for having been

INTOLERANCE captured by the French in Flanders eighteen years ago with a primitive gas-mask on his person! The prosecution demanded fourteen years in jail for Jaeger, and refrained from asking the death penalty "only because the Germans had not been materially injured by Jaeger's alleged disclosures." Jaeger, it was said, was a deserter, and the French found him in possession of an anti-gas contrivance with which the Germans had been equipped in anticipation of their own first secret gas attack. He was arrested on the same charge in 1920, but acquitted; his rearrest followed an article by a French general naming him as a person from whom the French gained knowledge of the German plans. This was in 1915. It is now 1933. It will be 1943 before August Jaeger again sees the light of freedom.

It is also interesting, in connection with the Schleicher amnesty, to note that Dr. Anna Siemsen, a former deputy in the Prussian Diet, has been forbidden permission to lecture in Thuringia because she supported the views of Professor Gumbel, who lost his job at Heidelberg University for having said that a turnip was a better symbol of war than a heroic virgin; that Herr Otto Rossbilt had his passport confiscated as he was preparing for a trip to Copenhagen because he had exposed some of the more obvious indecencies of the arms business in his book "The War Industry"; and that Professor Hans Cohn has been expelled from the law faculty of Breslau University on the basis of two grievous sins—he wrote an article defending Trotzky and he was born a Jew.

The Geneva machine-gun murders of November 9, when eleven citizens were brutally shot by a raw company of army recruits, continue to pile up victims. The latest is

apparently M. William Martin, for many years the foreign editor of the *Journal de Genève* and one of the two or three most distinguished liberal journalists in Europe. M. Martin happened to be in Rome when the murders occurred. But his point of view regarding them may be well imagined. His paper, a wholly reactionary sheet, tried to justify them, and joined the general propaganda seeking to gag such journalists as Robert Dell, *The Nation's* correspondent, who forced the issue into the open. And now I hear from Geneva that M. Martin, who has seemed as much an institution on his paper as is J. L. Garvin on the *London Observer*, is shortly to resign to accept a chair in history at, I believe, the University of Zurich. The world of European journalism thus loses a brilliant figure, but there is compensation for all calamities; I can imagine no reason whatever why any person should ever again read a copy of the *Journal de Genève*.

In the Driftway

THE Drifter is not a philanthropist. He has never had anything to give except advice, and his principles are against giving that. Nevertheless, he is going to break his rule for once and pass on the details of a method he has just learned for living on nothing a day—an art which is particularly needed at the present moment. All you have to have is youth, a moderate gift for acting, and a lead quarter.

* * * * *

ITS inventor, now a prominent radical, discovered the method by accident some years ago. Having arrived in this country at the age of seventeen completely broke, he hit upon the scheme of following coal wagons to their destination and then demanding the job of putting the coal in the cellar. Usually he got the job and fifteen cents for his labor. One day, however, in a burst of what happened to be generosity, his employer gave him a quarter, and being hungry as usual, he went to a bakery shop to buy a loaf of bread. After he had put the loaf under his arm the proprietor stopped him with the information that the quarter was lead and that he had better hand over the bread. Hungry and disappointed, the tears came into his eyes and the baker was touched. "It's all right," he said, "keep the loaf." It was not until he was out in the street again that the possibilities of the lead quarter dawned upon the ingenious young man, but as soon as they had, he hied him to a delicatessen store and demanded ten cents worth of liverwurst. The little drama was reenacted, and though the tears did not come quite so easily this time, they sufficed. "Do you know," he concludes, "I lived on that bad quarter for three weeks."

* * * * *

THE story, however, does not end here. The Drifter was unsatisfied. If for three weeks, why not for three years or three decades? Here was the ideal "elastic currency." There seemed no reason why anyone should ever work. The Drifter was almost sorry that he never had and could not, therefore, stop now. But when the subject was

broached, the face of his informant darkened. There were no tears or anything like them, but the sense of a great, never-to-be-forgotten wrong distorted his usually genial features. "One day," he said, "I gave my quarter to a street-car conductor and the blankety-blank-blank gave me back twenty cents' change."

■ * ■ * ■

THUS the Drifter was reminded that there is a catch in everything except drifting and he has gone back to that. It occurs to him that the story of the lead quarter is a modern rationalistic equivalent of the universal folk-tale of the three wishes, but he is convinced that we *do* progress. The two peasants got nothing whatever except a wooden spoon (in an inappropriate place) out of what seemed all that two human beings could want. The modern young man got at least bread, liverwurst, and other desirable things for three whole weeks. He lost the magic charm only when he felt above walking, and that, no doubt, was a punishment for asking more than a philosopher really needs. He would still be living in sweet idleness today if he had only been content with as little as his friend

THE DRIFTER

Correspondence

"Livy's Pictured Page"

TO THE EDITORS OF THE NATION:

As a Hellenist may I protest energetically against the left-handed compliment to Greek literature implied in your reviewer's commendation of Burton Rascoe's "onslaught on the Romans, the dreariest bores in recorded history, and their dreary literature," in his "Titans of Literature"? Isn't there enough barbarism rampant all about us at the present time without trying to prejudice "intelligent youngsters" against the people who more than any other, except the Greeks, are the source of such measure of civilization as we possess? To Cicero, more than to any other human being, we owe the wide dissemination of those ideals of liberty, justice, and humanity for which *The Nation* stands.

With respect to his style, a competent critic says: "The perfect harmony of his periods, the exquisite choice of his words, the delicate balance of his cadences, whose sound keeps up an ever-running accompaniment to sense, and the majestic roll of his wonderful perorations are absolutely without counterpart in Greek, or English, or any other language whatsoever, and they make reasonable and true the judgment of Quintilian that 'Cicero is now less the name of a man than of eloquence itself.'"

As to Caesar, it is hard to qualify in any other manner than as crass ignorance the reference to his polished periods as "Western Unionese." It is true that many a boy or girl, through imperfect knowledge of the language or dull teaching, may find the "Gallic War" a bore, but this experience should not be confounded with the actual quality of that celebrated work, which in the hands of the good teacher is, like other great books, "alive and of thrilling interest." And anyone who has ever had the memorable experience of hearing a great teacher, such as the late Professor Greenough of Harvard, read "Livy's pictured page" and bring out the inimitable chiaroscuro of his matchless style will have a higher opinion than your reviewer both of Livy and of professors.

Greenwich, Conn., January 8

E. F. CLAFLIN

Brooklyn Edison

TO THE EDITORS OF THE NATION:

In view of Jerome Count's excellent article in *The Nation* of January 18, your readers will be interested in a movement which combines the interests of workers and consumers against the power utilities. For the past two years the Public Committee on Power Utilities and Labor has given its support to the Brotherhood of Edison Employees, who, single-handed, have waged a courageous and effective fight against one of the largest operating electric utilities in the country—the Brooklyn Edison Company. This company, during 1931 and 1932, while increasing its dividends by 40 per cent, or a total of almost \$3,000,000, laid off 5,000 men—40 per cent of the company's total labor force.

The Public Committee on Power Utilities and Labor has carried this fight to the Public Service Commission and has established an important victory for utility labor throughout the country by obtaining an order from the commission directing the Brooklyn Edison Company to reinstate the 5,000 employees or justify its entire labor policy before the commission. By this action the Public Service Commission has for the first time recognized that labor conditions within public utilities are a matter for State regulation and control.

Plans have been formulated to organize consumers to back this fight before the Public Service Commission and for direct action against the Brooklyn Edison Company through a voluntary curtailment of electric consumption. This will be a movement of widespread national significance, since the electrical-utility situation is identical throughout the country.

All work has been voluntary and not a single dollar has been expended for salaries or compensation of any kind to active participants. The committee, however, needs substantial contributions from consumers and labor in order to make thoroughgoing preparation for hearings before the Public Service Commission and to carry its fight to the consumer. Contributions should be sent to Francis A. Henson, secretary, 128 East Sixteenth Street, New York City.

Socialists and the Bonus

TO THE EDITORS OF THE NATION:

While agreeing with your correspondent, Felix Morrow, in his expression of regret at seeing the name of Oswald Garrison Villard linked with a group of reactionaries in active opposition to prepayment of the bonus, I should like to know who gave Mr. Morrow authority to lump "the liberals and Socialists" together as fighting such prepayment. If he had said "some liberals and Socialists," he would have been fairly correct, as it is quite clear, at least in the case of the Socialist Party, that no formal declaration was made on the bonus question. Norman Thomas himself finally came around to approval of payment of the bonus to unemployed and needy veterans as a step toward a general move for federal aid to the idle millions. Many other Socialists were outspoken in their support of the ex-service men's demands. Apparently Mr. Morrow has the happy Communist habit of bunching all non-Communists together and damning them as "a reactionary mass," regardless of their varying views and acts.

Hollis, N. Y., January 1

HARRY T. SMITH

One Veteran's Story

TO THE EDITORS OF THE NATION:

At the time of the last war my son Benjamin Arnold Willits of Boonton, New Jersey, was enrolled in the army in Class A. He trained in Camp Dix and Camp McClellan, but did not go over seas—through no fault of his own, since he was held for observation. At the close of the war he was not well, but secured a good position which he held about six months. He then broke down with tuberculosis, and he has been fighting the disease ever since. Now, at the age of forty-two years, he has been told that the disease is arrested and his compensation, which was for total disability, has been cut down to \$50 a month. The premium on his insurance has been raised to \$17.71 a month. This is deducted from the \$50, leaving a small balance for himself and his wife to live on. Both have looked all summer for employment without success. When millions of able-bodied men are walking the streets looking for work, that is to be expected, for my son has only a part of one lung left and has been told by physicians not to let his insurance lapse as no other company will accept him. There are men (unless recently dismissed) in the Veterans' Administration, able to work, who are paid compensation and draw \$1,500 a year for their services. For instance, a man in Buffalo left the army with a light case of tuberculosis which was quickly cured. He found employment and has been working ever since. Notwithstanding this fact he receives a check from the government for \$150 each month. Why this discrimination?

ALICE MAXSON WILLITS

Williamsburg, Mass., December 5

The Theater Union

TO THE EDITORS OF THE NATION:

The Theater Union has been organized for the professional production of full-length plays which are written from the point of view of the interests of the working class. We will consider scripts dealing with all phases of contemporary America, its social conflicts, the revolutionary intellectuals, and so on. We are prepared to give acceptable scripts a competent production. Inquiries should be addressed to 104 Fifth Avenue, New York.

New York, January 15

THE THEATER UNION

For India's Freedom

TO THE EDITORS OF THE NATION:

The Indian independence movement is one which challenges the interest and sympathy of all Americans. This fight for liberty is being sustained by millions of oppressed people through unprecedented methods of non-violence which mark an epoch in history; and the spectacle of India's great leader, Mahatma Gandhi, held in prison without indictment or trial, has caught the sympathy of all defenders of justice.

Americans have always been quick to lend support to oppressed peoples. The American League for India's Freedom has been organized "to express American support of Indian independence through non-violence." Its chief source of strength is its association with the English Friends of India, an organization of British citizens headed by Laurence Housman. Our league, like the companion group in England, maintains an office for correspondence with India, publishes a monthly bulletin of news not accessible to the daily press, and holds public meetings and study groups.

The American League for India's Freedom invites all friends of India to join its ranks. Our office is at 383 Bible House, New York City; our secretary is Miss Eleanor Metzel; our fee, which includes subscription to the Bulletin, is \$1 a year and up. Our membership needs immediate extension if we are not to fail Gandhi and the Indian National Congress in the support we have pledged.

JOHN HAYNES HOLMES, Chairman

New York, January 15

Erratum

TO THE EDITORS OF THE NATION:

An error found its way into my poem, "Brought as a Sheaf," in your issue of January 25. The third line from the end should have read, "as hosts who shall answer most our sighs," and not "most of our sighs."

New York, January 26

RAYMOND LARSSON

Open Forum

TO THE EDITORS OF THE NATION:

Nation readers on the north shore of Long Island will be glad to know of the open forum inaugurated by the North Hempstead branch of the League for Independent Political Action. The forum will consist of a series of six lectures to be given in the Manhasset High School.

Two lectures have already been given. The other four will be as follows: February 7, "Is Technocracy a Way Out?" by Professor Harold F. Clark; February 14, "Tariffs and War Debts," by Oswald Garrison Villard; February 20, "How to Make Your Vote Count," by Walter J. Millard; February 28, "Who Should Own Our Public Utilities?" by Howard Y. Williams. Lectures begin at 8:30.

To the Powers of Darkness

By GENEVIEVE TAGGARD

My love for whose ruin we have wept
Tears no one weeps for the dead
Hears no more storms as simple as ours are.
He hears rain never. Nature is not his.
The great sane day of light and genial power
Ceases with him and is the Arctic black.
We weep that none may cheer him any more.
No not even the great sun.

Common Sense About Physics

Where Is Science Going? By Max Planck. Prologue by Albert Einstein. Translation and Biographical Note by James Murphy. W. W. Norton and Company. \$2.75.

DURING the last few years the layman has found himself placed in a rather uncomfortable position. On the one hand he is told that the science of physics is arriving at certain revolutionary conclusions of the utmost importance to him as a human being, but on the other hand he is assured that he can never understand the grounds for these conclusions. So far as he will ever be able to see, the universe is a rigidly determined mechanism operating in accordance with the laws of cause and effect. All the phenomena which he will ever be able to observe obey the laws of Newtonian mechanics and justify him in concluding that he understands their operation. But there are other subtle phenomena which only the specialist can either witness or interpret and which necessitate a radically different view of the universe as a whole. Hence the unfortunate layman must disregard all the evidence which he can understand and accept upon the word of the specialist the statement that things are very different from what they seem—that even inanimate matter does not obey established law, that a kind of “free-will” exists among the atoms, and that though God may seem to have left the macrocosm pretty much to itself He is probably still practicing miraculous intervention in the inter-atomic world.

Certain respectable scientists, like Sir James Jeans, have written popular books whose aim seems to have been to bewilder the everyday reader with paradoxes whose explanation is withheld at the last moment on the ground that he could not understand it anyway. It is not, however, from such scientists that the rationally inclined layman has suffered most, but from the new-found arrogance of various unscientific obscurantists and mystagogues who have seized upon these new developments for the purpose of discounting all rationality and of imposing whatever theological vagaries may please them. To any rational objections they reply that all that is a mere remnant of nineteenth-century prejudice and that the “new physics” has done away with everything. The quantum theory and Heisenberg’s principle of indeterminacy are reverently invoked as having made practically anything possible, and they serve as knock-down arguments for the use of persons who have only the very vaguest idea of what either of them means. For the first time since the dethronement of theology as the queen of the sciences, arguments between educated men concerning religion, free-will, the reign of law, and the possible existence of purpose in the universe come down to nothing more than the citation of authorities, and the most widely known popularizers have been on the side of an extremely loose variety of mysticism.

Under the circumstances the present straightforward and perspicuous little book is more than welcome. The theory of relativity and the quantum theory form the basis for most of the current paradoxes, and yet Einstein and Max Planck, respectively the originators of the two theories, here repudiate unconditionally the most important metaphysical deductions which have been made from them. On the subject of free-will Einstein is old-fashioned enough to remain content with the common-sense rationalism of Schopenhauer’s remark, “Man can do what he wills but he cannot will what he will will.” And on the perhaps more immediately important question of the universal validity of the law of causation, the two are agreed. Jeans has insisted that “Planck’s constant” “destroys the case for absolutely strict causation,” but Planck and Einstein agree, in the words of the latter, “that nonsense is not merely nonsense. It is objectionable nonsense.” Einstein further insists that physics has no grounds whatever for accepting what are urged as the metaphysical implications of Heisenberg’s principle; and to the suggestion that Professor Joad mentions him as corroborating the theories of Jeans and Eddington he replies simply: “No physicist believes that. Otherwise he would not be a physicist. Neither do the physicists you have mentioned.”

As the layman now usually knows, the phenomenon most usually cited by those who dispute the law of causality is that which is manifest when a transfer of heat takes place from a body at a high temperature to one at a lower temperature. Physicists have discovered, or seem to have discovered, that in the case of gases an individual molecule may, so to speak, move against the general current, and on the basis of this discovery certain of them have argued that the movement of every molecule is not determined by law, though we can, of course, predict statistically how the majority of them are going to behave. To this argument the thoughtful layman must himself have replied that the indeterminable is not the same as the indeterminate and that, perhaps, the aberrant particle may be obeying forces which are not yet detectable or measurable. He may have added that this latter explanation seems the more probable in view of the fact that causality is seen to operate in the case of every phenomenon which comes within the range of ready or complete observation, and that it is a curious sort of logic which will upset the conclusions drawn from very well-known phenomena because of others drawn from very imperfectly known ones. If he has raised these objections for himself he will be pleased to see that they are exactly the ones raised by Max Planck.

We do not know that loaded dice will always fall as the dishonest gambler intends. We know only statistically that they will usually fall a certain way. But that does not prove that loaded dice have free-will. It proves only that the calculation of the movement of the dice under the impulse given them by a hand involves factors which we have no way of measuring. And it is in precisely the same way that Planck explains the so-called “indeterminacy” of molecules:

In point of fact, statistical laws are dependent upon the assumption of the strict law of causality functioning in each particular case. And the non-fulfilment of the statistical rule in particular cases is not therefore due to the fact that the law of causality is not fulfilled, but rather to the fact that our observations are not sufficiently delicate or accurate to put the law of causality to a direct test in each case. If it were possible for us to follow the movement of each individual molecule in this very intricate labyrinth of processes, then we should find in each case an exact fulfilment of dynamic laws. . . . Here, as everywhere else, we must differentiate between the validity of the causal principle and the practicability of its application.

Planck's book is written for, but not in any condescending way down to, the layman, and one hopes that it will get as wide a reading as have some on the other side. The harassed rationalist who does not happen to be also a technically trained physicist has now two very good authorities to cite. What is even more important, he has two great scientists who recognize the validity of logical criticisms which he is quite capable of understanding and even making for himself.

JOSEPH WOOD KRUTCH

Chamberlain the Radical

The Life of Joseph Chamberlain, 1836-1885. By J. L. Garvin. The Macmillan Company. \$5.

THERE is no man in the present public life of England whose career equals that of Joseph Chamberlain in offering temptation to writers or speakers who like discussing the "ifs" of history. If Gladstone had given up the Liberal leadership when he made a feint of doing so after his defeat by Disraeli in 1874; or if he had gone, as the Queen and everyone else expected him to do, within two or three years of making his second government in 1880, the first place must have fallen to Chamberlain, already head of the radical Liberals in the country. If Gladstone, again, on admitting Chamberlain to his Cabinet, had measured the man more justly and had recognized him as the portent he was; if, in 1885, he had made the working out of an Irish settlement a cooperative task among his colleagues instead of treating it as a lonely adventure for himself, the secession of Chamberlain and his adherents might have been prevented and the course of party history and legislation have been correspondingly changed. And finally, if Arthur Balfour, after the Boer War, had been somewhat less adroit—. But what is the use of stating any such ifs? Things and actions are what they are, and the consequences of them will be what they will be.

And yet the astonishing facts stand. Joseph Chamberlain, half a century ago, was the voice of a new radicalism, the leader of a potential party which looked as if it would make an end, within a few years, of Whiggism and Gladstonian liberalism alike. He was remarkably able and positive. He had perfected a platform style equally far from the contrasted styles of Gladstone and of John Bright, and he was fast gaining power over the industrial workers. He was the first English politician to envisage the urgent needs of the great city, and he had to his credit a fine pioneer achievement of civic reconstruction, in Birmingham. He was a relentless champion of democracy against the landlords, the established church, and the whole structure of privilege; and as a provincial he seemed to embody a social force of the industrial midlands and north destined to overthrow the dominion of London society. In 1880 nothing could have seemed more fantastic than that Gladstone, already past the age of seventy, would remain in control of the Liberal host for fourteen years longer, or that midway in this period the radical leader would transfer himself to the other side and ally himself with the party which hitherto had looked upon him as diabolic. That, however, is what happened. Chamberlain employed his great parliamentary gifts in such a manner as to become the main influence toward the revival of Tory ascendancy and the shaping of a new imperialism—thus helping, among other things, to destroy the chances of a reasonable settlement with Ireland and to make inevitable the surrender of thirty-six years later. It is a story without a parallel.

This first volume of a spaciouly planned record carries Chamberlain to his fiftieth year. With a complete command of the material, a fine sweep of hand, and an energy of narrative

that never flags, Mr. Garvin expounds the dissenter and iconoclast. To those who know the biographer only as editor of the *Observer*, ringing Sunday changes on the themes of democratic conservatism, it may seem strange that he should be able not only to present but to glorify the earlier Chamberlain. As a matter of fact, Mr. Garvin is in his element, one very definite reason being that he is by nature and habit an impassioned anti-Gladstonian. A portrait of the midland radical is and must be a downright anti-Gladstonian document, as we shall see even more plainly when the second volume is reached. The Chamberlains were Unitarians; Gladstone was a high Anglican. Chamberlain knew the England of the large industrial centers, and was close to their problems of slums and land values a generation before the rise of the Labor Party. Gladstone, for all his splendor of spirit, had not, when his great chance came in 1880, come even within sight of the social problem. And Mr. Garvin has the advantage of writing the life of Chamberlain the radical at a time when party politics have been submerged and the social problem has for the great majority of his contemporaries become all in all. His is a challenging and fascinating subject, and he has identified himself so entirely with it that from beginning to end of these 600 pages there is no hint of disharmony between the radical Chamberlain and the most vital and distinguished of Conservative journalists expressing himself in an altered world. The volume is a grand orchestration. It makes an important epoch of English national life glow and march. And, let me add, here are an epoch and a nation with both of which the American reader should find himself in almost full accord.

S. K. RATCLIFFE

A Poet Disinterred

The Complete Poems of John Skelton. Edited by Philip Henderson. E. P. Dutton and Company. \$3.50.

IN one of our modern fantasies there is an amusing scene showing literary men of the future, mining libraries for valuable books as today we dig for ores. As literature accumulates and scholarship elaborates methods of preservation, this notion would seem to be more a forecast than a fantasy. The process may be said to be in action already, for disinterring buried masterpieces has become one of the cherished ambitions of criticism, and may in time become one of its chief functions.

Philip Henderson, in editing this edition of Skelton, judiciously modernizing the spelling and defining obscure terms, deserves credit enough for the venture itself, which restores to us a genuine master; but he has added to this credit by writing an introduction brilliant on all its facets—vivid in its portraiture of Skelton and in its description of his era, and shrewd in its estimation of his poetry. I can do little more by way of a review than confirm his judgment and summarize his principal statements.

Skelton wrote in one of the flattest periods of English literature—the latter half of the fifteenth century. Chaucer had grown remote, a vague memory. The writers who followed him had staled his measures into flavorless conventions. Skelton startled his generation with a poetry extraordinary for the vigor and variety of its rhythm and for the vitality of its matter. Skelton had sharp senses and a huge appetite. Utterly unsqueamish, he was enabled to turn the vulgar, the macabre, and the grotesque into poetry. He wrote with exultant and careless gusto. He antagonized his contemporaries and apparently enjoyed the quarrels. But he was not present to sustain the struggle in later generations. Condemnation grew and permitted his survival only as a figure to whom the learned prurient could look for furtive entertainment. A master of the

meticulous like Pope dismissed him with the epithet "beastly." Warton included Skelton in his survey of English poetry, but only for the sake of comprehensiveness, and rated his drab contemporaries above him because they rhymed more scrupulously and provided morals with their verses. With the romantic revival some appreciation of Skelton began to appear. Coleridge and Wordsworth called attention to him. But our own period, defiant of formulas and decorum, is certain to give him the warmest hospitality.

When examined, Skelton's meters, on the surface so undisciplined, are seen to be of extraordinary richness and versatility. What appears to be abandon we soon discover to be the effect of great dexterity and variety. "Elinor Rimming," with its syncopated effects, has a verse form that is strikingly original and wonderfully effective. "Philip Sparrow" dashes on in swift short measures, out of which, however, nuances and delicate conceits are distilled; everywhere in this poetry are diversity and animation. The predominant tone of it is satirical and the satire is frequently rough and bludgeoning; yet a lyric master is everywhere in evidence.

The restoration of Skelton to the ranks of accessible poets is an event to be thankful for.

ISIDOR SCHNEIDER

Barter or Dole?

The Abolition of Unemployment. By Frank D. Graham. Princeton University Press. \$2.

Unemployment. By Sir William Beveridge. Longmans, Green and Company. \$5.

"UNEMPLOYMENT has a business, not an economic, basis. It issues solely from dislocated exchange relationships and could not occur in a pioneer society, where every producer is laborer, capitalist, landlord, and enterpriser at one and the same time." Professor Graham, of Princeton and Geneva, gives concise expression to an idea which American farmers have been putting into practice for some years, and many of the unemployed for some months. He believes that if our unemployed were set down in a fertile but undeveloped country they would instantly start to work rather than starve. Such work, he holds, could be organized at once in this country on a self-sustaining basis, with an initial expense that would be trifling compared with our present yearly relief bill.

National prosperity and high real wages depend upon production, not upon unemployment-relief doles or unemployment insurance, both palliatives at best. Further curtailment of production will ruin what business is still functioning, and the rising cost of relief will threaten destruction of the still existing incomes, without solving the unemployment problem. Idle resources, idle plants, and idle men could all be brought together under an Emergency Employment Corporation, a non-profit-making concern. Under such a corporation unemployed workers of all kinds and trades could be set to work to produce goods for their fellow-"jobless." Payment for such work would be in scrip, exchangeable for the goods that these jobless turn out. Such scrip could not be hoarded, since it would lose some of its value each successive month. Goods produced would therefore be rapidly purchased and consumed.

The amount of payment for work would depend upon the amount of goods produced by the corporation, week by week. The valuation basis for labor and for goods produced would be the present market value in terms of the dollar. Once started, the organization would be virtually self-supporting, would provide a much better standard of living for the "jobless" than the present meager relief doles, and would lift from the backs of the struggling business men and workers the present huge burden of relief taxation.

Such an Emergency Corporation would not compete in the wage or commodity markets with existing business and labor, for the unemployed would be working and being paid in a self-contained economy. At the same time Professor Graham would have the corporation rent at low rates many existing plant and distribution facilities, thus enabling business men to meet some of their heavy overhead costs in this depression. This point, perhaps, will be the target of the major part of the criticism called forth by his scheme.

Farmers would gain by the exchange of their unsalable surplus for goods produced by the workers in the Emergency Corporation, and those workers in turn could obtain larger and better supplies of foodstuffs and raw materials from the farmers than would be possible if they had nothing to offer in exchange but their miserable relief doles. The rapid consumption of the farmers' surplus would favorably affect the regular market for agricultural produce. Moreover, with the unemployed the nation over assured of steady work in the Emergency Corporation, much hoarded money put aside by those still employed for money wages would quickly find its way into the normal channels of business and help lift the depression. This is no Utopia. Professor Graham meets many probable objections with careful arguments and data. Workers and farmers in many of the States are already struggling manfully to start such a "barter exchange." The immediate and urgent need is for organization of this movement on a national scale in order to gain the full benefit of the specialized industries of different regions. No heavy bond issue, no inflation of the currency, is needed—just a little courage and plain horse sense. Our pioneer grandfathers would have known how to proceed. One can scarcely believe that their descendants have become utterly incapable.

Professor Graham indicates that his scheme is a temporary emergency plan which reviving business would gradually reduce to a mere skeleton, to be retained, perhaps, for future periods of unemployment. Your reviewer takes a more gloomy view of the capacity of even revived business to absorb anything like the mass of those now unemployed. For that reason he welcomes the more warmly this plan for a sane alternative to present conditions, where vast natural surpluses rot and idle men decay.

"Unemployment" is a reprint of Sir William Beveridge's classic of 1909, with seven valuable chapters, added in 1930, bringing up to date the vicissitudes of British unemployment insurance. Sir William describes the deplorable change "from insurance by contract to relief by status" that has resulted from the successive pieces of legislation. The major fault with the British and other unemployment-insurance schemes does not lie in the temptation to "loaf on the dole," a glib allegation thoroughly disproved. The real peril lies in the demoralization of "governments, employers, and trade unions," in that they "take less thought for the prevention of unemployment." On this point Beveridge and Graham are in absolute agreement.

WILFRID HARRIS CROOK

Napoleon

Napoleon. By Jacques Bainville. Little, Brown and Company. Translated from the French by Hamish Miles. \$3.75.

The French Revolution and Napoleon. By Leo Gershoy. F. S. Crofts and Company. \$5.

BAINVILLE is a royalist and a nationalist. In his "History of France" he wore blinkers and colored glasses. In this book he is miraculously free. Most historians start with haughty claims to impartiality, Bainville makes no such promise and is better than his word. His great superiority is that he does not attempt to define Napoleon. Neither at the beginning of his work nor in his conclusion do we find a glitter-

ing formula, like Taine's *condottiere*. No man is a theorem; he is a bewildering complex of aspirations, most of them frustrated. The alleged "will" of a hero is a resultant which baffles analysis. And that will, such as it may be, is only one element in the man's career, far less potent than two other factors, necessity and chance.

Necessity (in Napoleon's own terms "the force of things") appears in Bainville's book under the guise of England. Europe could never accept the sudden and tremendous extension won by France in 1795; England, the only country that could not be coerced into acquiescence, embodied that refusal to the end. Napoleon was committed to the defense of impossible conquests for which he was not responsible. His military genius, the united resources and the enthusiasm of the French, the incompetence and divisions of the European sovereigns deferred the inevitable solution for nearly twenty years. But sooner or later the treaties of Basel were to be torn up by some Waterloo.

The thesis, which is not new, is plausible but not fully convincing. Bainville exaggerates the determination of the British and the importance of Antwerp, "that pistol aimed at England's heart." Prussia and Russia kept for well over a century conquests more extensive and more unnatural than those of the French Revolution. The peace of Amiens was popular among the masses across the Channel. It could have been preserved but for the insatiable and unscrupulous ambition of Napoleon. But there, again, Napoleon was merely following an example. It was the helpless and megalomaniac Directoire that sought adventure, pelf, and trouble beyond the Alps and beyond the Rhine. The circle of "protected" republics—Batavian, Cisalpine, Ligurian, Roman, Helvetian, Parthenopean—was an adumbration of that splendid phantasmagoria, the Grand Empire of 1810. Resolutely on the defensive within her so-called "natural" frontiers, France might have held them indefinitely.

Bainville's narrative never strives for eloquence, pathos, or picturesqueness. Yet it is constantly fascinating. A keen, energetic mind, earnestly and fearlessly seeking a path, affords a finer spectacle than all the pomp of empire. But the obvious dramatic power for which Bainville does not care clings unsought to his pages. His sober allusions evoke the glittering pageantry of triumph and the somber magnificence of epic downfall. And although he never "explains" Napoleon, we close the book with the feeling that we have been brought closer than ever before to the primitive, histrionic, and tormented soul of the Conqueror.

Professor Gershoy's book seems excellent of its kind. But for its kind—the magnified college textbook—I personally have very little liking. This volume is an able, up-to-date summary of research in an enormous field. But compilation is not history. First-hand information, like Gottschalk's "Marat" or Bruun's masterly little "Saint-Just," is history; and every honest monograph is at least history in the making. Interpretation, never losing sight of the facts, like Bainville's "Napoleon" or Carl Becker's "Heavenly City," is nearer the finished product. But an enormous collection of facts at second hand, without personal philosophy and without personal style, is of doubtful value except for sophomore cramming.

The nemesis of such a book, heaping together the spoils of a hundred research workers, is that it can never be wholly consistent in thought or even in the presentation of details. Professor Gershoy tells us in the same paragraph that Napoleon was "a profound statesman" and that "from the first he did not know whither he was going." A profound statesman would have read much earlier the plain sign: "This way madness lies." Fouché, Talleyrand, and even Madame Letizia had read it without effort. The brief summing up of the Peninsular War is wholly misleading: "Against that dogged commander [Wellington], Napoleon was to send his best marshals and 300,000 of his grizzled veterans, but nothing availed him. . . ." Pro-

fessor Gershoy forgets that in 1812 Wellington, who had reached Madrid, was sharply defeated, and had to retreat post-haste all the way to Portugal, "the officers having lost all command over their men." If in 1813 he was able to pursue the retreating French, it was only because "twelve hundred miles away the Grand Army was dead."

The bibliography is extensive, valuable, but not always critical. General Ballard's naive primer had best be consigned to oblivion. Kirchsen's is called "the best one-volume study since Fournier." Professor Gershoy must have been impressed by the appalling bulk of Kirchsen's other contributions to Napoleonic scholarship rather than by a careful evaluation of this particular opus; the quantitative test is not a reliable one. But we must repeat that the faults of Professor Gershoy's large and handsome volume belong to the type—a type for which there exists a large demand, and which our strictures are not likely to injure. For the painstaking and lucid work of Professor Gershoy himself we have nothing but sincere respect.

ALBERT GUERARD

The Osage Indians

Wah'kon-tah. By John Joseph Mathews. University of Oklahoma Press. \$2.50.

THE author of this book is a member of the Osage tribe of Indians, a graduate of the University of Oklahoma with a degree in natural science from Oxford. He has spent most of his life on the Osage reservation and he knows his own people. His story begins in 1878 when the late Major Laban J. Miles came as agent to the Osages, and it is based on careful notes left by Major Miles. The tale ends with the coming of the white men, when oil was discovered on the Osage reservation and the Indians became wealthy. It has to do chiefly with that period in the history of the tribe when the Indians, although they were under the United States government, still held to their simple customs and to their faith in *Wah'kon-tah*, or, in translation, to "that which the children of the Earth do not comprehend as they travel the roads of the Earth and which becomes clear to them only when they have passed on to the Great Mysteries."

Mr. Mathews's book is valuable as anthropological material in that it covers a period during which Indian customs and beliefs and rituals were slowly undergoing an inevitable change under the growing influence of the white man's civilization. It is a very interesting account of the workings of the Indian mind, long disciplined and learned in ancient lore, when brought by necessity into contact with a whole new set of ideas belonging to another people. Major Miles, intelligent and very sympathetic, is the mediator between the Indians and the white cowboys, traders, and exploiters. His is the central figure in the drama; to him come all the perplexed leaders of the Indian tribes. He must explain to these chiefs laws which they cannot understand, a system of ethics not their own, ideas in medicine utterly foreign to their curative practices. The story of this period in the development of the Osage nation ends with the death of Major Miles.

Mr. Mathews writes very well indeed. He has an extremely accurate ear for Indian speech and is able to translate the poetry of that speech into English. He understands perfectly the Osages' poetic feeling about their country, their customs, their religious beliefs. Through an incident, a bit of drama, a conversation, a descriptive sketch of the country, he gives us a sense of the dignity and intelligence of this tribe. Because he is himself an Osage, he does not, as so many white writers incline to do, romanticize or sentimentalize his material. He allows the facts to speak for themselves, but he is able so

to interpret the facts that we are left with a conviction: these Osage Indians were a people so completely at one with their environment, so beautifully able to express the meaning of the setting in which they dwelt, that the coming of the whites and the consequent breaking down of Indian culture must seem a tragedy.

"Wah'kon-tah" is one of the best of several studies of the Indian mind. We have at last come to realize that to have any record of the Indian mind before it perishes entirely, we must collect quickly the stories of such old Indians as remember the past. We value highly, therefore, this sympathetic, intelligent, artistic interpretation of the Osage.

EDA LOU WALTON

Shorter Notices

The Mirror of Fools. By Alfred Neumann. Translated from the German by Trevor and Phyllis Blewitt. Alfred A. Knopf. \$2.50.

Readers looking for entertainment will find it in "The Mirror of Fools," wherein they need not fear to see their own reflections. The book has no satirical intent; the characters are caricatures put together for no moral purpose—only the clown's purpose of making us laugh. Here is burlesque from belt to buttock, all grinningly unrefined. It is the story of an enormously fat and sensual princeling of the Holy Roman Empire and his cadaverous and ascetic chamberlain who knock about Germany in the sixteenth century, floundering through a cleverly invented mess of misadventures. However, in spite of Neumann's ingenuity and skilful workmanship the book cannot be accorded a very high rating. It succeeds in being amusing, but it has no integrity of its own. It passes lightly out of the mind, unlike its great sources, Don Quixote, Tyl Eulenspiegel, and Pantagruel, whose materials it so deftly reworks.

The Last Adam. By James Gould Cozzens. Harcourt, Brace and Company. \$2.50.

Since Main Street has become a term of opprobrium, a synonym for small-town bigotry and hypocrisy, Mr. Cozzens's demonstration that the simple and heroic life may still be lived in a quiet New England village has at least the charm of rediscovery and reaffirmation. But it is precisely this emphasis on reaffirmation that constitutes a serious limitation to his work. In tracing the destinies of the residents of New Winton, chief among whom is Dr. Bull, a heroic and Rabelaisian practitioner of the old school, Mr. Cozzens gives us the feeling that he is neatly solving a theorem, with the Q. E. D. that there is after all a good deal of human nature in mankind—even when the species happens to inhabit a small town. But this conclusion is not enough. Dr. Bull is drawn only in outline, with bold strokes, and has a rather official epic quality. What the story chiefly lacks is the element of surprise—not the unexpected turn of plot, but the turn of character, the pleasurable surprise of detail and individualization.

The Orient in American Transcendentalism: A Study of Emerson, Thoreau, and Alcott. By Arthur Christy. Columbia University Press. \$4.

Mr. Christy does in greater detail and for a broader field what Frederic Ives Carpenter undertook in "Emerson and Asia" (1930). He sets out "to tell why Concord men read the Orientals and to what end; and most important of all, the sources from which they took Oriental ideas and ornamentation for some of the classic pages of American literature." The monograph puts the Concord group in a new relation to world literature, underlining a fundamental generalization to which

all students have agreed—that the Transcendentalists were eclectics par excellence. Mr. Carpenter laid down the proposition that Emerson approached the East through Neo-Platonism and Mr. Christy accepts the point without laboring it. He goes on to show, in the light of a very intensive study and from the vantage-point of an exhaustive knowledge of Oriental thought and Oriental studies, just how and what the three men borrowed from the literatures of India, China, and Persia, leaving the Zoroastrian question to one side. Borrowed is the proper term for what they did, the definition of Emerson's method applying to them all: "He was fascinated with them and used them abundantly, sometimes with a purpose quite contradictory to that in the Oriental mind. But however they were used they reflected his own moods, impulses, and spiritual experience." Emerson was of course most hospitable to the literature of India, as were Alcott and Thoreau. Mr. Christy thinks the influence of Confucius was greater than that allowed by Mr. Carpenter, but agrees that the Persian influence was expressed mainly in poetic method and diction. Thoreau is discussed chiefly as a Western exponent of asceticism, while Alcott is viewed as a popular propagandist for Oriental doctrines. A major contribution is the definition of the Oriental strain in Emerson's optimism. Altogether the book is a valuable contribution to our knowledge of the origins of a major American literary movement.

Zola. By Henri Barbusse. Translated from the French by M. B. and F. C. Green. E. P. Dutton and Company. \$3.

M. Barbusse makes no new revelations concerning Zola's life, the last private details of which were made public some years ago by his heirs and indicated few enough and reasonable enough vices. It is regrettable, moreover, that he "novelizes" the life in a form which has become curiously popular in France, thanks to the transient successes of Maurois. We are given a succession of impressionistic scenes and glimpses of the great man and his milieu, from the time when he began his Rougon-Macquart series of novels to the day of the Dreyfus case. Sometimes these impressions are based on documents, new and old; sometimes on simple conjectures of the biographer; but nearly always they have the effect of making the subject remote and the historian disagreeably immediate. What M. Barbusse does exceedingly well, however, in the whole second half of his book, is to drop the "novelizing" and interpret the interior drama of Zola in terms of our own time. During what can only be called a revolutionary crisis Zola, the worthy bourgeois, emerged from his study and threw himself into the political struggle on the side of humanity and decency. With "J'accuse!" as M. Barbusse trenchantly phrases it, the "man of letters" had become the "man." On the subject of Zola's courageous example and his conversion to socialism M. Barbusse, who is a Communist, speaks with the utmost conviction and forthrightness. What of our own writers, he asks, in a time of social debacle, of the foreseen agony of an international empire? Will they remain silent, which is to say complaisant, or will they take their stand?

The Congressional Follies. New York: The Abbot Press. \$1.50.

For years H. L. Mencken has been boosting the *Congressional Record* as the most hilarious periodical in the country. Now some anonymous hand has made a compilation from its pages which is published under the very appropriate title "The Congressional Follies." Unfortunately, however, the extracts are only occasionally funny. The best one is a list of bulletins issued by the Department of Agriculture, which include "Principles of Window Curtaining," "Children's Rompers," "How to Dress for a Sun Bath," "Where Sheets Wear Out," and

"Vitamins in Relation to Salad Dressing." For some incomprehensible reason only the *Record* of the first session of the Seventy-second Congress has been drawn upon. There is thus still room for a truly choice collection based upon a long succession of Congresses.

The Growth of Literature. Volume I: *The Ancient Literatures of Europe.* By H. Munro Chadwick and N. Kershaw Chadwick. The Macmillan Company. \$6.50.

This is the first volume of a work which, according to the authors' plans, will require three volumes for completion. It is a comparative study of five literatures—Greek, Anglo-Saxon, Irish, Welsh, and Norse—in the period before they were set down in writing and subjected to influences that disintegrated their native qualities. The purpose of the authors is to follow the growth of literature and the elaboration of genres, and to trace the operation of general principles in this growth. The authors reserve their conclusions for the final volume, but the tone of the present work forecasts them. It seems clear that they will demonstrate that, given similar conditions, peoples remote from each other will develop similar literatures. In the course of their work the authors turn up some curious and fascinating data, but the book as a whole, in obedience to the scruples of scholarship, is too inclusive of detail to make interesting reading.

Films

Movie Cant and Criticism

MOVIE criticism, although it is too new to have set up any really solid standards or even to have found for itself an adequate vocabulary, has already managed to establish in a certain section of the public mind a body of a priori judgments which can only be described as cant. I suppose what we usually mean by cant nowadays is the adoption of some opinion or point of view whose implications of superiority depend largely on its being at variance with the popular (or should we say vulgar?) point of view. Now the essence of current movie cant is fortunately summed up in a single definitive and invariable dictum: that nothing worth while ever has or will or can come out of Hollywood. If one shares this conviction, the whole problem of discrimination in the films is of course very much simplified. It is only necessary to make sure that the picture seen was made in Germany or Russia or Czechoslovakia to be relieved of the always difficult task of critical analysis and comparison. An unqualified admiration for foreign films, therefore, not only becomes a mark of good taste but also represents, in an age of hard thinking, a considerable economy of mental energy.

The truth is, of course, that it is much too early to make any generalizations about the films on a merely national basis of comparison. If a fair-minded jury were to draw up a list of the ten best films produced to date, it is fairly certain that at least four countries of the globe would be represented and each of them to about the same extent. And one of these countries would certainly be our own. The movie, in so far as it is a characteristic phenomenon of the age, is an international medium; and the perfect movie, when it appears, is as likely as not to be a synthesis of elements now being separately developed all over the world. We need only point, for example, to the obvious fact that such a director as René Clair owes just about as much to Hollywood as Hollywood owes to René Clair. And in the more recent German films one sees an increasingly fruitful assimilation of American and other foreign influences.

Speaking of Lame Ducks

Apparently the halt have been leading the blind. But you can keep your eyes open with THE AMERICAN MERCURY. It not infrequently exposes just such a condition as this. . . .

WHAT CONGRESS COSTS

24 jars Naicurema vanishing-cream.....	\$15.60
6 bottles Brilliantine hair-dressing.....	2.10
1 dozen nail files.....	2.75
1 dozen nail brushes.....	5.75
1 dozen orange sticks.....	.60
2 gallons bay rum.....	9.00
1 bottle Pinaud's Lilac tonic.....	.90
6 bottles Listerine.....	3.30
3 blackhead removers.....	.45
7 boxes Chocolate Ex Lax.....	.60
1 dozen Sylph bath brushes.....	6.00
53 gallons Beau Brummel liquid soap.....	66.25

. . . and that is only one of the many amazing expense accounts submitted by our Senators and Representatives! Mineral water, aspirin, fish-hooks, revolvers, ice, winter jaunts to Florida and summer trips to Alaska are only a few of the little things (running into hundreds of thousands of dollars) that Americans pay for to make life pleasant for their officials. The whole business is described by Hilton Butler in an article entitled THE RACKET ON CAPITOL HILL in the February issue of The American Mercury. A very funny article, but painful, too. However, you can read it yourself by using the coupon below.

The American Mercury alone, \$5.00 a year.

Certainly these remarks have no very particular application to the unpretentious French film at the Little Carnegie. "Sous la Lune du Maroc" is, first of all, a rather charming travelogue of Fez and other spots in North Africa. It is also a rambling, poorly accented melodrama about five Europeans suffering under a trumped-up sorcerer's curse in the same region. Between the setting and the melodrama, however, there is no inevitable connection; the excellent photography is not integrated with the narrative. Many of the effects—such as the checkerboard shadows beneath the lattice-roofed streets—we have already seen in Von Sternberg's "Morocco." The important difference is that while in the one these have only a photographic value, in the other they had a dramatic value as well.

"Woman's World," at the Acme on Fourteenth Street, is somewhat below the level of recent films from the Soviet Republic. The difficulty here again is not that the picture is pure melodrama or melodrama based on propagandist values which one may or may not accept, but that it is, for an American audience, unsuccessful melodrama. For such an audience melodrama is made effective only by a speeding-up of its psychology of response—a condition that apparently does not apply to a Russian audience. The still-photography throughout has of course a certain independent beauty of its own.

The Film Forum opened triumphantly with an uncensored newsreel of the march of the unemployed on Washington last summer and an uncut version of Fritz Lang's "M." "Hunger" was interesting as a social document but not as interesting as it should have been as a photographic treatment of the event. The Forum should be congratulated on its choice of "M" for its initial offering.

WILLIAM TROY

Drama

The Prosecution Rests

ELMER RICE'S sociological drama "We, the People" is an indictment pure and simple. The twenty scenes which pass rapidly across the stage of the Empire Theater summarize vividly the case against contemporary society and conclude with a series of speeches directed straight at the audience. No previous effort of the same sort has been anything like so ambitious, and none has been, within its limitations, so effective. The most convinced defender of the status quo could hardly fail to feel the force of the indictment, and several times the audience broke out into mingled applause and hisses. Here are clarity, logic, and an intense sincerity, plus a very unusual gift for dramatic writing.

And yet, if the truth must be told, a certain sense of disappointment is mingled with the admiration one feels. It was to be hoped that Mr. Rice would do more than state a strong case strongly; it was to be hoped that he would be technically inventive, that he would advance the art of the sociological drama by making it more satisfactory as drama. But that is exactly what he has failed to do. Perhaps it would be unfair to say that "We, the People" is merely "bigger and better" in the conventional American sense. But it would be, at least, to state a part of the truth. The play stands out because it is ambitious, elaborate, and complete. It is not essentially new, original, or inventive. Like all the other plays of its kind it is interesting almost wholly because of its subject matter. No one could possibly call it a good play after it had ceased to be relevant to existing conditions, and it will be admired precisely to the extent that the individual spectator happens to be on the author's side.

Great propaganda must manage in some way to hold even

those who do not want to hear, and that "We, the People" will fail to do. If he is honest with himself, even the most delighted spectator will realize that he is thinking chiefly of what the play is going to do to his opponents rather than of what it is doing to him. The prosecution is summing up and summing up well, but it is stating nothing which has not been stated before. The dispossessed family, the riot at the factory, and the condemnation of the agitator are typical; so too, perhaps, are the attitudes of the industrial magnate and of the "liberal" college president who dismisses the troublesome professor. But they are too little more than merely typical. We expect of a drama that it shall tell us something we do not know, give us some insight we did not have, or, if it deals wholly with the familiar, that it shall arouse and then discharge our emotions in some effective way. If it does none of these things, we may still "approve" as we approve "We, the People"; but we shall remain, nevertheless, unsatisfied.

This particular sort of thing will hardly be better done than it has been done here, and that means, I think, that the contemporary drama of protest has yet to find a suitable method. It has already discarded a great many conventions, but that is merely a negative achievement. It scorns neat structure, which, for example, Mr. Rice himself knows so well how to use in plays of a different kind, and it scorns also that emotional reconciliation which, in tragedy, takes the place of the happy end of comedy. Since its avowed purpose is not to reconcile the audience to life but to exasperate it into action, it refuses to resolve its own discords and it ends upon a dissonance. Unlike the drama as it has usually been known, but like the classical oration, it ends with the question: "What are you going to do about it?" And its true last act is, I suppose, that revolt at the polls or that riot in the street which would furnish the only conclusion either logically or emotionally satisfactory. But when the revolt or the riot does not take place the spectator merely finds himself with emotions undischarged. That is not aesthetically satisfying, and for that reason it is unsuccessful propaganda. It provides no attraction for those who need its arguments to convince them, and if it pleases at all it pleases only those who are convinced already.

"Art is a weapon." If I understand aright those who announce this dogma, they recognize and proclaim their departure from the whole tradition of the "classics." But if they do, then they have taken over far too many of the methods suitable only for a different purpose, and they too often challenge comparisons which result unfavorably. They need styles as revolutionary as their intentions, and they have not developed them. Despite the fact that it is broken into many episodes "We, the People" is enough like a conventional play to arouse the conventional anticipations. It engages our sympathy for a group of individuals and then plunges them into a series of difficulties which we follow with concern. But it does not provide the satisfaction which such a drama ordinarily provides. Not only does it take abrupt leave of these personages, but it fails to make the characters as such anything like so interesting as the characters in more conventional plays. Since they are intended to be typical they lack individuality, and they tend to sink to the level of mere puppets—to become merely a workman, a college professor, and so on. Yet the process of typification is not carried far enough to make them pure symbols. Doubtless the drama of social forces must deal with generalities, but if it is to do this effectively, then it must do it so clearly that the human beings involved will seem to us more than merely rather colorless individuals. And that is a good though simple example of what I mean by saying that if such plays are to revolutionize the drama, they are not yet revolutionary enough. They still challenge comparisons unfavorable to themselves and still suggest intentions which are not realized.

The propaganda play cannot achieve its purpose until it

A Second Questionnaire for Consumers

What vitamins, how necessary they, and what foods contain them?

What special hazards of infection or poisoning are involved in using certain bakers' goods?

Is Bond bread "the only food that gives you the extra vitamin D you need"? Do you need it?

Is it safe to eat only canned foods and no fresh foods in the diet?

Are noiseless typewriters as sturdy as the standard models?

These are a few of the many questions answered for subscribers to Consumers' Research in the December 1932, section of the Handbook of Buying which covers Food (in part) and Office Appliances.

Consumers' Research is organized as a membership corporation to provide unbiased information and counsel on goods bought by the ultimate consumer. It is not a business enterprise and is not operated for profit. Information by brand name is given on hundreds of different commodities in the Handbooks of Buying which will be issued in several sections during the coming year, each section dealing with different subjects such as cosmetics, medicine and hygiene, automobiles and gasoline, textiles, etc. The data on which the listings of goods are based come from impartial, unbiased technical experts—not from manufacturers, merchants, salesmen or advertisements.

The service which is confidential, and available to private individuals only, is \$2 a year. Send for a circular which gives further details and contains an application form.

draws in the audience it intends to convince, and it may do that in either of two ways. It may, like the comedies of Bernard Shaw, be so diverting that the bitter is swallowed for the sake of the sweet. It may, on the other hand, be so original, so surprising, so obviously a work of genius, that the enemy comes—either because he is genuinely interested in supreme excellence of any kind or because, snob-like, he must be *au courant* with things artistic and intellectual. Unfortunately, the revolutionary drama of the moment has not found either its Shaw or its Ibsen. One does not have to go.

"Pigeons and People" (Sam H. Harris Theater) is an almost indescribable entertainment in which George M. Cohan, the author, plays the role of a mysterious park-bench philosopher whose directness and sincerity completely befuddle a rich young man determined to befriend him. It is an extraordinary *tour de force* for Mr. Cohan, who is on the stage continuously for an hour and a half before his single brief absence from it. It is also well worth seeing both for the amusement it provides and for the insight it gives into the mind of a remarkable American original. Sometimes Mr. Cohan's "philosophy" suggests the plaintive lyrics of the life-is-a-funny-proposition-after-all school. At other moments it is elevated by a patent sincerity into something almost profound. "Pigeons and People," with its sometimes childish and sometimes intriguing metaphysical ingenuities, might have been written by a self-educated Pirandello.

I must add a word of belated praise for the incredibly deft marionettes performing at the Lyric Theater under the title of "The Piccoli." Nothing deflates the human being more effectively than the malicious realism of these puppets, and the gestures of the great or dignified cannot fool us any more. It is done with strings.

JOSEPH WOOD KRUTCH

□ JOSEPH WOOD KRUTCH says □

ALICE IN WONDERLAND. Civic Repertory Theater. It will fascinate children and adults alike by the reality of its unreality and the sense of its nonsense.

ANOTHER LANGUAGE. Booth Theater. Hilarious perennial exposing almost anybody's family.

AUTUMN CROCUS. Morosco Theater. Sentimental English comedy with Dorothy Gish and a new matinee idol named Francis Lederer.

BIOGRAPHY. Guild Theater. An intelligent and sinewy comedy about what happens when a cultivated woman of the world tries to choose between a pompous opportunist and an unmanageable idealist.

DESIGN FOR LIVING. Ethel Barrymore Theater. To be reviewed next week.

DINNER AT EIGHT. Music Box Theater. Trick melodrama about what happened to the various guests invited to a dinner party. The general public likes it very much better than I do.

GOODBYE AGAIN. Masque Theater. Fine performances by Osgood Perkins and others make this farce comedy very funny.

PIGEONS AND PEOPLE. Lyceum Theater. Reviewed in this issue.

THE LATE CHRISTOPHER BEAN. Henry Miller Theater. Light comedy from the French completely rewritten by Sidney Howard and charmingly played by Pauline Lord and others. All things considered, it is much the most enjoyable comedy of the season.

WE, THE PEOPLE. Empire Theater. Reviewed in this issue.

GENERAL AUGUSTO CESAR SANDINO, for nearly six years a rebel against marine rule in Nicaragua, characterized as an unprincipled "bandit" by marine officers and the United States government, has made his peace with President Juan Bautista Sacasa. The terrible bandit flew into Managua, embraced a member of the National Guard, spoke soft words of brotherly love, declared he bore no enmity toward the American people, and did not even demand a post in the new government. He sounded more like Gandhi than a fire-eating chieftain from the wilds. The marines who unsuccessfully struggled through fever swamps and lofty cordilleras to destroy him must be a trifle chagrined at the manner in which he flew peacefully into the hand of authority as soon as they had left. Were it not for its tragic antecedents, this outcome would appear almost comic. Sandino is reinforced as the hero of a continent and a half, and will doubtless have a few more streets and plazas named after him in Latin America. For a figure in the public eye of that part of the world, he has shown remarkable consistency. When *The Nation's* correspondent took his life in his hands to interview him in 1928 at the height of the marines' campaign against him, Sandino promised—as was recorded in the columns of this weekly—that if the ma-

rines were withdrawn, he would lay down his arms and accept no public office in return. He has faithfully carried out those promises, and had General Feland accepted Sandino's pronouncements at that time, the country would have been saved five years of bloodshed and the present evidence that the activities of the marines were largely futile.

SANDINO HAS ASKED for lands for his soldiers, further carrying out his 1928 statement that when the marines finally left, his men only wanted a chance to work honestly. The Nueva Segovia region where they will settle is for the most part an untamed frontier. It will require relentless effort to bring such mountainous jungle country under cultivation. As for Sandino, it is hardly likely that a man with such courage and such popularity will fail to play an important part in the future destiny of his country. The United States has had to eat humble pie a number of times in connection with Nicaraguan affairs. After opposing Moncada, dumping his ammunition into the swamps, and harassing his operations in every way possible, Washington was obliged to stage an election to enable him to become President. After calling Sacasa a Bolshevik and denouncing him as a puppet of Mexico, we were obliged to receive him as ambassador to Washington and then to recognize him as President. It will be still more amusing if some future Stimson has to stretch his legs under the same conference table with Sandino. Let our government's experience in Nicaragua be a lesson to us.

FRANKLIN D. ROOSEVELT has promised to keep Congress informed of the progress of his war-debt negotiations with Great Britain. This was the sensible thing to do. However, it is important to note that Mr. Roosevelt's statement was prompted by recent speeches of Senators Lewis of Illinois and Reed of Pennsylvania. The two Senators intimated that if Mr. Roosevelt follows the precedent set by Woodrow Wilson and keeps Congress in the dark with regard to negotiations with foreign countries, the agreements eventually arrived at may meet the fate of the Versailles treaty. It needs to be pointed out that the present situation is not comparable to that which President Wilson had to face. Then the President was forced to deal with a hostile Congress; Mr. Roosevelt's party has an overwhelming majority in both houses. Ratification of the peace treaty could be and was blocked by a one-third minority in the Senate; the debt negotiations, which require only a simple majority vote of the two houses, cannot be blocked by a minority. If Mr. Roosevelt is at all successful as a party leader, he should have no difficulty in finding a Congressional majority. We believe strongly that Congress and the public should be kept informed at all times concerning the progress of the debt negotiations, but we also believe that Mr. Roosevelt would be making a fatal mistake if he were to allow himself to be influenced by the unsupported threats of the new irreconcilables in Congress. He is in an excellent position to assert his leadership boldly and firmly, to win Congress over from its present isolationist attitude. This should be his chief purpose in taking Congress into his confidence during the debt negotiations.

MANY PEOPLE are discussing the possibility of a revolutionary crisis resulting from the rebellion now sweeping the farm States. This appears to be extremely far-fetched, though it must be conceded that several elements necessary to the development of a revolutionary crisis are to be found in the unrest of the farmers. Their organized defiance of the constituted authorities is particularly significant. In many communities the farmers have taken the law into their own hands; in other communities they have adopted a decidedly indifferent attitude toward law and government. Defiance of the law and apathy toward government, as history shows, are two of the conditions which invariably precede revolution. Whatever the farm rebellion may portend, it is being taken with justifiable seriousness by State officials and mortgage-holders. The legislatures of a dozen States are considering radical measures to reduce the indebtedness and interest burden of the farmers and to place agriculture on a sound economic basis. Some of these measures are themselves revolutionary in that they would employ the power of the State to interfere with private contracts. The insurance companies, which hold 20 per cent of the farm mortgages in the country, have responded by declaring a general moratorium on such loans. This, however, leaves mortgages worth \$7,000,000,000 or more in the hands of local banks and individuals. A general default on these obligations would greatly aggravate the situation. President-elect Roosevelt and the Democrats in Congress are exceedingly wise in placing the farm problem at the top of the list of jobs to be tackled early in the new Administration.

THE RECENT CONVICTION of Angelo Herndon in Georgia appears at first glance to have been as fantastic as it was cruel and partisan. Herndon was sentenced to spend from eighteen to twenty years in prison. The charge against him was incitement to rebellion and the statute on which the indictment was based was written before the Civil War—to provide against uprisings of slaves—and was revived after the war in the struggles that marked the reconstruction era. It has not been invoked from that troubled time until this; but as the result of its recent resurrection a Negro boy of nineteen faces half a life in a Georgia chain gang, and six others—men and women, black and white—are awaiting trial on similar charges. Herndon, a Negro and a Communist, was defended by Negro counsel before a white judge and jury. Those facts taken together were sufficient to insure the verdict. But it is idle to argue now whether or not his chances would have been better if his counsel had been white. Perhaps they would; but under any circumstances the trial would equally have been a dramatic example of class and race justice. Perhaps the old statute served as well as would any newfangled criminal-syndicalist law to express the facts of the situation. The judge and jury were not interested in the contentions of the defense: that Herndon had been arrested on the basis of radical literature which had been seized in his room without a warrant; that the barring of Negroes from the jury rendered a fair trial impossible; that the Communist Party is a legal political organization in Georgia. Putting constitutional rights aside, they concentrated on what after all was the real issue: a Negro Communist had come into the State of Georgia and had helped to organize and arouse the unemployed workers of both races. Herndon was on trial as a menace to the dominant class and race. And this, in a modest degree, he was. The law was on his side. But what is law in the face of class and race fear?

IT IS PROBABLE that whatever action New York State takes in balancing its budget will be closely followed and perhaps imitated in many other States. It is therefore doubly unfortunate that Governor Lehman included a proposal for a tax of $\frac{3}{4}$ of 1 per cent on retail sales in his first annual budget message. Such a tax has all the objectionable features that a federal sales tax would have, and raises special administrative difficulties. Nor are the Governor's income-tax recommendations free from objections. It is logical that he should follow the new federal law in lowering the exemptions for a single person from \$2,500 to \$1,000 and for a married person from \$4,000 to \$2,500. But he proposes further that all persons with taxable incomes should pay in addition to their regular tax a flat rate of 1 per cent on their entire income with no personal exemptions allowed. This last provision is quite unjustifiable. If, instead, a rate of 2 or 3 per cent were levied on incomes in the higher brackets (in addition to the present graduated tax rising to 6 per cent) it would be unnecessary to disallow personal exemptions. The increase in the gasoline tax to 4 cents, while regrettable, is sound; and the Governor is to be especially commended for his proposal that no deductions shall be permitted for capital losses. If the same rule had been followed in fixing the new federal income tax, the revenues from that tax would increase enormously.

IT IS TIME WE STOPPED expecting a recovery in business for the wrong reasons, particularly when the reasons are precisely those that have so signally failed to prove effective in the last three years. Mr. Loree, president of the Delaware and Hudson Railroad, made the front pages by predicting a recovery in business this year on the ground that the railroads "have put off renewals for plant and equipment for at least two years" and "that by the middle of next summer extensive renewal of equipment will have to be made—and I think that holds true of industry generally as it does of the railroads." Mr. Loree, in other words, tells us that the railroads need equipment, which nobody doubts, but does not tell us where the purchasing power is to come from. In the first year or so of the depression it was constantly argued that the up-turn would begin when people could no longer put off buying new overcoats, new automobiles, and so forth; but the event has proved that the millions on shrunken incomes or totally without employment do put off these purchases. The renewal of capital equipment no less than the purchase of new consumers' goods comes from those who have the purchasing power and not from those who have merely the need. How long will it take us to learn this first principle—to stop looking for "automatic" recovery by "natural" processes while neglecting the fundamental maladjustments that only political action can correct?

THE COMMITTEE OF NINETEEN by agreeing to recommend that members of the League of Nations refuse recognition to Manchukuo injected a note of firmness into Geneva's attitude toward Japan just when it was degenerating into complete futility. It is further announced that the committee will report that a settlement of the Manchurian question must be based upon the recommendations of the Lytton report. To be sure, the report of the committee has not been committed to cold print, and even if the final draft submitted to the Assembly is as firm as it ought to be, the Assembly debate will doubtless dull its sharpest points. But the

gesture has already had some effect on Japan. The same Yosuke Matsuoka who was threatening world war on Saturday was on Monday circulating reports that the League's conciliation draft might be accepted by Japan even though it bars recognition of Manchukuo. It is true, moreover, that the Committee of Nineteen made bold to talk back to Tokio only after Sir Eric Drummond had made it clear that they could do so without committing themselves to the application of sanctions. Whatever the reason, it is to be hoped that Geneva will have the courage to follow up this first step in developing a firm stand against Japan's threat to world peace.

THE PRUSSIAN DIET has been dissolved and the last fragment of Prussian state autonomy wiped out as the result of a presidential decree replacing Otto Braun, the Socialist Premier, with Vice-Chancellor von Papen, who cast a controlling vote in the Cabinet overriding the decision of the Diet against simultaneous elections with the Reich. At the same time press restrictions of unprecedented severity were announced in another presidential decree. In addition to the regulations now in effect it lists as offenses any "incitement to general strike or a strike involving a vital industry," and the dissemination of "deliberately false news" whose publication would be likely to "jeopardize the interests of the state." This last clause can obviously be used to suppress any opposition newspaper. Public meetings may be forbidden if they are regarded as "dangerous to the public order," or dissolved by the police if speakers make remarks which, if they appeared in a newspaper, would result in its suppression under the new law. Hitler now controls all the organized avenues of communication with the German people, including the government radio and the movies. Nazi gangs freely break up even informal groups of Socialists and Communists, and murder and assaults continue unchecked. The Communist Party expects to be outlawed before the elections in March. Germany is under worse than martial law; it is under mob law supported by all the powers of a reactionary centralized authority.

CONGRESSMEN are prepared to talk economy until they are blue in the face—so long as the contemplated economies do not affect their own pocket-books. They can lop off the appropriation for such bureaus as the Federal Trade Commission without a qualm, but let anyone suggest that they cut their own salaries and they will rise almost as one man to condemn the idea. On February 4 the House of Representatives voted down amendment after amendment to the legislative appropriation bill which would have reduced Congressional salaries from the present rate of \$10,000 per annum to \$7,500 or \$5,000. The opposition, which included all but a few Southern Democrats, contended that the amount involved—\$1,327,500 in the first case, or \$2,655,000 in the second—was so small that it was not worth while writing it into the budget. Presumably the huge appropriation for the Veterans' Bureau was so large that it was not worth bothering about. In any case, just the day before they considered their own salaries the members of the House wasted many hours debating items involving only a few thousand dollars and passed without a record vote and without slicing off a single cent the \$956,800,000 appropriation for the veterans. There must be economy, of course. The Democratic Party, which already controls the lower House, has promised to cut expenditures at least 25 per cent. Where do they propose to begin?

TWO WEEKS AGO we remarked editorially that it was still too soon to state definitely whether or not the termination of certain New York theatrical managers to reduce their prices would justify itself economically. We are glad now to be able to say that two meritorious productions which were about to close enjoyed such an increase in gross receipts as a result of the new scale that both have indefinitely prolonged their engagements. During the month of January business tended to improve all along Broadway, but that means only that about half the theaters are lighted and that about half of those enjoyed capacity business even on Saturday night. Meanwhile the Paramount-Publix Corporation—which controls the largest group of moving-picture theaters in America or the world at large—has gone into the hands of a receiver. That means, in effect, one more business which the government is not going to keep out of.

John Galsworthy

DURING the course of his sixty-five years John Galsworthy enjoyed most of the possible rewards of a literary career—critical esteem, great popularity, considerable financial profit, and the Nobel Prize. Writing must, besides, have come fairly easily to a man who published at least forty volumes, and "The Forsyte Saga" shared with Maugham's "Of Human Bondage" the honor of being one of the two novels usually chosen to head lists of the "ten best" of our generation. And yet Galsworthy also paid one of the penalties of a long literary career: he outlived his generation to the extent, at least, that the worship of new heroes detracted somewhat from the fame which had once been his. Plays like "Justice" and "Strife" had definitely receded into the past; even "The Forsyte Saga" was less and less often cited as the most significant work of fiction written in the twentieth century.

The form of his novels had something to do with the fact that the more "advanced" critics sometimes professed to be bored by them. They were regular, systematic, explicit, and carefully rounded. Thackeray or George Eliot would have understood their method, and, indeed, Galsworthy may some day be classed as the last of the great Victorian novelists in the sense that he was the last to cultivate the Victorian form. But there was also in his attitude and spirit something too judicious, tolerant, and conciliatory to please a more violent generation, to whom, sometimes, he inevitably seemed sentimental. The early readers of either his sociological plays or of "The Man of Property" would have thought it fantastic to classify him as a conservative, and yet by comparison with younger writers that is what he came to seem. There was, as a matter of fact, nothing of the revolutionary about Galsworthy. Patriarch by birth and in appearance, his sharp and trenchant criticism of the privileged class was criticism from within and was motivated primarily by a sense of *noblesse oblige*. Far less radical than Shaw or Wells and with less interest or faith in political schemes, he was a humanitarian rather than either a political or an economic radical. To him the dispossessed were objects of pity and the victims of wrongs, but he had none of that romanticism of the revolutionary which enables the latter to idealize the workingman or to make him, like Rousseau's Noble Savage, a reservoir of uncorrupted strength and

virtue. Essentially Galsworthy was merely asking that those who have should be more just and more generous in their dealings with those who have not.

At the end of the play "Loyalties" one of the characters defends himself by saying that he has kept the faith and played the game. Another replies, "That is not enough," and this fragment of dialogue sums up better perhaps than anything else he wrote the essence of Galsworthy's criticism of English society. That society prided itself upon its honor, its justice, and its sense of fair play. Its code was rigid and it generally lived up to the code. But it never criticized the rules of the game it played, never asked if the rules themselves were reasonable or just. Galsworthy did ask that, and he rebuked, even if he did not damn, those who refused to ask themselves the questions which he asked them.

Many radicals of today would reply to Galsworthy in the very words quoted above: It is not enough. Nevertheless, it is probable that at least "The Forsyte Saga" will be long remembered, both because of the completeness of the picture which it gives of a certain class and because of the clear logic with which it analyzes and condemns the respectable ideals of a whole generation. The nineteenth century in England was preeminently the time when the idea of property as the central reality of life, the source of honor and dignity and privilege, reached its full development. "The Forsyte Saga" is the real saga of the owning class.

Hitler's Role

EACH of the recent chancellors of Germany seems to have had a special role to play. It was Heinrich Brüning who first spoke the word that ended forever the annual payment of "tribute" to the victorious Powers. It was Kurt von Schleicher who achieved military equality for his country, at least in principle, by simply asserting that if equality was not granted, Germany would rearm. It has not been generally recognized, except by the nationalist press of France, that these two gestures in effect destroyed the Versailles system. Germany has already won its most important battles in the foreign field and now has only to consolidate these victories. What, then, is there left for Chancellor Hitler to do?

It has been suggested that the bankers and industrialists have temporarily elevated Hitler to power for the single purpose of frightening the American creditors of Germany into scaling down the huge private debt of the country. It is considered significant that the fascist leader was taken into the government at the very moment when the debt negotiations with the American bankers were beginning. It has also been suggested that Hitler will help to expedite the "liberation" of Central and Eastern Europe from French political control. However, his real mission appears to lie in the domestic field.

The election manifesto issued by his government clearly indicates what Hitler's role is to be. Ever since 1919 the industrialists, bankers, Junkers, and militarists have been fighting, by sabotage and other means, not only the republic but also that which they call "Marxism." Since June, 1932, when Franz von Papen became Chancellor, this fight has been conducted openly and without shame. What these groups mean by Marxism is not the socialism of Karl Marx but the state socialism inaugurated by Bismarck and taken over with very few changes by the democratic parties that came into

power with the revolution of November, 1918. The reactionary industrialists and Junkers want to go back much farther than 1918; they want to go back at least a half century. They want the workers to submit patiently and meekly to a form of reactionary rule in which labor would have no voice whatever. Neither the Von Papen nor the Von Schleicher Government could gain this end so long as a large and important nationalist group, the Nazis, opposed the parties in power. But the followers of Hitler were dangerous and had to be purged of their socialistic inclinations. The reactionary elements could not hope to do this by propaganda—the Nazis had been fed too long on Hitler's demagogic promises. Nor could the goal be attained by setting the loyal Reichswehr against the Brown Shirt army, for that might open the way to communism. The only remaining course was to capture and tame the leader of the National Socialist movement, and this the reactionary groups seem to have accomplished.

The rank-and-file followers of Adolf Hitler must have received with mixed emotions the manifesto he read over the radio two days after he had accepted the chancellorship. His denunciation of communism sounded natural enough. But where were the other grandiose promises they had been hearing for years—the pledge to drive out the international bankers, to destroy the power of the liberal press and the big department stores, to restore the prosperity and property of the middle class through national socialism, to rehabilitate the small farmer by breaking up the estates of the landed gentry? Instead, the Nazis heard their leader vaguely promise that his government would set to work at some indefinite date on two four-year programs, one designed to help the farmer and the other to eliminate unemployment. Only one line in the manifesto had real, concrete significance. "To the pillars of this program," Hitler declared, "belongs the idea of compulsory labor service."

Compulsory labor service? In a society based on the profit system and controlled by bankers, industrialists, and militarists such service could only mean slavery of the worst conceivable sort. Are the dispossessed members of the middle class who make up the bulk of Hitler's following, not to mention the millions of Socialists and Communists, to be delivered into servitude for the greater glory and profit of the industrialists and military rulers of Germany? No other interpretation can possibly be placed on the manifesto. This is clearly the task for which Hitler has been chosen.

It remains to be seen how the Socialists and Communists will react to this terrible threat from above. The Hitler Government seems to have no fear of a general strike, the only weapon left to the radical workers. And there is some justification for this confident attitude. Last July Chancellor von Papen found it ridiculously easy to bluff the Socialists into surrendering control of the Prussian government. There is abundant evidence that he was afraid his bluff would be met with the same weapon the workers used in defeating the Kapp Putsch in 1920. But when the Socialists submitted to the July coup with only a feeble murmur of protest, Von Papen and his colleagues knew that they were safe. They suppressed the Communist newspapers for a few days, and found that nothing more was necessary to hold the workers in line. In the present situation they are following the same course. If the reactionary leaders, working through Hitler, succeed in these tactics, the German working class will without question be reduced to a state of servitude of a sort unknown to modern industrial history.

"Compensating" Tariffs

IN a wave of hysteria accompanied by a gross distortion of facts, there seemed grave danger last week that Congress would pass and the President sign what would surely have proved to be one of the most disastrous pieces of legislation of the last four years—the so-called "compensating" tariff. This is at present embodied in the Hill bill, which proposes that where any currency is depreciated by 5 per cent or more from its former gold parity the Secretary of the Treasury may impose a "compensating" tariff in addition to the regular tariff against the goods of that country. Speaker Garner, fortunately, has spoken against hasty action by this session, but the question is certain to be raised again in the next session.

It should be pointed out, to begin with, that the absolute amount of the depreciation of any country's currency has no bearing whatever on its supposed ability to "undersell" its competitors. A drop of 50 per cent in the value of a country's currency does not help it in foreign trade if internal prices and costs have risen 50 per cent—as they eventually would—to offset this depreciation. The "advantage" in foreign trade of countries with depreciated currencies is thus entirely a transitional advantage. The Hill bill, it is true, attempts to take account of this by permitting the Secretary of the Treasury to allow for increases in prices and wages in the countries with depreciated currencies. But an allowance of this sort on any equitable basis is impossible, because it would be based on the relation of the depreciation to the average price level in the exporting country, and in this case the average price level is meaningless.

When a nation's currency is depreciating, commodities with an international market—those commodities, in other words, which mainly enter into foreign trade—rise first within the country, and their rise, in many cases, immediately offsets the depreciation in the currency, so that any added tariff on such goods would not merely be unnecessary, but would unduly discriminate against the country with the depreciated currency. Prices of many internal goods, on the other hand, would not rise at all, and though these goods would not enter into foreign trade, their failure to rise would keep down the "index numbers" of prices in that country. This fact in itself would make any "compensating" duties against that country on the basis suggested by the Hill bill altogether too high. In addition, the Secretary of the Treasury would constantly be under pressure from special interests to keep out foreign goods by prohibitive tariffs. This pressure would so greatly exceed any pressure on the other side that it would be almost impossible for him not to give way to it.

Wholly apart from such questions, however, and in spite of the long-standing and almost universally accepted myth to the contrary, it is simply not true that a country with a depreciated currency is able to flood other countries with goods. We have now before us the figures for trade with individual countries for the full year of 1932. These show sharp declines in imports from practically every country, compared with 1931. France sent us only \$45,000,000 worth of goods in 1932, compared with \$79,000,000 worth in 1931, a decline of 43 per cent. Germany has sent us only \$74,000,000 worth in 1932, compared with \$127,000,000 worth in 1931, a decline of 42

per cent. The exchange rate of both of these countries is still at gold parity. But one would certainly suppose from all the propaganda of the last year, that England, at least, had increased her exports to us. We find, however, that the United Kingdom sent us only \$75,000,000 worth of goods in 1932, compared with \$135,000,000 worth in 1931. This is a decline of 44 per cent, which, it is interesting to notice, is even greater than the decline in imports from the two principal European countries still adhering to the gold basis. Even from Japan, whose currency has fallen far more than that of Great Britain, and which appears to be the special hobgoblin of the compensating-tariff propagandists, imports fell in 1932 by 35 per cent compared with 1931, at the same time that our exports to Japan fell by only 13 per cent. While Japan sold us \$134,000,000 worth of goods in 1932, we sold Japan \$134,500,000 worth.

Not only have countries with recently depreciated currencies failed to increase their sales to us, or even to prevent sales to us from declining, but contrary to popular belief even in these countries themselves, depreciated currency has never really stimulated exports. In the five-year period from 1921 to 1925, for example, which roughly covers the period of the German inflation, Germany was shipping to the United States an average of only \$132,000,000 worth of goods a year, and was buying from us \$383,000,000 worth. B. M. Anderson, Jr., pointed out last November that France's proportion of exports to imports in the year 1919 to 1926, her period of inflation, was 74 per cent, whereas in the years 1927 to 1930, following stabilization, it was 92.2 per cent. Italy's ratio of exports to imports in the years 1919 to 1926 was 55.6 per cent, whereas in the years 1927 to 1930 the ratio was 71 per cent. Belgium's ratio of exports to imports in the same years prior to stabilization was 71.9 per cent, whereas it rose to 90.6 per cent in the years following stabilization.

The "flood" of goods from countries with depreciated currencies is a complete myth. The contrary impression is produced by a few isolated examples of increased sales of relatively unimportant items, which are given a fantastically exaggerated importance by special interests. But if imports from depreciated-currency countries were a real menace, the advocates of higher tariffs might stop to ask themselves what it was that threw those countries off the gold basis. To a large extent it was the tariff policy of the United States. We insist on debt payment; we refuse to allow our debtors to pay in goods; we compel them to pay in gold; this depletes their gold reserve and forces them off the gold standard; this makes us fear that they are going to flood us with goods, whereupon we raise our tariff further; this further depreciates the foreign currency, and so on.

No recovery can be hoped for as long as this economic insanity continues. Our troubles are not the result of a flood of imports. The truth is the exact opposite. They are to an enormous extent the result of our policy of making imports—which pay for exports—increasingly difficult. The record of our imports in the last four years tells its own story:

1929 . . .	\$4,400,000,000	1931 . . .	\$2,090,000,000
1930 . . .	\$3,060,000,000	1932 . . .	\$1,323,000,000

Issues and Men

Secession in the West

I RECENTLY stated in an address in Boston that the day of revolutions had passed because of the tremendous increase in the power of any government of a highly organized industrial country to suppress revolt. Modern instruments and methods of warfare, notably the wireless, poison gas, tanks, airplanes, high-powered artillery, and the machine-gun, have strengthened the hands of those in control. Good roads, too, have made a vast amount of difference. What would not cement roads have meant in our own Civil War, in which both armies calmly went out of business when the weather got cold and waited until spring came round again! Of course, when the government decays and loses control of the army and navy, and when the bulk of the people are ready for a change, any government will collapse as did that of Spain, with little or much fighting. But somehow or other I have not been able to visualize a section of this great country organizing an armed secession from the federal government as did the rebels of 1861.

Could there be peaceful secession? A friend of mine who lives on Cape Cod has for some time past been telling me that the secession of the West from the East is inevitable. He even believes that it will come within our lifetime. He harps upon it, produces fresh evidence every time he appears, and never fails to say that it is being engineered by Great Britain—which has always added to my skepticism about his thesis. But now from the Legislature of North Dakota comes a resolution which will certainly convince my friend on Cape Cod that the hour of secession is near. This resolution was introduced by State Senator W. E. Martin on January 16. In a long preamble it is stated that "since the close of the Civil War the States of Maine, New Hampshire, Vermont, Massachusetts, New York, Pennsylvania, Connecticut, Rhode Island, and New Jersey, because of their dense population and consequent dominant power in Congress, have manipulated Congress and Congressional legislation that said States have become rich at the expense of the rest of the Union." The resolution goes on to say that the Eastern States, through their manipulation of tariff laws, have protected their manufacturing industry at the expense of the agricultural producers who have been without such protection, in consequence of which there has grown up "a financial oligarchy, with Wall Street as the center of the financial power of the Union." These Wall Street interests, it appears, are now seeking by means of the chain-banking system to obtain absolute control of the nation "with the purpose in view evidently of making the people of the thirty-nine States financial peons." More than that, the New York Stock Exchange and the house of Morgan are guilty not only of gambling in stocks, but of making "huge, unnecessary, and uncollectable loans to every country on earth"; and they have "induced the government of the United States to lend money to foreign governments which were then and are now unable to pay." These financial interests were also "the first in this country to talk war and demand that our young men offer their lives to protect their money." For these reasons the

people of North Dakota are now fully and unalterably convinced that "said States have not and never will have the best interests of the rest of the nation at heart," and therefore they recommend that the remaining thirty-nine States "secede from the above-named States, carrying with us the Star-Spangled Banner, and leaving them the stripes, which they so richly deserve; let them continue to prey upon their own people and give them a free hand, but they must keep off us. All we will demand is that our remaining territory have no treaty or trade relations, no agreements or understandings whatsoever, no business or social connection" with them.

Now this sounds altogether ridiculous. Most people will set it down as the usual, wild-eyed Populist stuff out of the corn-fed West. It should not be dismissed so lightly. Extravagant and, from the practical point of view, ridiculous as it unquestionably is, it none the less is symptomatic of the tremendous feeling against the East throughout the West. Vast numbers of the people of the Western States believe everything stated in this preamble: that they have been exploited, robbed, and plundered by Eastern financiers; that, as becomes more and more apparent, the bankers had a great deal to do with putting us into the World War to protect their investments abroad; and that we achieved nothing in the war but the loss of 50,000 American lives and about \$21,000,000,000. Much of this feeling is obviously well grounded in fact. More than that, the pressure of economic conditions in our Western States is terrific. The East does not begin to know what is actually happening there. Any honest newspaperman will tell you of the "stuff" that is thrown away in the metropolitan newspaper offices—stories of violence, distress, and action against the constituted authorities. The prevention by force of the sale of mortgaged farms, because it has assumed the proportions of a great popular movement, is now being reported in the New York papers.

Unfortunately, the average Eastern newspaper editor is unaware that any portion of the United States lies beyond the Hudson River. The editorial writers of our Eastern dailies rarely go West. If they do venture into the "wilds" they seldom go beyond the large cities, and even less often journey into the strictly agricultural communities. It may be alleged in reply that the Westerners do not know us, and do not understand the complicated questions of finance and international trade, which seem to them a magnificent conspiracy against their interests. That may be true, too, but the fact that I wish to stress in this article is that the feeling in the West against the East is growing so tremendously as to be a genuine cause for alarm. If the President-elect is wise he will give a great deal of attention to this situation. Certainly if things continue to go on as they have been going, the hostility of the West to the East will be something to be reckoned with, absurd as it is to talk of a break-up of the Republic.

Dwight Garrison Kilgus

The Detroit Strike

By SAMUEL ROMER

Detroit, February 2

AT nine o'clock on Wednesday morning, January 11, a worker at the main tool-and-die-making plant of the Briggs Manufacturing Company was told by his foreman to step into the office and receive a wage cut. Instead, the worker went to the head of his shop committee and then, along with the other workers in his department, from floor to floor, announcing that a strike against wage cuts had been called. There were only about 450 men working in the plant then—but every one of them put away his tools and walked out. So began the first major labor struggle in Detroit since the period immediately following the war.

Today there are between 10,000 and 14,000* workers on strike at the four plants of the Briggs Company and at the Murray Manufacturing Company's plant. The huge Ford factories all over the country have shut down—admittedly because they cannot get bodies from the two factories crippled by the strikes; the Hudson Motor Company has shut down; and the Chrysler Motor Company plant is working on part time when ordinarily it would be operating at the peak of production. The story of these strikes is the story of how manufacturers seeking "low production costs" slashed wages, disregarding or dismissing the possibility that the victims might revolt, and of how unorganized workers spontaneously struck at a time when, according to the estimate of the Mayor's Unemployment Committee, there were more than 175,000 jobless in Detroit. It is a story of remarkable unity, not only between the strikers and the workers at other plants, but also between the employed and the unemployed. Incidentally, it exposes the class character of the Detroit daily newspapers.

Detroit in the past ten years has won renown among chambers of commerce as an open-shop area second only to Southern California. Advertisements by the various industrial associations boasted of an "open-shop paradise," while the vested interests were able to prevent effective enforcement of such social legislation as was passed by a reluctant legislature. Nevertheless, during the war period and immediately after, there was a strong Auto Workers' Union in Detroit. It boasted some 20,000 dues-paying members and was growing rapidly. But anti-red hysteria and the split in the Socialist movement caused the union slowly to lose strength, until in 1925 it was completely broken as the result of an ill-advised strike at the Fisher Body Corporation. The Auto Workers' Union became merely another Communist paper union.

The Detroit workers, in contradiction to the widely advertised Ford gospel of "high wages," were never really well paid. The automobile industry is a seasonal one. The factories slacken production during the fall months in order to prepare for new yearly models; and the automobile worker had to stretch the "high wages" of eight months to cover the full twelve-month period.

The automobile market collapsed with the crash of 1929, and the period of steady work was cut to three and four months or even less. In the mad scramble of the manufacturers to

grab a slice of what little market there was, labor costs were slashed and slashed again. The workers took the cuts apathetically. They grumbled, it is true, but they were also aware of the fact that there were plenty of men ready to take their places if they did not care to work. The Auto Workers' Union endeavored to organize the men, but because of the powerful spy system in the automobile industry, the union had to function underground and it met with little success. A strike was called at the Fisher Body plant in Flint last year. It was greeted with cries of "red" and police brutality. The strike was lost and the few men who had harbored any idea of an automobile workers' revolt gave up hope. Wage cuts continued, the conveyor belt was stepped up, and conditions in the factories became increasingly worse. Men reported for work daily, waited around for hours, and if they were lucky, secured two hours of work. In one instance a worker received for two weeks the munificent sum of 49 cents. His total wage for the two weeks was \$2.49, but \$2 was held out by the company for factory insurance. During the two weeks, however, he had been called to work six times, spending 12 cents car fare each time. His net loss, therefore, was 23 cents.

It was after a 15 per cent wage cut at the huge Mack Avenue plant, which was regarded as a preliminary to cuts in the Briggs Company's other factories, that the men in the Vernor Highway plant began talking strike. Accepting the advisory leadership of the Auto Workers' Union, they elected shop committees and decided to meet the expected cut with a walkout. The cut came in less than a week and the men walked out. After a futile attempt at arbitration, the strike was called and a picket line established. The mere calling of the strike had immediate reverberations. In the Mack Avenue plant the cut was rescinded. At the Hudson Motor plant, where a 10 per cent wage cut had been posted, the cut was shortly after withdrawn.

At the striking plant, after fifty-two hours of picketing, the cut was rescinded—the first victory for strikers in Detroit since 1920. This victory was due to several causes, among them the refusal of tool-and-die-makers in other plants to accept the Briggs dies and the fact that pressure was undoubtedly brought to bear upon the Briggs Corporation by the Ford Company to hurry production in order that Ford might get his share of the market.

The daily newspapers carried not a word of the strike at the Vernor Highway plant, although every city desk was informed of the strike by telephone. During the strike one small item appeared to the effect that Briggs was hiring men, but the settlement was reached before any concerted attempt was made to break the strike. Despite this total lack of publicity, news of the victory spread among the workers like wildfire. And on the Thursday following the victory of the Briggs workers, between 900 and 1,400 employees of the Motor Products Company, manufacturers of automobile parts, walked out against a 15 per cent wage cut which had been announced January 1. Strikers said that girls working at the plant were getting as little as 8 cents an hour and men 17 cents. Under the slogan, "Give Us a Living Wage," the strikers drew up a list of de-

* The strike committee claims that 14,000 men are out; the company puts the figure at 10,000. Both estimates are given since it is obviously impossible to ascertain the exact number.

mands which included rescinding of the wage cut, minimum wages of 40 cents an hour for men and 30 cents for women, recognition of grievance committees elected by the workers, and no discrimination against strike leaders. After an attempt by the Briggs Company to send its employees into the Motor Products plant and the refusal of these men to scab, the company granted not only each of the strikers' main demands, but also a 15 per cent wage increase!

The daily newspapers at the beginning published nothing about the strike. The men had appointed a publicity committee to deal with the newspapers, but at the strike meeting the publicity committee naively announced that it had no report to make since the newspapers had published nothing. Their ire aroused, the strikers elected a committee to call upon each city editor and threaten him with the picketing of his newspaper office if publicity were not given. Immediately following this action the newspapers grudgingly printed one-inch and two-inch items buried on inside pages, and even after the strike had been won, they mentioned only the fact that the men had gone back to work. The victory was not reported.

Following closely on the heels of the Motor Products strike, between 2,000 and 4,000 workers at the Highland Park plant of the Briggs Company and between 4,000 and 6,000 workers at the Mack Avenue plant of the same concern walked out in protest against low wages and "dead time." "Dead time" is the name given to the time spent by the workers in waiting between busy periods or in going from one part of the factory to another. The two strike committees joined forces and agreed not to go back separately. They were heartened by the news that the workers at two other plants of the Briggs Company, the Vernor Highway plant and the Meldrum Avenue plant, had walked out in sympathy and had declared their solidarity with the strikers in the other plants.

The strike committees established picket lines a thousand strong at the various plants, and then drew up their demands. These included abolition of what the strikers called "rackets," such as health and accident insurance, a minimum rate of 40 cents an hour, a nine-hour day and five-day week with time and one-half for overtime, abolition of "dead time," no victimization of strikers, and abolition of the vicious bonus piece-work system. The picket lines included not only strikers but many unemployed. Both the Unemployed Councils and the Unemployed Citizens' League had pledged their solidarity with the strikers and were using their influence to keep the jobless from strike-breaking. At the Murray plant, which has interlocking contracts with the Briggs Corporation for Ford and Lincoln bodies, the men decided to strike. Instead, the company locked them out. The men, nevertheless, formed strike committees and decided not to return until demands similar to those of the Briggs workers were granted. In Grand Rapids more than 450 workers walked out against a wage reduction of 25 per cent in the Hayes Body Corporation plant, which manufactures bodies for Continental Motors.

Little was said about the strike in the newspapers until the Briggs Company officials decided to break it. While they refused to meet with the negotiations committee elected by the men or to deal with them collectively, they offered a jumbled pay scale and the abolition of "dead time." Immediately the *Detroit News* ran a huge two-line scarehead: "Briggs Raises Rates; Will Open Tomorrow." Over the radio the word went out too—"The strike is over, the company has conceded the demands of the workers and will begin production tomorrow."

What both the newspapers and the radio failed to mention was that the strikers in a mass-meeting had voted down the proposed settlement and had declared that they would go back only as an organized body.

The Briggs officials publicly gave as their excuse for not dealing with the strikers in a body the alleged fact that the strike was Communist. The men, however, vehemently denied the charge and pointed to the fact that they had picketed with American flags and had excluded known Communists from the strike committee. The newspapers played up the proud announcement of the Briggs officials that, contrary to certain rumors, they had never paid workers less than 25 cents an hour—despite the fact that picketers were showing checks ranging from \$3 to \$8 for two weeks' work, which the strikers maintained meant rates of 8 cents and 10 cents an hour, and that strikers from the sewing department declared that the girls working there on a piece-work basis averaged from 3½ cents to 5 cents an hour.

In what strikers declared was an effort to turn public sympathy away from them, Ford announced the closing of his plants throughout the country and the consequent laying off of nearly 150,000 men. This story, of course, gained the front pages of the papers. That the strikers' contention was in many ways correct may be deduced from a leading editorial on the strike which appeared in the *Free Press*, organ of reaction in Detroit. After conceding that the conditions were bad, the writer declared: "They [the strikers] should remember, too, that they owe consideration to their fellow-workers; and that if they remain idle after securing the ratification of their principal grievance [abolition of "dead time"] they will be depriving more than 150,000 men and women in other plants of the means of livelihood, by forcing those plants to remain closed through lack of construction material."

When Briggs officials asked for workers from the welfare rolls and the employment bureau of the Mayor's Unemployment Committee, both the welfare department and the committee refused to send workers over after they learned of the strike. The Briggs Company has had great difficulty in recruiting workers to break the strike, although it maintains that it has smuggled 1,000 workers into the two main plants. The strikers feel secure in the knowledge that such key workers in the plants as the electricians and the tool-and-die-makers are striking solidly.

The strike has been orderly and the picket lines have been well disciplined, especially in view of the provocation offered by the presence of literally hundreds of policemen, deputy sheriffs, special deputies, and State troopers. There have only been a few minor cases of violence against strike-breakers. Although the police in general have let the pickets alone, in Highland Park they arrested about twenty of them on charges of disorderly conduct because the pickets dared to yell derisively at strike-breakers or went through the lines encouraging the men. If the present strike is won, it undoubtedly will mean the organization of nearly the entire automobile industry. The mere fact of the strike has already resulted in a tremendous surge of workers toward the Auto Workers' Union. But even if the strike is lost, as long as low wages remain, as long as the speed-up exists, so long will walkouts against wage cuts and bad conditions take place with ever-increasing frequency. Only the return of prosperity and the restoration to the workers of a minimum living wage will stop this unrest. And prosperity is not in sight.

Trotsky and Revolution

By BENJAMIN STOLBERG

I

THE official Communists, with neurotic venom, dismiss Trotsky as a "counter-revolutionary." Middle-class critics, unless they too are afflicted with the incompetence of hate, do not deny that his work is brilliantly imaginative, vastly disciplined, felicitous in insight and "invective." But objectivity, they add, is of course impossible to him. This is now the reaction to his "History of the Russian Revolution."* It is fascinating polemics, we are told, important, to be sure, because Trotsky wrote it. But, of course, it isn't history.

To me the "History" is the most objective, the most passionately objective, study of revolution I have ever read. It has a creative objectivity. Trotsky evaluates not "facts," but their social origins and direction within the historical perspective which inspired and guided the revolution. It is not a filing cabinet in book form. It is the proud story, too proud either to defame or to boast, of a great social epic. Since there is no way of bringing out the truly poetic objectivity of Trotsky as the historian of the revolution without relating his own role and morale to its theory and nature, I shall briefly attempt such an estimate. From it a review of the study itself follows so naturally that the barest epitome will suffice.

II

Most revolutions, as in Latin America, are fakes. The outs try to shoot their way in. Modern history can show very few authentic revolutions. The seventeenth-century revolution in England, the American Revolution, and the Civil War are genealogically connected. The French Revolution, a cousin of our own, is continued in the Russian. The revolutionary labors in each culture differ profoundly, a point rather neglected by our latter-day Communist Adventists. But the social consanguinity is there. The lesser shocks of 1830, 1848, 1871, the long and critical confinement of the German revolution since 1918, the counter-revolutions of Mussolini and MacDonald, the desperate crisis in capitalism—these may all be significantly viewed as the fruits of the same social family tree, which like all trees is materially conditioned. That is, its adjustment to its natural resources determines its life and health. Marxism says just that. On this theory, ponderously known as "dialectical materialism," is based the Marxian philosophy of history. Trotsky, in discussing the tactics of the revolution, implicitly, illustratively, illuminatingly moves within this historical conception. He forever dwells on this "organic nature" of social change.

Into the warp of its philosophy Marxism weaves the threads of its economics. Its economics, of course, is socialistic. It is the well-known critique of capitalism, pointing to its final socialization. The philosophy and economics of Marxism are integral. Together they form its ideology. Trotsky never steps out of it. A born writer, he superbly directs his vast and meticulously documented material within this ideol-

ogy, which so consciously, and hence "objectively," guided the victorious revolutionary party. Such is the "inner logic" of history to which he constantly refers.

The Marxian ideology is, on the whole, accepted by all Socialists; increasingly even by middle-class economists, as can be seen in "Recent Social Trends." The controversy really rages about the Marxian politics. It is the politics of revolution, it is the method of guiding the class struggle, which causes Socialist sectarianism and excites the modern world. To this revolutionary strategy the clearest and the ablest contribution is Leninism. It clarifies not merely Bolshevik doctrine but the historic role of every other social force. Leninism may or may not have correlated these forces too sharply on the international scale. But be that as it may, it was Leninism which mastered and directed the Russian Revolution. And within this Leninist strategy Trotsky was the great and undeviating tactician. Any other "objective" criterion of Trotsky's revolutionary contribution is irrelevant, for there was none.

III

Leninism proper consists of certain theoretical corrections mainly in the politics of Marxism, not in its ideology. It also consists in the creation of a revolutionary ethics. The main Leninist correction of Marxism holds that the best way of attacking capitalist imperialism is indirectly, through its more primitive and semi-colonial tributaries. In short, Lenin created an apologetics for the social revolution in Russia without waiting for it in the more highly developed West. The natural corollary to this doctrine is the theory of "permanent revolution," now known as Trotskyism, which was developed by Lenin and Trotsky together between 1915 and 1917. It is the belief that a successful social revolution "in one country" is necessarily only partial and therefore must keep on until it gains international victory. Trotsky discusses the tactics of the October revolution strictly within these Leninist principles, which, be they true or false, none the less determined that revolution.

But for the psychological understanding of Trotsky, both as leader and historian, it is even more essential to grasp the nature of the Leninist social ethics as a guide to revolutionary tactics. The tragedy of revolution lies in its moral dilemma, in the deep conflict between the great aim and the desperate means. The aim is a new society. Accordingly the means must defy the culture in which the revolutionary lives and is forced to act. Such defiance may either ruin the revolution or cause the revolutionary to deteriorate, or both. One of the major problems of every great revolution has been the spiritual need of protecting itself against the disintegrating effects of its means. Lenin resolved this conflict. He could do so because the Marxian ideology furnished the revolution with a "program." Cromwell, Jefferson, Robespierre—all had a theory of revolutionary destruction, but they had no clear program of social construction afterwards. Cromwell had to compromise with feudalism. The old Jefferson already could see the dusk of democracy. Robespierre stood

* "The History of the Russian Revolution." Volumes II and III. By Leon Trotsky. Translated by Max Eastman. Simon and Schuster. \$3.50 a volume.

at the top of the Terror, but from there he had no place to go and so he fell under its knife. It was the Marxian critique, based on these prior revolutionary experiences, which enabled Lenin to forge his social strategy. From the Marxian sociology he constructed a new social ethics. From its revolutionary determinism he deduced a consistent body of revolutionary sanctions. It was a true revaluation of values. And Trotzky's "History" moves entirely within this revolutionary ethics; which goes with the Leninist strategy; which, you will note, is derived from the Marxian economy; which in turn is part of its philosophy of history. It is this inner symmetry which makes Trotzky's "History" the great work of art it is.

Trotzky's psychology of leadership can also be best understood in his relation to Lenin's role in the revolution. It is precisely because Trotzky was not an "old" Bolshevik, not a revolutionary sectarian before 1917 and a revolutionary yes-man after that, that he and Lenin developed their uniquely supplementary leadership. For his destiny Lenin had such a perfect inner balance that he finally merged with it. He had the supreme gift of converting ideas into convictions and these into an organon of action. In time all his qualities became purely strategic. He became implicit in the revolutionary process. He rendered it conscious. His personal psychology became indistinguishable from the sociology of revolution. That was the secret of his seeming simplicity. In short, Lenin lost himself in the revolution. As Lenin lost himself in the revolution, Trotzky found himself in it. This unique correlation in leadership can be traced way back to 1902. Lenin was always behind the scenes. Trotzky was always magnificently visible. Lenin became organic to the revolution. Trotzky was its great actor. Lenin is all ideology. Trotzky is the Great Idea. Lenin made the revolution and Trotzky led the insurrection. But throughout strategy and tactics were integral. This tactical genius in Trotzky, extraordinarily aware of every larger implication, explains his journalistic gift and the epic quality in all his writings, especially in his "History."

The revolution, both in fact and under his historical analysis, intensely clarifies and sifts the rush of social forces. Throughout the three volumes we can watch the tug and pull of class relations, right and left. The revolutionary danger strains men and events almost to the bursting-point. And under its pressure the invisible forces of society, for the moment, are forced into plot and counterplot. Life becomes a terrible and obligatory melodrama. And leaders are driven almost in spite of themselves to act according to their natures and their class affiliations.

Kerensky, the little bourgeois lawyer who all his life had sought publicity in libertarian movements, and had even flirted with "socialism," is thrown to the top, and in three short months his inner weakness becomes positively macabre in its strident meaninglessness. Zinoviev, a really marvelous demagogue, Marat-like in his sensitiveness to every mood of the masses, finally fails in "revolutionary character" as the day of insurrection nears. Stalin, whose strength of character Trotzky readily admits, votes with Lenin for the coup d'etat, yet as editor of the *Pravda* subtly plays with Zinoviev and with Kamenev. The eternal centrist in his case is not hesitating. He is waiting. Miliukov, Rodzianko, Kornilov, literally hundreds of personalities, are shown under the revolutionary searchlight. By far the most tragic figures are those old

revolutionaries—Cheidze, Tseretelli, Martov, Kropotkin—with years of imprisonment behind them, who wavered, compromised, and were lost.

IV

Russia had had no prior revolution, no Cromwell, no reformation, no eighteenth-century revolution. The year 1905 was but a dress rehearsal for 1917. Accordingly, the Russian Revolution, from March to October, 1917, had to recapitulate in its social embryology all these historic experiences. The February revolution, which supplanted Czarism with a liberal government, really lasted until June, when hostile mass demonstrations made an official bourgeois government impossible. Kerensky, who had had Socialist connections as a member of the Labor Party, moved up from the Ministry of War to the head of the government. With the "July days" of increased mass unrest, the second volume of the "History" begins.

Lenin arrived in Petrograd on April 3, and the next day he promulgated the famous April Theses. In the midst of the compromise revolution he drove toward the social revolution. On May 4 Trotzky came, and joined Lenin. But in July the great task of the Communist Party was to put the brakes on the Petrograd masses lest the revolution run away with itself. The Bolsheviks had the extraordinarily difficult task of simultaneously leading the masses, yet holding them back. The masses still had confidence in the Kerensky Government, which they expected to complete the social revolution. The Bolsheviks had to wait until the middle-class character of that government became too obvious for such a hope. It was the relation of the government of Kerensky to the counter-revolution led by Kornilov which finally compromised the Kerensky regime.

The Kornilov affair is one of the most bizarre incidents in history. Kerensky put Kornilov, a half-illiterate Cossack general, in command of the army at the front to keep Russia in the war. When the social revolution seemed imminent, he called on him to crush it. Kornilov, of course, planned his own dictatorship. Kerensky vaguely hoped to beat him to it. Their strange half-dealings with each other read like a chapter out of "The Brothers Karamazov." Finally Kornilov was defeated by the revolutionary situation. His drive on Petrograd was doomed to abort in a *Putsch*. The armed forces were almost completely revolutionized. The peasant in the rear "with revolutionary barbarism was wiping out the barbarism of the Middle Ages." The urban workers were rushing to the left. Having "defeated" the white reaction, Kerensky now turned against Bolshevism.

From mid-July to mid-September he gathered around him for an attack on the left all the forces arrayed against the social revolution—the liberals, the Mensheviks, the Right Social Revolutionaries, the Anarchists. But the primitive and stunted Russian middle class was played out. Lenin saw his chance. From mid-September on he pleaded and begged and fought in the inner councils of the party for the insurrection. Finally he had his way. And Trotzky, as chairman of the Military Revolutionary Committee, took charge of the coup d'etat. The "ten days that shook the world" lasted from October 16 to October 26.

The world was dazed. The international social revolution seemed to have begun. Now we know better. Russia merely took the next great step in the modern revolution.

The October revolution swung back; and then started out on a long career of state capitalism, of which the natural managers are Socialist functionaries and politicians. The Third International today is the agent of Russian nationalism, not of the international revolution. Its counter-revolutionary influence is only too visible in the antics of the American Communist Party, for instance, which quickly "liquidates" the least effort of our indigenous radicalism.

So, after all, Lenin did not resolve the dilemma of the "permanent revolution." What he did not know was that he was great enough to found a church. That is how the man whom he intellectually most distrusted inherited his "mantle." While his most intimate revolutionary comrade is now a "counter-revolutionary" exile.

Trotsky reads like a master of English prose. One need say no more of Max Eastman as his translator.

The Company Roosevelt Keeps

By PAUL Y. ANDERSON

Washington, February 4

HAPPY days are not here yet and there will be ample time after they arrive to burn Roman candles, but Roosevelt certainly performs as if he desired to give the country a civilized Administration. I judge him mainly by the company he has been keeping of late. He was acting of his own free will when he sought the friendship and cooperation of Norris, Johnson, Cutting, and La Follette. Since his party will have large majorities in both houses of the next Congress, his deliberate fraternizing with the Progressive Senators is hard to explain except on the ground that he has progressive aims of his own. For my part I am thoroughly convinced that he entertains the ambitious hope of merging the Progressive movement with the Democratic Party. From the day he was nominated, the power trust feared the worst, and fear froze into conviction when he visited Muscle Shoals with Norris. He has accorded what was diffidently described as "a sympathetic hearing" to the hunger-relief bill now pending in the Senate, thus signifying that "rugged individualism"—Hoover's celebrated formula for slow starvation—is to be scrapped in favor of common decency. Much that we hear about the probable composition of the Cabinet is equally encouraging. Henry Wallace and Miss Frances Perkins would be ideal appointments. The choice of that iron rod of righteousness, Senator Walsh, as Attorney-General would be sufficient proof that the new Administration harbored no conscientious scruples against enforcement of the anti-trust laws. In fact, I am told there was a time when ex-Governor Philip La Follette was seriously considered in that connection—a thought sufficient to send cold shivers down the spine of big business. The appointment of Senator Cordell Hull as Secretary of State, which now seems possible, could be explained on the ground that Roosevelt wanted someone to negotiate his proposed reciprocal tariff agreements, Hull being an authority on the tariff. In addition, however, he is a man of the very highest character, possessing a fine intelligence and identified with no private interest which could influence him in the discharge of his duties. To the suggested line-up there is only one serious objection: if Roosevelt puts Walsh, Hull, and Carter Glass in the Cabinet he will deprive his party in the Senate of three of its ablest members, who will be needed in putting through any broad program.

* * * * *

THERE, of course, we come to the heart of Roosevelt's problem. With the best intentions, and with excellent assistants, he can avoid disaster only by appearing on the job with a comprehensive program for licking the depression. He

must be prepared to render emergency relief to the millions in actual physical distress. He must be prepared to create jobs for the millions who are able to work. He must be ready with measures calculated to expand export trade—which should include prompt recognition of Russia. Some form of currency inflation appears to be the only alternative to a general scaling down of private debts and interest rates. Obviously, the public debt should be refunded on more favorable terms at the earliest possible moment. Above all, it is imperative to adopt a scale of income and inheritance taxes which will correct the appalling maldistribution of wealth which makes millionaires of a few and paupers of a majority. The new President will find conditions auspicious for the enactment of a broad program. The very desperateness of the situation will be an aid. The country plainly is ready to try anything that offers a ray of hope. Congress will follow almost blindly. The one indispensable thing is that President-elect Roosevelt shall have a program.

* * * * *

DURING the last ten days the daily press has almost ignored one of the most significant pieces of news that have "broken" in Washington in years. In testimony before the Senate Judiciary Committee John P. Frey, secretary-treasurer of the Metal Trades Department of the American Federation of Labor, charged that a few New York banks are rapidly establishing a dictatorship over American business through interlocking directorates and financial intimidation. The evidence was startling. He gave the names of 855 corporations, including many of the largest in the country, in which directors of the Chase National Bank hold interlocking directorships. He showed that the firm of J. P. Morgan and Company, through its own partners and through banks over which it exercises a dominant influence, has representation on the boards of railroads, insurance companies, mines, and corporations engaged in the manufacture and distribution of everything from locomotives to radio tubes and two-pants suits. The ramifications of the National City Bank made a similar picture. Frey produced evidence to show that these bankers are deliberately forcing employers to reduce wages. Many employers had told him they were helpless under the dictation of the banks. What is happening seems obvious enough. Through a merciless squeezing process, piously described as "allowing the depression to run its course," these twentieth-century Huns are reducing the whole of American industry to a state of economic peonage, and if permitted will soon succeed in establishing a degree of concentrated control heretofore believed impossible. To tell

them that they are pulling down the temple on their own heads is useless—you might as well tell a hog to diet. I once remarked in this place that a moron could always learn something in this country, no matter how many millions he had. That was a mistake. If all persons having incomes of \$1,000,000 a year and over, together with their lawyers, were placed in iron cages and cut off from all communication, it is my solemn belief that conditions would start to improve within ten days. The theory has been advanced by McConnell, Cram, and others that many members of *homo sapiens* are not true human beings, but merely bipeds. It gains much support from the social morals of bankers.

* * *

IT will be observed that the main benefits accruing to the public from the present session of Congress are the result of Senate investigations. One is the exposure of the banking conspiracy; another is the public airing of R. F. C. loans to the railroads. Infuriated by what he pronounced an effort by R. F. C. directors to mislead him in an earlier inquiry, Jim Couzens went into action with all guns blazing, and the result is that some of our most interesting suspicions have been confirmed. For instance, it now appears that of more than \$270,000,000 lent to the railroads by this benevolent agency of Uncle Sam, nearly \$200,000,000 was to enable them to pay their debts. In other words, a vast sum of public funds has been provided to support rotten capital structures that are in obvious need of being squeezed out. Here again, as Commissioner Eastman remarks, the evil in receiverships lies in the fact that the bankers invariably seize the initiative and formulate reorganization plans to their own profit. Drastic reforms in procedure are needed to protect the public interest. Still another Senate investigation which promises well is that which Senator Robinson, the Democratic leader, has demanded in connection with the granting of air-mail contracts to private aviation companies. This pleasant little graft—running to upward of \$10,000,000 a year—has wanted investigating for a long time. When Senator Robinson undertakes the job he might be rewarded by answers to the following questions: What former officials of the Post Office Department are financially interested in companies enjoying air-mail contracts? What former public officials represented those companies in their negotiations with the Post Office Department? Did the Republican Party in the last two Presidential campaigns receive substantial contributions from persons financially interested in air-mail contracts? Have certain companies been unduly favored with "route extensions" during Postmaster-General Brown's term of office? Have the air-mail subsidies been apportioned in a manner calculated to promote the development of air lines, or have they actually aided certain large companies in destroying their competitors or forcing mergers? If Postmaster-General Brown possesses a head commensurate with the silk hat which he was unable to get into an ordinary Lincoln limousine, he should have all the answers at his finger tips.

* * *

WE are, thanks to Senator Norris, approaching the end of the last lame-duck session it will ever be our lot to suffer. I am impressed by the unanimity with which the newspapers rejoice over this fact. But among the editors who now find the lame-duck Congress so loathsome, how many took the

trouble to denounce the Longworth-Tilson-Snell leadership of the House during the ten-year period in which it blocked submission of the constitutional amendment abolishing such sessions? I should just like to know.

In the Driftway

THE theater program of "We, the People," Elmer Rice's new play, reprints the following comment on the behavior of New York theater audiences from the New York *Mirror* of October 13, 1932:

The character of the audience has much improved lately, yet still there are outrages on good breeding such as are unworthy of a refined people. Gentlemen will wear hats in the boxes, even before ladies. . . . Noises interrupt the performance. . . . As for those worthy personages who can wantonly destroy the effect of a finely acted scene, they are, we fear, below reproof. . . . We can only recommend the better informed, when sitting near such persons, to guard their pockets, which, if ever, must be then in danger.

It is an amusing coincidence that these lines appeared in the program of a play which aroused the audience to such demonstrations as would have shocked the *Mirror's* commentator, no doubt, beyond expression.

* * *

AN average contemporary New York audience is not given to expressing its feelings beyond the conventional clapping of hands or appreciative laughter. But Mr. Rice's attack upon the complacent and the well-fed was so direct and so forceful that his well-fed, fur-coated audience could hardly be expected to remain complacent. The excitement began when a hundred-per-cent American on the stage asserted in ringing tones that foreigners should pay their debts. A wave of handclapping rose from what the Drifter will call the right benches. Whereupon the left hissed a mighty hiss; and for several seconds the audience neglected Mr. Rice's drama for their own. Through the whole evening the audience was on its toes, and while the ermined ladies in the front rows did not actually talk back to Mr. Rice, the Drifter had the distinct impression that the violent applause and the cries of "Author" which went up when the curtain went down might have arisen either from intense approval or an intense and perhaps unconscious desire to lay vindictive hands upon a man so disrespectful in his attitude toward the best people.

* * *

MR. RICE'S play, as everybody knows, is an indictment of those forces which seem to him responsible for hunger and injustice in present-day America. He minces no words in illustrating his thesis, and the last scene, the appeal for justice, though it is set in a public auditorium, is in fact addressed to the audience itself. It was stirring and effective. Complacency, the Drifter reflected as the crowd dispersed, could not persist under the impact of Mr. Rice's reality. Two overheard remarks broke the spell. Said Mrs. Moleskin, "Mr. Rice must feel very strongly about these things." "It was awfully good," said Mrs. Mink, "but a little depressing, don't you think?" To which Mr. Rice might have replied, "It is."

Correspondence

Isn't It Too Bad?

TO THE EDITORS OF THE NATION:

So Technocracy is dead. Henry Hazlitt's annihilation of the data and conclusions of Technocracy came as a welcome reinforcement to those of us who had stood dazed before the miracle of Technocracy's publicity value.

But isn't it a little too bad? After all, what the Technocrats aimed at was a planned economy on a national scale. Their crazy figures caught the public imagination. But is that not because for 99 per cent of the people of the country planned economy is the only hope? And because Howard Scott rigged up a man of straw which enemies and friends of planned economy alike rejoice in tearing down, will not the voting millions once more shy away from all planned economy, with the idea that they have been fooled into thinking and won't be caught again?

Life and Art

TO THE EDITORS OF THE NATION:

As one who has been a teacher of young children for a short time in the past and who hopes to join that profession again in the fall, I should like to challenge the remarks of Elizabeth C. Wallach in a letter published in *The Nation* of January 11. She maintains that "we should teach our children that literature is not an escape from their environment but an aid in conquering it." She does not approve literature that offers no help for "the present problems of youth"; she condemns the "impulse, not confined to children, to avoid actuality and revel in a jolly world." At almost any other time, since people are generally disregarding of the importance of "sexual, social, and economic" problems, it might be well to remind them that it is a wholesome thing to face reality and try to understand it. But in these days, when reality is starkly and grimly revealed to everyone, almost without distinction, it seems to me that occasional escape from the world is very valuable.

Does Miss Wallach mean that art can never be its own excuse for being? Are we always to read with the object of finding a solution to our problems and difficulties? I do not mean to deny that art may be of great value in relation to the lives of men. It must be or it would not endure. But is it not permissible to read for appreciation, or love, or just for fun? I should certainly think twice before discarding Dorothy Canfield Fisher, or depriving children of Mother Goose.

same things concerning a party bearing any other name? An electorate which is stupid enough to be misled in regard to the aims of socialism will be misled in regard to the aims of any other party, of whatever name.

Many of my acquaintances throughout the country who a few years ago would have replied to any suggestion for social betterment by indignantly saying, "But that is socialistic, I hope you're not a Socialist," are now saying, "Something has just got to be done for the common people." When I reply, "But that's socialistic," they say, "I know it is, but I've come to think the Socialists are pretty nearly right about that."

East Orange, N. J., January 10

J. B. R.

Miners on Strike

TO THE EDITORS OF THE NATION:

The areas of hope in this country today are those communities where workers have taken their courage and the lives of their families into their hands in striking out for themselves against conditions which are beyond human endurance. In Illinois the miners have organized themselves into the Progressive Miners of America. Some operators have settled with the union, but the powerful Peabody-Insull coal interests around Taylorville and Springfield look to the exploited Kentucky coal region to break the strike of the miners in Illinois. Miners at work—most of them work only part time—contribute one dollar each pay day to their relief fund. During the winter months accidents increase because the ordinary hazards underground multiply. The cost of burial of the dead and help for the injured takes away much of the funds. At least 10,000 miners and their families in central Illinois today are utterly dependent on the money and clothes our committee can send them.

In West Virginia the union is in friendly alliance with the Progressive Miners. A strike at Coalburg waged during this last month of snow and cold is the forerunner of another and larger strike which may become unavoidable in the early spring. In the tent colonies all over the Kanawha Valley babies die by the score. Before a child is a year old in these camps it has run the gauntlet of every form of disease. The whole population is hungry and sick. Still farther south, in Wilder, Tennessee, coal miners are carrying on a lone battle against the company and a community which fails to sympathize with them in their plight.

Our plea is simple and direct. We know in your own midst there is suffering which must be assuaged. But friendless miners, sometimes lacking in hope, shut up in their tents or little houses crowded with children, need money and clothing in their struggle against the organized operators. Please send money and clothing at once to Room 1105, 112 East Nineteenth Street, New York City. Make checks payable to the Emergency Committee for Strikers' Relief, to Norman Thomas, chairman, or to Reinhold Niebuhr, treasurer.

New York, January 16

NORMAN THOMAS

Congratulations

TO THE EDITORS OF THE NATION:

Permit me to congratulate you on your excellent attack on the Edison Company. It is time that a representative periodical such as *The Nation* took a courageous stand against individual companies as well as against the whole electric industry.

As a Manhattan consumer I hope that a similar investigation will soon be made in this borough.

The Best People's Best Novelist

By CLIFTON FADIMAN

IT is a matter for sincere regret that his once large and enthusiastic audience has fallen away from Mr. Hergesheimer; and that vanished are those Cytherean days when reputable critics guaranteed "he need have few fears of rivalry for his position as America's foremost novelist." With admirable energy and determination Mr. Hergesheimer has now worked himself into a position of considerable obscurity. But this obscurity should not be accepted at its face value or be permitted to overcast his real importance. To the thoughtful reader he must appear one of our most interesting writers.

For twenty years Mr. Hergesheimer has written novels, short stories, and even autobiographies about people who do not work for a living. In the mucilage of his style he catches every detail of the life of the leisure class, omitting, indeed, only the comparatively minor matter of the effect this class has had upon the negligible rest of us. It is no mean achievement: to have been the Sargent of the modern American novel. And now history comes to lend even greater point to his work. The class to which for twenty years he has dedicated himself with almost fanatical devotion—even to the martyr's gesture of binding himself to the *Post*—is apparently disappearing or changing into a quite different thing. He is the chronicler of a disappearing Atlantis—and therefore a writer of great historical interest. As the only contemporary romancer whose relevance ceased with the stock crash of November, 1929, he will be to the literary paleontologist of the future a figure of primary importance.

What gives Mr. Hergesheimer his supreme position as a pre-depression novelist is not merely the completeness of his survey of the aristocracy but its rigorous unity. Just as the Greek drama depends upon a particular theology, so Mr. Hergesheimer's work is, in every slightest detail, dependent upon still another theology—that of money. His masterpiece, "Cytherea," contains a chiseled phrase referring to "the undistinguished evils of improvidence"; but aside from this slight lapse, there is never any vulgar relaxation of Mr. Hergesheimer's social sympathies. Money polarizes every one of his characters; they are free to act and feel only in accordance with the liberty with which their bank balances endow them. Mr. Hergesheimer's most glamorous heroine, Linda Condon, trades herself in (though still unused) for fifty thousand a year; the flight of Lee Randon and Savina depends for its effect on the money they are able to spend while making their escape from the vulgarities of the upper middle class. It is a measure of her exquisiteness that the slightest discomfort destroys completely Savina's equilibrium. "Savina's bottles on a dressing-table were engraved crystal with gold stoppers: it was all as it should be."

Mr. Hergesheimer's world of gold stoppers is a world of complete logic and exclusiveness, an architecture erected upon the excellent foundation of stocks and bonds. Of all the writers of his time Mr. Hergesheimer has the clearest and most consistent view of the presuppositions of life. He

knows on what terms life must be met—profitable terms only. Thus after the uncertainties of Dreiser or Anderson it is sheer relief to fall back on Mr. Hergesheimer's gold stoppers and feel that all is as it should be.

However, even the best of all possible worlds may have to yield to a new one. Mr. Hergesheimer's closely knit universe is passing. And because it is passing, Mr. Hergesheimer's pages become of greater and greater value. For these pages are unstirred by the foul intrusion of any breath save the wind blowing through the musical colossus of Mammon. They distil the pure essence of conspicuous waste. Can any of Mr. Hergesheimer's contemporaries present as proud a claim?

In the preface to "Quiet Cities" Mr. Hergesheimer muses upon one of his characters, Nicholas Elliset of the Boston of 1840:

Above all, I was engaged by his frank contempt for writers. He regarded them, and not without justice, as a sort of paid entertainers. They were not, then, very highly paid, they couldn't have Bulfinch build their houses, and so his attitude was comparatively easy to follow. It had the support of a general recognition. No one today could lay down his clear social lines; no one today, the truth was, wanted to. The orchestra had been moved to the dinner table. The necessity for constant amusement, amusement at any price, had taken the place of a strict social integrity.

Such passages exhibit Mr. Hergesheimer as a genuinely modest man. He is under no illusions as to his status as a writer. He feels the justice of Mr. Elliset's view of the writer as "a sort of paid entertainer." He confesses, with admirable candor, that up to 1917 (the year of "The Three Black Pennys") "the note of popular sentiment still evaded me." There is no nonsense about Mr. Hergesheimer. This clear conception of his role and its complete coherence with the spirit of his books give him his special integrity of character. He is an entertainer, the jongleur of a—regrettably—modern feudalism.

But Mr. Hergesheimer, with proper pride, continually reminds us that he is not merely an entertainer but a paid entertainer. Unlike the jongleur he is himself a member of a privileged class endowed with certain inalienable rights—among them the right to the life, liberty, and happiness of others. Thus, while Mr. Hergesheimer has no false vanity about his art, he is justly proud of the feudally aristocratic position his art enables him to maintain. He is beyond any doubt our best gentleman writer, the one with the clearest apprehension of what it is that differentiates him from vassal and serf. In the words of Savina Grove: "All law and order were made for the mob. I don't need the policeman I see in the street."

It is extremely important for us to understand this feudal viewpoint, for otherwise Mr. Hergesheimer's work cannot be fully appreciated. Of late, for example, he has

shown a tendency to satirize his own class. But we must remember that Mr. Hergesheimer is more royalist than the king. Today's aristocrats do not come up to snuff. That is because they have relinquished their snuff-boxes. They have been spoiled by a democratic association with the lower classes. Accordingly, in his endeavor to express the true gentlemanly ideal, Mr. Hergesheimer is frequently forced to return to the past, to feudal or semi-feudal states of society. Hence, in his stories of the past—"The Three Black Pennys," "Java Head," "The Bright Shawl," "Balisand," "Quiet Cities"—he condenses his most telling criticism of the shortcomings of the present. The structure of modern capitalism is too shifting: where are the fixed classes and positions, for example, of pre-Civil War days? For real breeding one must go back to pre-Revolutionary times, to duels and to knee breeches. (Does this, by the way, account for Mr. Hergesheimer's own pure passion for plus-fours?) His feeling for the days when the bearing of arms was a mark of honor is not that of a romantic antiquarian, as some critics have basely asserted. For Mr. Hergesheimer the duello is a very real thing; it is not mere romance, but the true sign of a gentleman. In "Balisand" the duel is taken, as it should be, with the greatest gravity, not at all as a mere convention of the costume novel. In "Balisand," too, the politics of federalism are not exhumed for the purposes of historical coloring, but because Mr. Hergesheimer is a genuine, perhaps the only living, Federalist.

And more than that: he is a dependable pro-slavery man. Contemplating one of the stories in "Quiet Cities," he writes:

As I considered Natchez and Sylvester Dering and his momentary friend Damaris Vaun, I was conscious of a certain sympathy for the institution of slavery. It seemed to me to be neither inhuman nor inappropriate. I wasn't convinced of the existence of the brutalities asserted to belong to it by the different North.

He ends on that delicately philosophical note which really underlies everything he has written: "Most men, anyhow, were slaves." All this is no idle gesture on Mr. Hergesheimer's part; he is far too honest to indulge in mere rhetoric. There is a sentence in "From an Old House" (describing the delights of building a Colonial mansion and tastefully illustrated with photographs of Mr. Hergesheimer's bedrooms) which indicates that for him the Civil War was a trivial skirmish: "*Cypress shingles, cut by a crew of niggers in a Louisiana swamp, hand split and drawn. How was it possible for me to have any other?*" A statement that deserves to go down in history with Marie Antoinette's "Let them eat cake."

Mr. Hergesheimer is not the man to evade the logic of his own position. His finely phrased disdain for the generality of people leads him inevitably to the high worship of things. Among all the writers of our time he is the only one who may be said really to have put things in their proper place. And to his love of things we, his readers, owe our own insight into Mr. Hergesheimer's character. In "From an Old House" we follow his furniture-collecting career more and more breathlessly until at last we reach the almost unbearable triumphant climax: "I had what I was convinced was the only very early high-posted walnut bed in existence." A sentence like this is as revealing as anything in the "Confessions" of Rousseau.

Mr. Hergesheimer's high regard for beautiful things runs through every one of his books. Two of his most characteristic novels are, indeed, hardly concerned with people at all, except indirectly. One of them revolves about a doll (expensive); the other about an evening dress (from Paris). His ability to deal with the inanimate is so masterful that frequently the characters recede into complete banality as compared with the rooms they inhabit, the jewels they wear, the chairs they sit upon. Let us take a typical Hergesheimer passage:

They were at lunch in the Feldt dining-room, an interior of heavy, ornately carved black wood, panels of Chinese embroidery in imperial yellow, and a neutral mauve carpet. The effect, with glittering iridescent pyramids of glass, massive frosted repoussé silver, burnished gold-plate, and a wide table decoration of orchids and fern, was tropical and intense.

After this description of the Feldt dining-room, who could care about the Feldts themselves? A banal sentence such as "Clara moved to the fireplace and looked at her watch" takes on warmth and meaning when translated into Hergesheimer:

Clara moved at once to the fire burning in a small open fireplace set in an ornamental Georgian frame of imitation stone. She looked at the minute watch bound on her wrist by a band of platinum and diamonds.

Mr. Hergesheimer's technical resources have never received adequate tribute. He can arrange and serve a dinner with more aplomb than the suavest captain at the Colony. No one can do a better genre picture of an attractive lady slowly dismembering an artichoke; describe a hotel lobby with greater fire and enthusiasm; convey more precisely the interior of a hairdressing salon, each waver and wire rendered with the clarity of a Vermeer. His knowledge of women's underwear, exhibited modestly but firmly in a dozen books, is that of a trained connoisseur: some of his most admirable, if not most exciting, sentences deal with the delicacies of "insertions" and "foams of ribbon and lace." He is, in fact, a past master at dressing women.

Because he loves nice things it was perhaps natural that he should establish with George Horace Lorimer the *entente cordiale* which has helped to make the *Saturday Evening Post* what it is, in the opinion of many people, today. Let us remember that it is not enough to call attention to the best things in life. It is important to show that the best things in life are not free. This Mr. Hergesheimer's stories and novels do with unmatched finesse and conviction. It is impossible to estimate how greatly the antique business was stimulated by his notable series of tales dealing with early American furniture. His characters toss off slogans which even Barron Collier would envy: "*The most expensive corsets are the cheapest in the end.*" His descriptions of interiors are not merely aesthetic exercises, but, like good Communist literature, create the impulse to action, to purchase. "The ice was frozen into precisely the right size; and the cigars before him, a special Corona, the Shephard's Hotel cigarettes, carried the luxury of comfort to its last perfection. Mrs. Grove smoked in an abstracted long-accustomed manner." Compared to the delicate lure of such phrases, the shrieking tobacco billboards are inefficient and behind the times.

Mr. Hergesheimer's novels show his mastery of one of

the major principles of salesmanship—the appeal to the gentler but more prodigal sex. His most attractive heroines possess, as one of their dominant characteristics, the ability to make their men spend money on them. Young but ambitious Bailey Sandby, suing for the hand of the charming Vigné, says: “But of course I’m not going to be poor, not with Vigné. Nobody could. She’d inspire them.” Again and again he creates, as in Linda Condon, women single-minded in their desire to give little and get much—and any advertising executive will tell you that this sound American upper-class female trait is responsible, to a very respectable degree, for keeping the wheels of industry turning. The Reconstruction Finance Corporation might do worse than devote a small subsidy to the exploitation of Mr. Hergesheimer’s novels.

His women, of course, represent Mr. Hergesheimer’s major claim to immortality. If his works are ever collected as a set, I should suggest as a general, if somewhat clumsy, title: “A Chronicle of the Omnipotence of Really Glamorous Women.” For, when you get right down to it, his books *are* his women, enigmatic creatures always on the lookout for something beyond passion. (On the other hand, one must not forget the flaming insight which gave us the memorable cries of Savina Grove: “I want to be outraged!” and “I want to burn up with a red flower in my hair and not cool into stagnation.”) Mr. Hergesheimer himself has uttered the last word on all his heroines, whether they be Manchu princesses or ladies-in-waiting from the English court:

They were created delicate and charming, impracticable in cambric and chiffon, for my personal reassurance and pleasure. I wanted them that way and there they were. Later, when I met delightful women, I discovered a secret they shared with each other and with me: what I had always wanted them to be they wanted to be—delicate and charming in cambric and chiffon, tender and faithful and passionate.

To expect these creatures, impracticable in cambric and chiffon, to be subject to the emotions of ordinary women would be a social error of the most heinous variety. It is true that a sentence such as “Every little while a specially insinuating melody became apparently entangled in the women’s breathing, and their breasts, cunningly traced and caressed in tulle, would be disturbed” would seem to indicate the contrary. Yet, one realizes at once that a single magical touch, the tulle, immediately lifts the scene above the level of ordinary sensuality into the more refined domain of lingerie.

We have mentioned previously the necessity Mr. Hergesheimer has been under, in his endeavor to depict an ideal aristocracy, of relying upon the past. Particularly of late he has shown a certain lack of confidence in the society he ornaments. This is not to be attributed to any lack of esprit de corps. With all Society’s faults he loves it still. Yet his misgivings make for a kind of ambiguity in his approach to his material which lovers of his fine consistency will be the first to deplore. In “Cytherea,” for example, he devotes four lapidary pages to the description of a fox hunt—and at the end the reader is troubled with some slight doubt as to the seriousness with which Mr. Hergesheimer takes this high ritual. The novel itself, it will be remembered, deals with the revolt of Lee Randon against the comforts of country-club life and the endearments of a good woman. For a moment it would seem that this revolt might be part and

parcel of a deeper rebellion against what wild young radicals would call the System; but this is a superficial judgment. At bottom, it is clear, Lee Randon is fleeing his forty-seven years. His virility, urged into activity by the doll Cytherea, makes its last stand with Savina Grove. Together they float into a travel-bureau paradise of special compartments, luxury liners, Daiquiri cocktails, and gold stoppers. Still even this *voyage en Cythère* betrays a kind of failure of nerve, a hint that all is not right with the best people.

His latest book, “Tropical Winter,” a super-epic of Palm Beach, serves to emphasize this impression. Here Hergesheimer turns Cassandra. The real Palm Beach aristocrats were stricken by the market crash and only the dross, the *nouveaux riches*, remain. The wealthy are faced with Æschylean tragedy (one poor lady is left with a mere \$3,000 a year for life), and the only humor to be extracted from the whole deplorable situation lies in the amused contemplation of those vulgarians who either have not enough money really to get by or who, even if rich, cannot possibly know the ropes. In this saddening book Hergesheimer’s chosen people have succumbed to boredom; some are even homicidal; all appear to be dipsomaniacs. These stories are Mr. Hergesheimer’s contribution to the literature of the depression: meeting his artistic responsibilities nobly, he offers this ten-act Palm Beach tragedy as his reaction to the social crisis which confronts the world. His next book, he tells us, will follow the careers of these pitiable “new poor” in Biarritz, Nice, Monte Carlo, and St. Jean de Luz. Mr. Hergesheimer is fundamentally sound; he intends—and more power to him—to stick to the end and shame the rats by going down with the sinking ship.

Lest the reader imagine that his dissatisfaction with his colleagues conceals any growing revolutionary ardor, I append a short reassuring passage:

It was appropriate for the young to be socialistic, since youth was in essence a splendid, if temporary, revolt; but I had passed that age; I wanted pleasantness and security . . . an occasional half-hour choosing neckties.

And there, engaged in the charming pursuit of selecting cravats, it seems, to use Mr. Hergesheimer’s admirable word, “appropriate” for us to leave him.

Sonnet

By MARK VAN DOREN

I said: It will not blow this way again;
The branches of my life too soon are old;
The wind is kind to early-withered men
Lest they remember and confess the cold.
I said, and scarcely knew that it was I,
Hanging my leaves there in the springless year.
I said; and did not listen to a high,
Loud sound of March that filled the woods with fear.
Then it was all around me, till at last
Love like a hurricane of hate was blowing—
Bruising me everywhere. Yet I was fast,
And stood among the ruins of his going.
Only the after stillness came and showed
These blossoms on me everywhere, like blood.

To the Queen of Heaven

By GENEVIEVE TAGGARD

(*Athena speaks*)

Maiden in love with Possibility,
Seducing from the Void, the Event,
Look, curiously virginal creature, look on me
On whom the void lies barren and frequent

Storms of small meaning pass and sadden; send
Some fate unique, locked in some bosom; make
Of nothingness a substance, Mother; lend
Me Thy archaic smile, the blind gaze of the bacchante
For my sake,
Amen.

Little Caesars

By HORACE GREGORY

And did you see his face:
the wide Augustan eye
that rivets stellar space?
Gaze deeply on this face
whose features never die
but are restored again
from bronze and curried stone:
nostril and broad cheek bone
carved out of memory—
the face of other men
whose swift mortality
discovers them again
engraved in bronze, in stone.

Put Charles the Bald in that corner of the museum:
the brain so light, the limbs so heavy
no horse could carry him;
and over there, Napoleon's son
whose eyes held midnight in two spheres,
the two lost kingdoms his.

Hail him, inheritor
of millions—

Was it men
or stocks or acres or . . . ?
Count all his wealth again.

Intangibles of power are written in ticker tape
on private yachts: ring them up on the cash register,
cable them from Maine to Singapore
around the world tonight.

Remark the stallion eye
the white-lipped masonry,
the mouth endures beyond
brass-written monuments
where sleepless deserts lie.
And did you hear the name?
Each with a different name
but the anatomy,
limbs, torso quite the same;
the head erect, secure,
the face rolled toward the sky.

Books

Ludwig and Mussolini

Talks with Mussolini. By Emil Ludwig. Translated from the German by Eden and Cedar Paul. Little, Brown and Company. \$2.75.

HAVING revealed the most intimate secrets of Goethe, Napoleon, Bismarck, William II, Schliemann, Lincoln, Frederick the Great, Leonardo da Vinci, Stanley, President Wilson, Lenin, and even Jesus Christ, thanks to the art of mental analysis, Emil Ludwig decided to perform the mental analysis of Mussolini. In eighteen cross-examinations Mussolini kindly consented to submit to this delicate operation.

Ludwig once again describes with religious fervor the famous hall, sixty feet long, forty feet wide, and forty feet high, where il Duce receives his visitors; the crossing of that ocean before reaching the harbor of the writing table; while beyond this historical table the Duce sits meditating profound thoughts. Near him on a high stand is an open atlas showing the map of Europe. Mussolini scrutinizes Ludwig with "his dark eyes which gleam like black satin in the half light," "thrusts forward his chin," raises his "beautiful" hands, "turns his chair," "knits his brows," "lays his arms on the table," "leans forward," "rests his chin on his hands," "sets his jaw," "pulls down the corners of his mouth," "the sound of his low-pitched voice recalls that of a distant gong"; and Ludwig takes notice of all these physical postures with the all-inclusive concentration of the little nun who receives the vision of her mystical spouse.

Mussolini explains how he organizes his days in order to take better advantage of his time—a problem which every sensible person solves in his own way; and Ludwig becomes enraptured: "You describe a Goethean technique." Mussolini modestly confesses to feeling "akin to Dante," because of his partisanship; and Ludwig trembles with delight: "You remind me of Bismarck." Mussolini says that he does not need an opposition because he creates an opposition within himself. President Hoover would say: "What a pity that it was not given to me to rid myself of Mr. Roosevelt, creating to my own liking my own internal opposition"; but Ludwig is carried away by a wave of enthusiasm: "I seem to be listening to Lord Byron." Mussolini wrote a description of his youth; and Ludwig, with a tremor of excitement up and down his spine, compares Mussolini to Trotzky. Mussolini explains how he prepares his speeches; and Ludwig immediately counteracts: "Lenin must have fashioned his speeches in much the same way." Mussolini expounds the principle—indeed, not a very original one—that "if one sets out from certain principles, one must not shrink from the logical consequences of these"; and Ludwig: "Your logic is Napoleonic and I have nothing to say against it." Ludwig speaks of Plato; Mussolini stretches his arm, and there are Plato's "Dialogues." Ludwig speaks of Caesar; Mussolini stretches his arm and presents to Ludwig a copy of Shakespeare's "Julius Caesar." "I have just been reading 'Julius Caesar'"; and Ludwig does not stop to think that on that very day he had had to wait for well over an hour before being received because Mussolini had a lengthy business meeting with a commission consisting of about thirty people: had he been reading Shakespeare's tragedy just while he was discussing business with those thirty people? Ludwig reads those verses by Goethe in which the centenarian Faust dreams of a new humanity, redeemed by the arts of peace and freedom—verses which everyone in Italy knows by heart since they are sung at the end of Boito's "Mephistopheles"—and Mussolini is "very much struck" by the parallelism which Ludwig establishes between Faust and Mussolini, and "slowly reads the German verses

aloud." In a succeeding conversation, however, Mussolini asserts that he has thoroughly studied Goethe's works, "above all 'Faust'—both parts"; and Ludwig does not ask him how he happened to be so very much struck by those verses that he wanted to read them slowly and aloud, as if he had never known of their existence, when he had studied the "Faust" so thoroughly.

Blinded by his enthusiasm, Ludwig avoids every embarrassing question. Nay, more; he suggests—in the very act of questioning—the most appropriate answers: "When on your way to Rome, were you in the mood of an artist or that of a prophet?" "Artist," Mussolini is happy to answer. "I advocate movement," Mussolini says; and Ludwig: "Is your movement undulating, or is it, rather, like the ascent of the Alps?" "Climbing an Alp." Ludwig cannot help speaking at least once of Matteotti: "When all the power of the state is concentrated in the hands of one man, it may well happen that undesirable things take place *in spite of the autocrat's will*: don't you think that such things are more likely to happen in a dictatorship?" Thus Ludwig *a priori* solves the problem of whether the murder of Matteotti really occurred in spite of Mussolini's will, and Mussolini can triumphantly answer that "political crimes occur just as frequently in democratic states. You will remember a notorious instance under Napoleon III." Ludwig thinks of everything except of asking Mussolini whether the empire of Napoleon III was a democratic state, and whether it is common practice in democratic states for those who instigate a murder to be the most intimate collaborators of the Prime Minister and to receive from him a pardon without his being turned out. Mussolini subjugated Ludwig, made of him his propaganda agent, and tells us—through Ludwig—only what he wants us to believe.

GAETANO SALVEMINI

Gentleman Seeks Regeneration

The Coloured Dome. By Francis Stuart. The Macmillan Company. \$2.

EXTRAORDINARY praise was given to Mr. Stuart's "Pigeon Irish" and is now being given to "The Coloured Dome." This is likely to prove embarrassing to him and perhaps injurious. In the first place, it will not help him with perceptive readers, who, having heard such phrases as "the most noteworthy example of Irish literature in twenty years," will be astonished to come upon a romance in the tradition of Stevenson that would be outweighed by the most hastily written tale by Liam O'Flaherty, to stop short of greater names. The plot of "The Coloured Dome" turns on the Shakespearean convention of disguise: Tulloolagh, the secret leader of the Irish Revolution, is in reality a woman; her troops and fellow-conspirators are fooled by her deep voice and derby hat. Another romantic revival is the prevalence of only the noblest motives: the street hawker would not think of taking money for his little boxes, he wants to give them away; the hero and heroine have but one wish, to die for their ideal as soon as possible. One does not have to be a grim realist to know that the story is absurd. Near the end an attempt is made to redeem it with satire and a religious idea; but the satire is painfully schoolboyish and the religious idea a naive steal from Dostoevski.

In the second place, the stupid praise given to Mr. Stuart may do him harm, because beneath his present deficiencies there are a warmth of heart, a liveliness of impression, a hunger of soul, which might lead him, if not hindered by nonsensical compliments, to develop considerably. The religious idea embraced at the end by his hero is that of self-immolation, of humbling himself among outcasts, of losing in order to find. Mr. Stuart himself is a young gentleman of Ulster-Unionist parentage and Rugby education who went to jail for fighting on the unrespectable side of the Irish Republicans. The autobiographical

material is the most interesting part of his book; like his hero he seems to be seeking regeneration through identifying himself with the disesteemed and oppressed. His novel, however, remaining derivatively and thinly in the ether of ideas, is no more than a spiritual slumming party, a well-bred peek into the lower depths. For all his dissatisfactions and yearnings Mr. Stuart seems to continue to be a most unimpeachable gentleman. Whether he is to go farther in the realization of his wishes, both religious and artistic, will depend greatly on whether he listens to his admirers or his friends.

GERALD SYKES

Stanley and Africa

Bula Matari: Stanley, Conqueror of a Continent. By Jacob Wassermann. Translated from the German by Eden and Cedar Paul. Liveright. \$3.

WASSERMANN wrote this biography with a good deal of self-consciousness. He reports long conversations in his preface, conversations to justify his project to his friends. It is a relief to turn to the matter of the book, which handsomely justifies itself. But the self-consciousness persists like an undertone, breaking out now and then into shrill "psychographic" demonstrations which mystify more than they explain.

In Wassermann's youth Stanley's explorations were the sensations of the Occidental world. Their glamor has survived in his memory with an insistence which, had he been an adventurer, he might have met by, let us say, a crossing of the Gobi Desert; but being a writer, he has met it by penning a book. Certainly Stanley is a hero worth the attention of any literary monument-builder. He was the first white man to traverse the interior of Africa, an explorer unmatched in courage, endurance, and sheer human effectiveness. Stanley was one of the men whom a cruel childhood prepared for a career of strenuous greatness. An illegitimate child, his first years were spent in a workhouse where the children were under the care of a sadist subsequently committed to an insane asylum. His experiences there developed his endurance but left him for the rest of his life shy and uncomfortable in society. The solitude of the African jungle, so mercilessly indifferent to human life, offered adjustments to a personality solitary among men.

After wanderings in his youth, during which he tasted all the brutalities visited upon the casual worker, he found himself serving aboard a Northern ship during the Civil War. Letters he wrote to a newspaper describing a naval battle were so well received that he entered with immediate success into journalism. His first African expedition—the search for the missionary Livingstone who had penetrated into the jungle and been unheard from for years—was a newspaper assignment given him by James Gordon Bennett. His second expedition was undertaken to complete the work of Livingstone, who had descended a river which he believed to be the head-stream of the Nile, but which Stanley proved to be the Congo. His third expedition, under the joint auspices of an American and an English newspaper, was organized to bring relief to Emin Pasha, an officer under Gordon, who had escaped with a small Egyptian army from the conquering Mahdists.

All these expeditions were spectacularly successful, and Stanley's own stamina and capacity may be measured by the tragedies of most of his subordinates, who died or, failing in their lesser tasks, became nervous wrecks. To his generation his achievements seemed incredible, and armchair geographers ridiculed him. When he had vindicated himself, doubt turned into the belief that he had succeeded only by inhuman treatment of his Negro carriers.

AT ALL BOOKSTORES

THE MACMILLAN COMPANY

No one could then foretell what the outcome of his explorations would be. Stanley had the naive nineteenth-century faith in civilization and progress. He thought himself a bearer of civilization, and went begging among the governments of Europe, trying to interest them in the development of the Congo region, sincerely believing that it would bring advantages to the native populations. Had he foreseen the vast and ghastly sweat-shop the land would become under the exploitation of that royal sharper Leopold of Belgium, he would have felt worse betrayed than by the libels that pursued him to the end of his days.

Except for the self-consciousness which I have mentioned, Wassermann's biography is vigorous, well proportioned, well paced—a very good piece of work. In trying to find almost occult stresses of personality in the meetings with Livingstone and Emin Pasha, and especially in trying to analyze the processes of a "poet of action" he strains his talents and the reader's attention. Action is best expressed in its own terms; and Wassermann could have made his effective book more effective by using the space given to psychological analysis for describing more of the incidents of the expeditions.

ISIDOR SCHNEIDER

Too Early in the Morning?

The Years of the Locust (America, 1929-1932). By Gilbert Seldes. Little, Brown and Company. \$3.

ONE gathers from the first chapter that the primary purpose of this volume is to discover the emotional ups and downs of a period which so far has been considered chiefly in financial and industrial terms. In pursuit of this idea the author has introduced a "fever chart." Taking the Standard Statistics Company's wriggly black line of stock prices from 1929 onward, he has superimposed a red line to record roughly the "psychological temperature" of the depression years. It is one of those whimsies which are delightful when tossed at a group of friends after the second cocktail but which rarely seem as realizable the next morning. Unfortunately, Mr. Seldes went ahead and realized it, and in spite of the flaming scarlet of his fever line, it is pallid, unsubstantial, and a trifle absurd beside the hard, sober finality of the black mark.

Probably the chart is not intended to be taken too seriously, and the book is not without discriminatingly gathered facts and thoughtful criticism, but the promise of the first chapter is not fulfilled. Mr. Seldes includes too much of the newspaper material of the past three years—material which a decade hence may be picturesque but just now seems merely a little stale—and too little on that most important question, the loss in moral and mental values which has been a distinguishing feature of the present depression as compared with others in America's history.

The author concludes that the intellectuals have suffered as much in prestige from the depression as have the capitalists. "Long separated one from the other, each fell for lack of support. It is remarkable that after the first six months or so, hardly an authoritative voice was spoken in defense of the capitalist system." But Mr. Seldes is impressed not so much by the fact that "a few excellent writers have become Communists" as by the fact that a great number have "begun to feel a certain insignificance in their work." It is "a kind of depression pessimism," founded on the theory that this is "no time for the parasitic activities of art." It had been a common—and lamented—belief that America had no past, Mr. Seldes continues, but no one questioned its future, "and there was something unmanly in the prompt enthusiasm with which we leaped overboard the moment the ship struck a reef. The capitalists and the intellectuals were both being highly romantic in the sense that neither was willing to contemplate things as they are."

Maybe we have had so many histories lately in the manner made popular by Mark Sullivan that we are tiring of the method; maybe the author of this volume, finding himself sinking instead of swimming in an ocean of material, grabs the reader and pulls him down too; maybe it is too soon to attempt an interpretation of the depression. A history of the debacle published only three years after it began—and heaven knows how long before it may end—is like an evening newspaper on sale at 9 a. m. One surmises that at the end of the epoch—if there is a definite demarcation five, fifty, or one hundred years hence—not much importance will attach to the efforts of the ambitious Nimrods who got up at dawn in order to shoot the depression on the wing before breakfast.

ARTHUR WARNER

Australian Pioneering

Pageant. By G. B. Lancaster. The Century Company. \$2.50.

THE subject of Miss Lancaster's "Pageant" has a great fascination for American readers, for the idea of pioneering is deeply fixed in the popular imagination as something highly romantic and adventurous. This is an entirely natural result of the persistent overstress placed upon these aspects of the process by writers of historical romances. On the other hand, a school of American critics has sought to impress exactly the opposite idea on its readers—the intellectual and emotional cost of pioneering. In either case there has been an exaggeration of a single aspect of the situation rather than any effort to recover a sense of actuality, of complexity, of contradictoriness. It is one of the outstanding merits of "Pageant" that all the elements of the pioneering era in Australia are present, and while Miss Lancaster has integrated her story around the fortunes of the "aristocracy" she has not failed to indicate the counterbalancing group which paid a heavy price for the success of the undertaking.

"Pageant" interests me far more in its sociological implications than as a work of fiction aesthetically considered. Australian fiction is usually most profitably approached from this angle, for the literature of the country has not yet become "literary"; it still retains a good deal of pristine vigor. "Pageant" tells the story of successive generations in Tasmania from the original pioneering representatives of a family that came out from England after the Peninsular War, down through the years of change, to the scattering of the younger people on the mainland, which became the theater of the great developments that we now associate with Australia. We find in its pages the main facts which distinguish the Australian story from that of pioneering in the United States.

We discover, that is, that there was no important conflict between the white invaders and the aboriginal population; that the story is not one of small proprietors, but of the immediate development of great sheep stations manned by convict labor; that underlying the pseudo-aristocracy which immediately developed was an oppressed class, the convicts, which supplied the needed labor power; that the conflict between the two classes issued in bushranging; and that the political history of the country is, roughly, a story of the struggle of the aristocracy for the right to rule themselves and escape the power of the military sent out to govern the convicts. We see the struggle to end the convict system when there came to be a dangerously large surplus of labor, and the gradual entrance into the picture of the trading class, the small farmer, and, by implication, the industrial workers who, in collaboration with the agricultural and pastoral laborers, form the basis of the present day Labor Party and give the country its tone. The history of Australia is a history which follows these steps—aristocracy, bourgeoisie,

114 Fifth Avenue :: :: New York

labor, with the second group the weakest of all. In America the cycle has been, roughly, small bourgeoisie, big bourgeoisie, and a large question mark to indicate the future.

"Pageant" is, I should not neglect to mention, a fascinating story and undoubtedly will interest more readers than my sociological summary would indicate. Placing it against the background of Australian literature, I should rank it with the work of Miles Franklin, Barnard Eldershaw, and Brent of Bin Bin. It is another well-wrought swan song for the aristocracy, or what the Australians call the squattocracy, but it is not the classic swan song. That is being written by Brent of Bin Bin and is slowly being published in England. All who read "Pageant" should be excellently prepared for Brent's tremendous chronicle.
C. HARTLEY GRATTAN

Tempests and Music

The Shakespearian Tempest. By G. Wilson Knight. Oxford University Press. \$4.25.

THIS is the fourth volume which Mr. Knight has published about Shakespeare's symbols, and though it is neither the best nor the worst of the four it seems suddenly, while continuing to reveal the great critical virtue of Mr. Knight, to reveal also his cardinal defect.

His virtue—rare these days—is that he addresses himself solely to the consideration of Shakespeare as a great poet. Nothing else about Shakespeare even faintly interests him. Questions of source, authenticity, and technique are left quite out of an account which has only to do with the one question: How did Shakespeare's imagination work? In his new volume, as formerly in "Myth and Miracle," "The Wheel of Fire," and "The Imperial Theme," Mr. Knight answers the question by saying that Shakespeare's imagination worked in a marvelously consistent and at the same time copious way with a host of themes or symbols which may be reduced, and here are reduced, to two: tempests and music. The two are in reality one, since they express an opposition, and since Shakespeare is concerned from first to last with setting forth this opposition in divers terms. The histories and the early tragedies are swept by tempests of civil disorder through which only now and then sound the sweet notes of peace and music. The early and middle comedies are "plays in which tempests are but the condition through which are attained the dreamland melodies of romance." The great tragedies are entirely given over to "a minute analysis of disorder [tempest] in all its forms"; though "in these plays, too, against tempests sounds still the siren music of peace and love." Finally, in the romances Shakespeare abandons himself to pure image, which becomes the poem and makes the plot—most notably, of course, in "The Tempest" itself.

Mr. Knight writes so richly and passionately in defense of his thesis that one does not know how to stop him and ask him a question. Not that one has a question, perhaps, bearing directly upon the material which the thesis considers. No, Mr. Knight is quite clearly the master of that material; the imagery of Shakespeare is not likely ever to be studied to such good purpose again. But what if one wants to know whether Shakespeare can be understood in any other way? Mr. Knight's answer, given over and over in the preface to this book, is such a humorless and priestlike No that now at last the reader—hitherto hypnotized by Mr. Knight's eloquence and poetic learning—has the clue to his defect. His defect is that he believes he has none. For does he not present in these pages "the hitherto neglected Shakespearian essence"? Has he not the amazing privilege of pointing out, now in this year 1933, "the only final unity in Shakespeare"? Has he not a unique

advantage over every other commentator—over him, for example, who explains the plays through their characters? To isolate a character distorts the play, says Mr. Knight; to isolate a symbol clarifies it. Which is another way of insisting that Mr. Knight is the only critic among all the ten thousand who holds or ever held the true key to Shakespeare. Which, fortunately or unfortunately, is nonsense.

MARK VAN DOREN

Mary Wollstonecraft

Mary Wollstonecraft. By H. R. James. Oxford University Press. \$2.50.

THIS sketch of Mary Wollstonecraft, by a man well known in connection with the struggle for liberty in India, is a very excellent account of her mind and work. The unpretentiousness of the essay and its informality have the effect of putting her activities into relief, so that we get a clearer view of the astonishing social revolutionary she really was than we might get from a more accomplished work. Mr. James lays the emphasis on what she achieved and on the extent of her influence rather than on her complexes and drawbacks. The book, however, is in no sense a biography; the author never comes to terms with the personality of Mary, for he never quite comprehends her combination of quixotism and practicality, eighteenth-century devotion to abstractions and a Celtic impetuosity and combativeness, all centered in a very attractive and warm-hearted human being. There have been few belonging to that most slandered order, women of genius, who have been more thoroughly slandered than Mary Wollstonecraft. She presented to calumniators a personality that could be attacked front, flank, and rear. An independent and fearless thinker, she had scant respect for the sacred rights of property, for the British constitution, for the marriage laws, for hereditary rights and social distinctions. Her writings were so thoroughly alarming in her own day that it was probably only owing to the great personal charm of their author that they were ever published at all. For this early champion of the rights of women and the rights of the proletariat seems, from the accounts of those who knew her, to have fascinated everyone with whom she came in contact: she was handsome, she was high-spirited, she was warmly affectionate; in fact, to our cold-blooded age, all her friendships seem to have the intensity of love affairs, for she gave herself extravagantly—to her family, to her friends, to humanity, to her two lovers—the American adventurer, Imlay, and afterwards to that splendid revolutionary thinker, William Godwin, who, undiscerningly, is always spoken of in a niggling way, chiefly because, in default of an income or a patron or of regular royalties from a publisher, he had often to apply for loans.

Though Mary Wollstonecraft's best-known work is her "Vindication of the Rights of Women," which is generally regarded as having started the movement for the emancipation of women, she first became famous in her own day by the reply she made to Burke's "Reflections on the Revolution in France." This was her "Vindication of the Rights of Man," which has frequently been described as one of the most dashing political polemics in the language. She was aroused to furious indignation by that appalling passage of Burke's about the rights of property and the proper attitude of the bulk of people to property: "They must respect that property of which they cannot partake. They must labor to obtain what by labor can be obtained, and when they find, as they commonly do, the success disproportioned to the endeavor, they must be taught their consolation in the final proportion of eternal justice." "It is possible, sir," Mary wrote in her reply, "to render the poor happier in this world without depriving them of the consolation which

THE VIKING PRESS • NEW YORK

you gratuitously grant them in the next." "In that sentence is latent by implication," writes the author of this essay, "all the legislation for social betterment of the nineteenth century and after." On the heels of this reply the slanders began. "Security of property!" she had said; "Behold, in a few words, the definition of English liberty!" And the sentence staggered everybody to whom any attack on the status quo was alarming; in addition, it seemed more than indecent for a woman to handle a famous statesman so harshly and with such high temper. However, Burke was a good fighter himself, and though he wielded the rapier more elegantly than Mary, and was, which she was not, master of a magnificent prose style, there is in their methods of attack and even in their mentality something akin which was, perhaps, due to the same racial inheritance—Mary was born of an Irish family in England. They both had a passion for liberty, though the liberty they fought for was of different brands—he, as was perhaps natural in a statesman, thought that liberty came out of order, while she had the more daring idea that order came out of liberty; they had the curious Celtic quality of being revolutionary and conservative at the same time; both were powerful pamphleteers. She has been snappishly referred to by anti-feminists as "a she-philosopher," but that is exactly what she was; Mary Wollstonecraft was, like Burke, a social and political philosopher, with the difference that whereas many of the great Edmund's ideas are now embalmed like flies in amber—the amber of his wonderful prose—Mary's have helped to make the modern world, and have provided rallying cries for present-day movements. He of course surpassed her on the speculative plane and was a great writer, which she was not; Saintsbury was right in leaving her out of his "History of English Literature." Whatever were his real reasons for doing so, Mary Wollstonecraft's contribution is not to literature or art, though Mr. James takes her seriously as a writer. It is to political and social reform, and it is only owing to the unorganized condition of literary history that she is described as a woman of letters. She was a constructive thinker, but she never really learned to write any more than Madame de Staël ever learned to write. She wrote hastily, in a state of high excitement, for the purpose of forming opinion, and her method of expression was effective enough for that. Like some of Burke's, her writing was of the pamphleteering order, but she was among the greatest of the pamphleteers. The business of a pamphleteer is to conduct a propaganda, to advance a cause, and advancing causes was Mary's work in life. The chief causes to which she devoted herself, human liberty in general and the emancipation of women in particular, though they have been greatly legislated about since her time, have not yet caught up with her conceptions.

She had a more human and a more workaday political philosophy than Burke's, for she had come to grips with life in a way that had never come within the experience of that Ciceronian statesman. She was a personality who was not limited to the round of experience that normally falls to women—the experience of sex, motherhood, and home—though she had all that, too: all classes of people were known to her; she earned her own living and helped to provide for her family; she nursed the sick and succored the poor; her travels, for that age, were extensive and included Portugal, France, and Scandinavia. She was in Paris during the revolutionary period and saw the king from her window as he went to his death in a hackney-coach surrounded by the National Guards. Burke polished his ideas about the French Revolution in his study, and always with due respect to that bulwark of the British constitution, the sacred rights of property. Mary's final ideas were painfully formed from emotions felt and observations made on the spot. Her instinct for obtaining a first-hand knowledge of events is shown in her letter to her publisher written from Paris, in which she says: "I labor so continuously to understand what I hear that I

never go to bed without a headache, and my spirits are fatigued with endeavoring to form a just opinion of public affairs."

There were at the time many Americans in France, and she frequented their society. With one of them, Gilbert Imlay, a gentlemanly cad from New Jersey, she had the passionate love affair that was really her undoing, for it may be said that from the time she met him her useful life ended. The chapter in which Mr. James deals with her relationship to Imlay is the best and most extensively documented in the book. Mary entered into a union with Imlay with the firm belief in its seriousness and lastingness, for when it came to falling in love this wise and brilliant woman was as easily fooled as a village girl. After having made use of her in every way, including making her his business envoy to Sweden, where she had to look after his interests though in a miserable state of health after childbirth, he deserted her and her child under, for her, very tragic circumstances, and a whole sequence of tragic dramas ensued. She attempted suicide and was barely saved by a rescue from the Thames, her physique badly damaged; her daughter, Fanny Imlay, later, actually ended her life by suicide. The elopement with Shelley of her second daughter, Mary Godwin, brought about the suicide of Harriet Westbrook, the poet's first wife. But after the intensity of the distress caused by Imlay's desertion it is a trifle startling to find her sufficiently recovered emotionally to marry William Godwin two years later, a union legalized before the birth of their daughter, which event cost her life, for Mary Wollstonecraft, like Charlotte Brontë, died in childbirth. As the Brontës brought a dash of Celtic intensity and untamedness into English literature, she brought the same intensity, the same untamedness into political and social affairs. She was a revolutionary, not in the plain and sane English way, but with the impetuosity, the *saeva indignatio*, and the personal passion of the Celt, and it is these qualities in her which, in spite of his fervent admiration for her, make her seem a little indecorous to Mr. H. R. James.

MARY M. COLUM

Violence and Reform

Moral Man and Immoral Society. By Reinhold Niebuhr. Charles Scribner's Sons. \$2.

ACCEPTING the thesis, curious in a Union Theological Seminary teacher, that violence per se is not necessarily immoral provided it leads to a greater measure of justice in the world, Mr. Niebuhr traces the implications of his assumption by an appeal to history. Certainly he proves conclusively that the privileged classes, which are the ones to discountenance violence as a matter of dogma as long as they are in control of the state, have never hesitated to use force in the maintenance of their power, even when a menace has not taken the form of armed revolt. Mr. Niebuhr comes to a final distinction: that violence is not justified in the guise of imperialist war, but may be resorted to by oppressed minorities and by the disinherited of the class struggle if peaceful suasion notoriously fails to work. It comes a little hard for Mr. Niebuhr to admit that the end sometimes justifies the means; the time for violence he leaves to the conscience and intelligence of revolutionary strategists, hoping that reason will serve to temper any necessary struggle.

In the course of his demonstration Mr. Niebuhr makes some very shrewd analyses of conditions which give rise to fascism, of the snares held out by nationalism for Socialist leaders who cling to parliamentarianism, of the attitudes of privileged classes, and of the proletarian class. "Moral Man and Immoral Society" is, on the whole, the triumph of the psychologist, recognizing the human animal for what he is, over the preacher, who puts his faith in a miraculous change of heart.

Did You Know These 20 Significant Books

are only

95¢ each?

Each Book Complete and Unabridged

There has been no cutting or censoring of the texts. Printing is on excellent paper in large, clear type. Rockwell Kent and Elmer Adler did the end-papers and title-pages. Send no money. Mail coupon, and when books arrive pay postman. Money back if you wish it.

JUST run your eye down this surprising list of noteworthy books now offered by the Modern Library in handsome, gold-stamped, balloon-silk bindings for only 95c each! Most of these books could never before be bought for less than \$3. Some cost as much as \$10 a copy! Many are first and only reprints of expensive, original editions. Only the Modern Library, with its sales of over a million books a year, can afford to produce such books at so low a price. How many of them do YOU want to read? The first 3 listed here are new reprints.

42—ARROWSMITH . . . Sinclair Lewis

Considered the best novel of the Nobel Prize winner.

32—REIGEN (HANDS AROUND), ANATOLE, etc. . . Arthur Schnitzler

Also includes the Green Cockatoo, and Living Hours. The Translation of Reigen is new and unabridged.

136—EREWON and EREWON REVISITED . . . Samuel Butler

Two novels complete in one volume by the author of "The Way of All Flesh".

61—SANCTUARY Faulkner

Those who have read his recent "Light in August" will want to read this.

112—A HIGH WIND IN JAMAICA

Richard Hughes
First published as "The Innocent Voyage."

146—THE INFERIOR JONES

Eugene O'Neill
A great play now made into a great opera.

191—DEATH COMES FOR THE ARCHBISHOP

Willa Cather

193—DROLL STORIES Balzac
These rollicking, lusty tales are presented here absolutely unabridged.

200—THE MAGIC MOUNTAIN

Thomas Mann

201—THE ARABIAN NIGHTS

A new, 900-page selection (Burton Translation) of these bizarre tales. For adults only. Unabridged.

202—CAPITAL AND OTHER WRITINGS Karl Marx

Conveys the whole Marx philosophy.

203—YAMA, THE PIT Kuprin

A powerful, true-to-life tale of white slavery in Russia. Unabridged.

205—THREE SOLDIERS

John Dos Passos
With an illuminating new introduction by the author.

206—POWER

Lion Feuchtwanger

207—PETER IBETSON

George du Maurier

With a splendid introduction by Deems Taylor.

208—THE DIVINE COMEDY

Dante

The first one-volume edition ever produced of the Carlyle-Wicksteed prose translation.

209—ANTIC HAY

Aldous Huxley

With an introduction by Lewis Gannett.

210—PENGUIN ISLAND

Anatole France

19—A FAREWELL TO ARMS

Ernest Hemingway

34—VICTORY Joseph Conrad

Outstanding among novels of adventure.

□ JOSEPH WOOD KRUTCH says □

ALICE IN WONDERLAND. New Amsterdam Theater. Miss La Gallienne moves uptown with her charming company of fabulous beasts.

BIOGRAPHY. Guild Theater. An intelligent and sinewy comedy about what happens when a cultivated woman of the world manageable idealist.

DESIGN FOR LIVING. Ethel Barrymore Theater. Reviewed this week.

GOODBYE AGAIN. Masque Theater. Fine performances by Osgood Perkins and others make this farce comedy very funny.

THE LATE CHRISTOPHER BEAN. Henry Miller Theater. Light comedy from the French completely rewritten by Sidney Howard and charmingly played by Pauline Lord and others. All things considered, it is much the most enjoyable comedy of the season.

THE PICCOLI. Geo. M. Cohan Theater. Indescribably deft company of Marionettes. Nothing deflates the human being more effectively than the malicious realism of these puppets.

WE, THE PEOPLE. Empire Theater. Elmer Rice's indictment of contemporary society in twenty-one scenes. Impressive and depressing.

If the conclusion is not as sharp as the hard-boiled Marxian might wish, put it down to Mr. Niebuhr's intelligence. For he knows that circumstances can always alter cases, that parliamentarianism may work for certain ends in one place where it will not in another.

JOHN CHAMBERLAIN

Films

The American Homeland

WHEN the archaeologist of the future begins his task of reconstructing the physical background of American life in the early twentieth century—the streets, the houses, the garages for two cars—he will have at least one advantage over his predecessors. Unlike the Egyptologist with his tattered bundle of hieroglyphic papyri or the Hellenist with his “two gross of broken statues,” the student of our Middle American period will have at his disposal a whole library of flyblown celluloid which will need only to be exposed to the light to unfold, like Proust's madeleine, the whole rich, variegated, and preposterous life of our time. These long rolls of preserved sights and sounds, whether or not they will afford the entertainment for which they were once intended, will provide a vision of the past more complete than any procession of dancing figures on a vase, more vivid than any fragment of song or story, more articulated than any handful of bones on a hillside. So much, theoretically, would seem to be the great boon for posterity made possible by the cinema.

The only difficulty is that the twentieth-century American himself, in watching these same rolls unfold, is all too often at a loss to relate the backgrounds represented on them with any particular background of his acquaintance. If he is a New Yorker, for example, he is likely to be disturbed by the unmistakable vision of a palm-tree in the front yard of some Fifth Avenue mansion. The old New England farm of the pictures rarely resembles the real thing: the mountains are too high to be the Berkshires and there is a suggestion of cactus in the distance. Who is there that can fix the exact point in space occupied by the ironic parables of Charlie Chaplin? The city, the street, the house, the lamp-post—these have no local habitation and name. They are everywhere and nowhere. They are the mere abstractions of places and things. And they are recognizable only in so far as they are somehow profoundly typical of our life and time. It may be that this quality of abstractness in most Hollywood pictures is the result of an inept grafting of stories with different settings on the uniform California landscape. Or it may be, as it probably is in the Chaplin films, the result of a conscious stylization of material. But the fact remains that so far there has been in the films very little of that particularization of background which has been the main tendency in American fiction in recent years.

The most important thing about “State Fair” at the Radio City Music Hall is that it marks a possible tendency of the same sort in the films. Not since Wallace Beery's “The Champ” has any American picture striven so hard for a feeling of place. The choice of Phil Stong's novel was of course an excellent one for the purpose. Certainly nothing offers a better opportunity for the localization of distinctive American types, situations, and *mores* than a Middle Western state fair. There is a stretch in which we follow a typical American family riding at night along the corn fields, which has something of the beauty we admire in Russian films. Another group of shots of typical American faces at the fair gives us a notion of what may be done in this line as soon as our directors become more objective toward their material. Unfortunately, the presence of Janet

Gaynor in the cast infuses just enough of the Pickford tradition into the picture to cancel some of its best effects and prevent it from being as good as it should be.

"Whistling in the Dark" at the Capitol is an effective comedy-thriller which owes rather too much to the straight legitimate technique of Ernest Truex. The scenes between this comedian and Una Merkel would be good on stage or screen; and this is of course equivalent to saying that the picture contributes nothing to the advancement of its own medium.

WILLIAM TROY

Drama

What This Country Needs

IT is obvious enough by now that the theatergoing public of New York does not want what by logic it should.

Certain popular economists may have ridden to wealth on the crest of the depression, and pamphlets on technocracy may have saved the book trade from imminent collapse. But so far at least, the theater has made no profits out of protests or plans. Doubtless audiences have undergone their reverses and read their books, but the result of their suffering and their meditations was, apparently, only a growing conviction that what this country really needed was a play by Noel Coward, written for himself and the Lunts. In any event, that play had hardly been announced before a suppressed excitement began to make itself felt, and before the curtain rose on the first performance success was taken for granted. It made no difference that the box-office price was \$4.40 a seat, or that practically all the tickets had mysteriously made their way from the box-office to those agencies which cannot be expected to resell except at a profit. An enthusiastic public considered itself lucky to get them at any price, and during the coming months it is generally expected that a definite class distinction will be drawn between those who have and those who have not seen "Design for Living" at the Ethel Barrymore Theater. The ghosts of several Barrymore heroines must shudder nightly as Messrs. Coward and Lunt descend the modernistic stairway of a pent-house apartment in pajamas which do not fit them for the very good reason that they belong to the husband of the lady who returns in satisfactory fashion the ardent and unplatonic affection of both of them.

I must, however, not forget to say that the evening provided is really amusing in an inconsequential and rowdy way. This time, to be sure, the play is decidedly not the thing and, indeed, I am inclined to suspect that even its "sophisticated" audience would be a little bit shocked if it were allowed to realize just what is going forward. We have got used to the triangle composed of two women and one man. It has been contemplated from all possible angles and treated alternately as deplorable, sentimental, and amusing. But for some reason or other we have shied off from the other triangle composed of two men and a woman. Quite irrationally, no doubt, the general feeling still persists that though a gentleman may divide his affections for an indefinite time, a lady who doesn't choose, at least after reasonable experiment, just isn't a lady. In sentimental romance "reasonable experiment" means only adequate attention to the claims put forward by her suitors. In more sophisticated tales it may include certain additional activities of a less completely symbolic kind. But in any event, choose she must. And yet it is exactly the necessity for choice which the heroine of Mr. Coward's play is original enough to deny. Such scruples as there are come from the male side, and the funniest moment of the piece is that in which Mr. Lunt,

WHAT IS SOCIAL ADJUSTING?

In dealing with the socially maladjusted individual, his psychological, racial and cultural background are of the utmost importance.

Jewish social work is in need of men and women especially trained to apply this principle. The Graduate School for Jewish Social Work gives this training.

Scholarships and fellowships ranging from \$150 to \$750 for each academic year are available for specially qualified students.

somewhat alarmed at the consequences of his rationality, exclaims: "What we need is some standards, something to hold on to"—and then looks wildly about as he realizes quite clearly that none of them have any. But the lady is less disturbed. After betraying the first man with the second and then betraying the second man with the first, she comes to the sensible conclusion that there is no use continuing that indefinitely, and so the design for living has been worked out at last when the final curtain descends upon the three of them rolling around together on a couch—obviously prepared for what has previously been described as "a nice, spontaneous little tumble in the hay."

It is not wit which persuades the audience to accept this unconventional conclusion. The play is, indeed, rather deficient in bright lines, and the pleasure which it gives is due rather to the general high spirits of the playing than to anything inherent in the text itself. What really counts is that New York has taken the Lunts to its bosom. It is ready to meet them rather more than halfway, and the effect is visible in their own playing. They romp around the stage in the full knowledge that a crowded house is ready to admire them, and that knowledge gives them a gaiety almost irresistible. "Design for Living" is hardly to be judged as a play; it is a festival for all concerned, and it warms the heart as any success not obviously undeserved is almost sure to do. Audiences come, I suspect, partly because they are happy to contribute to some enterprise which is booming along with a good nineteen-twenty-nine sort of boom; and the success of this play was predestined by the stars—in more senses than one.

"Bad Manners" (The Playhouse) contains a great deal of talk about sex. It is smart comedy which is not quite smart enough, with a serious undertone which is not quite serious enough. The heroine says things like "You have a creative mind and that is the only sort I really respect."

JOSEPH WOOD KRUTCH

Contributors to This Issue

SAMUEL ROMER, who has been active in Socialist Party work for some years, is now editing a Socialist newspaper in Detroit.

BENJAMIN STOLBERG writes articles and book reviews for various periodicals.

PAUL Y. ANDERSON is the national correspondent of the St. Louis *Post-Dispatch*.

CLIFTON FADIMAN is at work on a book of criticism entitled "American Life and American Novelists."

MARK VAN DOREN is the editor of a new anthology of American poetry, "American Poets. 1630-1930."

GENEVIEVE TAGGARD is the author of "The Life and Mind of Emily Dickinson" and of several volumes of verse.

HORACE GREGORY will publish shortly a second volume of verse, entitled "No Retreat."

GAETANO SALVEMINI, formerly professor of modern history at the University of Florence, is at present lecturing at Yale University.

GERALD SYKES is a writer of fiction.

ISIDOR SCHNEIDER is the author of "The Temptation of Anthony."

ARTHUR WARNER, formerly an associate editor of *The Nation*, is the author of "A Landlubber's Log."

C. HARTLEY GRATTAN, author of "Why We Fought" and "The Three Jameses," lived for some time in Australia and has published a history of Australian literature.

SUBSCRIPTION RATES: Five dollars per annum postpaid in the United States; to Canada, \$5.50; and to other foreign countries, \$6.00.

THE NATION, No. 20 Vesey Street, New York City. Cable Address: NATION, New York. Muriel C. Gray, Advertising Manager. British Agent, Gertrude M. Cross, 23 Brunswick Square, London W. C. 1, England.

FOUR YEARS AGO it was Herbert Hoover who was to perform miracles. Today it is Franklin D. Roosevelt. This feeling may not be prevalent throughout the country, but in official and journalistic circles in Washington it is running very strong. There are already rumors of an economic rehabilitation program on a titanic scale, involving billions of dollars, of which the ambitious Muscle Shoals program recently announced is but a single detail. It must be said for Mr. Roosevelt that he is making no extravagant claims. Nevertheless, these reports have upset many conservative commentators, who also are looking with suspicion upon the fact that the President-elect has of late been associating with such progressives as Senators Norris, La Follette, Cutting, and Hull, while noticeably avoiding public contact with conservative Democrats such as Senator Robinson, Newton D. Baker, Governor Ritchie, and former Governor Byrd. That the Roosevelt Administration, at least to begin with, will be unashamedly radical—in so far as the Senate liberalism may thus be termed—is now apparent. There is evidence, too, that the 124 new Democratic members of the House will as a group be found standing even farther to the left than the new

President. Some of these members-elect have already visited Washington and made known their views, which sound as if they might have been lifted in part from the Socialist Party platform. We have not forgotten that as a miracle-worker Mr. Hoover proved a complete failure, and it must also be remembered that Mr. Roosevelt will be under constant pressure from the conservative elements within his party to modify his views. But at the moment the outlook in Washington is the most encouraging it has been since March, 1929.

AT LAST the issue is joined between Japan and the League. The Committee of Nineteen has faced the obvious fact that procrastination and debate and the search for face-saving formulas have produced no solution in the affairs of China and Japan. It has demanded of Japan "the discontinuation of Manchukuo" and of the campaign already under way against Jehol. And Japan has apparently abandoned sophistical evasions and replied with similar directness that Manchukuo must be maintained; while that kidnapped province itself has issued a statement asserting its independence and its "nonchalant" attitude toward the pronouncements of the League. The conquest of Jehol will be pushed unless the Chinese troops withdraw. These proceedings suggest no safe or simple method of solving the problem of the Far East, but at least they have had a clarifying effect. The world is faced now with a clear-cut issue. Will the League maintain the position its committees have formulated, so gradually and with such reluctance? Will the United States and Russia support the League in its opposition to Japanese imperial aims? And if Japan resigns from the League, what steps will the nations pursue to render effective their condemnation of its action? These questions must be answered within the next few weeks. The position of the United States may not be made clear until after Roosevelt takes office, but the President-elect has indorsed the Stimson doctrine and the arms-embargo measure now under consideration in the Senate, and is known to favor cooperation with the League in support of existing treaty obligations. Mr. Roosevelt's attitude, together with Litvinov's remarkable speech defining aggressive action and supporting the idea of a consultative pact and the use of economic sanctions, has no doubt done much to create Geneva's new mood of resolution.

OUR OWN HOPE is that the recommendations of the Committee of Nineteen will be accepted; that the United States and Russia will cooperate with the League in determining a united course of action; and that such action will be based upon a policy of limited economic sanctions against Japan. To cut off war supplies and war funds would cripple Japan's capacity for aggression without seriously injuring its population. No doubt the international munitions ring will oppose such action (as the United States munitions and aircraft makers oppose the Senate measure giving the President power to declare an arms embargo), and it will run counter to other powerful commercial interests in the countries concerned. But it is also obvious that the weight of general interest in the Western world has begun to tip the

balance the other way; Japan's imperial ambitions have apparently alienated or frightened even its former supporters in France and England. It is important, however, that the policy adopted by the nations be expressed in terms so clear and so dispassionate that even Japan can find no excuse for assuming the role of the martyred country facing a hostile world. The method of non-intercourse can succeed only if it is deliberately planned as an alternative to war, not ■ ■ hostile act. The nations adopting such tactics must proceed in ■ passive mood; they must simply refuse to aid or abet an international crime. For more than a year Japan has listened to arguments and expostulations from the League; but it has gone straight ahead with its imperialist schemes knowing that it could turn to the very nations that talked the loudest and buy from them the arms and munitions necessary to carry out its plans. This cynical paradox can only be ended by international agreement to enforce an embargo on war materials.

MEANWHILE the proposal to give the President authority to lay down embargoes on munitions shipments to countries at war or threatening to go to war is meeting with obstacles in Congress. This authority would be used only after the United States had obtained "the cooperation of such nations as the President deemed necessary." The most obstinate opposition to the measure comes, of course, from the makers of war materials. The empowering resolution passed the Senate without much difficulty during the confusion attending the Long filibuster, but it has since been recalled for reconsideration upon the motion of Senator Bingham of Connecticut. It cannot be entirely accidental that Connecticut is the home of several large munitions factories. The manufacturers of airplanes have now blocked action on the resolution in the House. Its adoption, they maintain, would divert business to other countries; to quote Guy Vaughan of the Wright Aeronautical Corporation, "no country would buy from us unless she could be sure she could continue to get parts and replacements for her planes as she needed them." This is the burden of their complaint. Apparently, they consider it sufficient merely to assert that adoption of the resolution would interfere with their profits.

A SECOND FIVE-YEAR PLAN does not, as yet, exist in Russia, though Stalin recently outlined its general character. But Moscow has published—and the Moscow correspondents have duly ignored—the Soviet program for 1933. Industrial production is scheduled to rise 16.5 per cent. Capital investment will amount to 18,000,000,000 rubles. Nine million tons of pig iron are to be produced, 8,900,000 tons of steel, 6,200,000 tons of rolled steel, 16,300,000,000 kilowatt-hours of electricity (compared with 1,900,000,000 in 1913), 84,000,000 tons of coal—coal production was 28,900,000 tons in 1913, 59,000,000 in 1931, and about 66,000,000 in 1932—and 24,400,000 tons of oil. Corresponding increases are expected in the output of machines, chemicals, consumers' goods, timber, and homes. Individual productivity in industry, according to the 1933 plan, will be raised 14 per cent and wages 9 per cent. This is an impressive undertaking, which indicates that even though the Bolsheviks have shifted the direction of industrial advance and moderated its speed, progress will continue to be rapid. In a world of unemployed millions, idle factories, and descending curves of production, such a program insures the support of the masses, who, despite present

hardships, see improvement on all sides. Poverty which accompanies progress is less disheartening than poverty in the midst of plenty. #

IT WOULD BE DIFFICULT to find ■ more completely disingenuous report than that made by Secretary of Commerce Chapin to the House Ways and Means Committee urging "compensating" tariffs for imports from countries with depreciated currencies. *The Nation* last week published the official figures which show that imports from Great Britain, for example, last year fell even more compared with the year before than did imports from France and Germany and other countries with currencies still at gold parity. It showed also that last year the direct trade relations of Great Britain and Japan with the United States were even less favorable to those countries than in the previous year. None of these facts is mentioned in Mr. Chapin's memorandum, and they can only be surmised from his various apologies. He remarks that what is important, anyway, is not the dollar value of imports, but the quantity of them. But even when we allow for a price decline of 13 per cent during the last year, the decline of 44 per cent in the value of British imports, for example, still indicates a very heavy decline by quantitative measurement. Mr. Chapin remarked that 232 commodities were imported in greater volume in 1932 than in 1931, but it turned out under the questioning of the committee that he did not know how many of these commodities came from depreciated-currency countries and how many from gold-basis countries. It further developed under questioning that the imported dutiable products in which increases were shown in 1932 amounted altogether in value to \$76,800,000, or less than 6 per cent of our total 1932 imports. What this means is merely that the other 94 per cent of our imports must have shown an even greater average decline than 37 per cent. In its juggling with figures the Hoover Administration is running true to form to its last gasp.

WILLIAM Z. RIPLEY, whose resignation as Nathaniel Ropes Professor of Political Economy at Harvard is announced, has been a rare type of academician. His researches have had direct and practical effect upon the economic and social conditions which he has investigated. The foremost American authority on transportation economics, he was among the first to attack the abuses in railroad finance. Later he became a critical student of corporation practices in other fields. He was the pioneer in uncovering the increasing dissociation of ownership from control in corporate affairs. His "Wall Street and Main Street," published in 1927, after magazine publication of some of its material, was a direct attack on financial practices which have continued unchecked and today are recognized as in large degree responsible for our economic debacle. Professor Ripley was subjected to scathing counter-attack as a destructive and reckless critic who would put shackles on our progress and prosperity. Had his warnings been heeded, had a vigilant Administration followed his recommendations and enacted adequate statutory safeguards, the corporate structure would not have been built so high and so flimsily, and its crash would have been less ruinous. At this time, when the wreckage of enterprise and investment strewn the land, when the financial "widows and orphans" weep for their departed dollars, when suits against directors are being instituted everywhere in the hope of quickening assets long

since dead, the extent of Professor Ripley's contribution may be recognized. It is to be hoped that his health, the impairment of which caused his retirement, may be restored and that his mind and pen will long continue in the service of the American people.

THE PUBLIC SERVICE COMMISSION of New York has been asked to assume jurisdiction over the labor policies of the Brooklyn Edison Company. Thirty customers have filed a formal complaint that the discharge of some 2,300 employees impairs the "safe and adequate service" which under the law every public utility must furnish, and that power-house accidents have increased 100 per cent. The company replies that the commissioners have no more jurisdiction over its labor policies than over those of a department store or a hotel. Under a rigid and reactionary interpretation of the public-service statute, this may conceivably be maintained. Chairman Milo R. Maltbie, while asking for additional briefs, pointed out that the courts have ruled that the commission has no jurisdiction except such as is expressly conferred. He recalled that when the Public Service Commission was established in 1907, exclusion of labor questions from its jurisdiction was taken for granted. But that very contention justifies a new stand by the commission. A quarter of a century's experience has shown that regulation, even within the limited field prescribed for the commission, has proved inadequate. Service, on the whole, is satisfactory, but rates have continued excessive, owing chiefly to the limitations imposed upon commissions by the courts. Worker and investor—surely two other "parties at interest"—are wholly without safeguards. Counsel for the plaintiffs, Jerome Count, finds in the public-service law adequate ground for an interpretation sufficiently broad to include regulation of labor policies. It is high time that this issue be joined. If the commission rules that it has not this power, the law needs prompt revision to include protection of both worker and investor, as well as strengthening to provide true protection of the consumer. The companies will be well advised to cease opposing the extension of regulation, for public ownership looms as the imminent and only possible alternative.

BUT WHILE STATE REGULATION has been largely ineffective, "pitiless publicity," of which we heard during the last Democratic national Administration, has begun to produce results. The data assembled during the last four years by the Federal Trade Commission have furnished citizens and groups in hundreds of communities with the factual ammunition needed to attack high electric and gas rates. The one invaluable service rendered the consuming public during the Hoover Administration was that performed by the Federal Trade Commission. Yet, paradoxically, the branch of Congress dominated for the first time in seventeen years by Democrats—the party now committed to a new deal on the power question—has just voted a crippling cut in the appropriation for the Federal Trade Commission, \$510,000 against the budget recommendation of \$1,109,550. Already, as a result of curtailment, four volumes of testimony, including that on the Insull and Associated Gas and Electric systems, cannot be printed. The projected chain-store and stock-market investigations will have to be abandoned. Instead of reducing the appropriation of the Federal Trade Commission, Congress should double it and speed the work. The trifle over

a million dollars spent annually has already resulted in rate reductions which have saved the American electric consumer many times that amount. And the full force of the commission's findings has not yet been realized—thanks to the tenderness of the press for the power companies. Fortunately, the Senate threatens to hold up the entire appropriation bill unless the item for the Federal Trade Commission is restored.

THE BOARD OF TAX APPEALS has just written a learned and entertaining essay accompanying its refusal to grant Miss Lenore Ulrich the right to deduct from her taxable income \$11,129 allegedly spent in entertaining critics and other newspapermen. (The board digs into history to report that the custom of feeding the influential is old, and that Shakespeare is said to have died as a result of a dinner offered to certain rival poets; it then turns to anthropology to cite the fact that cannibals are often placated by a gift of salt; and, finally, it arrives at the great psychological truth that "the potency of donated favors, especially of food, in securing adherents is recognized." Nevertheless, it says no in the end, and Miss Ulrich is exposed to the rage of the principal New York critics, who tell the reporter of the *Times* that they were neglected. John Mason Brown denies that he ever got eleven thousand dollars' worth of entertainment from Miss Ulrich off stage or on; Burns Mantle complains wistfully that the story only confirms what he has long feared—namely, that he is not meeting the right people; while John Anderson is sure that nobody takes the trouble to entertain critics these days—not even the producers. When consulted, *The Nation's* own dramatic editor insisted that his failure to receive even a sandwich from the star of "Lulu Belle" was only another example of the penalty he has to pay for his well-known incorruptibility.

"DO YOU KNOW," writes a friend from the Middle West, "that people are riding up to relief stations in high-powered motor cars, getting food, and then driving off with it? What have you got to say to that?" Well, we have to say that people who live some distance from town and who have no other means of locomotion are going to hold on to their cars just as long as they can. It would not be economical for them to sell their cars—for which they could get almost nothing—and to buy a horse with the proceeds, for the animal has to be kept alive and a wagon must be purchased as well. For hundreds of thousands of people the automobile has become an absolute necessity. It is not a luxury, but the only means by which they can go from farm to farm, or to the village to swap, to bargain, to borrow, and sometimes to buy. In every town in the Middle West there are now rummage stores to which people bring all sorts of odds and ends that they can possibly dispense with in their homes in the hope of realizing thereby a few cents. Often the trip to the rummage store is made after the children have been deposited in the district school. In cases like these, the cost of gasoline, which in many places is as low as eight cents a gallon, must be figured in as a necessity of life, unless relief committees or towns establish delivery service. In several States, notably in Iowa and Indiana, the State authorities have put off the date for renewing licenses for 1933 in order to help the people who have no money but must drive. There is also a movement on foot in the legislatures to help the farmer by reducing the cost of drivers' licenses and car registration, whereas in New York the demand is for higher fees and licenses.

The Department of Labor: A Challenge

RECENT press reports declare that Industrial Commissioner Frances Perkins of New York has told President-elect Roosevelt that she does not wish to be considered for the post of Labor in his Cabinet on the ground that the opposition to her appointment by organized labor would handicap and embarrass the coming Administration. Assuming the report to have some foundation—for the offer of the post to Miss Perkins is known to have been made—it raises pertinently the question of the purpose, scope, and potentialities of the Department of Labor. To make this department, for the first time in its brief and not too creditable history, a worthy and important administrative branch of the federal government, rendering real service to the millions of American workers, is one of Mr. Roosevelt's great opportunities.

Just how deeply rooted the purely political concept of government has been in America is proved by the fact that Cabinet posts dealing with the now admittedly overshadowing economic problems are of very recent origin. The Secretaryships of State, Treasury, and War, the offices of Attorney-General and Postmaster-General date from the beginning of our constitutional government. The Secretaryship of the Navy followed closely, in 1798. President Zachary Taylor, who played so large a part in extending our territory, created the Department of the Interior in 1849, when the nation, stretching now from ocean to ocean, became conscious that it had an interior. President Cleveland established the Department of Agriculture in 1889, a date that corresponds roughly with the disappearance of free land in the United States. President Roosevelt, in 1903, when the United States had become a world Power and was beginning to ship the dollar overseas, established the Department of Commerce and Labor, and made George B. Cortelyou its first Secretary. A private secretary, a lawyer, a merchant, and a lawyer successively held the post. Then Woodrow Wilson, imbued with ideas of the "new freedom," created two departments where but one had existed, and named as the first Secretary of Labor a man who had known at first hand the problems of the worker—William B. Wilson.

The World War gave labor an artificially favored position and, through the collaboration of the Wilson regime with Samuel Gompers, endowed the American Federation of Labor with a brief prestige. The Administration, however, ended in the red haze of the "deportations delirium" of 1920 in conjunction with the hysteria of Attorney-General A. Mitchell Palmer, against which Assistant Secretary of Labor Louis F. Post alone battled gallantly, and not wholly in vain. Then came "normalcy." As evidence thereof, the organizer of the Loyal Order of Moose, with the distinction, carefully publicized, of having labored as a puddler, became Secretary of Labor—for ten years. It mattered little who filled this tail-end Cabinet job. In those gilded days A. F. of L. leaders sat on festive boards with bankers and magnates—indeed, became bankers and industrialists themselves—while the open shop and the company union, rechristened "the American plan," flourished. William Nuckles Doak, with no appreciable record of having labored but with a quarter-century's career as a labor-union official, followed Davis. And today, with

labor in the United States stripped of illusory advantages, its effectiveness long since undermined by the personal ambition of so-called leaders, its ranks disintegrating, the cry goes up from the federation officials that they must control and head the Department of Labor! What is there in the history, in the achievement, in the service of this clique of self-perpetuating labor bureaucrats that validates any such claim? Even if they may fairly be said to represent the 2,500,000 who still retain their A. F. of L. cards, what is this trifling number compared with the 40,000,000 wage-earners who are American labor, and for the last twelve years have been virtually unrepresented in the administrative councils at Washington? And what is there in the record of the federation candidate, Daniel J. Tobin, to justify his appointment? Like his predecessors, Wilson and Davis, he is an example of an immigrant who has risen to success. For twenty-five years he has been president of the Brotherhood of Teamsters, Chauffeurs, Stablemen, and Helpers at a salary in excess of a Cabinet officer's.

We know of nothing in the career of Daniel Tobin that compares with the wide experience, the diversity of interest within the broad field of labor and industrial relations, and above all the superlative personal achievement of Frances Perkins. Since the completion of her studies, first at Mount Holyoke, then at the University of Pennsylvania and Columbia University, Miss Perkins, working unceasingly for better conditions of life and labor, has to each assignment brought high intelligence, courage, vision, and practical efficiency. She has been secretary of the Philadelphia Research and Protective Association, executive secretary of the Consumers' League of New York, executive secretary of the State Committee on Safety, director of investigations of the New York State Factory Commission, during the war executive director of the State Council of Organization for War Service, New York State Industrial Commissioner, director of the Council on Immigrant Education, member and later chairman of the New York State Industrial Board. Both theory and practice are hers to a unique degree. With her own eyes she saw the ghastly Triangle factory fire. As factory inspector and as head of the New York Committee of Safety she has labored unremittingly and successfully for the elimination of industrial hazards. The bare official record gives no adequate picture of the patient, steadfast labor in education, administration, and diplomacy which has enabled Frances Perkins again and again to reconcile the conflicting interests of employer and employee.

For twenty years the Department of Labor in Washington—with the shining exception of the Children's Bureau, so ably presided over first by Julia Lathrop and now by Grace Abbott—has been a convenient repository for a few political legatees. During the days of boost and boast that mattered less. Today, with labor shattered and demoralized, a tremendous task in organization and coordination confronts the Department of Labor. To correlate with federal efforts the scattering activities of forty-eight States and countless cities, to recreate employment and restore decent standards of labor—these are major tasks of the government. The new Administration could make no better beginning than to enlist the devoted and expert services of Frances Perkins.

The Mortgage Problem

AS the seriousness of the farm-mortgage situation becomes increasingly apparent, there is some danger that well-intentioned but only half-thought-out legislation may be passed which will create evils greater than those it seeks to cure. It is above all necessary to keep constantly in mind the complex nature of the problem, and the secondary consequences of all suggested remedies.

Most of the solutions so far proposed fall into two main divisions. The first group would have farm mortgages taken over in one way or another by the federal government. It is proposed, for example, that the Reconstruction Finance Corporation pay the whole or some part of a defaulted mortgage to the mortgagee, and become itself the holder of the farmer's mortgage. (This is a mere extension of the perilous policy of subsidy that the government has already been pursuing with the banks and the railroads. The government, in effect, would be called upon to validate many unsound loans made by present mortgagees; in the long run the taxpayer rather than the mortgagee would be compelled to take the loss. Meanwhile the result would be a further extension of the government's debt and a consequent restriction of its possible borrowing power for other purposes, such as direct relief. Nor would the government as a mortgage-holder be likely to prove very effective as a collection agency. It is probable that government-held mortgages on farms would be whittled down from time to time by various legislative measures and special pleas.

The group of farm-mortgage remedies more often proposed, and already partially in effect, involves some sort of moratorium either with the voluntary consent of the mortgagees or through the united action of farmers. The most frequent suggestion has been for a complete moratorium for a period of two years. But apart from legal difficulties, such a general moratorium, if it involved payments of interest as well as principal, might have extremely serious social effects. It has been estimated that about 15 per cent of all farm mortgages are held by farmers themselves, most of them retired farmers, while other individuals hold about 15 per cent more. Among these individual holders are certainly many who depend almost entirely on their interest for a modest living. Under a general indiscriminating moratorium they would be forced for two years to accept nothing, even though many of the farm-owners could afford to pay something. The remaining 70 per cent of farm mortgages are held by federal land banks, joint-stock land banks, commercial banks, mortgage companies, and insurance companies. The effect of a general moratorium would certainly be to bankrupt many of these, ruining depositors in commercial banks and still further reducing confidence. It would not even do much toward solving the problem of the debtor, for at the end of the two-year period there would be an immense amount of accumulated interest to be paid.

Such considerations need not lead us to reject completely all moratorium or even all government-aid proposals, but they reveal how necessary it is to keep constantly in mind the dangers likely to be found in any simple, sweeping remedy. Any proposal must be elastic enough to allow for the capacity to pay of various individual debtors, and even for the position of the creditor. Some of the problems involved could perhaps

be most satisfactorily adjusted by special local committees.

But there is one general step that could and should be taken immediately, and that should apply not merely to farm mortgages but to mortgages on urban homes as well, and perhaps to those on all real estate. This is legislation which would compel the holder of a mortgage, upon the request of the home- or farm-owner, to renew for at least two years more any mortgage falling due, say, within the next two years. Such legislation might further provide that for several years following this period the holder could not demand payment of the principal of his mortgage at a rate of more than 5 per cent a year. This step would protect all the essential rights of the mortgagee; it would assure his continuity of income so far as the law can assure it, as well as his power for redress where interest payments are not continued; and it would mitigate, if not prevent, the chaotic situation that is otherwise almost certain to develop. The value of real estate in general has collapsed violently, and there is no reason to suppose that the major part of this collapse is a temporary one. This means that all mortgagees will be anxious to call their mortgages, or drastically to reduce their capital amounts, at the earliest opportunity. It would be impossible for farmers or urban home-owners to raise the capital sums demanded, and they would lose their farms or homes even though they were able to continue to meet interest payments. Nothing can stop a general reduction and liquidation of mortgages. Only legislation of the type proposed can help to make that liquidation orderly rather than a disorderly and cruel one.

Doctors and the Public

IF the doctors of the country had deliberately framed a plan to antagonize the public and goad the American people into a demand for some form of state medicine, they could hardly have acted with more effect than they have since the Committee on the Costs of Medical Care made public its report last December. The tactics of the more vocal physicians seriously threaten the future independence of the whole profession. There can be no question whatever that the public is increasingly insistent on protection against the economic hazards of illness. Too many persons—especially in these desperate times—have been financially devastated by doctors' and hospital bills. In response to this demand the Committee on the Costs of Medical Care, after a thorough canvass of the whole field of medical economics, issued the report which has so generally aroused the medical profession. To be sure, the report exonerated the doctors of profiteering—for which service the profession might have shown more appreciation than it has—and proved most conclusively that the financial burdens of illness are hard to bear, not because doctors are overpaid, but because the expenses come unexpectedly and often in staggering doses.

To remedy this situation the committee has proposed "group payment." It has urged that the costs of medical service be met by the annual payment of small fixed sums by large groups of people, whether they are sick or well, rather than in big and unpredictable amounts by individuals when they happen to be ill. All of the twenty-five physicians on the committee approved of the group-payment principle, though eight urged control of such plans exclusively by the medical pro-

fession. The committee also recommended that costs be reduced and service facilitated through an extension of "group practice." None of the twenty-five doctors on the committee disapproved of this principle, although a small minority pointed out certain dangers and limitations. The entire committee agreed that taxation should be resorted to to defray the expenses of medical care for those who could not afford to pay fees. Eight out of the forty-eight members of the committee said that the industrial States should "plan for legislation" to require "persons in certain income groups, certain occupations, or certain areas to subscribe for health insurance." But the committee was unanimous in urging that the group-practice and group-payment methods be applied voluntarily and by private medical agencies—not by state compulsion or under government control.

In spite of the plain letter and intent of the committee's report, those who speak for the medical profession have played it up as a demand for "state medicine." (Dr. Morris Fishbein, editor of the official *Journal of the American Medical Association*—who never practiced medicine in his life—is engaged in a campaign of editorials and stump speeches before medical societies in condemnation of the report. He views it as a combination of mass production, socialism, and revolution. The issue, as he has phrased it, is "Americanism versus Sovietism for the American people." (Several of his stock arguments are summarized in a letter to the editors printed elsewhere in this issue.) Local medical organizations in various parts of the country have passed incendiary resolutions against the report; a particularly imposing set adopted by the St. Louis Medical Society on January 17 contained these words: "The majority group [of the committee] now offers to medicine . . . a cup of gall, an incitement to revolution, disorganization, separation, heretical practice, and the abrogation in principle of the general practitioner." Dr. Logan Clendening, who discusses medical matters in his syndicated newspaper articles, argues against group payment on the ground that someone who is "mentally diseased" might "eat his insurance certificates" and there would be "no way to prove he is entitled to medical care." Dr. Samuel Kopetzky, editor of the *New York Medical Week*, delivered a radio speech under the auspices of the New York Academy of Medicine in which he asserted that "representatives of the small group that has made millions through capitalism" (meaning, presumably, the foundations which financed the Committee on the Costs of Medical Care) advocate "state medicine" and "medical socialism"—a surprising anomaly, if it were true.

All this sound and fury betrays a state of mind as natural as it is easy to understand. The medical profession realizes that some sort of change is imminent. In these desperate days many doctors would undoubtedly welcome a plan of organization which could be counted upon to yield them a steady, even if limited, income. But the self-appointed spokesmen of the profession and most of the medical societies look upon any concrete proposals for change with a suspicion born of conservatism and fear. They resent the investigations and oppose the recommendations of "outsiders." Yet no enterprise was ever more clearly "affected with a public interest" than is the practice of medicine. If under private ownership and operation the medical profession is unable to provide good care at prices which the people can pay, some sort of state control is inevitable. The doctors know this and look with suspicion upon any suggestion that even points toward socialization. The

majority report of the committee offers the only plausible alternative to such control that we have heard of: voluntary organization to cut costs and ease the burden of payment. In their own interests, the wise and moderate members of the profession should halt the attack that is being led by their vociferous representatives.)

Purity at the Port

THE current issue of the Catholic weekly *America* contains an excited article urging upon its readers the duty of prosecuting the publishers of certain current books "dripping with the virulence of sex." The author, Father Francis X. Talbot, sketches the plots of several novels and promises later to describe for the delectation of the pure similar publications in Germany. But though campaigns of this sort doubtless still titillate the imagination of those to whom only the vicarious indulgence in evil thoughts seems permissible, the fact remains that the influence of the vice crusader has suffered an eclipse hardly less near to totality than that of the Anti-Saloon League itself. Speakeasies do, as a matter of fact, still keep up a pretense of secrecy, but even the more esoteric of erotic classics like the "Venus in Furs" of Sacher-Masoch are quite openly displayed in drugstore windows. This is an age of hard drinking and plain speaking. It is not even worth one's while to discuss whether or not the emphasis contributed by the crusaders made it drink a little harder and speak a little plainer than it would otherwise have done. But it is perfectly clear that law has been incapable of controlling the customs to which it is now gradually giving its consent.

For several years no reputable publisher has been successfully prosecuted, and the chances are that the test case now pending will establish the right of Joyce's "Ulysses" to circulate freely. But there is nothing which illustrates more strikingly the conscious weakness of the censors than the strange behavior of the customs authorities, who admit their unwillingness to allow the validity of their decisions to be tested by the courts. Six years ago a presentation copy of George Moore's "A Story Teller's Holiday" was seized at the port. Recently a copy imported by Dr. Ernest Sutherland Bates was passed—simply because it was known that the National Council for Freedom from Censorship planned to question the authority of the Customs Bureau to keep it out. But that is not all. When asked if this action was to be considered a precedent, the bureau replied frankly that it was not, and it implied that the book might be barred whenever the importer was not prepared to question the decision. Thus a novel by a contemporary author may be a classic on Monday and indecent on Tuesday.

The situation is not made any more logical by the circumstance that an American edition of the same book was printed and disposed of, but the really significant fact is simply the willingness of the customs authorities to play fast and loose with their own rules. The artful dodge and the legal technicality are supposed to be the resource of the malefactor rather than of constituted authorities. One expects the smuggler to temporize and to escape the test of the courts as often as he can. But one hardly expects the representatives of the law to be concerned only with what they can get away with.

Issues and Men

Racine: A Dentist, a Salesman, and a Priest

RACINE, Wisconsin, is a fortunate city. It has a self-constituted clique of guardians who are determined that there shall be no treasonable utterances within its limits, and that no unworthy persons shall be allowed to speak there. So, of course, when it was announced that the contributing editor of *The Nation* had been invited to speak in Racine these censors rose in their wrath. The society of the Forty and Eight, a subsidiary of the American Legion, passed resolutions that no such bolshevik and Communist and pacifist as Oswald Garrison Villard should be allowed to appear in Racine; and the Episcopal rector who had offered a hall hastily withdrew it. The Elks, when asked, said they would gladly grant their hall to "anybody except Mr. Villard." The beautiful memorial hall erected to the memory of Racine's soldiers in all our wars since Bunker Hill was, of course, denied. It remained for the Danish Brotherhood to offer theirs when, the original committee of invitation having disbanded, representatives of the Socialist Party invited the offender to come to Racine in shameless defiance of the patriots' fiat.

When I arrived in Racine I called upon the commander of the Legion, Dr. W. H. Gearan, veteran of a dental company in the World War. He was suave, oily, diplomatic. He explained carefully that the matter had not originated with the Legion, but in the Forty and Eight, and that the Legion had merely approved the action of its subsidiary in a perfectly perfunctory way. Had he ever read a word that I had said or written? He had not. Had he made any effort to verify the facts in the fatal dossier which was the basis of the action taken? He had not. Had it occurred to him that in fair play the matter might be taken up with the offender and he be given a chance to answer to the indictment? It had not. Was he aware of the fact that the Constitution of the United States guaranteed to every citizen, however wicked, the right to free speech, besides saying something about free press and free assembly? He believed that there was something in the Constitution to that effect, but he reiterated that the responsibility for this action rested with the Forty and Eight; the American Legion had merely gone along. Naturally he could not agree with me in my belief that American citizens who undertake of their own free will to override the Constitution of the United States and to nullify it are bad citizens, and that their organization is an unworthy one.

This worthy tooth-puller slipped up, however, in that he did not immediately telephone to his confrere, the head of the Forty and Eight. I found the latter to be a plain, uneducated salesman, rejoicing in the fine old New England name of George Admadt. He let the cat out of the bag. It was the soldier-dentist himself who had introduced the resolution in the committee of Forty and Eight, and urged its passage upon that organization! Mr. Admadt admitted that he had himself had the resolution put through. What was in the indictment? He could not remember a single word. Had it ever occurred to him that there might be another side? It had not. Could he not remember a single one of the offenses alleged? Not one. But he was certain they were proved to the hilt.

Was he aware that the Constitution of the United States had been amended? No, he did not know that there had ever been an amendment to the Constitution. Then he was not aware that the Constitution guaranteed free speech, free press, free assembly? No; with unfeigned surprise he stated that no one had ever told him this in his entire life. After all, he had merely done what the wily and dodging doctor had asked him to do. But he was certain that everything done was exactly right, that the Forty and Eight was a patriotically virtuous association, and that it could not possibly have violated the dictates of the Constitution or the traditions of the Republic.

Next I sought the priest. That shepherd of the community had attended the first meeting of the committee and had been told that the meeting was to be addressed by the contributing editor of *The Nation*; everybody else heard the statement, but when the American Legion acted, the shepherd, remembering the Scriptural injunction to do unto others what one would have done unto oneself, promptly withdrew the use of the hall. He had not understood that it was that dreadful man, Villard of *The Nation*, who was to be invited; probably he had supposed that it was another journalist of the same name. The priest could not be located, so it was not possible to ascertain his understanding of the Constitution. Amusingly enough, he himself rejoices in the Anglo-Saxon name of Roth. It is German for red, but plainly he wears another color. As for the terrible dossier, it lies before me. It appears that I was once a member of the American Association for Medical Aid to Russia; that I once conferred "with an agent from Moscow" with the result that there arose the Federated Farmers' Labor Party (news to me!); that I am a member of the Association for Old Age Security, the American Civil Liberties Union, the Association for the Advancement of Colored People, the Fellowship of Reconciliation, whose purpose is "the wiping out of color lines," and, despite my sex, the Women's Peace Society!

Now, I am perfectly well aware that American liberties would not crash nor the world stand still if Oswald Garrison Villard were to be barred from every hall in the West instead of having been welcomed in many on a long speaking trip just ended. But the principle at stake is so important that I have violated my rule and written about myself in the best manner of our daily columnists. Also, it seemed as if our readers ought to know something of the mentality, the character, and the ignorance of the self-constituted censors, who, in the guise of patriots, are preparing the way to the best of their ability for a fascist overthrow of our American institutions. In Racine the net result was, of course, much publicity and a splendid audience, about twice as large as it would have been had the censors held their peace. That is what always happens when you try to suppress free speech. But patriots of the Racine type are not mentally able to grasp this simple truth.

Oswald Garrison Villard

Who Stands Behind Hitler?

By LUDWIG LORE

ELECTIONS to be held on March 5 for the Reichstag and the Prussian Diet and on March 12 for all Prussian municipalities will decide, not the fate of the Hitler-Hugenberg Government, but whether that coalition is to continue in outward conformity with the constitution or the recognized dictatorship of a national minority. Adolf Hitler has already announced that Reichstag elections are being held "for tactical reasons," and that their outcome will "in no way determine the course of the present government," even if the election fails to give a majority to the reactionary coalition. Regarded objectively, this announcement is not so revolutionary as it may appear. The Reichstag long ago ceased to play a role in German government. For two years, under Brüning, Papen, and Schleicher, the country has been governed by presidential edicts, in form if not in essence in accord with that provision of the Weimar constitution which permits the President to use dictatorial power in situations of extreme emergency. Republican in form Germany's government may be; in content it has been as autocratic as any under Hohenzollern rule.

The new German Cabinet is made up of two distinct groups which, though they agree in fundamental aim and outlook, differ, often widely, in tactics and in the social and economic interests they represent. The German Nationalist People's Party, the political expression of the Junker aristocracy and a certain influential group of industrialists, is led by Dr. Alfred Hugenberg, millionaire owner of a large string of conservative newspapers and the Ufa film-production company. It was he who induced his party to adopt a frankly monarchistic platform. Several years ago his political organization sent more than 100 deputies to the Reichstag. Since then its representation has fallen to 41, rising to 51 under the wing of the Papen Government after the election in November. The party owes much of its popular following to the "Steel Helmets," world-war veterans of the conservative, reactionary type, well-trained, experienced soldiers. Under the leadership of its commander and founder, Franz Seldte, a well-to-do liquor manufacturer of Saxony and an important figure in the Nationalist Party movement, which he represents as Labor Minister in the Hitler Cabinet, the Steel Helmet has been an effective force against the labor movement. In the Rhineland, in Hamburg, and in Saxony bankers and manufacturers constitute an important adjunct to Hugenberg's party. The ideology of the Hugenberg-Seldte group is further expressed in the Cabinet by Neurath, Minister of Foreign Affairs, Baron von Schwerin Krosigk, Minister of Finance, Baron Eltz von Rügenach, Minister of Post and Transport, Dr. Grüttner, Minister of Justice, Dr. Gereke, Reich Commissioner for the Creation of Employment, and General Werner von Blomberg, a military man who has hitherto played no important part in party politics. Papen, Vice-Chancellor and Commissioner with dictatorial power for Prussia, at one time member of the Centrist Party, made his peace with Hugenberg a year ago and is today probably his most intimate adviser.

The National Socialist German Labor Party has only three representatives in the new Cabinet: Adolf Hitler, Chan-

cellor; Wilhelm Fricke, Minister of the Interior; and Hermann Göring, President of the last Reichstag and now Secretary for the Development of Germany's Air Forces and Minister of the Interior for Prussia. But in the hands of these three has been placed control over the police force of Germany and Prussia and the appointment of all Reich and Prussian officials. The growth of the National Socialist movement during the three years that have passed since local elections were last held in Prussia will be reflected in a tremendous increase in fascist votes. It is already accepted as a foregone conclusion that most of the large cities, industrial centers, and provincial districts will be dominated by National Socialist majorities after March 12. This is important not merely because it gives that party complete control of Germany's largest state. It also assures the Nazis of a majority in the State Council of Prussia, which is elected by the provincial councils and which, in turn, elects the members from Prussia to the Reichsrat, the upper house of the national government, in which five smaller states are already represented by National Socialists. Should the election produce a Reichstag that will stand behind the coalition Cabinet, the Reichsrat, which ratifies all laws passed by the Reichstag and sanctions government proposals before they are submitted to the lower house, will become an important factor in national affairs.

Nationalists and National Socialists will, because of a fundamental similarity of outlook, be able to cooperate for a time. Both parties are composed of extreme nationalists, monarchists, and militarists who dream of the return of their country's pre-war greatness and believe in the possibility of its regeneration through a youth trained to military service and obedience to the state, and an army and navy that will restore to the Fatherland the territory and colonies it once possessed. The two parties are also at one in their determination to end unemployment by a system of universal labor service under which the nation's youth is to be enrolled for a stated period in a disciplined working army for the performance of public construction and reconstruction work. The National Socialists first promulgated the idea of compulsory labor service for Germany. Their party maintains a special labor-service department and regards it as the patriotic duty of every German youth to contribute his services to the upbuilding of the nation. Volunteer labor camps established by National Socialists, the Steel Helmet, and the state furnish the basis on which this forced labor service is to be built. In them the work soldier receives maintenance, housing, clothing, and pocket money of from 30 to 50 pfennigs (7 to 12 cents) a day. Labor Minister Seldte, discussing the immediate program of the new government with the press, announced its intention of proceeding at once with labor conscription. For the present this labor army is to be used chiefly for the reclamation of swamps and unfertile tracts, for the building of power stations in connection with a widespread system of flood protection, for the extension of the country's road system, for the building of airdromes and air-traffic stations, and for reforestation work. The financing of this costly project, the government believes, can be accom-

plished out of the sums now expended for unemployment relief. German labor unions see in this new step an instrument for wage reductions, a menace to labor's right to collective bargaining and wage agreements, a threat to its arbitration system, its social services, and its right to strike for better working conditions.

Their mutual devotion to the monarchist cause constitutes another firm bond of sympathetic understanding between the parties of the "Harzburg coalition." To the Junker the nation exists for the wealthy landowner and powerful aristocrat, subservient to a rock-ribbed monarchical government. With the growth of international commerce and industry these landed reactionaries were forced to admit rich bankers, industrial magnates, and merchants to their hallowed circles. Their younger sons, forced by circumstance, were permitted to enter the offices and homes of these "capitalist upstarts." But they are as arrogant as ever in their assumption of a God-given superiority and a heaven-sent right to direct the destinies of the nation. "Presidents die," exclaimed Friedrich von Winterfeld, Hugenberg's successor on the executive committee of the German Nationalist People's Party, when the election campaign was opened, "but the king lives forever."

The National Socialist Party is less outspoken in its attitude toward monarchical restoration, although its program, too, states that "Germany must be ruled by one man." Moreover, Hitler's close association with the highest aristocracy and the Hohenzollern princelings speaks for itself.

Notwithstanding the similarity of their aims, a deep gulf divides the world outlook of the Nazis from that of the aristocratic leaders of the Hugenberg wing. These National "Socialists" are motivated, as their meretricious name would indicate, by a mixture of under-dog resentment and Nietzschean nationalism of the crudest type. They lack the cultural background, the bred-in-the-bone self-assurance, and the disdain for the lower classes that dominate their brethren-in-arms. Their nationalism has a vociferous aggressiveness that appeals to the masses because it can be expressed in action; the Nationalist is more inclined to use diplomacy and to appeal to the traditions that centuries of monarchist education bred into the German people. The same difference in viewpoint marks their approach to the problem of the Jew. Both are anti-Semitic. The contempt of the old Prussian conservative for the Jew is proverbial. The Semite was not tolerated in public office and could not become an officer in army or navy; permission to marry a Jewess was granted to penurious army officers only in exceptional cases, where the great wealth and social position of the bride became an extenuating circumstance. Under the Hohenzollerns it was practically impossible for a Jewish immigrant to become a citizen. But neither the Conservative Party nor its present successor, the German Nationalist People's Party, discriminated against the Jew in their official programs. They took anti-Semitism for granted. National Socialists, on the other hand, emphasize the anti-Jewish position, often to the exclusion of all other issues. Theirs is the anti-Semitism of the middle class, a hatred that is born out of bread-and-butter considerations. They hate the Jew as the successful competitor who has crowded the tradesman to the wall with his department-store and chain-store establishments, against which both Nationalists and National Socialists are waging a campaign for governmental restriction. The recent announcement by "a spokesman of the government in the Foreign Office" that nothing will be undertaken against the Jew is a bid

for favorable public opinion until such time as the government shall be firmly entrenched. Wilhelm Fricke, the official spokesman of the Nazi Cabinet group, announced in an interview that measures will be taken in the interest of the unemployed to expel all "unnaturalized foreign workers and other undesirables," the latter term referring to those Eastern Jews who were naturalized in the Republic and whose presence has always been particularly obnoxious to the National Socialists.

Germany, like every other European Power, is confronted with the urgent necessity of increasing its trade balance, which, though exports still exceed imports, is dropping to lower levels from month to month despite stringent import regulations. National Socialists and Nationalists propose to solve this well-nigh unsolvable problem by a policy of national self-sufficiency. The Nazi press and propaganda literature preach a return to the Spartan life of Germany's forefathers and rail against the weakening influence of foreign luxuries on Germany's manhood. Hugenberg's party, while it does not support the Hitler platform of *Autarkie*, demands prohibition of all imports except raw materials—a sound basis for the development of industry and commerce.

Are the days of this reactionary Cabinet counted? I doubt it. The forces that stand for democratic and liberal government outside the labor movement are practically nonexistent. The Centrist Party with its Bavarian annex, the Bavarian People's Party, is at present opposed to the new government. But this opposition cannot be taken very seriously, the Center having negotiated for weeks with Hitler for the establishment of a coalition Cabinet. The largest labor party in Germany, the Social Democratic Party, in spite of two years of uninterrupted Nazi growth, had such confidence in Hindenburg that it would not believe that the "grand old man" would intrust the chancellorship to the National Socialist chief. Unfortunately, it held to this unfounded conviction to the end and therefore neglected to prepare a solid and united phalanx of labor against this eventuality. In Cologne, on February 6, Wilhelm Sollmann, one of the party's most influential and conservative leaders, called upon Moscow to conclude a non-aggression pact with the German Social Democracy such as it had signed with France and Poland, a counsel that comes late, if not too late to unite Communists and Socialists, who were but yesterday waging such bitter warfare against each other that their mutual hostility and distrust were hardly less than their feeling against the real enemy of the worker. The Socialist Workers' Party of Germany, a small but active secession movement from the Social Democracy, has been urging on both parties the necessity of a united front against fascism, as the only means whereby the National Socialists can be defeated. But Communists as well as Social Democrats turned deaf ears to their pleadings. The Communist Party will be suppressed, the protestations of Göring and Dr. Fricke to the contrary notwithstanding, and is probably prepared for an underground existence. But it is as yet, in part because of its unrealistic methods, not strong enough in following and influence to fight the terror of a government that will stop at nothing to abolish the constitutionally guaranteed rights and liberties of a people, the freedom of movement and action of labor—a government that has made the individual the helpless tool of autocracy and despotism, that has replaced culture and progressive thought with bigotry and fanaticism.

The future of the German people is dark indeed.

An Iowa Foreclosure

By CHARLOTTE HUBBARD PRESCOTT

EARLY in January at Le Mars, in northwestern Iowa, a mob of a thousand farmers seized the attorney for an insurance company, dangled a rope before his eyes, and threatened him with immediate lynching. They held the judge of the district court a prisoner in his chambers and defied the county sheriff. And they got what they wanted—the withdrawal of foreclosure proceedings against one farmer and the defeat of a deficiency judgment against another. It was the opening engagement between an organized rural population and established authority—social revolution in the corn-fields of Iowa.

This is startling news, but the incident at Le Mars was no sudden or isolated outburst. The dissatisfaction of the Middle West is profound and widespread. Over two years ago the agent for a farmers' loan company told me: "Unless you get out into the country, you don't know what's happening there. The farmers aren't making even a bare living, most of them. And men don't see their families going hungry without doing something about it."

They began doing something about it last summer. Their first gesture against things as they were was the "cow war," in which farmers refused—with shotguns—to have their cattle tested for tuberculosis. Then came the far more important Farmers' Holiday movement, an attempt to raise the price of farm products by keeping them on the farm, by force when necessary. The attempt was unsuccessful. Prices are even lower than last year when they were the lowest in history. Through delinquent tax sales, the foreclosure of farm and chattel mortgages, and deficiency judgments the farmer is facing the loss not only of his farm but of his grain, live stock, and machinery as well. His home, his tools, and his place of business are all threatened.

A Farmers' Council of Defense has recently been organized, composed of ten leading farmers of Iowa and South Dakota. This heads a large organization of farmers which stems directly from the Holiday movement. The council acts as a judiciary body to decide upon the grievances of the farmers. If it decides, for example, that the foreclosure of a certain farm mortgage is unjust, it passes the word along to a thousand farmers—and the foreclosure is halted.

"You want to talk to me?" The whiskered little old man wearily closed one eye, as if it had looked at the world too long, and gazed at me out of the other. He was a lawyer who had lived in Le Mars for fifty years. "Yes," I said, "I want you to tell me, if you have time, about the farmers' revolt."

We were standing in the lobby of the hotel which has long been a landmark for the 5,000 inhabitants of Le Mars. The little old man sighed and seated himself in a worn leather armchair, while he pulled on a pair of overshoes which zipped to his knees. Then he rose and adjusted a sealskin cap over his eyebrows. "I never have any time," he said, "so you may as well come across the street to my office now."

We climbed a steep flight of wooden steps and settled ourselves in his office. "I tell you," he began, "the farmer's

slide to ruin really started a long time ago, but it speeded up considerably soon after the war. The farmer was urged to raise all he could and he got big prices for his crops. All sorts of companies sprang up. Potash companies and packing houses and oil companies—two or three oil companies right here in northwest Iowa.

"A salesman would say to a farmer, 'You're getting 4 to 4½ per cent on your government bonds. Well, our company pays 8 per cent.' So away would go some gilt-edged liberty bonds. Farmers bought everything under the sun. All kinds of farm machinery, one, two, three, four automobiles, and all the land they could get their hands on at three or four hundred dollars an acre.

"Things went along pretty well for a while, until the prices of farm products went down and farmers began borrowing money on their farms. It was easy to borrow. Then came the crash in Wall Street, and Eastern companies called back their money and started foreclosing the mortgages they held. Often the farmers had deficiency judgments rendered against them. When a farm is sold after a mortgage is foreclosed, if the amount it brings doesn't equal the amount of the mortgage—I told you that the money was borrowed when farm land was sky high—the court issues a judgment to cover the difference and attaches the farmer's grain and live stock and machinery. What makes it worse is that the mortgagee can send a receiver out to the farm right away to run it and collect the amount of the judgment, so the farmer is done out of the year of redemption after foreclosure that he's always been allowed before in Iowa. You don't have to be a radical to sympathize with the farmer. I've lived in this community fifty years and I know the people around here pretty well."

I questioned one of the county officers in the red sandstone courthouse. "Last week's battle?" he answered, "I tell you it was mighty serious. You see, according to the law here in Plymouth County when a mortgage is going to be foreclosed, the sheriff announces the sale of the land and the sale has to take place outside the north door of the courthouse." There were red pillars at the entrance, I remembered, and a steep flight of stone steps leading to it.

"Last Wednesday a sale had been advertised and crowds of farmers began to gather along about nine o'clock. When the sheriff and the lawyer for the insurance company came out on the north porch, the lawyer made his bid. The trouble with foreclosure sales nowadays is that the folks who hold the mortgage are usually the only ones who bid and naturally they aren't going to bid very high.

"Well, the lawyer bid somewhere around \$30,000 for 320 acres of land. Good land, you understand. Used to be worth \$300 an acre. That left about \$3,000 deficiency. Someone in the crowd yelled, 'You bid the whole amount of the mortgage!' He said, 'I can't bid any more than I'm told to bid.' Then they hauled him down the steps. After they got him down in the yard, they told him again to bid the full amount of the mortgage, and he said again he couldn't. The sheriff tried to get over to him, but he's a slight fellow. Any-

way, what could he do against so many? Someone had cut a piece of rope from a swing in the courthouse yard and they said they were going to put it around the lawyer's neck and hitch it to the back end of a car and if he couldn't keep up it would be just too bad.

"Finally they asked him if he'd send a telegram to his company in New York. He said he would. So they dictated a telegram to him. I didn't see just the wording, but it wound up, 'My neck is in danger.' Everyone felt sorry for the man who was losing his farm. We call him one of the 'good Johnsons.' He's seventy years old, and his folks broke the ground on his farm with a pair of oxen. At his age it would have gone pretty hard with him if he'd had a debt settled on him besides losing his farm. I suppose, as it is, he'll rent his farm from the insurance company. Oh yes, Lawyer Lampson got word back to bid the full amount of the mortgage." He paused as a cheerful-looking woman entered unannounced. "This is my wife," he said. "Mary, you tell this lady your view of what happened here last week."

Mary took up the story, settling her pince-nez firmly in place. "When the mob started yelling at Ed," she said, "I was right out on the steps with him. Ed's the lawyer they were after. I've known Ed all his life and I used to work for his father. There was one man in the crowd who was a sort of leader. He stood up against one of the pillars. When he hollered, 'Make him bid!' they crowded up around Ed and the sheriff. And when he yelled, 'Let's take him for a ride!' they all yelled, 'Let's take him for a ride!' and hustled him down those eighteen stone steps. After Ed had sent off the telegram, he came right back and mingled with the crowd. Brave? I should say he was brave!

"But I'm sorry for the farmers. What I say is, if the farmer has to take a big loss, why shouldn't the company that lent him the money take one, too?

"Well, that gave them a taste of blood. Saturday, they gathered here again. They went to the Farm Bureau agent's office and told him to get out. They said, 'We're the law here! We're in the majority!' You read in the paper, didn't you, about how they kept the judge 'incomunicado' while they were threatening Ed and the sheriff? John, here, was with the judge when it happened."

John flicked off the keys of his typewriter with a substantial hand. "I thought he might need a little help. A gang of farmers came into the judge's chambers—sixty or seventy, I guess. They told the judge not to sign any more foreclosure decrees or they'd have a necktie party and he 'wouldn't need his hat.' The judge said that he was only doing his duty as he'd sworn to do and they asked him, 'Is your oath more important than women and children?'

"Then they rounded up all the lawyers and put them on the spot in the judge's office. Made them sign an agreement for a moratorium on mortgages for thirty days. The judge was called on the 'phone. Someone grabbed him by the collar and said, 'You stay here until we're through with you!' Then they all began making speeches. One man said: 'We're going to draw a line at the Mississippi and have our own country west of it. Have a capital at Des Moines or somewhere. Make our own laws, make our own money.' They talked about everything, even the gold standard. There was an old man right in front of the judge and whenever anyone made a point, he'd pound the table. 'Get that!' he'd holler to the

judge, 'get that!' The toughest ones weren't farmers at all but riffraff, you might say, hangers on. But the leaders were mostly good men. Square shooters."

Henry van de Stegen has an office on Main Street. He has thirteen farms of his own and looks after thirty more. Last year he collected \$500 from his farms and paid \$2,600 in taxes. Twice he has been called before the Farmers' Council on the complaint of renters and both times he was told that he had been more than fair.

"The deficiency judgments that the farmers are holler-ing about," he told me, "are perfectly just. Supposing I sell you a horse for \$100 and take a mortgage for the amount. On the way home your horse breaks his leg and has to be shot. You bring me back the dead horse. The hide is worth \$2.50, so I'm out \$97.50 unless I can collect a deficiency judgment from you. I shouldn't have to suffer for your misfortune, should I? And when I make a loan on land valued at \$400 an acre, should I be left holding the sack because the land goes down to \$100?

"Remember, I'm for the farmer 100 per cent, but this violence shouldn't be allowed to go on. We'll have mob law and the farmer in a mob is a dangerous man. A fellow who's used to shoving 1,400-pound bulls around isn't timid and is apt to be pretty husky. The Governor had better be sending the militia to this county unless he wants to have a civil war on his hands."

A tall, raw-boned Scandinavian in regulation working clothes—overall thrust into the tops of heavy rubber over-shoes, short sheep-lined coat, and battered felt hat—lounge-d in the sunshine before the door of the farmers' grain elevator. As I came up, I said that I was hunting for a certain member of the Farmers' Council.

"I guess I'm him," he grinned. "What say? Was I at the courthouse the day we stopped the deficiency judgment against Gus Johnson? I'll say I was. We're showin' 'em we mean business. Our organization's got committees in the four corners of the State and in the middle. The main thing right now is to stop the tax sales and keep the attorneys from foreclosing on our farms. Before we can pay anybody anything we've got to have better prices for our stuff. My God, I should think they could see that!

"The domestic-allotment plan? Well, I haven't studied it. I don't take much stock in federal legislation any more. Congress has passed a lot of bills and the farmer is getting the lowest prices he ever got. But something's got to be done quick or there's going to be trouble. I'm telling you."

The fight goes on. Since the demonstration at Le Mars 700 farmers at Logan, Iowa, have prevented the eviction of a farm owner because of a \$700 deficiency judgment. In central Iowa a group of farmers returned to the owner live stock which had been taken from him on an attachment writ. A sheriff in southeastern Iowa left at the point of a rifle without serving a writ. At a chattel-mortgage sale in Wisconsin hogs were purchased for 25 cents and horses for \$1 and immediately returned to the original owner. At Tipton, Iowa, and at Appleton, Wisconsin, foreclosure sales were postponed. Throughout the Middle West crowds of farmers are preventing any bids from being made at delinquent tax sales. These are straws which show the way the wind is blowing.

Soviet Deportations

An Explanation of Recent Russian Events

By LOUIS FISCHER

THE wholesale transplanting of tens of thousands of Russian peasants from their native villages to distant regions, the introduction of a passport or citizens' registration system in larger cities—which may have the effect, in Moscow alone, of forcing thousands of people to find homes elsewhere—the grain tax, the mobilization of peasants for timber-cutting in the Archangel district, the Kremlin's decision to restrict construction and stimulate production of consumers' goods, the gradual scrapping of the ration system, and the new spirit of tolerance in literature and art may, if viewed as isolated measures, puzzle or annoy or do both. But they are closely related parts of one well-integrated policy which can only be understood against the wider background of general Soviet development.

The first Five-Year Plan was inaugurated in October, 1928. By 1930 the operation of the plan had absorbed all idle hands. In 1931 the absence of unemployment grew into an acute shortage of labor. In 1932 the Bolsheviks were faced with a technological famine. Their labor reserves were exhausted and construction had to be checked. This is the central fact of the Soviet situation today.

A number of huge new apartment houses were being erected around my home in Moscow all last year. Under my very window, so to speak, the Five-Year Plan was being carried out. I could observe the peasant girls straight from the village, still wearing their wide pre-war cloth skirts and their picturesque blouses ballooned at the shoulders. They were buxom and jolly, rude tasks came easily to them, but they knew nothing about work. They were clumsy, wasted a lot of motion, dropped things, got into one another's way, and frequently made a complete mess of their particular job simply because they lacked experience and had never seen such work done before. They had milked cows but could not pile bricks.

As construction activity progressed, boys who could not have been older than sixteen—though they told me and their superiors that they were eighteen plus—came on the scene. The labor reserves of the country had touched bottom. I would lean over my window-sill every day and observe these youngsters. They played a lot, and work seemed to be a lark for them. But how inefficient they were! For several days, at one stage, they had to move boards from one part of the street to another. The boards were about fifteen feet long, eight inches wide, and one inch thick. A boy would approach the stack and place two planks on his shoulder. Before he had proceeded far the boards would cross and he would have to stop and wriggle his shoulder and neck to get them back into position again. Then his load would begin to seesaw; one end would go up and then the other. Each time he would be forced to halt to reestablish the equilibrium. If two boys had taken four boards, however, they could have run with them if necessary. Any sensible layman could have told them that, and a foreman should have. But there was no foreman. The lack of foremen plagues Soviet industry. In the Amo motor-truck plant in Moscow the president of an American automobile com-

pany pointed out to me how much time and energy the common-sense advice of a foreman might have saved. At that same factory a young man of nineteen with only eighteen months' practical experience was operating a most expensive die-cutting machine, which in America would be run by the best mechanic in the plant. These instances illustrate a general problem.

The Bolsheviks have constructed so many new cities and so many new industrial units during the last five years that the supply of even slightly skilled labor is exhausted. Indeed, things have reached such a pass that there is no choice but to hire altogether unskilled workers and court the inevitable resultant harm. On the eve of the second Five-Year Plan the Bolsheviks have undertaken to remove these serious difficulties.

The real reason for the intensive industrialization that marked the period from 1928 to 1932 was the pressure of surplus village population on the undeveloped Russian city. For several centuries the backward countryside with its primitive agriculture had borne the burden of a considerable amount of excess humanity. Migration away from the hungry, crowded village was always the rhythm of Russian economic life. Czarism sought to meet this problem by territorial expansion. From the time of Peter the Great the monarchy tended to acquire new agricultural lands by advancing first into Siberia, the Ukraine, and the Caucasus, and then, during the second half of the nineteenth century, into Turkestan. Czarist expansion was longitudinal and latitudinal. It took place by extension. Simultaneously, of course, a weak bourgeois class endeavored to industrialize, and the results were not negligible, but on the whole Russia remained predominantly agrarian.

When the geographical and material limits of this development had been reached, the Romanov regime, having lost the faculty of growth, began to wither and decay. Soon it died. Russia needed bolshevism to give her vigor. But Bolshevik expansion is intensive rather than extensive. It is based on the increasing utilization of all available resources. This is why urbanization, industrialization, and modernization are the essence of Soviet policy.

The function which history has assigned to bolshevism is the industrialization of Russia. Instead of finding new farming land for crowded peasants, the Soviet aims to create new city jobs for them. The Communists must absorb and employ the village emigrants. This process has a cumulative effect: industrialization at the expense of the peasantry makes the village even less attractive than before; more peasants pour into the cities; the government is compelled to find more jobs for them; the forces making for industrialization are thus still further accentuated. These forces induced the mad tempo of the first Five-Year Plan. The consequences were that (1) millions who formerly had grown food ceased to produce it in the village and began, instead, to consume it in the city—in the matter of food supplies there was thus a loss on both sides of the ledger; and (2) the supply of even partially skilled labor was exhausted and it became necessary to employ untrained personnel at skilled tasks.

These two circumstances will mold Bolshevik policy for the next few years. They are the framework in which recent and current changes in Russia must be fitted to become intelligible. The Soviet Government is now called upon to slacken the speed of urban growth. Blind population pressure must not compel the state to engage in further rapid industrialization before the plants constructed between 1928 and 1932 are mastered and assimilated. It would be ideal if the passport scheme, which many people in crowded Moscow and Leningrad enthusiastically welcome, were to drive back to the villages and provincial towns the workers and employees with least experience and training. In the last year Moscow and other cities were swollen with peasants who came to buy and sell and to speculate, but also to work on new construction projects and in factories. They filled the street cars and stations. They crammed the apartments. They broke traffic rules and made the life of motorists an unmitigated hell. In 1932, in Moscow alone, there were probably no fewer than a million transients or residents of less than a semester's standing. No one blames them. They were impelled by economic forces. Now the bureaucracy is sending them back home. Citizens' registration, a more rigid control of cooperative membership, a restriction of the centralized ration system, the discharge of slackers and of poorly equipped workers, the rationalization of office work through the dismissal of extra personnel—these measures, together with the food shortage, should, after a period of adjustment marked by chaos and cruelty, achieve the threefold purpose of relieving congestion in the major cities, directing a new reserve of labor to smaller cities which now languish for want of an adequate supply of workers, and bringing many peasants back to their villages. This means that the cities are being made less attractive until they can adjust themselves to the vast influx of the past years, that the provincial towns and huge neglected areas in the north, in Siberia, and in Turkestan will witness a very considerable development, and that the village, finally, must be made much more attractive. The fascination of the Five-Year Plan induced a concentration of attention on industry and a neglect of agriculture. The peasant paid and the city grew. Collectivization was sometimes regarded as a magic wand which would automatically improve village conditions. Having completed the Five-Year program, the Bolsheviks can now turn their eyes to the problems of the countryside.

The grain tax recently introduced is the most important legislative measure adopted by the Bolsheviks since 1929 and is calculated to make the peasant stay at home and raise more food. Only with this tax in effect will it be possible to form a preliminary judgment on the practical benefits of collectivization. For heretofore excessive grain procurements have marred the picture of agrarian socialization. Its theoretical advantages are obvious, and there were certain concrete gains despite the requisitioning of what amounted, in practice, to an average of 30 per cent of the mujik's crop. But the great revolution which collectivization implies was checked and diverted by these confiscatory tactics. Today the ground is cleared for further Soviet progress in agriculture.

Collectivization, to be sure, puts the Bolsheviks on their guard. Peasants organized as Russia's World War army made the two 1917 revolutions. The peasants are today organized in the *kolhozi*. Of course, the peasant soldiers were inspired, awakened, and led by the proletariat, and the proletariat would now oppose rather than guide any move against

constituted authority. Nor is such a move at all likely. The collectives will merely remind the government that it must show greater consideration for peasant needs instead of flying too frequently in the face of economic realities. This is all to the good. Recent draconian measures notwithstanding, an observer more interested in larger trends than in sensational manifestations must discern the very gradual recession of revolutionary lawlessness. I think the Communist Party is slowly beginning to realize that arbitrary measures and violence have their place but must not become the permanent substitute for wise civil administration. In 1931 this realization induced a more friendly policy toward engineers and intellectuals. In 1932 the RAPP organization, official watchdog of Soviet literature, whose terroristic activities depressed all intellectual life, was dissolved. In January, 1933, the grain tax replaced the procurement process, which required police methods and superimposed fiat. All these changes, plus the new Bolshevik acceptance of the principle of decentralized organization, testify to the emergence of forces which prefer automatic economic and social controls to dictation. Because of the uneven balance between proletariat and peasantry the course of all Soviet events must be a zigzag, and in this field, too, a tug of war will go on between the protagonists of ruthlessness and the friends of conquest through persuasion plus an appeal to self-interest. It is interesting that this struggle already shapes more and more of Moscow's acts.

The cynic may wonder how liberal tendencies can be discovered at a time when ruthless measures seem to multiply. But the grain tax was decided upon just when the violence incident to procurements rose sky high. RAPP was dispersed just when its aggressiveness became most objectionable. That will always happen in Russia. Evils attain their maximum and then burst. At this very moment, of course, thousands of peasants are being exiled to lumbering and mining areas or to distant agricultural districts which are just now entering upon their pioneering stage. This is part of a big colonization movement which other nations would probably conduct with less rigor. It is especially intended as a means of exterminating the last champions of capitalistic agriculture. During the autumn the Bolsheviks discovered that many *kolhozi* were controlled by former officers of Denikin's, Machno's, and Petlura's armies. In the Ukraine the chief bookkeepers in dozens of collectives were found to be active Petlurists. The policy of procurements was wind in their sails. Village Bolsheviks played their anti-Bolshevik game. Today Moscow is striking these people down mercilessly. Simultaneously, however—and this is another characteristic of Soviet tactics—it caresses those who remain. In the North Caucasus, Cossack recruiting ground of most of the white armies of the civil war, whole villages have been depopulated and shipped off. At the same time the government is granting the entire region huge subsidies of machinery, seed, and food. It is easy to say, "We would have done it differently." But in Soviet Russia no situation is as simple as it appears.

The most imposing feature of the great policy shift which marks the transition from the first Five-Year Plan to the second is the relative ease with which it is being accomplished. All the cards are in one hand. What may, with some accuracy, be described as the present Soviet crisis is very different from the crisis in capitalist countries because the Bolshevik leaders know its causes, have planned the cure, and are already applying it. All factors of the situation—except the weather—are

under control. In times of difficulty the virtues of national economic planning have proved as valuable as in periods of buoyant progress.

The progress under the first Five-Year Plan has been enormous. And yet the biggest lesson of the plan is that the rate of revolutionary advance will be slower than most people

had expected. The Bolsheviks must learn patience. In the next two years the Soviet Government may be expected to catch its breath and rest. Soon enough, its freshly trained technical cadres, the products of its numerous factories, and the fruits of a more rational agrarian policy should enable it to make another spurt.

Machinery and Unemployment

By LEO WOLMAN

CURRENT discussion of what has popularly come to be known as "technological unemployment" still appears to disregard the fact that measurement of the phenomenon, not to mention the explanation of it, is a vastly complex and technical matter. Measuring the changing productivity of industry and the efficiency of labor, on the one hand, and estimating the changing volume of unemployment and accounting for the causes of the change, on the other, are related economic problems on which a tremendous amount of work has been done during the past fifteen years. Beginning with the index numbers of the physical output of 1920, the work of E. E. Day, Woodlief Thomas, Carl Snyder, F. C. Mills, and many others in this field has made available a great fund of additional materials and constant refinements in the methods of interpretation. In the measurement of unemployment, likewise, rising popular interest in the subject and the eagerness of students to examine anew the effects of machinery have produced the invaluable studies on the volume of unemployment by M. B. Givens, Paul Douglas, and Ralph Hurlin, and the particular inquiries on displacement by machinery by Isador Lubin, Ewan Clague, W. J. Couper, and Elizabeth Baker, together with the remarkable series of investigations conducted since the early twenties by the staff of the United States Bureau of Labor Statistics.)

(The material, then, on both the output of industry and the volume of unemployment exists now in greater abundance than ever before.) But there is still wide difference of opinion among close students as to precisely what has happened, say, in the last twenty or thirty years. These differences of opinion, moreover, are not the result of hair-splitting but of real difficulties which cannot be disposed of by any amount of argumentation. Exhaustive treatment of this whole question, assuming I were prepared and competent to undertake it, obviously cannot be attempted within the compass of an article. I shall, therefore, limit myself to the consideration of a few of the problems connected with measuring, first, output, and then unemployment.

At the outset there is the question of the appropriate general method of attack. The preparation of a list of labor-saving machines, or processes, however interesting such a list may be, cannot serve the purpose of adequately describing the experience of the past and estimating the probabilities of the future. In the analysis of this kind of problem, the economist, the statistician, and for that matter the engineer are concerned with aggregate and average changes and results. The collection of an exhaustive list would require enormous funds and the exercise of the most meticulous care in the job of investigation. The results of such an enumeration might well be spectacular, as they probably would have been during

many periods in the industrial history of this country since the Civil War. But it would be the sheerest accident if they faithfully and accurately reflected the aggregate trend.

(So far as the basic data for the measurement of aggregate changes in the physical output of industry are concerned, they are still defective in quality and in comprehensiveness. Statistical devices must frequently be employed which are of dubious value and uncertain meaning. Since, also, one obvious purpose of current investigation of these questions is the discovery of comparative historical developments—to determine, for instance, whether the current rate of industrial output is faster or slower than it was at some time in the past—it must be remembered that defects in the current data are often multiplied many times the farther back we go with the same or similar series. Long-time comparisons, consequently, must be accepted for what they are, as reflections of the best measurements possible under the circumstances and not of instruments of unquestioned precision. More detailed work on the earlier series, particularly with reference to the experience of specific industries, may, in my judgment, produce results greatly at variance with some of the conclusions now widely held.

Finally, the economic characteristics of the last twenty years have in so many respects been unusual that no valid interpretation of any important feature of the period is possible without taking these unusual conditions at least partially into account. The rise of the automobile and kindred industries after the war, the great growth of purely war industries and their rapid demobilization between 1916 and 1920, and the dilution of labor attending the diversion of men from industry into the American army are a few of the more important factors affecting both the productivity of industry and the volume of unemployment during this whole period. In the face of forces of this magnitude, the events of the relatively few years from 1922 to 1929 may to a much greater degree represent the resolution of temporary forces, originating directly and indirectly in the war, than the unfolding of persistent, long-time trends.

With these cautions in mind, it should be possible to examine the data on the physical product of several categories of American industry with some appreciation of the limitations of the available measures and of the accidental or temporary character of what has happened. Before presenting illustrative data, I should say that inspection of a great mass of material leads me to the conclusion that the physical output of industry and the physical output per worker increased at a very rapid rate in only a few of the years after 1920.) By how much this rate exceeded the rate of change in single years in the past it is almost impossible to determine. But it

is certainly the case that the conclusions drawn from the available data are often powerfully influenced, if not determined, by the purely technical fact of the length of the periods chosen for comparison and the character of the terminal years in each period.

A recent and authoritative survey of the advance in agricultural technique is found in the chapter on agriculture in "Recent Social Trends," by O. E. Baker of the United States Department of Agriculture:

The five years from 1922 to 1926 [he writes] are in several ways the most remarkable in the history of American agriculture. Agricultural production increased about 27 per cent, while crop acreage remained practically stationary and labor engaged in agriculture declined. . . . Nevertheless, production per person engaged in several types of farming has not increased as rapidly as is commonly assumed and there is a wide margin available for further advance. The increase in efficiency has been notable principally in the production of the small grain and hay crops. Cotton today is picked by hand, as it was a century ago, most of the corn is still husked or snapped by hand, and practically all the fruit is picked by hand, while much of the fruit has to be sprayed also, which was not done a century ago.

Estimating the future effects of the *universal* (italics mine) mechanization of agriculture, Mr. Baker concludes that the average production per labor year would in the future be increased by 33 per cent "for the nation as a whole." "This," he states, "is about the same percentage increase as has occurred during the past thirty years."

In the bituminous coal industry, output per man per day increased a fraction less than 100 per cent in the forty years from 1890 to 1930. During the last decade, 1920 to 1930, or one-fourth of the whole period, per capita output measured in the same way rose slightly more than 25 per cent. The productivity of labor in the anthracite industry, however, actually declined from 1920 to 1930. Viewing the whole mineral situation from the standpoint of productivity and costs, F. G. Tryon, in the most valuable summary of this question it has been my good fortune to see (in "Recent Social Trends"), forecasts the future in these terms:

Considering minerals as a whole, the outlook in the next ten years is for ample supplies available at declining cost. . . . In the long-time outlook [however] the outstanding facts are the growing difficulties of mining and the prospect of an ultimate increase in cost. The tendencies are unmistakable, and the experience of England shows how early in the exploitation of a mineral resource the stage of increasing cost may arrive.

On the railroads the per capita output of labor increased 14 per cent from 1899 to 1909; 25.5 per cent from 1909 to 1919; and 20 per cent from 1920 to 1930. Here, then, is the measurable record of productivity in three basic industries. While the changes recorded since the war are noteworthy and afford substantial evidence of technological progress, they are still far from representing an unprecedented or revolutionary development.

What the really difficult problems of measurement and interpretation are, is most clearly revealed in estimating the course of total and per capita output in the heterogeneous group of manufacturing industries. In this group the per capita output of labor ■■ measured by one competent student increased 7 per cent from 1899 to 1909; declined 1 per cent

from 1909 to 1919; and then increased 49 per cent from 1919 to 1929. In view of these data, which have in reality been the source of much of the current belief in the widespread displacement of men by machinery, the rapid advance in the efficiency of labor after the war appears unquestionable. But there are many good reasons, technical and logical, for accepting this conclusion with considerable hesitation.

In the first place, the rate of the post-war rise in the productivity of manufacturing labor is in part the result of an apparently slow rate of increase in productivity in earlier periods. This condition can be illustrated in two ways. Among the four groups of industries here considered, the productivity of manufacturing industries showed the slowest rate of increase from 1899 to 1925. Thus the increases in this period were 53 per cent in agriculture, 56 in railway transportation, 99 in mining, and 42.5 in manufactures. Between 1909 and 1919, furthermore, the per capita output of labor actually declined in manufactures, whereas it increased substantially in each of the three other groups. It requires no profound knowledge of statistical method to see how the decline in productivity before 1919 helps to explain part of the rapid increase in manufacturing output after 1919.

The post-war rise in manufacturing productivity was also neither continuous nor uniform. During the years from 1923 to 1929 there were only two occasions when the annual increase was striking, one from 1924 to 1925 and the other from 1927 to 1928. In all other years of this period the changes were so small as to be hardly noticeable. This is an important fact to bear in mind before the conclusions drawn from the experience of so brief a span of years are accepted as unmistakable evidence of a powerful and permanent trend. Professor Frederick C. Mills, for instance, in a recent encyclopedic study of post-war and pre-war economic changes ("Economic Tendencies"), concludes that the annual rate of increase in per capita physical output in industry was twice as great in the post-war as in the pre-war period. For this comparison Mr. Mills chose 1922-29 as the post-war period, and 1901-13 as the pre-war. Although the choice of periods must always be to some extent arbitrary, it is clear that the results derived by Mr. Mills are in a measure determined by certain formal features of the periods he has elected to use. The pre-war period is thirteen years long, the post-war only eight. In economic series longer periods are almost certain to include more years of business recession than shorter periods; and in years of business recession per capita output usually, though not always, declines. If, then, the post-war period were extended to include the years since 1929, all of which have so far been years of business depression, the results would obviously be quite different.

These comments on the measurement of productivity apply with added force to the estimates of the volume of unemployment in this country. The specific studies of the displacement of men by machines are meager samples of a vast and complicated economic system. The observed decline since the close of the war in employment in mining and railroading is in large part due to the competitive rise of new industries which have absorbed a great amount of labor. In the manufacturing industries, where the situation is confused by the influences of the war, the official figures for 1929 show that the numbers employed in manufacturing increased from 1909 to 1929 by 38 per cent, while during the same period the population of the country, ten years of age and over, in-

creased by precisely the same amount. For the rest, every novice in economic statistics knows that it has been quite impossible to derive anything like an accurate measure of the volume or rate of unemployment in the United States, particularly since it has been only since 1928 that anything like comprehensive employment data have become available for several of the most important American industries.

Direct estimate, finally, of the extent of technological unemployment must be made by measuring the joint effects on employment of changes in the volume of business activity and in the efficiency of labor. So far as I know, the only attempt to apply this method is to be found in an article by David Weintraub of the National Bureau of Economic Re-

search in the *Journal of the American Statistical Association* for December, 1932. It should prove valuable in this connection to present one of his major conclusions. "So far as manufacturing industries are concerned," Mr. Weintraub states, "the evidence based on the comparatively short period, 1920-31," does not "warrant the statement that the increased output per man-hour has resulted in a permanent displacement of workers. In fact, the analysis indicates that during the period 1920-26 a number greater than that displaced by the increased output per man-hour was absorbed by the increased physical volume of output," while in the years 1926-29 only 0.1 per cent of those displaced through greater efficiency failed to be reabsorbed in manufacturing industry.

Sandino Keeps His Word

By CARLETON BEALS

THE marines had hardly arrived home from their holy crusade in the jungles of Nicaragua when the rebel General Augusto César Sandino laid down his arms with appropriate words about brotherly love. Not our bayonets but our honorable retreat brought the terrible "bandit" to terms. This happy conclusion could have been attained at any time during the past five years; instead, stiff-necked army pride and State Department dignity preferred to create, and combat, a fictitious ogre, like Don Quixote laying about him among the wine skins, save that the blood was real. Now, the Nicaraguan stew, which has simmered merrily for twenty-four years, has been served up on the banquet board of good-will and peace. Now, as the local Indian legend of a future Utopia relates, "the cotton will grow already dyed many wondrous hues, and the ears of corn will be so big that a man can carry only one ear with difficulty." I doubt if the fundamental problems of the country are anywhere near a solution, but with most of the world in confusion, it is a relief to discover that sanity has prevailed somewhere, if only in such a swampy corner as Nicaragua.

And now at last the marines have come home. After twenty-odd years of civilizing Nicaragua at the point of the bayonet they are back with an assorted collection of tropical diseases, parrots, native wives, newsreel bows, but otherwise, as Colonel De Courcy remarked of the French soldiers evacuating Mexico with Marshal Bazaine in 1867, with little more than "eighteen hundred leagues of country on the soles of their boots." Their withdrawal is one of the most creditable acts of the Hoover Administration.

When in 1928 I rode over the mountains of Nueva Segovia and through the Coco River jungles as correspondent for *The Nation*, in company with Sandino's troops, I discovered them, for the most part, to be simple, honest folk, fiercely imbued with the idea that they were fighting for the liberty of their country, and at the time I quoted some of the songs of freedom they sang around their bivouacs at night. Pedro Altamirano, whom the marines branded as the most blood-thirsty of all the Sandino "bandits," was a rugged, courteous, honest man, with ever a kindly thought for me—one of the "hated Yankees"—and for his men. General Girón, whom the marines captured and shot as a "bandit," was a cultured gentleman who had studied in a European military school, and

was probably far better versed in literature, the arts, and contemporary affairs than General Feland, whom I later interviewed in Managua. Colonel Echevarría was a poet of standing and asked me about the verse of Sandburg and Lindsay. Those men knew far better what they were fighting for than did any of the marines with whom I talked.

These contacts prepared me somewhat for the direct honesty of Sandino when I rode into his camp in San Rafael del Norte on a cold night in February, and they enabled me to understand the great and self-sacrificing personal loyalty his followers felt for him. A bit of a braggadocio about his military achievements, he nevertheless had a definite philosophy of personal courage. "Death singles out him who fears death," he used to tell his men. He gloated over the fact that he had brought two captured marines to camp, fattened them up, and then sent them back to their units, to show the American *machos* that the Sandinistas ate well. I later learned that the two men were court-martialed for desertion because the marine officers refused to believe their story.

Though he was living in the wilderness and hedged around by bayonets, Sandino was conversant with the proceedings of the Pan-American Congress then in session in Havana, and with Coolidge's attempt to offset the wave of hatred for the United States which had engulfed Latin America because of our policy in Nicaragua. Sandino was well acquainted with the whole Latin American scene and the relation of Nicaragua to it. He wished at that time only to stress the question of national autonomy and the withdrawal of marines, but that autonomy, he felt, could not be achieved without economic independence, freedom from control by foreign bankers, and the education and economic betterment of the common people of Nicaragua. Neither he nor any of his followers, he assured me, had any desire to win government jobs: "We are all humble artisans and peasants; we only want peace, land, and a chance to labor. We do not need charity from anyone; and when the foreign invader is driven out, we will return to our homes to till the soil."

He has kept his word. The "bandit" has asked that his guns be exchanged for agricultural implements—all Nicaraguans, now that the foreign invader has been driven out, should be brothers. On arriving in Managua to tender peace, he embraced with words of affection a member of the National

Guard, the organization created by the marines to continue fighting him, and he sent greetings to the American people, even inviting them to his country to work, but not to be "bosses." His words may seem a bit naive to our sophisticated ears, his idealism unwarranted in our cynical and bellicose world; but Sandino and what he represents are the only moral victors in the Nicaraguan struggle.

The facts may defeat his hopes. The problems of Nicaragua remain unsolved. True, the country is largely freed of foreign indebtedness, every cent of money having been squeezed out to attain this end and to pay off millions of dollars' worth of claims. Nicaragua has her railroad back and owns her national bank. But the basic support for this new independence has not been established. Managua has been paved; its water supply has been purified by adding so much chlorine that it tastes like ipecac; a few bad roads have been built at high cost to help the marines chase Sandino; the high-salaried experts have been paid off; the country has been provided with an up-to-date currency system (*colón* par with the dollar) which makes it possible for Nicaraguans to buy many American products more cheaply than Americans can, though native products find difficulty in reaching the world market; we have provided the people with a constitution and an electoral law in line with the best Anglo-Saxon traditions, though from the standpoint of Nicaraguan realities these documents are more naive than any put forth by Sandino. On the other hand, our intervention has done nothing for education and it has blocked the economic development of the country. Zelaya had already started the railroad to the Atlantic coast, without which political stability is impossible, when we intervened; today there are fewer miles of railroad in operation than when Philander C. Knox started us on our long goose chase in 1909.

Nicaragua has many serious issues to solve, and it is to be hoped that some progress will be made in that direction while the present harmony prevails. It seems improbable that the country will not call upon Sandino's services in the future, for he is by all odds the most outstanding personality in the country. Let us hope that he will refuse to become "civilized" in the manner of the political sycophants who clung to Uncle Sam's coat-tails and looted and betrayed their country. May he remain a good "bandit"!

Sonnet

By MARK VAN DOREN

No wonder-deed done in the oldest time
Whose whiteness burns oblivion away,
No miracle of grass, whose muted rhyme
Outsings the dawn and silences the jay,
No fiend's invention, no good man's endeavor,
No other tale of love is so untrue
As this one of my heart, that empties never,
But fills even as you take, and still is new.
It cannot be there is more love to come;
Yet, coming on, love tells me I have lied.
So I must learn to listen and grow dumb,
Believing in a heart that never died—
Believing then in you, who like a dream
Draw out of me this ever-waking stream.

George Moore's Burial

By S. K. RATCLIFFE

London, January 26

A SUNNY winter day of North American freshness and a peculiarly English scene. A few automobiles are in the yard of the crematorium at Golders Green close to Hampstead Heath, and stragglers are making their way into the chapel. One pair of companions is most conspicuous—Ramsay MacDonald, Prime Minister of England, in everyday dress, and Augustus John, most renowned of British painters, his remarkable tawny head surmounting a rough tweed overcoat of a glaring check pattern. Under the portico a little knot of reporters may be seen. They keep strictly to the English custom at funerals, even of the great and celebrated. That is to say, they are not interested in the occasion itself. They are intent only upon collecting the names of those attending. No descriptive writers are here, either English or American. There is no sign of the press photographer.

The small chapel, with its quiet brick interior and plain oak pews, is nearly full. Ramsay MacDonald and Augustus John are seated together and apart in the front row on the left; members of the family, together with a nurse, housekeeper, and secretaries, on the right. It is not easy to explain the presence of at least half the people in the unreserved pews, mostly women, some of them young and nearly all in deep mourning. A few who are unable to find seats stand at the back. Clearly this is not a gathering of men and women of letters. Actually the painters outnumber the authors: Sir William Rothenstein and Wilson Steer; Henry Tonks, recently retired from the headship of the Slade School; D. S. MacColl, who belongs to both camps. He was formerly director of the Wallace Collection and, much earlier, art critic of the *Saturday Review* when Frank Harris was editor and Bernard Shaw was splitting the coteries with his weekly onslaught on the London stage.

The writers of distinction are very few. Here, unmistakable in any assembly, are the cavalier figure and fine silver head of Henry W. Nevinnson; Charles Morgan, of "The Fountain"; Evan Charteris, the biographer of Edmund Gosse; young David Garnett, appointed literary editor of the *New Statesman and Nation* just as the reviewers are being called upon to appraise his "Pocahontas." One sees no others whose names are known. It is astonishing, inexplicable, unless one should choose to lay emphasis on the fact that "our dear brother here departed" was a writer who quarreled lustily through sixty years and found continuous delight in forging and launching the hardest insults at his fellows. No representative of the company of great prose writers whose fame was made in or near the dead man's prime has come to bid him goodbye. There is not one of the younger critics who have been glad to exercise themselves over his technique; no member of the Irish group which made the gossip of literary Dublin more entertaining and more malicious than that of any other capital during many years before the war. Of course the names just recorded imply a sprinkling of men illustrative of English genius, and eccentricity; but would anybody assert that the funeral of a writer whose fame has gone out into all the world could be conducted amid circumstances similar to these in any country save England?

The organ has been playing softly. A full voice begins to

intone, "I am the resurrection and the life," as the bearers step toward the broad bare metal slab, at one end of which are the copper doors opening into the furnace. The officiating clergyman is a burly Anglo-Irish canon, whose utterance is surely as strange a mingling of resonance and inaudibility as any among us have ever heard. He makes a brief and skilful selection from the burial service, altering here and there a word in the rubric and avoiding the long Pauline argument about corruption and immortality from the Epistle to the Corinthians. He reads no prayers until he comes to the Lord's Prayer, in which no one audibly joins after the opening sentences. There is no mention of the dead man's life or work. He is not even named. Death in England is more than a leveller; it confers anonymity. We continue standing while the organist plays the all-familiar tune of "Abide with Me," with a very short variation. And then we follow the Prime Minister out into the sharp, bright midday air.

Such is the strange burial (if the word is permissible) of the man who wrote "Esther Waters," "Evelyn Innes," "The Brook Kerith," "Abelard and Heloise," "Avowals," "Hail and Farewell!" The scene on January 25 could perhaps have been described only by the author of "Vale" himself. He sprang, as we know, from an old Catholic family of the County Mayo, but ignored the church after his schooldays. Long afterwards, when he was approaching elderhood in Dublin, a newspaper called him a Catholic novelist, and he vowed that he would put a stop to this kind of thing by formally joining the Church of England. His friends, he said, "were all men of the world and they would understand." Hence, as you see, the appropriateness of the Anglican liturgy at his last farewell.

George Moore was an extraordinary being. His career as critic, novelist, and author of imaginative autobiographies which are described in Dublin as examples of Irish comic fiction is without parallel. I doubt whether anyone among us would care to risk a prediction as to how his work is likely to stand up fifty, or even twenty, years from today. Charles Morgan is to write his Life. Its substance, no doubt, will be as remote from the record to which he applied the principle of self-determination as anything could be.

In the Driftway

IN a moment of abandon—his normal state—the Drifter lately expressed the belief that the craze for speed might be nearing an end and that, in consequence, the steamboat might experience a rebirth. Only two exceptions can be taken to this statement: first, the premise is not demonstrable; and, second, the conclusion does not necessarily follow. But why bother to predict the inevitable? The only virtue in prophecy lies in a reasonable content of uncertainty.

WHEN he predicted a waning of the craze for speed, the Drifter specifically excepted travel for business purposes. Persons going somewhere just to get there will continue to demand speed—as much, that is, as they can afford. But after a quarter of a century of rush, noise, and danger, the Drifter surmises that a wiser generation may swing back toward more rest, quiet, and security in its travel for pleasure. Of course the airplane is likely to engage more and more

persons both professionally and as amateurs, but it is well to recall that its progress has not been so fast as is commonly supposed. Although almost as old as the automobile, the airplane is still in its infancy in point of use, while the former has reached adulthood, if indeed senescence has not begun. The head of a leading motor-manufacturing company said at the time of the recent automobile show in New York City that 2,300,000 old cars were discarded in 1932 as against only 1,400,000 new ones bought. This may be ascribed to the depression, but even if prosperity emerges presently from around the corner, a new fashion may have congealed. It is possible that motoring for pleasure is losing its prestige. Roads are getting too crowded and they have been robbed of their charm by commercialization and the insistence that they be speedways.

IN contrast to our much-injured roads, our inland waters remain what they always have been—our most spacious, most beautiful, least spoiled highways. Nor have they been abandoned to the extent which some suppose. In spite of romantic articles on the passing of the steamboat on the Mississippi River, more tonnage is moved on that stream today (thanks to the barge) than ever before in history. Of course there is a difference between old traffic and new. The steamboat carried passengers and way freight, usually with frequent stops over a short route. The modern barge carries no passengers and specializes in through bulk freight over long distances. Yet even the steamboat is holding its own tenaciously on certain routes, and in some instances has been helped substantially by the desire, born of the depression, to keep down carrying costs. In one kind of passenger traffic the steamboat has never lost its hold. When two sizable cities are separated by about the distance which a steamboat can travel in a night, many persons elect to go that way, for economy and comfort, as witness the water services between New York and Boston, New York and Albany, Baltimore and Norfolk, Louisville and Cincinnati, San Francisco and Sacramento. What the Drifter hopes for is a greater amount of day service over some of our beautiful water routes, supported by discriminating tourists.

ANYHOW the Drifter discovers that some agree with him in thinking it not impossible that the public is in a mood to look with favor on slower, cheaper, and safer means of travel—especially for pleasure. Some think of the bicycle as practically extinct, but in the Netherlands there are special bicycle paths on the highways and almost half as many bicycles as inhabitants. Even in the United States there still is a Cycle Trades Association, which meets annually in convention assembled. At the recent convention it was voted to introduce bills in various State legislatures calling for the setting aside of three or four feet on public roads for the use of cyclists. The Drifter has long wanted pedestrian paths, both in connection with and apart from our highways. For the present, at least, bicycles and pedestrians might use the same paths. The steamboat is an idyllic and the bicycle a delightful means of travel, but the human leg was the primeval method of locomotion and when not afflicted with arthritis at the knee, remains incomparably the best one.

THE DRIFTER

Correspondence

Literary Duel

TO THE EDITORS OF THE NATION:

The Nation enjoys an excellent reputation for the quality of its literary criticism. That reputation entails a considerable responsibility on the part of both its editors and its reviewers. I feel it my duty to protest against your having allowed Cuthbert Wright to review my book "The Ironie Temper" in your columns. I am protesting, not because Mr. Wright judged the book unfavorably, but because he revealed himself quite incompetent to judge it at all. His article in *The Nation* is inspired by prejudice of the grossest kind, and his estimate of my book is founded on a grotesque distortion of its main thesis. I charge Mr. Wright with the following:

1. He flaunts a hatred of Anatole France so intemperate that it renders him irrational and foolish. His insults and insinuations are of a kind that one dares make only when one's opponent is safely under the ground.

2. His knowledge of the subject is so sketchy (or his temper so malicious) that his brief review is full of inaccuracies and deliberate misrepresentations. He takes for granted, for instance, the fact that Mme de Caillavet was France's mistress, for which there is not the slightest proof. He makes the gratuitous insinuation that France's only motive in siding with Dreyfus was the fact that his own "mistress" was of Jewish extraction. Almost every statement Mr. Wright makes is either to be flatly contradicted or is subject to serious reservations. But more than any of his critical ineptitudes, the niggling, self-righteous tone of his writing condemns his whole review as a childish performance.

3. Mr. Wright either has not read my book or else suffers from a curious mental derangement. He makes the book out to be a defense of Anatole France. He calls it a "work of piety," "a two-hundred-page eulogy on the irony of Anatole France." It is nothing of the kind. It is, on the contrary, a condemnation of that irony and an analysis of its destructive effect upon France's character and work. Only the most absolute irresponsibility could have made Mr. Wright miss this point of view, which is present both implicitly and explicitly throughout the book. As it is this basic misinterpretation which sets him off on his incredible rodomontade, the entire review is thereby invalidated. I am glad Mr. Wright enjoyed the illustrations. I trust the next book he reviews will be a picture-book.

Berkeley, Cal., December 10 HAAKON M. CHEVALIER

TO THE EDITORS OF THE NATION:

It would be easier to give Mr. Chevalier satisfaction for my review of his study of Anatole France were he himself able to justify his displeasure with me on any other grounds than that (a) he disapproves my review, and (b) he disapproves my not approving of Anatole France. I submit that he must have better grounds than these before he puts himself in such an obvious state of rage, and also that both (a) and (b) are well within the rights of anyone who considers himself a critic of literature. I propose, however, to answer his objections such as they are in the small space allotted to me.

1. I deny that I have flaunted an "intemperate hatred of Anatole France." One is permitted to dislike a writer without dealing in "insults and insinuations" of a kind that "one only dares to make when one's opponent is safely under the ground." Anyone who reads my review and then reads this part of Mr. Chevalier's letter would agree that it is not I who have written "irrationally and foolishly."

2. I never took for granted that Mme de Caillavet was

France's "mistress" in the physical sense of the word. That she was his platonic mistress, his Egeria, is sufficiently well known. I did not insinuate that her Jewish origin was his *only* motive for becoming ■ Dreyfusard, but it is well known that it was *a* motive.

3. In conclusion Mr. Chevalier "insinuates" in his turn that I never read his book, or suffer from mental derangement. It is a habit of the Dunciad to suppose that an unfavorable criticism of one of their works constitutes mental derangement, or moral collapse, but I can assure Mr. Chevalier that I read his book with considerable pleasure and profit. I understood perfectly that he disapproved largely of the late Anatole's famous irony, and my calling his study on the whole "a work of piety" ought to please one who is evidently an admirer of his obsolete hero. Finally, I do not consider my strictures on that gentleman to be any more "niggling" or "self-righteous" than those expressed in print by Barry Cerf, Joseph Delteil, Bernard Fay, Philippe Soupault, and many others whose names are probably familiar to so capital ■ student of contemporary French literature as is Mr. Chevalier.

St. Andrew's, Tenn., January 1

CUTHBERT WRIGHT

Dr. Fishbein Takes the Stump

TO THE EDITORS OF THE NATION:

On January 16 Dr. Morris Fishbein, editor of the *Journal of the American Medical Association*, addressed the New Haven Medical Association on "The Costs of Medical Care." The audience was quickly won over by an easy and unscrupulous display of wit. Dr. Fishbein first described the long step from the black bag of the general practitioner of 1890 to the Mayo clinic, ■ outstanding example of modern group practice. And the audience agreed that it was very funny that when a case history was sent to the home of Will Mayo, it happened to be of such dimensions and to have had so many holes punched in it in the course of indicating the diagnoses that Mrs. Mayo mistook it for a new roll for the player piano. Such anecdotes, coupled with Dr. Fishbein's conception of it as the application of Ford methods to a "tonsil factory," disposed of group practice. The high point in his account of the tonsil factory came when the patient reached the end of the "tonsillotomy belt" and was charged by the cashier "what he had in his pants when he came in." That deserved ■ laugh and got it.

He next disposed of current notions about adequate medical care. This was done by a *reductio ad absurdum* which purported to trace the care given to an obstetrical case from the preliminary consultation with the physician several weeks before conception to the final big event, which took place in a "luxurious palace" (hospital) in a room with fancy decorations, radios, dietitians, and so on. Dr. Fishbein went on to assert that 90 per cent of our ailments today can be adequately treated by the black-bag method, and that "determinations of non-protein nitrogen, basal-metabolism rates, and electrocardiograms" are frills which can usually be dispensed with. Dr. Fishbein made no mention of the contributions to medical science of either the Mayo clinic or the "frills."

The larger part of his discussion of the Committee on the Costs of Medical Care was centered on the choice of people for the committee, the alleged "selection of cases" by the committee, and the lack of publicity given to the minority report. The audience responded with a satisfied titter when Dr. Fishbein pointed out that Evans Clark was director of the Twentieth Century Fund which financed the committee; that, further, Evans Clark was the husband of Freda Kirchwey, "the editor of two conservative magazines like *The Nation* and the *New Masses*," that obviously the gentleman in question was bound to be influenced by his wayward wife. The reliability of the majority report was further thrown into question by the significant observation that

*The Book Which Sets a New Basis
for Economic Thinking!*

MODERN CORPORATION and PRIVATE PROPERTY

By A. A. Berle, Jr. and G. C. Means
(School of Law, Columbia University)

A sensational analysis of the "revolution" which has taken place in American industry within a few years. The authors assert that 200 corporations through less than 2,000 directors absolutely control industry; that Ownership no longer carries Control; that the very concept of Society has been drastically altered.

"There may have been a better book published in the past twelve months, but I did not see it."

Birth Control, Monday, 5 p. m.

Michael Strange, Tuesday, 5:15 p. m.

Hendrik Van Loon, Friday, 8:15 p. m.

no one of the members changed his mind as to the future of medical practice during the five years of intensive investigation.

The conclusions of the majority report were summarily disposed of. It was pointed out that this report recommended the practice of group medicine, supported, possibly, either by taxation or voluntary insurance. Dr. Fishbein held that since further taxation was impossible, we should have to fall back on voluntary insurance. Voluntary insurance, he held, inevitably becomes compulsory insurance. And finally, the failure of social insurance in France, Germany, and England was held up as an object lesson. Dr. Fishbein's conclusions coincide with those of the main minority report. His advice is to preserve the 3,000-year-old traditions of medicine, namely, to care for the patient first and to advance medicine as a science afterward. Adequate medical care is to be provided for each man "according to his station." He pointed out that the railroads do not worry because some people ride in drawing-rooms while others ride in lower berths. When there is an attempt to have everyone ride in the same conditions, the whole transportation system breaks down—witness Russia! An additional grievance of the profession is the free services expected of it in the cause of preventive medicine.

It is thus seen that Dr. Fishbein considers organization no boon. But he stresses the fact that if there is to be organization it must be done by physicians, who understand the practice of medicine, and not by economists, sociologists, and such. How the second of the traditions, the advancement of medicine as a science, is to be maintained without utilizing the results of medical research, which to a large extent require organization and group cooperation, he did not explain. There seemed to be no realization of the fact, further, that treating each individual "according to his station" neglects completely the social implication of disease.

And there was no discussion.

Books, Drama, Music

Birch

By RUTH LECHLITNER

Where the green plumes of willow blow
And cloudy herons lift
The lilac shadow of slow wings,
Where the wild geese drift—

Brittle and broken at the foot
Of the stony hills they face,
The gleaming skeletons of birch,
Through boughs that interlace,

Arch their pellucid, Gothic ribs,
Shiver with phantom fears,
And gently at each other thrust
Their rigid ghostly spears.

In tournament pale unicorns
On some enchanted night
Might so have locked their slender horns,
Pierced light with white,

Leaving their shining weapons crossed
Bone-naked and bone-neat
When virgins like May lilies sprang
From the dark earth at their feet.

Culture vs. "Life"

The Modern Theme. By José Ortega y Gasset. W. W. Norton and Company. \$2.

THE extravagant praise lavished by critics here upon Señor Ortega's former book, "The Revolt of the Masses," is puzzling, and it might be well to inquire into some of its causes. Ortega's merits as a stylist are undoubted: he knows how to manage a sentence; he can combine in a remarkable degree subtlety with vigor; and he always appears to be about to say something revolutionary and profound. He does succeed in stating ideas in a fresh and attractive guise, so that they have nearly always the outward semblance of novelty; and he is, in addition, constantly assuring us that they really are very new. It may be so; but I emerge from "The Revolt of the Masses" and "The Modern Theme" unable to say precisely what leading ideas I have encountered in either volume that I had not met before.

The thesis of the mass-man, born into a civilization which he did nothing to create and which he does nothing to forward, accepting this civilization with no sense of gratitude to the minds that made it possible, recognizing none of the insecurities in it, no sense of obligation toward it, seizing all of its privileges and deriving from their exercise a false sense of inherent strength, remaining self-satisfied, glorifying the commonplace, condemning anybody who does not think like everybody, attempting to impose his vulgar standards universally—the thesis, in brief, of hyperdemocracy, of "the vertical invasion of the barbarians," is set forth in "The Revolt of the Masses" impressively and dramatically, though the total impact of the argument is reduced by digressions and contradictions. The book is a brilliant restatement rather than an advance into new territory.

The three main "influences" in Ortega's style and thought are apparently Nietzsche, Bergson, and Spengler; although Nietzsche is mentioned only once or twice, Bergson not at all, and Spengler mainly for the purpose of expressing disagreement with him. "The Modern Theme" is a less impressive volume than "The Revolt of the Masses," and Ortega's weaknesses as a thinker are more evident in it. I find it difficult to summarize its thesis at all, for the author develops it confusedly, its very statement depends upon the acceptance of leading terms in special and very dubious senses, and when these special senses are granted, the argument becomes a mere insistence on the obvious. Ortega attacks "rationalism," or any culture that ignores "life." He insists that "uncultured life is barbarism, devitalized culture is byzantinism"; that "pure reason cannot supplant life"; that "it is culture, reason, art, and ethics that must enter the service of life":

Is it not an alluring idea to reverse the present attitude completely and instead of looking outside life for its meaning to turn our attention to life itself? Is it not a theme worthy of a generation which stands at the most radical crisis of modern history, if an attempt be made to oppose the tradition and see what happens if instead of saying "life for the sake of culture," we say, "culture for the sake of life"?

Now most of us will agree with all the propositions I have quoted—so thoroughly, indeed, that we may wonder whether it was necessary for Señor Ortega to shout them so often and with such an air of discovery. Who does not believe that it is culture, reason, art, and ethics that should serve life, rather than the other way round? To believe otherwise is hopelessly to confuse means and ends. But what is "life"? Are not culture, reason, art, ethics, themselves parts or phases of life? Would an ethics that failed to serve life be ethical? Would a reason that failed to serve life be reasonable? Or is Ortega merely trying to say that animal lustiness is itself a value? If he is, does he mean to imply that it remained for him, or for the present generation, to discover this?

It would have been difficult for Ortega to write this book in "answer" to anything or anybody unless he had begun by building up an elaborate caricature of "rationalism" or "reason." "Pure intellection, or reason, is nothing else but our understanding functioning in the void, without let or hindrance, in contact with itself, and controlled only by its own internal standards." This is not a definition of reason, but of a misapplication of the deductive method, without inductive impetus or confirmation; it may perhaps apply with some justice to the concept of reason held by Descartes, for example, but it is a little late to be refuting him. The same criticism must be made of the passage in which Ortega declares that "reason is not capable of dealing with qualities," and hence that "color is irrational." *Mathematics*, of course (not reason generally), ignores sensuous color, but only because it is usually advisable to deal with one question at a time. Three plus five equals eight, whether we are talking of red billiard balls or white ones.

Ortega, in brief, seems to me to be not a real thinker, but a rhetorician-thinker. The type abounds in Europe—Keyserling, Croce, Valéry—and always makes a deep impression here, perhaps because we have so few comparable specimens of our own; Waldo Frank is about the nearest approach. Spengler belongs to it, but transcends the others with his staggering erudition and his pyrotechnic prose. Writers of the type have much in common: they will appeal to science and to common sense where these seem to support them, but whenever such criteria become prosaic or embarrassing, they fall back upon a poetic metaphor, a meretricious paradox, or frank mysticism. Nearly all of them are full of egotism. The combination is impressive, and many readers seem to find it charming.

HENRY HAZLITT

Germany During the War

Fall of the German Empire: 1914-1918. Selected and Edited by Ralph Haswell Lutz. Stanford University Press. Two volumes. \$12.

IT would be difficult to exaggerate the value and interest of these two stout volumes, which form the first instalment of a series of publications on Germany since 1914. Though our sources of information on the origins of the catastrophe are almost embarrassing in extent, our knowledge of the diplomatic history of the years of conflict is still very limited. The great collections of German and Austrian documents stop at the outbreak of hostilities, and the British and French will follow their example. Russia alone has published a mass of material on the war years and is about to publish more. Fresh light from any quarter on international relations during the struggle is therefore peculiarly welcome, and it is the chief merit of these volumes that they provide it. Everyone has heard of the Hoover War Library of Stanford University, and now we are privileged to share in its treasures. The editor's Introductory Notes to each chapter are brief and clear, while the full table of contents, the chronology, and the index enable the reader to find his way without difficulty through the labyrinth. We are told where each of the 523 documents, published or unpublished, is to be found. The print is clear and the price is moderate. Students all over the world will be grateful for this encyclopedic work.

By far the larger portion consists of material already known, though for the most part untranslated and difficult to find. Where can the ordinary student procure the official debates of the Reichstag, the Prussian Parliament, and the Berlin City Council, or the complete files of the German newspapers? How is he to lay his hand on army orders, departmental regulations, expert memoranda, strike proclamations, lectures, and pamphlets? Here he will discover exactly what he needs in order to reconstruct the life and thought of a great nation at the crisis of its fate. The variety of the feast is suggested by the titles of the chapters: the outbreak of the war, war guilt, propaganda, censorship, internal policies, submarine warfare, war aims, peace proposals, conversations with Herron, the army, the navy, Belgian relief, the control of foreign affairs, negotiations with Bulgaria and Italy, the kingdom of Poland, the peace of Brest-Litovsk, the treaty with the Ukraine, negotiations with Rumania, Turkey, and the Baltic states, the League of Nations, the Socialists, industrial development, Mitteleuropa, the food problem, war loans, strikes, the crisis of July, 1917, the Reichstag in 1917-18, the Prussian electoral reform, the armistice negotiations, the abdication of the Kaiser. Thus there is something for us all.

For the student of war diplomacy Chapter 9, entitled *Conversations with Herron*, and filling over a hundred pages, is the most novel and the most valuable of the whole work. The activities of Dr. Herron in Switzerland began in the last year of the war, and his reports reached not only Washington but London. Switzerland was the meeting-ground for official and unofficial representatives of the belligerents, and no one strove more earnestly than he to prepare the way for a peace of reconciliation.

I really did make Europe believe in Wilson, and to what proved to be an amazing degree—far beyond any hope or expectation I had when my erstwhile purely private and journalistic propaganda began. Thus there grew up the legend, which no effort or denial of mine was ever able to counteract or diminish, that I was Wilson's personal spokesman and interpreter in Europe and his intimate friend.

It was true, however, that his opinions were highly valued by the President, and, indeed, he received confidences from men who could never have spoken freely to official representatives of an enemy Power.

The most important of the conversations were with a Bavarian, Dr. de Fiori, who was said to be the personal agent of Ludendorff. Since the German envoy requested that his utterances should be conveyed to the President, as they would be to the Chancellor, Herron proposed that they should be taken down in shorthand. The correctness of the reports was recognized by De Fiori, and we may therefore accept the picture painted in June, 1918, as an accurate presentation of the aims of very influential Germans just before the ebb of the military tide began on the battlefields of France on August 8. Germany was still undefeated, and Herron urged that the German government should do something to redeem itself in the eyes of the world by proposing "a peace that will make possible the Society of Nations." No one detested more than he what was generally described as German imperialism, which he held responsible for the war, and he was ready to continue the struggle indefinitely rather than accept its triumph. But he longed to end the carnage, and he believed that the Wilson program would be to the advantage of both sides. His pleadings were in vain, for the conflict was decided by the sword; and the Treaty of Versailles was the natural result of a savage fight to a finish. No one was more horrified than Herron himself, and its condemnation by such an ardent Wilsonian is a measure of its unwisdom.

Next in interest to the Herron reports are the selections from the papers of the late Dr. Kanner, the Viennese journalist who denounced the policy of the Ballplatz as sharply as Förster condemned the Wilhelmstrasse and E. D. Morel the diplomacy of Sir Edward Grey. It is also a boon to find a translation of some of the documents of the Bulgarian Yellow Book on the entry of that country into the war, which have hitherto been available only to the few who can read the Bulgarian language. Among other items of interest we may note a telegram from Erzberger revealing the active part played by the Pope in the attempt of the emissaries of the Central Powers to prevent Italy from joining their enemies. It is, however, impossible in a brief notice to call attention to, much less to discuss, all the additions to our knowledge provided in these volumes. The reader must sample and study them for himself.

G. P. GOOCH

The Unhappy Queen

Marie Antoinette. By Katherine Anthony. Alfred A. Knopf. \$3.

THE history of this unhappy queen is a comedy to one who thinks, a tragedy to one who feels, and Miss Anthony does both. As she follows Marie Antoinette from the bedroom in the old Viennese castle where her mother instructed her in the duties of the dauphin's wife, through the lonely bewildered years at the court of Louis XV, up the velvet carpet to the throne of the greatest kingdom in Europe, and down the cobbled street to the guillotine, the biographer, grieve as she may over the ruin of this innocent life, has still a wry smile for the vain and stupid and selfish creatures who destroyed it. Indeed, the charm of this book is that combination of shrewdness and sympathy which one has come to expect of Miss Anthony in her treatment of those ladies who have engaged her critical attention. She observes the French queen less with a historian's curiosity than with a woman's fellow-feeling. As a result, one is less conscious of Marie Antoinette as a pawn in Maria Theresa's game of empire than as the unfortunate daughter of a domineering, unimaginative mother. One sees

her marriage spoiled not merely by the loutishness of her royal husband but largely by the attitude taken toward this daughter of the Hapsburgs by her Bourbon relatives-in-law—her husband's father, his brothers, and his aunts. One is asked to regard her death not as an inevitable and trivial incident of the revolution, but as the miserable end of a woman at the mercy of those whose weakness had overwhelmed her own strength. History is merely the backdrop for the staging of this personal and pathetic drama.

Miss Anthony spares nobody in her effort to magnify the charm, the fastidiousness, and the common sense of the much-maligned queen. Not only the inadequate Louis XVI and the venomous Cardinal de Rohan, but even such an accepted hero as Lafayette is touched off with an acid pen. Indeed, the only man whom Miss Anthony heartily approves of is the one who best served the interests of Marie Antoinette—her lover, Axel Fersen.

Excellent as her characterizations are, one regrets that the biographer did not make more of the march of events outside of the palace. Certainly she has a discerning eye for something beyond the play of personalities. One notes it in her observation that the cynicism of Henry of Navarre, who "made treachery smart," and who, in throwing Protestantism overboard, failed to drown the protestant spirit, was one of the agents of the revolution. One wonders whether Miss Anthony omitted a fuller chronicle of the origin and progress of that revolution lest the stature of her heroine be somewhat diminished thereby. However that may be, she has written a lively, half-ironic, and wholly tender account of the life of one whose misfortune it was to be the daughter of an ambitious empress and the wife of an unambitious king.

BABETTE DEUTSCH

The Youth of Arnold

The Letters of Matthew Arnold to Arthur Hugh Clough.
Edited with an Introductory Study by Howard Foster Lowry. Oxford University Press. \$2.50.

THE action of the Arnold family in putting at the disposal of Professor Lowry all available papers pertaining to Matthew Arnold seems to have finally destroyed the single romantic possibility of his life, the real existence of "Marguerite." For among all the papers, Professor Lowry declares, there is no clue to her. Yet this volume of letters to Clough, the first of a series of documents Professor Lowry is to publish, is a highly dramatic book. To our intellectual understanding of Arnold it adds perhaps less than later matter will: we see the inception of certain characteristic points of view; we learn how great was the reliance Arnold put in Spinoza and of his devotion to Oriental philosophy. But the chief interest of these letters lies in their record of the personal changes in a man as he struggled to establish himself spiritually in the modern world.

The Arnold of Russell's two-volume edition of letters, published in 1895, the dull, unsparkling person of mediocre emotions, did not always exist. At college Arnold was very different—a wit, a dandy, a persifleur, a reader of French novels, a singer of French songs, a misser of expected Firsts. He addressed his friends as "my darling," and when he was introduced as the son of the great Dr. Arnold he would pose as a sporting man just come from biting off bull pups' tails. It is this Arnold, shortly after he left college, who begins the present series of letters. The man of whom Lord Acton was to say that he had less personality than any man he knew tumbles his phrases about with the eccentricity of a Carlyle or a Sterne. He is irreverent; he uses strong language; he is frequently ribald—notes the size of Jenny Lind's "obverse," and refuses Biblical criticism a third place with "eating and copulation" as a natural function of man. He is enormously and attractively alive and unhampered.

He changed to become the unattractive person of the Russell letters, and the crisis that occurred in his friendship with Clough is the symbol of that change. In 1853 Clough wrote from America to complain of coldness and neglect. Arnold, reluctant to discuss the matter, tried to dismiss it—he had merely, he said, been occupied with marriage and an onerous job. But Clough presses him, and Arnold speaks out. "You certainly do not seem to me sufficiently to desire and earnestly strive toward assured knowledge—activity—happiness. You are too content to fluctuate, to be ever learning, never coming to see knowledge of the truth. That is why, with you, I feel it necessary to stiffen myself—and hold fast to my rudder." Clough was the symbol of Arnold's youth, and Clough, with his fluctuant doubts, was inviting the world to kill him, spiritually and materially, while Arnold was trying to make himself at home in that world.

For Arnold the charm of the classic ideal lay in the sense of human security that it gave; the basis of his criticism of the romantic poets was their inability to be secure. And classicism meant the abrogation of personality. When Acton used the phrase cited above, that Arnold had less personality than any man he knew, he meant it, of course, in praise; it was a tribute to Arnold's attempt to carry his own mind and the mind of England away from the personal and the eccentric toward the perfect and centric—the classic. When Arnold "stiffened" against Clough, he was stiffening against the romanticism that Clough represented. He was abrogating "personality" in Acton's sense of the word—intellectually. But for some reason he found it necessary to go farther—to abrogate personality in our modern sense of the word as well. The gaiety and freedom of expression disappear, and the Arnold of the Russell selection of letters begins to appear at the end of this collection of Professor Lowry's. The break with Clough—for, though affection and contact continued, the friendship was no longer alive—was Arnold's break with his own youth, with its poetry, and with personality in both senses of the word.

LIONEL TRILLING

Mazzini

Mazzini: Prophet of Modern Europe. By Gwilym C. Griffith. Harcourt, Brace and Company. \$3.

BORN in 1805 and dying in 1872, Mazzini lived through the great florescence of democratic enthusiasm in Europe, the high tide of which we may place around 1848. His thought is a fully evolved conception of citizenship in a democratic world; his state is a natural organism formed around nationality by the will of an educated, morally conscious, and morally responsible citizenry; his world is a loosely organized community of free and morally conscious peoples. He lived late enough, after the era of the Enlightenment, to see the polemic of popular rights give way to education concerning popular duties; and late enough to see the sentiment of nationality come to the surface in the great ebullition of revolutionary emotions as the one constructive principle. He lived still too early to see that the struggle between proletariat and bourgeoisie could not be solved with the theories of liberty which had grown out of the struggle between bourgeoisie and feudalism; and too early to see that the formulas of what he called "morality" were not adequate to solve the new problems posed by the Industrial Revolution. He lived just long enough to see that in all his restless thinking, in all his tumultuous adventures in revolution, patriotism was the sentiment that really demanded satisfaction, and that in the attainment of Italian unity his work could be called done. And, in fact, what have we seen in six decades that have followed his death? His republicanism has become a dead issue in virtually all countries in Europe; "liberty" is reconcilable with any form of government; "tyranny" is reconcilable with any form of republicanism. His bourgeois "morality"

has been battered to pieces under the attacks of capitalist, socialist, syndicalist, and now communist and fascist ethics. The great countries which incarnate his principles of free nationality have not instituted heaven on earth, but represent merely another and rather grim moment in the endless unfolding of the truth that life is struggle. Mazzini belongs to the past.

This, more or less, is the Mazzini that we have known. Mr. Griffith's volume does not alter this conception in any essential particular. Perhaps it obscures it a little, by trying to see in Mazzini's world picture a certain "prophecy" of the League of Nations. It certainly obscures it a good deal by a fallacy that is common to nearly all British historical writing, where the dominant idea seems to be that the purpose of life on this earth is to gain the moral approval of the "better elements" in London society. Mazzini's revolutionary methods, says Mr. Griffith, are "morally obsolete." Supposing one should say instead that they are "immorally up to date"? London society would probably shiver with disapproval and reach for another cup of tea. And history would go on as before. What does it mean to say that "Mazzini stands or falls" as a prophet? Supposing he stands, or supposing he falls—the problem of understanding him still remains, made only a little more difficult, perhaps, by an irrelevant and substantially meaningless moral attitude.

If Mr. Griffith's criticism of Mazzini the thinker is not up to the "state of knowledge," he makes many amends by the attractiveness of his narrative, where the picture of the moral man and the record of his doings leave little to be desired. Particularly vivid is the description of Mazzini's life in England, and of his struggles and final success in trying to make himself one of the outstanding "Englishmen" of a day when Carlyle, Thackeray, Morley, Tennyson were holding the spotlight. They struggled manfully, these Italian exiles, to rise to the great ideal of the English gentleman. I note one unforgettable touch: Agostino Ruffini, as a tutor at Edinburgh, wrote across the pages of his textbooks: "Ruffini, don't gesticulate." Wretched historians from any objective standpoint, these English writers are unsurpassed when it comes to giving the spirit of an age of gentlemen. And, perhaps, after all, that is the more important thing.

ARTHUR LIVINGSTON

Safe for War Profits

Death and Profits: A Study of the War Policies Commission. By Seymour Waldman. Brewer, Warren and Putnam. \$1.50.

THIS is a very useful volume. It is a careful analysis of the hearings held by the War Policies Commission from March 5 to May 22, 1931. Its purpose, as directed by Congress, was to "study and consider amending the Constitution of the United States, to provide that private property may be taken by Congress for public use during war and methods of equalizing the burdens and to remove the profits of war, together with a study of policies to be pursued in event of war." The real purpose of this commission was to consider how private property might be drafted in war time to prevent undue profiteering. The original impetus came perhaps from the American Legion and as a result of the Capper-Johnson Universal Draft Bill to "take the profit out of war and to conscript capital." Mr. Waldman attended every hearing of the commission, and brings out very clearly the complete breakdown of the effort to secure the United States in the event of war from a repetition of such scandalous profiteering as enabled the Utah Copper Company to make 200 per cent on its capital stock in 1917 and 150 per cent in 1918, while the Calumet-Hecla Mining Company made 800 per cent on its capital in 1917 and 300 per cent in 1918. The commission was packed for the military and governmental side by the appointment of the Secretary of War, Patrick J. Hurley, as chairman, Secre-

tary of Labor Doak, and four other members of the Hoover Cabinet as well. The only liberal-minded and anti-militaristic person on the commission was Congressman Ross A. Collins. It is hardly necessary to add that the War Policies Commission decided that the drafting of private property should not even be considered by Congress. The only recommendation was that the President be empowered in war time to stabilize prices at a level which would "minimize inflation." The report gives complete security to the profiteers in the next war.

Mr. Waldman's book ought to be in every library in this country as proof of the alliance of big business with the war-making forces. It is as melancholy a record of a completely abortive effort to make the next war unsafe from the profit standpoint for munition makers, bankers, and other big business men as could possibly be imagined. Mr. Waldman would have made his book more effective, however, if he had shown his own bias less constantly, and had let the facts and results speak more for themselves, as they do loudly enough. A later edition would also profit by stylistic revision. None the less, the book is indispensable in any collection which would cover the field of war-makers and war profiteers.

OSWALD GARRISON VILLARD

Leisure and Civilization

Leisure in the Modern World. By C. Delisle Burns. The Century Company. \$2.50.

SINCE the triumph of the Industrial Revolution there has been a great deal of preoccupation with leisure. But all too frequently it has been divorced from the greater problem of industrial civilization. One often finds no more than disquisitions upon the rather obvious connection of leisure with the automobile, the movie, and the radio. A book that considered leisure largely as the problem of filling spare time would be particularly irritating at present, which is no period of boom psychology but of involuntary leisure for millions.

Mr. Burns, however, pursues rather the elusive interstitial transformations which have been wrought in the fundamental character of modern society by not only the quantitative increase but the qualitative change in leisure made possible by machine civilization. He inquires into the conditions of daily labor because these affect very directly the possible uses of leisure: an exhausted worker cannot utilize his leisure. The home, too, is a factor in the spending of leisure hours, for "the way one lives at home . . . makes a difference to one's tendency to seek entertainment elsewhere." The machine's standardization of goods, particularly of clothing, has lessened the importance of external signs of wealth, so that the various classes tend to become indistinguishable in their leisure-time pursuits: "You cannot tell a butcher from a bank clerk, at least in his leisure hours." By facilitating the mingling of classes the increase of leisure has thus had a leveling social effect. But even more important, it has helped political democratization, and has played a particularly large part in the emancipation of women. Leisure time, created by the machine, has been used to push political demands more vigorously, and all sorts of social movements have been advanced. In short, there has been brought about a new experimentalism in daily life and an increase of political and social equality. Civilization is no longer dependent upon a leisure class, but may arise from the leisure of those who also earn their living.

Mr. Burns shows great acuteness in following many of the obscure tendencies of social change. Undoubtedly not only revolutions but little things play in the long run a tremendous part in altering civilizations. But every now and then Mr. Burns goes too far. It may not be possible to tell a butcher from a bank clerk after working hours but even a Dr. Watson could tell him from a banker. Mr. Burns, too, underestimates the devitalizing

Fewer Horses—Fewer Flies

Devious are the workings of technical progress—and strange are its repercussions.

The motor at the curb is obvious enough. Its effect on health, through adding to the number of maimed and crippled and also, conversely, by providing week-end airings, occurs to every observer. But the automobile makes a more obscure contribution to our common health. The President's Research Committee on Social Trends reveals it.

Communicable diseases, we are reminded, sometimes travel via the fly. The horse is an important factor in the propagation of the genus fly. It follows, then, that more automobiles mean fewer horses—that fewer horses mean fewer flies—that fewer flies mean fewer free rides for germs—that fewer hitch-hiking germs mean fewer . . .

The outlines and the influences of machine improvement—of tariffs and utility costs—are not so obvious. But we cannot doubt that their effects are at least as real and at least as great.

To see these outlines clearly and to give them proper weight is fairly important. We urge you to see and weigh—and offer you The New Republic to help you do it. Its pages may not always offer you analyses so diverting as the matter of the horses and the flies. But they constantly offer you facts at least as necessary to an understanding of our common problems.

effects of many types of machine labor, and practically ignores the speeding-up process in modern industry. He seems to be writing rather with reference to the middle class of his own experience than with reference to the proletariat. He is often depicting not so much leisure in the modern world as the future of leisure.

Yet the most remarkable feature of Mr. Burns's treatment of leisure is its freedom from what may be termed sociological puritanism, that is, the "scientific" rationalization of bluenose dogmas. The middle class that arose as a result of the English commercial and industrial revolutions had no conception of leisure. It believed that "the devil finds work for idle hands to do." Leisure was simply an opportunity to rest for more work. Nothing dies so hard as puritanism, and when extensive leisure became possible for many, sociologists began to worry even more than the early Calvinists. They thought of leisure as a threat to the all-but-perfect state, and began to think of the problem in terms of crime and juvenile delinquency. The modern Mr. Burns's philosophy of leisure is, curiously, Greek. Fortunately, he does not worry too much about organizing leisure-time activity. He even concedes as legitimate the pleasures of gambling. A sound philosophy of leisure must have room even for allowing the individual to go to the devil in a sweet private way. If work in the future is to be organized, it will become extremely important for leisure to remain unorganized.

WILLIAM SEAGLE

Shorter Notices

John Masefield. By Gilbert Thomas. The Macmillan Company. \$1.75.

Recent Prose. By John Masefield. The Macmillan Company. \$2.50.

In his study of John Masefield, the English poet laureate, Gilbert Thomas takes arms against those critics who have, in his estimation, undervalued the genius of the poet. After an excellent reconstruction of the poet's life—a life which Masefield himself has never outlined—Mr. Thomas proceeds directly to the attack:

There are critics today who speak as if, for intelligent readers, Mr. T. S. Eliot has finally closed one book of poetry and opened another. Mr. Eliot is, within his limits, an interesting and valuable experimentalist; it is his too fervent disciples who make themselves ridiculous. At all events, we need not fear that the cultivators of the poetic soil will ever kill the more vital, spontaneous growths.

What Mr. Thomas does not seem to know is that Masefield has not been criticized adversely either for his realism or for his idealism. He has been criticized rather for inability to fuse his realistic subject matter with his idealistic vision. The quarrel with Masefield, in brief, has been a quarrel with his art. But whether or not one agrees with Mr. Thomas's long argument for Masefield as an important poet, this critic's study does include interesting analyses of all the longer poems, correct estimates of their relative importance, and an acute tracing of influences upon the poet. "Recent Prose" is a collection of essays by Masefield on Synge, Chaucer, Shakespeare, Blake, and a few non-literary subjects.

Tristan and Isolde: Restoring Palamede. By John Erskine. The Bobbs-Merrill Company. \$2.50.

To the famous Celtic legend Mr. Erskine has restored Palamede, the Saracen, who, he claims, originally played a part in it and was dropped by the old chroniclers because an infidel could not be allowed to outshine the Christian Tristan. But the restoration has only affected the resulting novel by intensifying those characteristics that we have come to expect of any work by Mr. Erskine. Palamede, Tristan, Mark, Isolde, and Brangain go

through their parts in this jocular version of the familiar drama and turn out to be not much different from Helen of Troy, Galahad, or Adam and Eve. Like its popular predecessors, the story is marked by readability, horseplay, "skepticism," obviousness, professorial urbanity, and cerebral salacity. All legends look alike when put through the Erskine process.

A History of Russia. By V. O. Kluchevsky. Translated by C. J. Hogarth. Volume V. E. P. Dutton and Company. \$5.

This is the concluding volume of an important work which the author did not live to complete. His book ends with the reign of Catherine the Great, though the final volume includes, as Kluchevsky's literary remains, sketches and notes that summarize the history of Russia through the reign of Nicholas I. Four chapters, printed at the beginning of the work in the Russian edition, are here printed as an epilogue. They explain Kluchevsky's plan, which he only partially fulfilled. His intention was to write a sociological history, but he did not have a complete enough grasp of the sociological factors. Nevertheless, in its sweep, in its biographies, in its analysis of critical eras, and in its pithy style, it is a masterpiece of historical writing.

[In the review by Benjamin Stolberg of Trotzky's "The History of the Russian Revolution" in our last issue one sentence read in part: "... the theory of 'permanent revolution,' now known as Trotzkyism ... was developed by Lenin and Trotzky together between 1915 and 1917." It should have read, "between 1905 and 1917."—EDITORS THE NATION.]

Films

French Luxury

IN certain minor films that have come out of France in the last few years (and by minor, of course, one means all those not directed by René Clair) there is to be found a peculiar quality of charm which redeems the stereotyped triviality of their material and distinguishes them from efforts in the same genre in other countries. Although this charm is no more easily analyzable than any other, and probably exists largely in the eye of the beholder, it can be related to something which has often been pointed out in other expressions of French art and life—a cultivation of things for their own sake, an almost abstract delight in the material world, what the French themselves signify by the word *luxe*. "Mon Cœur Balance," at the Fifth Avenue Playhouse, is neither a very profound nor a very original example of cinema art, but it does possess to a considerable degree just this quality of charm based on luxury. It is a beautifully mounted film in every way: the modern rooms, the furniture, the women, are all in the best possible taste. Its beauty is entirely a beauty of surfaces. And since our response to it is intended to be superficial, nothing is allowed to disturb this response. The only American picture of recent date which succeeds so well in building up its own world on such a superficial plane is Lubitsch's "Trouble in Paradise." But while René Guissart offers no apologies for the elegant menage of his young count, Lubitsch found it necessary to include a scene in which an irate member of the proletariat bursts in upon the chic grandeur of the manufacturer's wife and emits a heavily accented and repeated "Pfui!" In other words, the French directors have not yet become social-minded. For some people, therefore, "Mon Cœur Balance" will merely represent the ultimate refinement of bourgeois taste, the fine artificial flower of a dying class.

"Ihre Majestät Die Liebe," at the Europa, also strives for luxury, but without the same success, and without improving

greatly on the Hollywood film on which it is based. It is in the present version an overdeveloped, slow-moving, and rather graceless idyll of the Berlin night clubs. As it happens, however, it has an independent interest in being the first talkie of the young Czech actor, Francis Lederer, whose success on the New York stage this season has been so great that he has already been recruited for Hollywood. Since Mr. Lederer will very likely become a household word in America within the year, one may be permitted to make in advance a single practical suggestion regarding his acting. Mr. Lederer's chief possession as an actor is a vast nervous and physical energy which manages to communicate itself sympathetically to every member of his audience. In the love scene in the second act of his current stage play he holds his audience in his hand in a more literal sense than that phrase usually signifies. He holds it not only by his voice and by his gestures, but by the whole weight of his body in motion. On the stage this appeal was so great that his one marked deficiency went unnoticed or was less apparent. But if we are to judge by the close-ups in his current picture, Mr. Lederer is going to be handicapped on the screen if he does not recognize the importance of facial expression, more particularly, the use of his eyes. In several scenes it would almost seem as if he did not open his eyes at all. And the result is that the enormous vitality which is his special gift seems too self-contained, cut off from the other players, from the situation, and from the picture as a whole.

Of "Luxury Liner" at the Paramount one can only say that it may prove significant if it marks an end to that tradition in the theater which assumes that if one melodrama is bad a half-dozen melodramas heaped into one are somehow superior. The most regrettable feature of this picture is that its sponsors did not even bother to make any important variations on "Transatlantic" of a few years ago.

WILLIAM TROY

Drama

The Queen of Song

"EVENSONG" (Selwyn Theater) is an entertaining vehicle for the English actress Edith Evans. Last spring Miss Evans was seen here very briefly in a dull play about Florence Nightingale, but she has proved to be a performer of considerable virtuosity.

It is true, to be sure, that the aging and temperamental opera singer is no new character. It is true also that neither Beverley Nichols who wrote the novel nor Edward Knoblock who helped him to dramatize it has plumbed any new depths or thrown any new light on the reason behind the fact that the egotism of the artist reaches its most preposterous heights in the prima donna. They have, however, presented the familiar character in a very amusing way, and they have been ingeniously inventive in devising situations to illustrate the many-sidedness of her self-absorption. The great Madam Irela, the "Queen of Song," insults her manager, snubs her fellow-performers, and completely absorbs the lives of everybody around her, while remaining perfectly convinced that she has "done nothing but give" all her life. The story in which she is involved is sufficiently factitious, but it serves well enough to hold the incidents together, and Miss Evans contributes a sense of reality which would be lacking without her. She easily dominates the stage as though by divine right; she is not afraid to look as ridiculous as she does in the scene where she enters in the blond wig and flowing garments of a Wagnerian heroine; and she even consents to illustrate the great truth proclaimed by the tenor in "Strictly Dishonorable" when he remarked: "The only thing that can sing and keep its shape is a bird." Incidentally the proceedings are also greatly aided by the presence of Jane Wyatt,

□ JOSEPH WOOD KRUTCH says □

ALICE IN WONDERLAND. New Amsterdam Theater. Miss La Gallienne moves uptown with her charming company of fabulous beasts.

BIOGRAPHY. Guild Theater. An intelligent and sinewy comedy about what happens when a cultivated woman of the world tries to choose between a pompous opportunist and an unmanageable idealist.

DESIGN FOR LIVING. Ethel Barrymore Theater. Noel Coward and the Lunts having a very good time in a play by the former. Amusing enough if not quite worth all the excitement.

GOODBYE AGAIN. Masque Theater. Fine performances by Osgood Perkins and others make this farce comedy very funny.

THE LATE CHRISTOPHER BEAN. Henry Miller Theater. Light comedy from the French completely rewritten by Sidney Howard and charmingly played by Pauline Lord and others. All things considered, it is much the most enjoyable comedy of the season.

WE, THE PEOPLE. Empire Theater. Elmer Rice's indictment of contemporary society in twenty-one scenes. Impressive and depressing.

a very pretty and talented young ingenue, in the role of a niece who escapes the annihilating protection of the great star just in time.

Opera singers seem to be the only artists about whom successful novels or plays can ordinarily be written. Your poet, your painter, or your architect (recently, by the way, a popular hero) is seldom convincing. One feels the lack of any proof that he can really write poems, paint pictures, or design buildings. All one really sees is that bundle of eccentricities which is associated in the popular mind with genius. But if the singer is large enough as well as complacent enough he is also convincing as a singer, and the reason is probably the same as the reason why the prima donna is likely to be peculiarly absurd. Nobody else comes in such direct contact with such extravagant popular acclaim; no one else is so likely to be unprotected by a superior mental equipment. Most other artists work with their heads, and since the "faculties" of the mind are not wholly independent of one another, most other artists have minds which are superior in more than one way. But the singer works with her throat. God gave her remarkable vocal cords, and he seems often to give them to persons whom he has not otherwise favored. Hence the great singer may come easily to resemble the bathing beauty, who has been blessed with thighs instead of a larynx, and hence, also, the great singer is the fictional hero most easy to make convincing. Wild hair and a taste for alcohol do not make a poet any more than unpressed trousers and a pipe make a brilliant young English physicist. Opera singers, on the other hand, seem very much like what the public imagines them to be—which is luck for the dramatist, even if a little hard on the singer's entourage.

That erstwhile stable on MacDougal Street which is known as the Provincetown Theater was once an important playhouse. The Hairy Ape and the Emperor Jones trod its boards before moving to more spacious stages, and more than one worthy playwright besides O'Neill found refuge there. For several years, however, it has been reaching new lows with the regularity of a stock market, and has now been taken over by a new group which calls itself Actors and Playwrights. The first and probably last offering is a "sophisticated" comedy entitled "One Husband or Another," which gets about the production it deserves—one, that is to say, in which the badinage of the characters is accompanied by the thump, thump of a cracked Victrola record. The problem of what to do with the playhouse has thus become acute. Perhaps if it were cleaned up a bit it might be used for horses again.

JOSEPH WOOD KRUTCH

Music

Two Kinds of Radicalism

RADICALISM in music may mean either the search for new means of musical expression or the musical reflection of other, such as social and economic, radicalisms. Representatives of both varieties feel that from such organs as *The Nation* they have a right to expect public notice. Personal inadequacy is only partly to blame, however, for my difficulty in giving them what they expect; some of it is inherent in the tasks they set.

Take, for example, the concert of Chamber Music by Composers of Soviet Russia, given at the New School for Social Research the other evening by Sergei Radamsky and the League of Composers Quartet. Some of the music on that program may be excluded from consideration as being written by composers—Taneyev, Balakirev, Moussorgsky—who are "of Soviet Russia" only by virtue of the fact that they are buried there. But apart from the String Quartet by Mossolov and the songs

by Bela Reinitz, none of the music, taken alone, would have enabled one to say that the composer had lived through the revolution and been influenced by it. Since we had previously heard Mossolov's "Iron Foundry" for orchestra, the *ostinati* of which his quartet largely consisted could be taken to indicate that this was music of the machines. The Reinitz songs, being catchy, tuneful settings of witty and stirring revolutionary texts, are propaganda music of the most effective sort—that is, of the same musical sort as "Keep the Home-Fires Burning" and "Pack Up Your Troubles"—though one may prefer that effective music be used for purposes other than those served by these latter.

But no appraisal of the music of the revolution can be expected from us except one based on musical standards, and such an appraisal would not be high. If this is effective propaganda music, so much the better, but those of us who have not been in Russia and do not understand Russian cannot be expected to tell that. It is in any case a question unrelated to musical criticism. A proletarian marching song is bound to sound to us like any other marching song. Music of the machines cannot indicate whether the machines are under Communist or capitalist direction. Music is a language in which concepts as definite as those of the revolution cannot be expressed; it is a means by which the definite message of words may be made more exciting or more poignant. What an evening of music by Soviet composers chiefly does is show us that it is possible to sublimate revolutionary impulses: either the Communist composers in general sublimate their revolutionary musical tendencies in social and political activity, or composers in capitalist countries have been sublimating their revolutionary social and political desires in musical revolt. At any rate the revolution bites harder than it barks.

As for the latest exhibition of musical radicalism, I must repeat my often-expressed reluctance to give much of an opinion of new works after a single hearing. In an age when there are almost as many musical languages as there are composers, and when there is a total lack of agreement on even basic standards, one must approach each new work as a separate entity—except as related to whatever one may know of the previous work of the same composer—and achieve some familiarity with it before one may even have, much less express, an opinion. Now in any period a concert devoted exclusively to works of composers less than twenty-five years old could hardly be expected to present a high percentage of even competently written works. Even in the days when composers were satisfied to learn a more or less ready-made technique and only gradually to enlarge upon it, all but the most exceptionally gifted required a period of years to master their technique. It seems obvious that a composer who was not satisfied to take over an inherited technique would need an even longer period to evolve one of his own. The fact that one cannot apply standards of good writing to contemporary works until one knows them should not, however, mislead one, as it so often does, into thinking that whatever one does not understand is well written, or even that there is no longer any difference between good and bad writing. It simply is not so easy to recognize the difference at once as it used to be, and there is always too much anxiety not to miss a young genius—as if it would do him any special harm to be missed for a while.

All this concerns a group of young composers who gave a concert the other evening, also at the New School for Social Research. It is of course valuable for any composer, old or young, to hear his work performed publicly and feel with the strange listener the latter's reaction to it. It does the rest of us no harm to furnish him that opportunity. But to indulge in any extended or specific criticism of individual compositions would be to mislead the composers into attributing to that criticism an importance and an accuracy which it would certainly lack.

THE NATION, No. 20 Vesey Street, New York City, Cable Address: NATION, New York. Muriel C. Gray, Advertising Manager. British Agent, Miss Gertrude M. Cross, 23 Brunswick Square, London W. C. 1, England.

PUBLIC OPINION has sounded the doom of the noble experiment. The accelerating swing of the pendulum away from prohibition culminated in the Senate in the unexpectedly decisive straight vote for repeal of 62 to 23. The House followed suit with a vote of 289 to 121. Even a provision against the return of the saloon was struck out, but the importation of liquor into States that choose to be dry is prohibited. This is the common-sense way of eliminating the legislation born of war excitement and pressure politics. Liquor control must be worked out anew, and this can best be done with a clean legislative slate. While the details of ratification by conventions as provided in this Twenty-first Amendment remain to be worked out, it now seems probable that the long-prophesied impossibility of removing the Eighteenth Amendment will yield to the rushing tide of wet sentiment. The speed with which the Twentieth (lame-duck) Amendment was ratified after its long opposition in Congress is suggestive of the ready acceptance of legislation whose moment has arrived. The grotesqueries which flourished under Volsteadism—the lawlessness and violence which it engendered—have converted millions who are sincerely solicitous for temperance, and the possible economic advantages of finding new sources of tax revenue will hasten ratification.

THE IMMEDIATE PROBLEM raised by the repeal resolution is how and when the State ratifying conventions are to be called and the form they are to take. The Constitution provides that amendments shall be valid "when ratified by the legislatures of three-fourths of the several States, or by conventions in three-fourths thereof, as the one or the other mode of ratification may be proposed by the Congress." The Constitution does not state, however, whether Congress has the power to summon such conventions itself, or whether they can be summoned only by the State legislatures; nor does it state whether Congress can fix the time, method, or form of such conventions. Former Attorney-General Palmer believes that Congress has this power, but Congressman Beck does not. The truth is that the language of the amendatory clause of the Constitution is itself ambiguous, and as this is the first time in our history that ratification by State conventions has been proposed, no one can know, until the courts have passed on the question, precisely what the powers of Congress in this respect are. But that in itself is a reason why Congress, if it does not wish to delay repeal and have any result upset by the courts, should be careful not to transcend its powers. Its best present course would probably be to pass a resolution recommending the time, method, and form of such State conventions that it considers most desirable, without attempting to make any of these mandatory. Certainly, one course that seems clearly advisable is for the States to provide that delegates favoring repeal of the amendment should be voted for in a body, as well as delegates opposing repeal. This would follow the method already used in voting for Presidential electors; and it would eliminate, as it should, all questions concerning the personalities of the delegates.

SERGEANT-AT-ARMS David S. Barry, removed from office by the United States Senate on February 7 for writing "there are not many Senators . . . who sell their vote for money," might have presented a better defense one week later. At least he would not have been obliged to confess ignominiously to having "no Senator in mind" and of not knowing "that there is such a Senator." On February 14 Earl Long, before the Senate committee investigating fraud in the Broussard-Overton Senatorial primary, stated that he had been told by his brother Huey that a man "named Abell had given him \$10,000 and that Huey was sort of afraid to use the money for fear it was marked." Mr. Abell was identified as H. C. Abell, representative of the Electric Bond and Share Company, giant super-holding company of many lesser utility holding and operating companies, including the New Orleans Public Service Company. The Senator's brother explained the motive for the transaction by saying to the Senator: "You began with proposing a big tax on them and ended with a tax just about what their lobby was costing." Earl Long likewise testified that his brother, the Senator, had telephoned to someone in Plaquemines Parish to "tell a man that he wanted to get enough votes there to fix it where it could stand a contest." Other charges related to "graft from \$4,000 to \$10,000 a

mile in building roads," and a bridge deal out of which Senator-presumably-elect Overton, Huey Long's candidate and political ally, was to make \$200,000. Needless to say, Senator Long used the short and ugly word, and much other picturesque language, in replying to his brother's testimony. But how the United States Senate can fail to take cognizance of such grave accusations, and to extend the scope of inquiry to include not merely Overton's but Long's record, it is difficult to see. After expelling Mr. Barry summarily, the Senate is in common decency bound to delve deeply into the scandals aired from the bosom of the Long family. Senator Huey Long must either be unmistakably cleared at the bar of the Senate or be expelled as unfit.

THE TESTIMONY of Samuel Insull, Jr., the youngster who a year ago was drawing an annual salary of \$113,000 as president of one of his father's numerous companies, further reveals how completely our late giants of finance have deemed themselves above the law. Insull, Jr., admitted that Insull Utility Investments Company had published in 1930 earnings of \$10,343,000. That was the story told the investors—"hooked" and prospective. But with the federal income-tax bureau Insull Utility Investments Company in the same year filed a net loss of \$6,493,000. Well, it was another Chicago "big shot," Al Capone, who was finally brought to book for his fraudulent income-tax return. If one assesses the relative demerits of the Capone racket based on beer and the Insull racket based on electricity, the underworld gangster comes out ahead. He sought to defraud the United States government. He did not, at the same time, seek to defraud the "widows and orphans" for whom the propaganda literature originated by the Insulls pleaded so eloquently while denouncing any proposals to regulate holding companies and their financing.

AS FOR CHARLES G. DAWES, he is another interesting exhibit as a pillar of our society (small wonder it is crumbling!). He admitted at the same Senate committee hearing that his bank had violated the "spirit" of the Illinois law which forbids a bank to lend more than 15 per cent of its capital and surplus to any one individual or company. His Central Republic Bank and Trust Company of Chicago had lent \$11,977,400, or nearly 50 per cent of its capital and surplus of \$24,000,000, to the tottering Insull structure. But as there were numerous Insull companies, Mr. Dawes insisted that the procedure was "technically" within the law. How strikingly this affair resembles his earlier loan to ex-Senator William Lorimer! When Lorimer's moribund national bank in Chicago in 1914 was about to be closed by the Comptroller of the Currency, he hastily decided to have it made over into a State bank. But in order to comply with existing legislation he had to prove that the bank had on hand \$1,250,000 in "actually paid-in cash." Lorimer did not have the money, but his friend, Charlie Dawes, then head of the Central Trust Company, without his directors' knowledge lent Lorimer the million and a quarter dollars with which he successfully deceived the State auditor when that official came to make his inspection. Lorimer got his permit and returned the money to Dawes, with the result that the bank collapsed and thousands of depositors lost their savings—just as thousands of investors have now lost everything they had in the crash of the Insull companies. The worthless Insull paper which the

present Dawes bank received as collateral was in part responsible for the bank's requiring \$90,000,000 of the public's money to avoid closing. But this was not revealed by President Hoover in his St. Louis address last November 4, when, to refute "constant misrepresentation," he told in great detail how his Administration had saved the Dawes bank.

THE ACTUAL SOLICITUDE for the widow's mite on the part of the banking-utility fraternity was revealed in the testimony of Harold L. Stuart, president of Halsey, Stuart and Company, another eminently respectable investment-banking concern. "How a Widow Should Invest \$10,000" was the title of one of its weekly radio broadcasts by the "Old Counselor." This form of security salesmanship, Mr. Stuart testified, had been suggested to him by Merlin H. Aylesworth, then president of the National Broadcasting Company. Merlin's wizardry had previously been revealed when, as managing director of the National Electric Light Association, he advised a convention of power-company public-relations experts: "Never mind the expense—the public pays the expense." He was impressing upon them the utilities' practice of charging their propaganda costs to "operating expenses" and letting the consumer pay it in higher rates. Apparently the investor, too, paid. "For ——— sake, is there any issue that Halsey, Stuart sold me that is not going into default?" read a letter from a customer introduced into the record by Attorney Ferdinand Pecora, counsel to the Senate Banking Committee. When the Halsey, Stuart "Old Counselor" was pushing the Insull securities, he did not inform his "friends of the radio audience" that quite apart from the usual banker's commissions and underwriting profits, the firm was itself heavily interested in Insull companies. But part of the advice sent out by that reputable house to one woman customer—whether widow or no, the record telleth not—was to sell her United States government bonds and buy the now worthless debentures of Mr. Insull's Corporation Securities Company.

"THAT IS WHAT was to be expected." These are the words attributed to Mrs. Franklin D. Roosevelt by some of the newspapers when she heard that her husband had been fired at by a crazy man in Miami. It recalled the matter-of-fact remark of King Victor Emmanuel of Italy, after a similar experience, that it was an inevitable accompaniment of the trade of being king. Anyone who takes high office runs the risk of falling a victim to a maniac or a criminal. As Mr. Roosevelt's experience shows, secret-service guards offer no certain protection; it was apparently the act of a plucky woman, Mrs. W. F. Cross, which saved the life of the President-elect. Of course, the sensational press attempted to fasten the crime upon the reds, and Zangara's foreign birth was made the excuse for an effort to pass in hot haste and anger one of the restrictive immigration bills which the Senate to its credit has so far failed to act upon. Fortunately, as we go to press, the innocent victims are recovering. Zangara, meanwhile, having been adjudged sane, has been sentenced to eighty years in prison. Franklin Roosevelt's well-balanced, kindly, and generous nature makes it certain that he will see this incident in a true perspective and refuse to allow it to be made the excuse either for reactionary legislation or for cutting him off from a normal life.

ADOLF HITLER is hourly giving the answer to those deluded Germans who have been favoring his elevation to the chancellorship on the ground that responsibility would tame him and make a good old conservative out of him. As a matter of fact, he is proceeding as if he considered himself sole dictator—as if he were Mussolini in Italy—and by the same methods. He is suppressing even Catholic dailies that dare to criticize his government. He has taken away the passes of prominent pacifists so that they are prisoners within their own country. One of his lieutenants has informed a large audience of students that the government will stamp out at once all Marxists, all pacifists, all internationalists—everybody who does not believe in Hitlerism. Liberty, he explained to the listening youth, is not a desirable thing or a benefit to a country! It is announced that every political meeting in the present campaign will be policed by members of Hitler's private army or of the Stahlhelm—which means, of course, that this police will be armed and will suppress the slightest criticism of the Nazis or of the Hitler Government. More than that, in the small cities and in the provinces there is certain to be a Hitler terrorism which will keep many voters at home or threaten them with violence if the votes in their precinct should not prove to be "patriotic" or "wise." This is the way of all dictators. This is the way their ruthlessness is tempered by authority! Yet there are innumerable Americans who insist that a dictatorship is what we need in this country.

AN ARTICLE on another page of this issue, *Paralysis and Profits*, tells in detail the story of a small row which is touched with large public interest. The issue involved is this: Should a man who has developed, in a university laboratory, an instrument for saving lives be permitted to patent his discovery, sell it for his own private profit, and so prevent the manufacture by another person or concern of a better instrument at a lower cost? The Drinker respirator or "artificial lung," used in the treatment of infantile paralysis, was developed in the laboratories of the Harvard School of Public Health. Its manufacturer is suing John Haven Emerson, the inventor of an improved and cheaper respirator, for infringing upon the patents protecting the Drinker machine, even though it is admitted that this machine in its present form embodies several ideas which were first used in the Emerson invention.

PROOFS of *The Nation's* article discussing this case were sent in advance of publication to several interested persons, including President Lowell of Harvard and Dean Edsall of the Harvard Medical School. While *The Nation* was still awaiting some promised comments from these persons, it was announced in the press that the Harvard Corporation had adopted a resolution stating that "no member of either of these schools [the Schools of Medicine and Public Health] should take out for his own profit, or make any profit on, a patent upon any invention or discovery that affects the health of individuals or the public. That if to protect the public against misuse of the invention or discovery it is necessary to control it by means of a patent, that should be applied for in such a name and under such conditions as the Corporation may determine." It is gratifying that the Corporation has taken this stand, even if such action was hastened by the

imminence of publicity. The resolution clears the university of any further connection, direct or indirect, with the Drinker affair, and, more important, it establishes a principle to be applied in future cases—which would have seemed obvious under the long-established code of medical ethics. Unfortunately, this belated action will not serve to right a present wrong; the Corporation makes it plain that its action is not to be taken as a reflection on either Drinker or the Collins company which manufactures his respirator. Mr. Emerson is left the satisfaction of knowing that his efforts and his personal inconvenience and loss have resulted in a lasting reform.

AMILITANT FEMINIST is the very reverend Archbishop of York. He has come out publicly and courageously, on the floor of the House of Lords, in favor of women's right to be hanged. Outraged by the sentiment which discriminates against women and frequently prevents them from hanging even when the law is clearly on their side, the Archbishop calls upon the female sex to "rise in protest." "It is a horrible insult to them," he says, "and they ought to resent it with ferocity." Of course we understand the Archbishop's generous indignation. It would be awfully gratifying if women could feel that they would be hanged just like men. But a few other legal disabilities remain which English women might possibly protest against first. There is, for instance, that little matter of exclusion from the House of Lords. If the Archbishop would see to it that women were admitted to that exclusive assemblage on equal terms with men, with how much more effective ferocity could they protest against all sorts of insults! We suggest that the women of England demand this right even before they begin chaining themselves to the gallows.

THE NATIONS CONTINUE to shock one another on a more and more spectacular scale. We have, of course, grown used to having foreign films censored to render them fit for America and American films similarly purified by foreign importers. England, for example, insists upon inserting a marriage ceremony in the new Clark Gable-Joan Crawford picture, although our own Presbyterian Elder Will Hays guarantees the purity of our products. But the situation grows daily more complicated. On the one hand the British Empire Exposition has just had to recall from the Orient advertising posters which shocked the sensibilities of Moslems in Egypt and India. They showed the lady, Britannia, lifting a beckoning finger—a gesture soliciting trade, but not of the personal variety the male Moslem mistook it for. On the other hand, our own customs authorities, who can be relied upon to go everyone else at least one better, excluded photographs of the Michelangelo frescos in the Sistine Chapel on the ground that they were indecent. It is true that the decision was later reversed when the art experts who pass upon such matters learned that the frescos in question adorned the innermost holy of holies of Catholic Christendom, but the time has obviously come for a little international cooperation or compromise. Bargaining is the order of the day. Why should not England agree to admit the "Kama Sutra" if India will admit the exposition posters, and why should not America agree to tolerate Michelangelo if the Pope will let up a bit on contraceptive literature?

Do We Need a Dictator?

EMPHATICALLY not! Nothing in the existing situation, grave, critical, and menacing as it is, warrants the overthrow of our system of government or the concentration in the hands of the incoming President of powers which are not already his under the Constitution. Congressional government has not broken down. The time has not come to abandon our faith in our democratic institutions, or to proclaim to the world that they cannot stand the stress and strain of the present economic crisis. There is no inherent virtue or wisdom in a dictator not to be found in a President. The mere appointment of a dictator, or a dictatorship of three or five, will not in itself solve any of the innumerable problems before us. Similarly it should be clear that the so-called obstructionist tactics of the Congress are not wholly responsible for the failure of the country to recover from the slump or to see before it a clear road to the restoration of our lost prosperity and economic well-being.

What we are suffering from is far less the weaknesses of the Congress than the total absence of clear-cut, wise, and constructive leadership in the White House. After all, the Executive is there to lead, not only because he is the head of his party, but because he is also the head of the nation. The truth is that we have had no White House guidance of a progressive kind, none to challenge the imagination or to sketch out far-reaching policies, since the first two years of Mr. Wilson's Administration. We have had from Mr. Hoover the weakest kind of effort to provide a program for the country and its parliament. He misconceived the crisis from the beginning, misrepresented it to the public, announced that it was rapidly passing by and was nothing to be worried about. When he was forced to admit the gravity of the situation he was unable to make any worth-while recommendations. It is not possible to know at this date whether Mr. Roosevelt will be able to prove to the country that he has sufficient knowledge and wisdom to guide us in this emergency. But if he has not that wisdom now, how on earth will it help to give him additional power? Such a grant will not open his eyes to economic truths that he does not already see; it will not give him greater resoluteness of character or endow him with stronger leadership.

The truth is that we are again chasing after a mere slogan in our old familiar American way. Last year everybody was calling for the balancing of the budget. Wall Street, Mr. Hoover, and the conventional editors were all crying for it. Secretary Mills assured us that if the budget was not balanced, disaster lay immediately ahead. *The Nation* was scorned because it declared that the budget could not be balanced and that it would not ruin us if it were not. But a bill was passed, Mr. Hoover and Mr. Mills declared that the budget *was* balanced, and the banker and newspaper packs promptly went baying off in another direction. Next came the demand for economy; that was to be the cure-all. Innumerable wiseacres at solemn dinner tables demanded a national cabinet—merely because England had one, although they did not know whether the result in England was favorable or unfavorable. And now it is dictatorship—with Walter Lippmann well in front calling it “the paramount

issue,” “the right direction.” He is certain that the only thing to do is to give to the President “the widest powers over the administration of the government and over expenditures which it is possible to grant him under the Constitution”—just as if the President did not already possess all the powers which the Constitution allows him. No latent Presidential powers are hidden away in the Constitution to be conferred upon the President by some vote of the Congress.

Mr. Lippmann is also certain that we must choke off “unlimited debate and obstruction” in both houses of Congress and he wants to restore to the Executive certain rights and powers which have been “usurped” by Congress because of Congressional yielding to petty local influences. Is there anything in the situation which could not be squarely met by an Executive of courage, independence, and force, ready, as were Woodrow Wilson and Grover Cleveland in their time, to go over the head of Congress and appeal to the public if Congress should prove recalcitrant? Indeed, Congress is waiting for just this sort of leadership. Moreover, when Congress meets again there will be an overwhelming majority of Democrats in both houses—not one-quarter of the Senate will be composed of Old Guard Republicans. Doubtless unduly large majorities are unwieldy, but in this emergency the party leaders will be only too happy to follow Mr. Roosevelt's requests, if he proves that he knows his own mind, has a program, and is determined to put it through—even to the extent of withholding patronage until he achieves it. But if he fails to do this, hamstringing the Congress and laying the foundations for a complete dictatorship will not help us.

But even if this should aid us temporarily, it would be better to suffer the delays which may come from a stupid and frightened Congress than to open the way for a dictator. Let us not have even the nose of that camel thrust into the tent of American government, let alone his head. One needs only to look at the latest dictator in Europe, Adolf Hitler, to see how quickly the liberties and rights of individuals may be menaced by a demagogue certain that his country's parliament also is of no further use, that his ideas are the cure-alls for his country's ills. Of course there should be reasonable, voluntary limitation of debate in the Senate in this emergency, but criticism is not always merely a means of delay. Far from it. Nothing in Mr. Roosevelt's record warrants the belief that everything he recommends will be completely wise.

Few journalists ever wrote more damning things about a public man than Walter Lippmann was writing only a year ago about this same Franklin D. Roosevelt to whom he now wishes to give tremendous power. If the President-elect sounds the keynote and takes the aggressive in well-reasoned suggestions, Congress will follow him willingly or will be compelled to by public opinion. But the Senate is the only debating forum left in America. As such, it is of inestimable value to our institutions, to our liberties, to the possibility of our progress along wise and sane lines. Muzzling it is no more desirable than to end all public criticism in the press and elsewhere. But if we muzzle Congress, muzzles for the rest of us will come as a matter of course, particularly if the emergency should become more critical.

Back the League!

THE future of peace in the Far East depends more upon the actions and decisions of the United States and Russia than upon any pronouncements by the League of Nations. It is both remarkable and heartening, in fact, that the Committee of Nineteen has dared to utter so final, though so judicious, a condemnation of Japan's reckless course in Manchuria without first ascertaining the response which could be expected from Moscow and Washington. That the fate of the world in the next few years may hang on the united efforts of two nations which at present are not even on speaking terms is ironical and fantastic; and is not the least among the reasons why Roosevelt should make recognition of Russia one of his early official acts.

Meanwhile the League has gone ahead, relying in part upon Russia's known objections to Japanese aggression in Manchuria and Roosevelt's known support of the Stimson doctrine, but at the same time leaving open a door through which it may withdraw in case Russia and the United States fail to come along. The statement issued by the Committee of Nineteen, to be acted upon by the League, reviews at length Geneva's long efforts to bring about peace in the East: the repeated promises of Japan to withdraw its troops, the repeated advances by Japan in contempt of the League and its own promises, the inquiry by the Lytton Commission, the subsequent attempts at conciliation, the refusal of the Japanese to consider withdrawal of their troops or the abandonment of Manchukuo, and the committee's ultimate decision that conciliation must be given up. The report urges as a next step mediation by a committee of the League on which the United States and Russia should be represented, and outlines the terms of a final settlement, which should include recognition of China's sovereignty in Manchuria, provision for the protection of Japan's special interests there, and the establishment of an autonomous government with a local gendarmerie.

But how is this most judicial arrangement to be put into effect? It is known and admitted in advance that Japan will reject the entire proposal, whether or not it withdraws from the League, and it is probable that many elements in the League will be delighted if they can merely accept the report and then let the matter drop. But too much blood has been poured over the plains of Manchuria and too much will flow when the Japanese press into Jehol to make it possible to end the debate with a mere vote of disapproval. The peace of the whole world hangs perilously in the balance. If the Assembly accepts the committee's report, the nations of the League are pledged not to recognize Japan's conquests; and further advances by Japan, in defiance of the League's recommendations, will be looked upon by China as acts of war. China will undoubtedly appeal for further protection from Geneva, and the League will have to proceed further along the line it has already laid down for itself.

And this brings up again the crucial question of Russia and the United States. No embargo against arms and credit for Japan, no pressure of any sort by the League, can be effective unless those two great and interested nations

actively collaborate in the support of it. And collaborate they should! The Soviet Government's opposition to Japanese aggression is based on obvious grounds of security and self-interest. The United States has equally strong reasons for opposing Japan's imperial designs, and Stimson went far ahead of the League in formulating that attitude of disapproval. Both nations should waste no time in letting the League know that they are ready to join in such action as is proposed.

To do this involves no commitments under the Covenant. Very carefully the Committee of Nineteen pointed out Japan's violation of the Nine-Power Treaty and the Pact of Paris. The United States and Russia would be committed only to a consideration of the means to be employed in enforcing binding agreements which both have signed. Such an announcement, following promptly upon the acceptance by the Assembly of the recommendations now before it, would at least have the effect of notifying Japan that her conquests in China will henceforth meet the opposition of the world. The forms such opposition would take can only be determined by the combined counsels of the great Powers—in and out of the League.

The Railroad Report

THE long-awaited report of the National Transportation Committee, in spite of the conservative quality of most of its recommendations, was disappointing to Wall Street, and railroad securities declined following its publication. This is partly because such commissions are almost invariably expected to produce some magical solution of the problem they deal with, while the actual report almost invariably fails to produce this magical solution. More specific reasons for Wall Street's disappointment in the present instance are the committee's failure to make any definite statement on railway wages—it pointed out that these are "determinable by established procedure in another forum"—and its comparative realism in discussing railway securities. Though the committee was actually formed at the request of various business associations, savings banks, insurance companies, and other institutions with a direct interest in railway securities, it nevertheless says flatly:

We distinctly do not believe that past mistakes as represented by present unwieldy debt structures should be salvaged by increased rates. The present debt structure must be revised and losses written off.

Few of the recommendations of the committee are new, some of them are obvious, and some have already been made several times by the Interstate Commerce Commission. One of the committee's four "emergency recommendations" is that the recapture clause should be repealed retroactively; the I. C. C. has long advocated such repeal. Other recommendations of the committee are that waterway and automotive transportation competing with the railroads should also be put under federal control, that competing water lines should not be subsidized, that competing motor trucks should bear their fair burden of taxes, and that railways should be permitted to operate their own supplemental motor-truck and bus services at competitive rates. With some modification this course has also been recommended by the I. C. C. The

first of the committee's four emergency recommendations—revision of bankruptcy procedure—is already incorporated in bills now before Congress. The fourth asks for a more liberal interpretation by the R. F. C. of the act governing its loans to railways; the committee nowhere questions the wisdom of continuing to supply the railroads with federal funds.

Two recommendations call for special comment—that advocating a change in the statutory rule of rate-making, and that advocating railway consolidations “looking eventually to a single national system.” The whole section on rate-making is vague and ill-considered. The committee proposes to abandon all the results of railway valuation and the principle of “fair return” on actual prudent investment for the following principle:

Wherever there is fair economic competition it will decide the rate question and it should be permitted to do so freely. . . . Where competition with trucks and other methods exists, it will determine rates. In other cases rates must be regulated, but the basis of costs of operation under efficient management is a better general guide than any attempt to preserve capital structures regardless of economic trends. We see no reason why the rate-making rule should not say in plain English that railroads are entitled to make a reasonable profit based upon costs of efficient operation.

Whatever plausibility this rule of rate-making has is based upon the vagueness of its crucial terms. What is “fair” economic competition? If rates are to be determined by “competition,” and not by a federal body, what difference would there be between the resulting condition and the chaos of rate wars, secret rebates, and charging “what the traffic will bear” which prevailed before the I. C. C. was established? Rates, of course, must be high enough to exceed railroad operating expenses under “normal” conditions, but it is not easy to secure agreement upon what constitutes “efficient management,” and even if standards for such management were established, what would be a “reasonable” profit based upon such “costs of efficient operation”? The “reasonableness” of the profit could not be established apart from some valuation of the capital invested in the roads.

Perhaps the most significant recommendation of the whole report is that urging that “regional consolidations should be hastened, and, where necessary, enforced, looking eventually to a single national system.” But the committee does not draw the logical corollary of this—government management and ownership. From the standpoint of management, it would obviously be unsatisfactory and inefficient for the single system to be controlled by one set of managing managers, half of whose acts would be constantly subject to veto by another set of regulating managers, who, in turn, would have neither control over nor responsibility for the other half of the acts of the managing managers. And from the standpoint of ownership, it would obviously never be possible for the federal government to compel the railroads to unite in one system, and to settle the endless squabbles and dickering among security-holders of various railroads concerning the basis of exchange for their securities, unless the government itself were to set up a commission to establish the valuations at which securities should be turned in, made it mandatory to turn them in, and gave the security-holder in return shares of common stock in the single system with a rate of dividend depending on earnings. This is the real logic of the railroad crisis and of the committee's report.

The “Met” in Difficulties

THE Metropolitan Opera House is faced, not merely with difficulties, but with the imminent possibility of closing its doors. Last year Paul D. Cravath headed a group which took over the responsibility of financing the organization for one season more, but Mr. Cravath has just announced that he considers his responsibility ended. As a last resort the general public is asked to contribute a guaranty fund of \$300,000.

At first sight the appeal to the public seems natural and reasonable. Actually, however, it is being made a little bit late, and the simple truth of the matter is that the Metropolitan Opera has not previously paid any too much attention to the public. The inhabitants of the “diamond horseshoe” have generally regarded the opera as a private playhouse to which outsiders were tolerantly permitted a limited access. Prices for good seats were so high as to rule out all but the affluent; cheap seats were neither good nor plentiful; and no serious effort was ever made to put the institution on a solid foundation by providing accommodation for that part of the great public which wanted to come. Indeed, it is only a short time ago that the directors rather arrogantly vetoed Otto Kahn's proposal to move the opera to a new building which would make a place for the popular audience. Now the public is being thought of as a last resort only.

Last year broadcasting of the performances was permitted for the first time. According to Deems Taylor, four or five million persons tune in every Saturday afternoon, and Mr. Taylor suggests that if only a fourth or fifth of these listeners would impose upon themselves a voluntary tax of one cent for each performance, that tax alone would support the opera. As a matter of fact, his proposal would be rather difficult to realize in practice, and there does not seem to be any good reason why the broadcasting companies should not themselves be compelled to pay to the government a reasonable tax, part of which could be used to support a national opera. These companies receive privileges of tremendous value for which they give a wholly inadequate return. The Radio Commission assigns them exclusive “channels,” from the use of which some of them make tremendous profits; yet they pay very little for what they get.

In the unlikely possibility that they should be called to account, there would still, however, be left the open question whether an opera would be the most culturally useful institution which the government could support. Theoretically it is the highest of the arts—the result of a perfect marriage between music and drama. Actually it is only the most fantastically expensive of the arts (except the moving picture!) and holds its position partly at least because the extravagance of its traditions makes it the most suitable plaything of the fashionable. In America it has never been genuinely popular and has rarely been looked upon more than dubiously by the most competent musicians. It justifies itself if it meets a genuine demand, as it does in Italy, where Verdi is popular almost in the sense that Irving Berlin is popular here. But there is some question just how much it is worth while to try to educate a public up to “Il Trovatore.” A symphony orchestra costs infinitely less to support. It is also worth considerably more.

Issues and Men

By Bus Through the Middle West

THERE were three of us in the bus traveling from Madrid, Iowa, to Des Moines, one being the driver.

Next to me was the man who started the first "farmers' holiday" in that State, the man above all others I should have chosen to talk with during that trip of an hour and a half had I known in advance of his existence. He explained that he was bound to the capital on an insurance matter; the insurance companies are in trouble, at least the farmers' mutual fire-insurance companies. "We have had to assess our policy-holders—our August loss was \$55,000 more than the largest previous monthly loss in our history. There is a lot of arson going on around here," he went on, "but I don't blame the farmers. If you were as desperate for money as they are, you'd burn a chicken-house, or a garage, or a barn, or even your house, as they sometimes do, to get clothes and shoes for your children. We just don't know what we are going to do, but I'll tell you this, we want the Eastern bankers to stay over in their country and leave us alone in the West. They can have their gold if they can keep it, but we are going to hold on to our farms. We had a tax sale not far from here on the fourth of January; there were 1,800 farmers there. They said they weren't making any threats, and weren't going to do anybody any harm, but that the first fellow who made a bid on any of those properties would go right out of the first-story window. That sale was postponed."

"How are things with you yourself?" I ventured. "Well," said he, "I have a wife and three children. I keep a careful record of every cent we spend, even when we put out a nickel for chewing gum, and last year \$808.34 passed through our hands. Ordinarily our purchasing power runs between \$3,000 and \$3,400 a year. I had fine crops, got in lots of corn and have a cellar full of vegetables, but you can't get anything for them. I am burning my corn in my furnace right now. It is just as cheap as to sell it for four or five cents a bushel after a long haul to the nearest town, and then to buy coal with what you get. I know it's a rotten deal for the coal miner, but what can I do? My daughter has been trying for a job for two years and she can't get anything."

Then I asked the question that I asked more often than any other during my sixteen days in Minnesota, Iowa, and Wisconsin: "What will be the conditions here if this crisis lasts two years longer?" I had already put the question that morning to the restaurant keeper who served me my breakfast. "Two years more?" he had echoed. "Why, we just can't stand it. There won't be any town left if that's going to be the case. Folks are moving out now." The originator of the "farmers' holiday" looked equally staggered. "Why, you just can't think," he said, "what things will look like if this goes on that long. But I can tell you one thing, the farmers aren't going to lose their farms and they aren't going to let anyone take them away from them. We don't want to make any trouble, but we are going to stay on our farms, and don't you make any mistake about it." "Of course," he added, "what we need is leadership, but that will be here within six months." "Where will it come from?" I asked. "I

don't know," he said, "but there is going to be a leader within six months, you can be absolutely certain of that. This country has never failed to produce a leader in an emergency, and this is an emergency all right."

The next day at Des Moines Henry Wallace of *Wallaces' Farmer*, who is still under consideration for Secretary of Agriculture in Mr. Roosevelt's Cabinet, said to me: "You must go to Iowa Falls and talk with John Wirds. That man's got the making of a Mussolini in him. Don't you leave Iowa without seeing him." I went, but not until I had also talked with Milo Reno, the head of the Farmers' Union. I found him ready for a third-party movement, but he thought it ought to originate in the West where men on the farms are face to face with the actual realities of life, face to face with the possibility that they may lose their farms tomorrow morning. Yes, he was willing to give the Roosevelt Administration a chance for a showdown, but it would have to prove where it stood very quickly indeed, and he had very little hope that it would work out from under the domination of Wall Street. If it didn't make good, he was certain of one thing—a new movement would sweep the West; the farmer could stand it no longer. "Are there many people starving on the farms?" I asked. "No, there are not, but the conditions are absolutely unendurable, and the farmer is going to hold on to his land no matter what happens."

I found John Wirds in his courtroom—he is a judge of the Superior Court—trying to save the farm of a seventy-five-year-old member of his family. When he had freed himself from that task he gave me of his time unrestrictedly until after eleven o'clock that evening. No Mussolini here, but a man with great strength in his powerful though unhandsome visage. He volunteered for the war and then came back determined to get a college education. He put himself through college and graduated from the law school at the age of twenty-eight, having supported a wife and two children with the wife's aid, and winning only "A's" in his law studies. It takes character to do that, and readiness to live on extremely humble fare. Now he has organized 90 per cent of the farmers of his county in his union, and the movement is spreading into adjoining counties. From one of the latter there came to him one morning five telephonic appeals for help. There was trouble at the county seat; there were ropes in the crowd, and there was certain to be violence if he did not come to their aid. He adjourned his court, jumped into his automobile, and drove at full speed for the place—in time to prevent bloodshed, in time to see the discomfited mortgage-holder withdraw in haste. About 250 members of the crowd followed him into one of the rooms of the courthouse and asked what he thought of the proceeding. He told them that he did not like what they had done; they had not done enough for the mortgagee, and they had not insisted that the owner of the farm should pledge himself to do what he could to pay something, however little, to the mortgagee. The crowd was stunned. "We are running this thing along Golden Rule

lines," said John Wirds, "and we are going to be just as square about it as we can possibly be." The crowd at once began to take up a collection for the mortgage-holder; \$250 was the objective.

"No," said John Wirds to me, "there's no suffering on the farms if you mean by that hunger. We see to that; our committees go out and do relief work. We can't give them the clothes they need, or the children the necessary boots, but we can keep them from starving, and we're going to. We're not aiming at the government, but we are just going to take care of ourselves and our own, and we're going to keep every fellow on the farm who deserves to be there." "What will be the situation two years from now?" "Why, something will break; something will happen; there will have to be a change in the system. Aren't you going to give us a lead in the East? We are never going back into the Republican Party, we Iowa farmers; it is dead, dead, dead. We want a new deal and a square deal."

That night he drove me, masterfully, to Mason City. I told him that when my bus had stopped that morning in a small town, the people were standing around in knots of four and five. "They're having a grand time in this town today," the motor-bus driver had said as he climbed into his seat. "The only bank they've got is just bust." Mr. Wirds laughed. "All our five banks are gone in Iowa Falls; we haven't one left. The express company takes our checks down to Des Moines and cashes them, and we manage to barter with one another, exchange checks, and do what we can."

The next day on to Minnesota, the farmhouses growing more unkempt, the countryside less prosperous looking, and then St. Paul and Minneapolis. Minneapolis is proud that it raised about a million and a half dollars for its community chest, that it has been able so far to take care of its own. But when I put my question to three of the leading business men of Minneapolis, they could not conceal their dismay. "Minneapolis will get by somehow, but our businesses, the country—what *will* become of them in two years?" One of these gentlemen has a 30,000-acre farm. He sold it a few years ago; it has come back to him; much against his will he is establishing a tenantry upon it. I asked him whether he foreclosed or dispossessed. "Never," said he, "when a man shows good faith and does his best." But he confessed that he did not see what was ahead for any of them. From others I learned that of the 800 Minnesota banks 200 are able to operate only through an agreement with the depositors that for the next five years they will withdraw only 10 per cent of their deposits each year. Well-informed men tell me that if there is no improvement, 500 of the 800 banks will be on the same basis by next fall. Everywhere I heard the Reconstruction Finance Corporation praised for standing by Charlie Dawes's bank: "If they hadn't done it, hundreds of banks would have failed in the West and Northwest." I found one town that faced the future absolutely unafraid—Eau Claire, Wisconsin. According to its leading editor it has not felt the crisis for longer than a year and it will have no difficulty in fighting its way through for two or three years more. One of its factories is running full time.

Everywhere else I went there were the same stories of blasted homes, ruined banks, wrecked existences; men and women have seen the labors and savings of a lifetime go to nothing in if overnight. A terrible feeling of fear and inse-

curity has come over the great rural stretches. People no longer feel safe; the dread of each day is upon them even though their cellars are full of unsold corn and vegetables. Their children are marking time; they themselves have nothing to look forward to; there is nothing left of any security for old age. They are puzzled, deeply disturbed, profoundly outraged—stunned that such a disaster could come to "God's country." They have no desire to turn against the flag. The farmer organizations are not against the government as such. They are standing unitedly against the Wall Street front; they believe, as did Woodrow Wilson in 1912, that the financial system under which we have been living, operated as it has been by those Mr. Wilson called "the masters of privilege, the owners of big business," has been "slowly girdling the tree that bears the inestimable fruits of our life," and that, as he prophesied, "nature has taken her revenge," because they have entirely girdled the tree and the tree is dying. They are no longer afraid of the name socialism, and they tell you frankly that there would have been hundreds of thousands of votes in that section for Norman Thomas had they not felt that the all-important thing was to sweep Herbert Hoover out of office. (In all three States—Iowa, Wisconsin, and Minnesota—newspapermen told me that they had never guessed how deep the feeling was against the President, or how high the tidal wave against him would go.) People tell you frankly that the Democratic Party not only has but a short time in which to make good, but that it must demonstrate once and for all that it stands for the people against the "interests," and that they will turn to the Socialists, or Huey Long, or anybody else who will take the lead toward a new political and social order.

But whither, whither? That is the question. They see life on the farms dying, their crops going for so little it does not pay to market them; they see milk selling for three cents a quart, which doesn't pay the feed bill; they see the children dropping out of school for lack of adequate clothing, and the schools in danger of closing because the teachers can no longer be paid. They see the small towns drooping, bank after bank closing, although they were told that the Reconstruction Finance Corporation had, or would, put an end to further bank failures. They see paralysis descending upon the small towns—more and more "to let" signs appearing in the empty shop windows. Their patience is magnificent; their resignation, if anything, too great. If the farmers are acting through their organizations, which may be best described as benevolent protective associations, the people of the small towns are voiceless, unorganized, unable to act in common. But not for long, certainly not for two years. It does not seem to me after those days in Iowa, Wisconsin, and Minnesota that they will see their neighborhood die by inches without some protest. They know that things are getting worse. Not a single conductor on bus or train would tell me that things are getting better; the trains are pitiful in their emptiness; the highways are beginning to be deserted. "What has become," asked a railroad conductor pathetically, "of American enterprise, energy, and invention?" What, indeed? And what has become of our leadership in the face of the destitution in our cities, our stricken countryside, the misery of our people?

Dwight Garrison Killard

Paralysis and Profits

By STEWART GRISCOM

THE precise responsibility incurred by a university for the ultimate control of life-saving and therapeutic devices developed by members of its own staff in its own laboratories has never been clearly defined. We are apt to take it for granted that these things are dedicated automatically to the common cause of humanity; that they are not monopolized to line private pockets but are available to anyone who can use them to advantage in the war with disease. And this, in fact, has usually been the case. Sometime during the next few months, however, if the present schedule is carried out, the history of a life-saving invention in which business and benevolence became confused will be told in the federal court at Boston. It is a curious story. Harvard University is the setting; leading scientists play the parts. The plot concerns the commercialization of an invention for the relief of human suffering and the efforts of certain persons to protect their monopoly by ruthlessly suppressing competition.

The events preliminary to the suit have stirred the Harvard Medical School. While few of the staff understand the legal technicalities of the alleged infringement, they are clear about the professional ethics involved. Indeed, a group of prominent faculty members are actively endeavoring to prevent the court proceedings which they fear will reflect on the reputation of the institution. They also hope to block the recurrence of such a contretemps through the adoption of some accepted code.

In 1929 Philip Drinker, associate professor of industrial hygiene and member of the faculty of the Harvard Engineering School, was engaged in research on pneumatic life-saving machines in the laboratory of the Harvard School of Public Health. He was subsidized in this work by the Consolidated Gas Company of New York and, it is fair to assume, was supported and encouraged by his brother, Dr. Cecil K. Drinker, assistant dean and professor of physiology in the School of Public Health. Dr. Drinker is reputed to be a power to be reckoned with in the inner circles of the university. The experimental machines were made in the machine-shop of the Harvard Medical School, which was under the direction of Dr. C. K. Drinker. In the course of this investigation, Philip Drinker was inspired to build a box in which the creation of varying atmospheric pressures would assist the respiration of victims of infantile paralysis whose respiratory muscles were incapacitated. Accounts differ as to what first suggested the idea, but it seems to be admitted that the idea was not strictly original. Drinker did, nevertheless, produce a practical apparatus and announced the fact in May, 1929.

It was a crude device. Noisy vacuum-cleaner blowers were used to exhaust the air; it included no hand pump to be used in case the electric current failed; it was geared to permit only a few respiration rates; and it was fitted with intricate fastenings which interfered with the rapid introduction of patients in emergencies. In spite of these deficiencies the machine was a real asset to life-saving technique and was welcomed by the medical profession. Philip Drinker and Louis Agassiz Shaw, who had collaborated with him on the invention, at once applied for a patent, which was finally

granted in December, 1931, two years after the date of application. From this time on Shaw has been out of the picture.

During this two-year interim, in the spring of 1931, a new figure entered the picture. It was John Haven Emerson, humanist and inventor, with a gift for mechanics approaching genius and delighting in the development of delicate and accurate scientific apparatus. He was twenty-five years old, a son of Dr. Haven Emerson of Columbia University, and the proprietor of a rather unique machine-shop located above Campbell and Sullivan's fish emporium in Harvard Square, Cambridge. The establishment is an excellent projection of its owner's personality. The little office, up two gloomy flights from the entrance, is obviously of minor importance in the proprietor's mind. Dusty, cluttered with papers, with a few schedules pinned to the walls in a casual attempt at office system, it boasts of a double desk for the boss and his chief of staff and a child's stool for visitors. There is no clerk or stenographer. Emerson himself answers the telephone—if he is within hearing. The ordered activity of the shop which occupies the rest of the floor provides a startling contrast. It is staffed by four associates (they would hardly recognize themselves as "employees"), all of whom are nearly as unordinary as their chief. Several are Harvard graduates or near graduates. There is no shop discipline. In emotional moments they may shout for "Jack" or burst into fervent song. The Emersonian collaborators include David L. Garrison and Maxfield Parrish, Jr. The output of this organization is extremely catholic. It specializes in complex apparatus such as the Barcroft-Warburg device for cancer research, the Emerson portable oxygen tent, the Emerson micro-manipulator for controlling micro instruments under any degree of magnification (it took Emerson five years to perfect it and it is used by research institutions in this country and abroad), and the Emerson diaphragm respirator. But in slack times the shop is not above making a pair of hinges or supplying an odd screw to a student repairing a second-hand typewriter.

It was in the spring of 1931 that Emerson first saw the Drinker respirator in operation at the Children's Hospital in Boston. Some members of the staff pointed out certain weaknesses in the machine and suggested that he figure out remedies. He said he would think about the problem, and a little later he talked to Drinker about the possibility of substituting a new type of blower. Drinker was not interested. Until that time Emerson had no thought of building a respirator. He now began to play with the notion of a machine which should embody all his projected improvements. Emerson says that the idea appealed to him as a challenge in applied mechanics and that he had no suspicion Drinker might object. Those who know him accept this statement. The device was designed to save life, and this, in his mind, precluded commercial jealousy. That Drinker's machine was not yet patented and that it seemed doubtful if it ever would be, was irrelevant. He probably would have proceeded with the improvements in any case.

The Emerson respirator was completed in July, 1931. It was far superior to the Drinker product. Instead of a blower it employed a silent leather diaphragm. It was adjustable to any respiration rate. The cost was \$1,000 instead of \$2,300 or \$2,000, the price of the other apparatus. That summer an epidemic of poliomyelitis swept New England, and one of the early models was left for trial at the Providence City Hospital. The next day it was put in use to save the life of a desperately paralyzed boy, Emerson and Garrison standing by to demonstrate the mechanism in operation.

This dramatic success marked the beginning of Drinker's open hostility. He was bitter at what he evidently felt was an invasion of the respirator market and spoke of legal protection against infringements. His objurgations were echoed by one Collins, of Warren E. Collins, Inc., manufacturers of medical apparatus, who by this time had acquired the exclusive rights to manufacture Drinker's machine. Collins, in fact, had been turning out respirators and paying royalties to Drinker long before the patent was issued. Drinker admits that he received a part of the profits, but neither he nor the manufacturer has ever announced their receipts. The only clue to the amount which the inventor pocketed comes from Collins, who once complained that he was forced to pay a royalty of \$300 on each sale. Accepting this as fact, and estimating that at least 150 machines had been sold when Drinker renounced his bonus in the fall of 1931, it is easy to see that the inventor had not fared badly. The payment of royalties, of course, would not exhaust the respirator's financial possibilities. Taking into account a subsequent reduction in the price of the Drinker machine, and considering the average price to be \$1,750 instead of \$2,000, it is clear that Collins must have banked at least \$262,500 in gross receipts when he stopped his payments to Drinker.

Up to this point Drinker and Collins fought alone for their monopoly. When Emerson declined to weaken and continued manufacturing in spite of threats and remonstrances, officials of the university intervened. Whether they did this deliberately, with knowledge of the facts, is not known. This phase of the story is mysterious and confused. Principals operate vaguely through agents. There are enigmatic whisperings and unintelligible movements behind an impenetrable curtain. Emerson and his friends have been unable to obtain an explanation of these activities. In any event, after some preliminary correspondence, Emerson and his father called on Dr. David L. Edsall, the dean of the Medical School, and placed all the facts before him as Emerson knew them. Deprecating the controversy, Dr. Edsall asked Emerson as a favor to the university to withhold all commercial advertising about his machine for a period of two weeks. The Harvard Corporation, he explained, had the disposal of the patent rights under advisement and it seemed probable that eventually they would be turned over to the public with only enough control to insure reliable workmanship.

To this proposal Emerson agreed. Some two weeks later the Dean wrote him a noncommittal letter stating that the corporation was still discussing the problem. After another three weeks had passed and Emerson had grown restive, Edsall sent another communication similar to the first but without suggesting release from the obligation to refrain from advertising. Exactly nine days later Warren E. Collins, Inc., announced the completion of a new model respirator selling at \$1,500. The design was a great improvement

over the earlier Drinker apparatus. This was less surprising when it developed that every mechanical change, without exception, which the Collins concern thought worthy of featuring in their new advertising material had appeared first in Emerson's machine. When, in the face of this performance, the university maintained an attitude of indifferent silence, Emerson decided to call on the Dean. Edsall released Emerson from his promise not to advertise but begged him to keep the story from the public. Emerson countered by asking whether the university proposed to exert its influence in creating a monopoly of life-saving devices for the financial benefit of favored individuals. If this was the policy, he said, he would ignore the patent and fight. The Dean replied that the matter was not in the university's hands. The next day, determined to get at the root of the matter, Emerson talked with President Lowell. Mr. Lowell had little to say except to reproach him for interfering with "the purely altruistic action of Mr. Drinker." He stated that the university had no control over the Drinker patent.

Four months later the Collins corporation entered suit for infringement. This is now pending. It seems to many physicians who are familiar with the facts that the ethical importance of this affair entirely transcends the legal equities. They believe that the right to manufacture therapeutic or life-saving devices developed in a university should be available to anyone who can guarantee reliability and a reasonable price. The value of Emerson's machine is unquestioned. Experts who have examined both report that the Emerson product is at least as efficient and reliable as the Drinker device. And, finally, the Emerson respirator has been officially accepted by the Council on Physical Therapy of the American Medical Association. There can be no better testimony as to its value.

As for price, the Emerson device has always sold for at least \$500 less than the Drinker apparatus. Curiously enough, this point is the one which seems chiefly to agitate the Collins concern. Although the Collins attorneys announced that "unlike many patent suits in which the maintenance of royalties is a chief point at issue, it is stated that the present suit is being prosecuted solely in the interests of public safety," they have recently sought a settlement under which Emerson would pay a 10 per cent royalty on the sale price of each machine and agree to a price-fixing arrangement. It is hard to see how the interests of the public would be served by such an agreement.

Another practical consideration, apart from purely ethical grounds, is the opinion of various authorities on poliomyelitis that both Collins and Emerson should continue to manufacture. In the event of a serious epidemic of infantile paralysis, they say, it would be impossible for either concern to produce all the apparatus which might be required. Healthy competition, furthermore, usually stimulates the development of improvements.

Whatever the outcome of this particular controversy, there can be no doubt that the rights of the community in cases like this should be protected by some accepted code. The exemption of educational institutions from taxation implies contingent obligations. It has been suggested that therapeutic and life-saving devices developed in colleges should be patented and that these patents should then be transferred to an inter-institutional commission empowered to license all worthy applicants. Almost any plan which would preclude selfish monopolies and unreasonable private profits would be preferable to the present unsatisfactory condition.

Big Business Cries for Help

By PAUL Y. ANDERSON

Washington, February 18

FRANKLIN ROOSEVELT'S indomitable optimism will be subjected to worse trials than attempts on his life before he has the Presidential chair very warm. It is difficult to recall any man in modern times who has been required to shoulder such terrific responsibilities. Lenin, it is true, planned and initiated the transformation of a medieval agricultural empire into a cooperative industrial commonwealth, but Lenin had inherited the blueprints of a dozen political geniuses, and he had brilliant collaborators. Roosevelt will have to plow much new ground, and it becomes more apparent every day that he is expected to do it almost single-handed. It is difficult to see how the federal government can get the country out of its plight without complete and intelligent cooperation from those who control its wealth. Yet our vaunted "wizards" of finance and industry today are the most thoroughly discredited class of individuals in the country; not one of them has advanced an idea worth a plugged nickel. After spouting all over the place for ten years about "political inefficiency" and the necessity of the government "keeping its hands off business," they are now crawling here in droves and entreating the despised politicians to rescue them from the consequences of their own stupidity and corruption. The next President can expect little assistance from them. Moreover, Congress, buffeted between its own problems and the ignorant and malicious criticism with which it has been overwhelmed, is half in a mood to surrender. Even the Senate, the most virile and independent of our political institutions, is pretty well cowed. Obviously we are on the eve of what in many respects will amount to a Presidential dictatorship. I would as soon trust Roosevelt with such powers as almost anyone I can think of, but the prospect has its dangers along with its advantages. For instance, two years of a Hoover dictatorship probably would reconcile the populace to the delays and inconveniences of democracy, but it is possible that Roosevelt may exercise his authority with such wisdom and restraint that the public will be content with an autocrat. It is a risky step and the strongest argument for it is that unless we voluntarily accept Roosevelt as a dictator now, we may be compelled involuntarily to accept someone like General MacArthur a year or two hence. The average citizen probably would be astonished to learn about some of the fancy ideas with which our brass hats have been toying. I understand they are so eager to quell the revolution that they can hardly wait for it to start. This week we were edified by the spectacle of a new type of armored tank, "especially adapted for riot duty," on display at the War Department. We may rely on Roosevelt to put a prompt end to that dangerous brand of nonsense.

* * * * *

THE necessity of an executive dictatorship, if one exists, may be attributed very largely to the newspapers, which have slandered Congress with such persistence and effect that the public has either lost confidence in the legislative arm of the government, or it has lost confidence in itself, or both.

An amazing example of this wholesale vilification occurred recently in connection with the dismissal of David S. Barry, Senate sergeant-at-arms. After refusing an offer of time in which to retain counsel and prepare his explanation, this employee repeatedly confessed to the Senate and its Judiciary Committee that he had accepted \$250 to write a magazine article accusing members of Congress of taking bribes, although he had no proof and no idea whether any existed. Naturally, the Senate dismissed him. Whereupon it was buried under an avalanche of editorial abuse, many of the papers insinuating that the bribery charge was true, and most of them declaring that poor Barry had been immolated by demagogues. As a matter of fact, the most notorious Senate demagogues had promptly rushed to Barry's defense, uttering fearful cries about "the right of trial by jury," "Anglo-Saxon traditions," and "freedom of speech." Long-haired Senator Logan of Kentucky, who last year opposed an investigation of the outrages in Bell and Harlan counties, denounced the Barry proceedings as "mob law," but after vowing to Almighty God that this crime could only be consummated over his prostrate form, went home to dinner without waiting for the roll call, although two days later he contributed a resounding moral treatise on the subject to the front page of the *New York Times*! All this unfair and ignorant criticism is having at least one beneficial effect—it is compelling Congress to consider seriously the evils of irresponsible radio broadcasting. Newspapers, after all, are private commercial enterprises, but the radio is a public utility, and Congressmen are beginning to inquire how much longer those precious channels shall be devoted to the dangerous and demagogic ranting of such persons as Edwin C. Hill and Boake Carter. Their unintelligent comment on public men and measures is offensive enough, but when it comes to using public property (which these channels are) for the purpose of fomenting war with Japan and inflaming national, sectional, and religious prejudice, it is high time the Federal Radio Commission took a hand. Otherwise, a higher authority will.

* * * * *

OLD Guard Republicans in the Senate, who for weeks have been conducting a slow filibuster with the object of embarrassing and discrediting the Democrats, were somehow induced to withdraw their paralyzing influence momentarily, with the result that the Senate, to the surprise of itself and everyone else, adopted the prohibition-repeal resolution. I suspect some slick work on the part of Joe Robinson and Charlie McNary, the latter, unlike Watson and Moses, being unwilling to see the country go to hell in a hack for the satisfaction of saying later that the Democrats drove the hack. Moreover, as the result of heroic efforts on the part of La Follette, Costigan, Cutting, and Wagner, the leaders were persuaded to adopt the eminently sensible course of laying aside pending appropriation bills and taking up the problem of relief. Notwithstanding that less than two weeks of the session remains, it is possible for something to be accomplished. Even the filibusterers shivered when the bank holi-

day was declared in Michigan. I am a reporter, not an economist, and yet this depression seems fairly simple to me. Purchasing power has been destroyed by unemployment, and the cure is to put men back to work. If it is true, as has repeatedly been said, that our chief weapon against the depression is the credit of the federal government, why not use it in attacking the heart of the trouble? Instead of wasting it in a futile attempt to prop up a lot of crumbling capital structures, why not devote it to financing the purchase of commodities by the unemployed, as provided in the Costigan-La Guardia bill, and to launching a gigantic program of public works, as advocated by Wagner, La Follette, and others? Put that question to some "captain of finance," and all you will get in reply will be a meaningless jumble of words. Tom Connally remarked the other day: "All they ever knew was to lend you a dime on a dollar's worth of security, and charge you 10 per cent interest."

■ ■ ■ ■ ■

THE pathetic sight which these erstwhile "leaders" make was heightened this week by the appearance of some of the most prominent before the Senate Banking and Currency Committee, which is investigating the stock market, and of others before the Finance Committee, which is trying to locate the road back to prosperity. Since several of these witnesses are scheduled to appear before both committees, it was suggested that a good purpose would be served by having them first go before the Banking Committee and tell how they caused the depression, and then go around the corner and tell the Finance Committee how to get out of it. It was also suggested, after several of them had testified, that

Pat Harrison had summoned them for the malicious purpose of showing that they didn't know anything. That probably is unfounded: Pat likes a joke, but not at the expense of millionaires. Nevertheless, the proceedings have not been devoid of comedy. There was the spectacle, for example, of Paul Block, Jimmie Walker's old pal, showing up to tell the Senate how to lick the depression. John F. Hyland also was on the list, although, so far as I know, there is no plan to call Gracie Allen or Jockey Gilbert. Fun of a more refined type was on display before the Banking Committee where that magnificent actor and humorist, Owen D. Young, informed the members with many an ingratiating smile and silken gesture, that his purpose in taking 4,000 shares of Insull stock at \$12 a share before the market opened at \$30, was "to help a friend." Poor Mr. Insull was nervous, he explained, lest some outsider buy up the stock and get control of the organization, so Young obligingly agreed to come in on the ground floor. The man is simply a marvel. If times were less critical I should be reconciled to seeing him in the Cabinet, just for the privilege of watching him perform in public. But there was nothing funny about poor old Charlie Dawes. The familiar theatricals were conspicuously absent from his testimony. He seemed badly licked. For a man who had "damned" and "helled" his way through a dozen Congressional investigations, it was a tough job to sit there meekly and cough up the confession that his bank had violated the principle of the law in lending Insull companies a sum almost equal to the bank's capital and actually greater than its surplus. It would appear that many of the gods of the Coolidge-Mellon era had, in addition to feet of clay, heads of bone. Some of us intimated as much at the time.

The Spread of Barter

By MALCOLM ROSS

BARTER in the United States is no longer a tentative experiment. At present there are 159 barter organizations in 127 cities of 29 States. Perhaps a million people daily receive part of their living through these exchange associations. As the movement has grown it has developed along varied lines and its aims now range from simple relief to the universal substitution of scrip for legal money. In its modern form barter began as a device for permitting the hungry access to surplus crops. Workers were idle and could not buy; food was rotting in the fields because there was no profit in harvesting it. It appeared sensible to set the idle to work as share-croppers. From this simple beginning barter has evolved into complex forms which touch the economic order at vital points. Several associations are already projecting national movements.

Barter as a relief measure has developed on a grand scale in California. Last spring a few men in Compton, California, began to exchange their labor on truck farms for sacks of vegetables—two days' work for a week's supply for a family. The croppers stocked a warehouse with their surplus vegetables and began to exchange with one another. A man paid in celery would exchange some of it for oranges, potatoes, and, eventually, for fish and meat. The system was soon expanded. Cobblers and tailors, doctors and dentists contrib-

uted their services to the croppers and were given credit for the variety of services and food available. When other units were formed, jobless radio operators set up communication between the exchanges. Each morning reports went out that this or that exchange had potatoes, dairy products, or mutton in excess of its own needs; whereupon the exchange managers shopped around the circuit for needed goods or services.

The movement has strong public support. The truck farmers obtain labor in exchange for off-grade products. Taxpayers are happy in the knowledge that more than 200,000 jobless people are being cared for without tapping the relief coffers. The exchanges are credited with preventing hunger marches, while their leaders offer assurance that "socialistic trends are conspicuous by their absence." On the assumption that the exchanges are expedients, to be dissolved when the emergency shall pass, much official support has been won. The Los Angeles County supervisors supply oil and gas to move the exchange products. Empty warehouses, old clothes and shoes, and cash for running expenses are provided by persons pleased to see the unemployed helping themselves.

No gentlemen's agreement to remain docile exists among the barter groups of the State of Washington. Here the movement took on a strong political cast as soon as the mem-

berships attained voting strength. The Unemployed Citizens' League of Seattle, oldest of the groups, has 40,000 members and is allied with other exchanges in the United Producers of Washington. Last June 400 delegates of the State organization convened at Tacoma and decided to override opposition office-holders in pursuit of their own aims of direct relief and guaranteed jobs.

Votes of the Seattle group were sufficient to turn the mayoralty election in favor of a sympathizer, John F. Dore. The city became an active collaborator in the movement. It supplies food, trucks, paint, and lumber from public funds, and it averted its official eyes when flying squads of league members tapped the city mains for those unemployed whose water had been cut off. The Washington exchanges are lively and contentious, and worth close attention.

The Unemployed Citizens' League of Colorado, modeled after but not connected with the Washington league, represents an effort to draw organized labor into the barter movement. There are eleven units in Colorado, comprising 45,000 people and marked by a strong resentment against community chests and city charities. They seek political action, and their printing-press is busy with appeals for the support of the Veterans of Foreign Wars, the Railroad Brotherhoods, and the Farmers' Union. To the American Federation of Labor the following argument is advanced: The jobless man is a potential scab. Organized labor is confronted with the existence of thousands whose need the unscrupulous employers exploit by taking their labor at bargain rates. Organized labor, therefore, should aid the barter movement.

The Colorado league seeks legislation to enable the unemployed to produce goods and food for themselves. They promise to consume all they produce in order not to compete in the open market. The league has a few coal mines and it sends members out as share-croppers; but it is much poorer than the Washington associations. Barter on a large scale flourishes best in sections where crop surpluses are easily accessible. The California exchanges are particularly favored. They have the most essential commodity, food, a warehouse goods against which other supplies and services can be bartered. Wherever crops are less abundant, as in Colorado, the exchanges must produce such commodities as coal or timber, which compete with the products of established firms and arouse opposition.

This dilemma is perhaps best shown in the Dayton, Ohio, Association of Cooperative Production Units. In their phraseology, they wish to substitute "producing-using" for "earning-buying." Their aim is to organize the unemployed, the old, cripples, and other dependents into neighborhood groups whose industry will provide articles having value both for exchange with other groups and for sale in the open market. Actually, some 800 families are at work in seven units, engaged variously in gardening, canning, raising rabbits for fur and meat, baking, cobbling, and making quilts. One group is building a shoe factory out of discarded wood paving blocks. Eventually the association hopes to move the units into the country to farm and to begin the manufacture of rugs, blankets, rabbit-skin caps, and so on.

In theory, a wide-enough variety of products and services for exchange between groups would make them independent of the regular markets. In present practice the production

units exist by grace of city aid. The Council of Social Agencies lends them money. The city relief store provides raw material which the units pay for by adding the value of their labor and then giving back part of the finished products. It seems evident that the units could not at present get along without a subsidy. It remains to be seen whether they can outgrow the need for aid, and can meet the inevitable opposition of conventional producers.

Instead of starting new industries the Midwest Exchange, Inc., of Yellow Springs, Ohio, brings existing producers together. Each member carries on an ordinary sales-for-cash business in the open market, but barter his surplus with other exchange members. A rubber manufacturer puts tires into the common pool, accepting in return printing, foundry work, and labor put up by other firms in order to establish credit. Antioch College is a Midwest member, since it is a producer with a printing shop, commercial research laboratory, and other facilities needing a larger market. Arthur E. Morgan, president of Antioch, helped found the Midwest Exchange, partly as an outlet, through barter, for college industries and partly because he believes that barter between manufacturers has an important future.

The Yellow Springs Exchange is an independent unit giving a retail outlet to the wholesalers in the Midwest Exchange. In theory each producer should have a retail auxiliary in which employees can spend the scrip they receive as part of their pay. Actually the Yellow Springs Exchange is the only retail unit in operation. It issues scrip, which it pays out to Midwest members for goods, and which it accepts for retail purchases made by Midwest employees. Besides functioning as a Midwest auxiliary, the Yellow Springs Exchange barter with farmers for scrip and goods, and has the services of workmen to offer. This combination of the Yellow Springs and Midwest exchanges is considered by its founders as a first step toward making barter so important in any region that business can be conducted smoothly no matter how serious the collapse of the money market may be. The extension of the scheme on a national scale is projected.

The tendency to make local exchanges the nuclei of a national system has appeared in many places. The Natural Development Association of Utah has a strong missionary leaning toward replacing the present money system with universal barter. It would bring existing producers into the fold, enter the producing field itself, and become self-contained and independent of all regular financial agencies. In diversification the Utah exchanges have gone farther than any of the groups, and great local success has widened their hopes.

In New York the Emergency Exchange Association, with economists, lawyers, and engineers on its advisory board, is offering its services and advice to all exchanges. It looks toward the organization of a national string of barter groups.

An aspect of barter common to all groups is the use of relief money to furnish the unemployed with raw materials on which they apply their labor to produce goods they themselves will consume. It has been suggested that the Reconstruction Finance Corporation should stop making work for the unemployed on roads and put them to work producing goods for each other. If that suggestion were followed, the United States government would become the biggest barter group in the country. The question is open.

We're in the Army Now

By OWEN R. LOVEJOY

AMERICA has suddenly become conscious of an army of transient youth. Boys wandering from home present one of the oldest problems in history, but it is only in these days that migrant youth has made the front page. This is partly because normal conduct has recently been invested with mysterious significance by the new psychology and partly because a situation unprecedented in modern times has multiplied the number of boys who leave home.

One can readily understand why some boys forsake the domestic inclosure and take to the open road. The spirit of adventure is strong in youth—indeed, it is one of its cardinal virtues, which from age to age has helped to advance the race. But the spirit of adventure is not alone responsible for the rise of this wandering army which has suddenly become the subject of popular interest and of the solicitude of social-welfare agencies. Loneliness, poverty, school monotony, domestic discord, and broken homes are other important factors. Youth is as conscious as the elders of what Dr. Nels Anderson calls the invasion of the home. "The home was never so insecure, for these people have left their firesides because they were convinced they would be better off on the outside than within." Mrs. Sidney C. Borg fittingly calls them "depression transients."

The futility of attempting to deal with the problem of these "depression transients" as a project distinct from all others should be obvious. It should also be obvious that since these boys, no matter how numerous, do not constitute a homogeneous mass—instead, each is an American individual with his own background, his own emotional reaction to our unusual national plight, his own family traditions, and his own ambitions or lack of them—no kind of mass treatment, however kindly on the one hand or rigid on the other, can hope to succeed. This fact has been recognized in the United States Senate by the members of the Subcommittee on Transients, who have sought advice from educators, physicians, financiers, social workers, and others interested in the problem. Senators La Follette, Costigan, and Cutting, who constitute this subcommittee, recommended an appropriation of \$15,000,000 for the relief of transient boys. It was proposed that this fund should be administered by a federal board but that the working out of details should be left to the several States. The plan has been widely approved, and it was generally believed that if any extensive relief measure went through Congress at this session this feature would be sure of inclusion.

The disturbing word now comes that the War Department, in order to make up for the much-lamented reduction in the military appropriation, has obtained an additional appropriation of \$20,000,000 as a special fund to be used in placing 88,000 transient boys in citizens' military training camps. Of this amount \$5,000,000 is made immediately available. The program undoubtedly is the result of a genuine and sincere conviction, but it is disheartening that this amazing measure passed the Senate without a dissenting vote.

The bill provides, according to the *New York Herald Tribune*, that camps shall be open for a year to the "thousands of youth roaming the land in search of work and a

place to sleep." It is estimated that 88,000 boys between the ages of fifteen and twenty-one will be concentrated in these training camps. Senator Reed of Pennsylvania estimated that the expense of caring for them would be \$250 a year for each. The boys will not be forced into these camps, but those who have been out of work for a period of six months may apply for admission and will be accepted if they are American citizens and sound of mind and body.

There are numerous objections to this proposal. While admission to the camp is voluntary, a boy who has entered will have substantially the same care, treatment, drill, exercise, and vocational training that a soldier receives in peace time, though it will be possible for him to leave the camp at any time if he can obtain employment. During this period of training the boys will be under immediate charge of regular army officers, and while no reflection upon the intelligence or general qualifications of these men is intended, it is difficult to suggest a group less well qualified for the instruction and training of youth along any except strictly military lines. The chief objection from the standpoint of the future welfare of these boys is that no constructive educational program can be carried out by mass treatment. At the same time any number of unemployed educators, social workers, recreation directors, and craftsmen are available to furnish individual guidance to the entire number of transient boys, provided they could be distributed in small groups in suitable places throughout the country.

The daily press indicates that the public is aware of the implications of this measure. While these enlisted youths will not be technically included within the military establishment, the country will actually have under training more than double the present number of soldiers in the United States. This emphatic militaristic gesture, made in the name of relief, provides a striking example of the resourcefulness of the military bloc in directing the actual policies of our government at the same time that we are proclaiming to the world our desire to disarm and to be at peace with all mankind.

Under the provisions of the program which is still before the Manufactures Committee of the Senate a federal board would cooperate with agencies in every State to work out plans according to the varied needs in different sections. Among the facilities for care and training immediately available, the following are suggested:

1. In every instance where the boy can wisely be returned to his home this should be done. It cannot be done without the aid of some trained worker who by intimate personal contact can discover the boy's motive in leaving home and the appropriate methods by which he can be returned.

2. There are many distressed farms throughout the country, some in the hands of banks and insurance companies which are eager to liquidate, on which boys in small groups of three to ten could be placed under wise direction and with no cost to the farmer beyond the provision of proper supervision and a home-like atmosphere. This policy has been followed for years by the New York Children's Aid Society with marked success and could be extended.

3. There are millions of acres of land in America that were once covered with forests and are now either entirely deserted or occupied by struggling farmers who cannot possibly make a living. Thousands of boys could be put to work reforesting these marginal lands and caring for the young trees until they are established, and many others could be engaged as junior forest rangers to safeguard the areas from fire, which now destroys millions of dollars' worth of national resources. It is estimated that within fifty years a program of this kind would enrich the American commonwealth sufficiently to wipe out the national debt.

4. There are hundreds of summer fresh-air camps for children, maintained by public and private philanthropic agencies. Thousands of boys could be placed in these camps in groups not to exceed 100. Under educational, health, and recreational supervision, they could be properly cared for and trained until suitable occupation was found for them.

Certainly the public ought to give careful and deliberate consideration to any plan that uses \$20,000,000 of public money to catapult 88,000 of our American boys into United States Army camps at a time when an increased military establishment is the least of our national needs.

Michel de Montaigne: 1533-1933

By JACOB ZEITLIN

WHEN students a few months ago were appraising the work of Spinoza, they dwelt on its importance in liberating the minds of men from the bonds of theology and dogma. It was a work in which Montaigne anticipated him by almost a century. If the ideas of the Frenchman were set down with as direct and naked a simplicity as those of the Jewish philosopher, their originality and boldness would be just as startling. But for all Montaigne's intellectual affinities with Spinoza—it is curious to observe that from his mother's side there flowed in him the blood of the same Spanish Jews from whom Spinoza is descended—he was not made of the stuff which exposes itself to social and moral excommunication for the sake of an inner conviction. His physical security was dear to him, and as a privileged member of the existing order of things he was loth to create an undue disturbance in the thoughts of men. Yet his convictions pressed for utterance. He had an artist's passion for communicating himself, and his literary genius found a way to say what he wished without the risk of dangerous censure. We owe the creation of the personal essay to Montaigne's need for a form of expression which would serve to veil the daring quality of his ideas and act as a lightning-rod against ecclesiastical fulminations.

The celebrated skepticism of Montaigne was chiefly a means of clearing the ground of the aged dogmas and outworn beliefs which encumbered it, of stilling the curiosity of men regarding the metaphysical, the absolute, the supernatural, and the miraculous, as things utterly beyond their grasp. His object was to free the mind for the untrammelled contemplation of all that directly concerned a purely human existence. His ripper thinking was distinctly positive in its coloring, so much so that he is sometimes represented as a precursor of Bacon and the scientific method. Yet this is a questionable association. He had too little faith in the power of the mind to comprehend and formulate under general laws the vast and complex diversity of natural phenomena. In view of the state of scientific inquiry in the sixteenth century, his attitude is proof of a critical intelligence rather than of a narrow vision. His position should not be confused with that of a group of thinkers who in the twentieth century persist in regarding science as something alien to man's highest interests. He made no deliberate exclusion of any truth that was certified to man through the exercise of his own natural faculties, or attested to him by the in-

telligence of an "attentive, subtle, impartial, and unprejudiced inquirer." The scientific quality of his temper is evident from his respect for facts—the facts of history as well as the facts of mental experience.

The feature in Montaigne's work that it is important to stress, if only for the reason that it is too often slighted, is the seriousness of the moral design that underlies it. In a world of dissolving loyalties and unsettled values he tried to discover the principle which would enable men to give some order and meaning to their lives. And he placed that principle ultimately in the conscience of the individual. Overlooking with a dignified silence the faiths and the institutions by which men were supposed to be kept in the path of duty, he quietly but unmistakably proclaimed the idea that every person is an independent moral being, completely responsible to himself, and to himself only, for the regular conduct of his life, and that it is the duty of each man to establish within himself a standard by which to censure or approve his own actions. "Conscience alone," he said, "marks us truly as what we are, and by itself overbalances all other qualities." He believes in man's ability to develop his powers as a free and self-sufficient moral being for whom the constraints of conventional law and organized religion are superfluous. It is an ideal of singular elevation, leading him to declare that there is no private advantage for which a man is justified in doing violence to his conscience, and that not usefulness but beauty is the criterion of a good action.

If Montaigne's vision of human character is conspicuous for its high-mindedness, it is at least equally conspicuous for its balance. The truth on which Aldous Huxley in our own time still finds it necessary to insist so passionately—namely, that man is as physical as well as an intellectual being—was much fresher in the sixteenth century and more in need of statement. And when was it ever stated more succinctly and more judiciously than in this sentence: "It is not a mind, it is not a body, that we are training; it is a man, who ought not to be divided into two parts"? It is the essence of humanism, and if it were taken to heart by all who profess that creed, it would save them from many aberrations. Modern critics who are accustomed to setting up an opposition between nature and man or nature and reason have accused Montaigne of naturalism, but there is little justification for such a charge in his writings. For him nature is simply the all-embracing principle of life. It includes man

and it includes reason among its manifestations. It includes a great deal besides, which the mind is powerless to fathom. Because of the vastness of the idea which it stands for, the word is apt at times to be employed a little vaguely and with ■ rhetorical coloring. Primarily Montaigne was concerned with restoring man to his *proper* place in nature. If in moments of satiric bitterness he was tempted to degrade him to the level of the lower animals, it was only through reaction against those who tried to elevate him to a place among the angels. The excesses of intellectualism and spirituality provoked him sometimes to exalt the instinctive elements in life, just as the artifices and affectations of society led him to admire with some extravagance the primitive and spontaneous virtues of the barbarians. In his normal and typical mood Montaigne thought of man as an animal ennobled by the faculty of reason, whose wisdom consisted in knowing how far to yield to "the simple authority of nature," while leaving to his reason the main burden of guiding his inclinations.

In the same humanistic spirit that determines his analysis of human nature, Montaigne makes the beauty and meaning of life consist in an inner quality of consciousness that brings to its owner the greatest satisfaction and serenity of which a man is capable. The great aim of life, in his view, is nothing else than to cultivate the art of living. This can easily be perverted, as has, indeed, been done by unfriendly or undiscerning critics, into a counsel of selfish indulgence and pleasure-loving dilettantism. At times he uses language which gives an opening for such an interpretation, but his ultimate intention is to concentrate the interest on the highest potentialities of our nature. To compose our characters, to teach the soul how to control and circumscribe itself so that our life may glide soberly and silently, "with goodness, moderation, equability, and constancy, and without bustle and ostentation," is not a facile undertaking. It implies an arduous self-discipline. It has, indeed, an old-fashioned air that is uncongenial to the temper of our time, not merely because of its emphasis on serenity, but because the burden of social responsibility weighs with ■ heavy pressure upon us. "We do not live for ourselves," one of our earnest leaders not long ago remarked, misquoting the ancient sage who had said, "We do not live for ourselves alone." Montaigne would have seized upon the distorted maxim as symptomatic of the great defect in our lives. The trouble, he would have said, is precisely that we live not enough for ourselves and too much for others. To know how to belong to oneself, to reserve ■ back-shop wholly our own where the soul may live on that which concerns it, he held to be the most important thing in the world. "The principal duty which we have," says Montaigne, "is, to every man his own conduct. That is what we are here for."

Abstracted from its framework, this teaching is seen to have a serious independent value. Its uniqueness, however, lies in the process by which it is unfolded and in the subtle art by which its precepts are insinuated. In reading the "Essays" we are made to feel that we are in the presence not of ■ system of morals but of ■ living person engaged in the task of adjusting himself to the conditions of his social and mental environment. His writing is the record of his intellectual growth, and preserves the traces of many hesitations and gropings on the road to the clarification of his judgments. He used the word *essay* originally to denote the uncertainty and the tentative quality of his ideas, and when

the ideas were fully matured he deliberately cultivated a method of writing which by its informality should deter the attention from probing them too deeply. The bolder his thoughts became, the more offhand and unsystematic grew his manner of expressing them. He posed before the public as an inoffensive babbler who liked to talk about himself and to indulge himself, out of sheer idleness, in venting strange humors and opinions which he would be sorry to see taken seriously by anybody. While delivering the shrewdest thrusts against superstition and prejudice, he managed to beguile the unwary into accepting him as a charming gossip of lively intelligence and skeptical insouciance. By his "dissolute" style he encouraged the belief in the slackness of his principles. As a literary artist he has imposed himself more fully on the generations of readers than as a moral philosopher, yet in at least one passage he confides to us that he prides himself chiefly on the richness of his substance and that he does not like to hear praise of his style, because it implies a certain disparagement of his sense. The device which he chose for his title-page, in revising the "Essays" shortly before his death, was "*Viresque acquirit eundo.*" It means that the chief object in life for Montaigne was progress in self-mastery. His book shows us how he pursued his ideal.

The Snob Racket

By S. E. MORISON

ONE industry seems to be thriving in these gray days of depression—the snob racket. The mail of the bourgeoisie is filled with appeals to their ego. If you are slipping in the economic race, you may at least dig in socially, for a price. Here is what came to me in three successive morning mails.

The first exhibit is an invitation to be a member of the National Society of Puritan Descendants. This society has many purposes, among which are "to foster patriotic educational research," to "collect records of the Puritans and their progeny [*sic*]," "to manifest tribute generally to the early and colonial days," and "to halt the vicious tendencies and philosophies that threaten the very foundation of our national life." (Can this mean Technocracy?) "All that we have today," avers the N. S. P. D., "we owe to the foundations laid by our Puritan forbears. They were the ones to give us our laws, our language, our political institutions. They created a painting, a sculpture, a mathematics, and an astronomy worthy of comparison with the best art and literature of Europe. . . . They fought the Revolution, wrote the Constitution, developed the continent, and founded ■ nation. . . . This is your legacy. Will you cooperate with us to preserve and protect this inheritance?"

This ringing appeal to the Puritan "progeny" issued from that quondam apex of culture, Beacon Hill. Eager to halt vicious tendencies, to view Puritan painting, sculpture, and astronomy, and to "manifest tribute generally," I lost no time in visiting the office of the N. S. P. D. I found three young ladies sending out circulars. The chiefest of the three explained how one manifests tribute to the early and colonial days. Tribute means \$10 for annual, \$25 for life, membership. Of course, the "historian general" would have to pass

on my ancestry, but there would be no trouble about that. You don't have to prove your ancestor was a Puritan.

There were some swell names on the society's printed appeal: Leverett Saltonstall, Julius H. Tuttle, Richard Cabot, George R. Nutter, Calvin Coolidge, John H. Finley, Henry Parkman, and Francis Russell Hart, among them. True, the "members" with whom I managed to establish communication—many were beyond that—either declared they had never heard of the society or admitted having received a handsome diploma of complimentary honorary membership. But their names will draw just the same. Yea, even among the Puritan "progency" a sucker is born every minute.

Tuesday's invitation is more festive. It is a letter from Lowell Thomas, well-known author, lecturer, ghost writer, and radio announcer, whom I have long admired from afar but never met. On his own letter paper he wrote:

DEAR MR. MORISON: Last night, Ralph Hitz, president of the Hotel New Yorker, told me that he was anxious to have you stop at the New Yorker when you are in New York. So I volunteered to drop you a note in his behalf, because, first, Ralph Hitz is the kind of chap one likes to help; and, secondly, I'm enthusiastic about the New Yorker and the unusual attention and service they always give . . ."

And he goes on to say that this excellent chap gives "ten-dollar-a-day service and luxury" for "as little as \$3.50 a day." Clipped to the corner of the letter is Lowell Thomas's own visiting card with a note scribbled on it in his own hand introducing Mr. S. E. Morison to Mr. Hitz. I am much impressed. Think of flashing that card in the face of Mr. Hitz and watching him bustle about to provide \$10 worth of service and luxury for \$3.50. And what a hit it would make at a Cambridge cocktail party to say: "Yes, I've just been to New York. Lowell Thomas, you know, had me put up at a nice little place he always goes to." But my dream of meeting New York's intelligentsia was spoiled when my hard-hearted secretary put Lowell Thomas's visiting card under the microscope, and reported my name to be in different ink from the rest of the penned personal message.

Wednesday brought another appeal to "Americans of Revolutionary ancestry." The Institute of American Genealogy, in that stronghold of ancestral culture, Chicago, wants me to help them print "a chronological record of all the passenger lists" of ships arriving in this country between 1607 and 1800. Some job, it seems to me, considering that there were not even ship reporters in the colonies. But the Institute of American Genealogy knows that every passenger list of every boat from the Goodspeed and the Mayflower on is tucked away "in the archives of the ports of embarkation in Europe," just waiting for the I. of A. G. to pull it out and print it. The report is signed, among others, by Bishop Burton, a pair of librarians, and a flock of presidents—the presidents of Mount Holyoke College, the Union Pacific Railroad, the D. A. R., Hampden-Sydney College, and the S. A. R. For \$10 a year I can not only help to support this great work, but receive a genealogical magazine, buy "membership emblem seals," and correspond with a "trained staff." For a \$100 life membership, I can write the letters F. I. A. G. after my name. And no questions asked about my pedigree; I need only be a "white citizen of sound moral character."

I give the palm to Chicago! The snob racketeers of Boston and New York are mere chisellers in comparison with the I. of A. G.

In the Driftway

EVEN an old-timer would admit that the snowstorm of February 10 and 11 was sudden and exceedingly swift. The Drifter drove that evening over roads ■ dry as summer; in some sections under repair they were thick with dust. The moon was shining, though mistily, when just before midnight the doors of a New England farmhouse closed upon him. At eight the next morning he awoke conscious of the stillness and isolation which only deep snow can bring. Nothing was visible beyond the white-cased windows except white flakes falling thick and endlessly. At ten when the storm abated the earth was thirteen inches down. After ■ ritual of preparation that began with arctics and ended with mittens, the Drifter ventured outside. The family cat, which has an unmistakable flair for back-grounds becoming to his shining black coat, came along.

■ ■ ■ ■ ■

IN the gleaming morning the old white house looked more then ever ■ part of its ancient setting. Snow was heaped over the door sills and molded high on the steep roof. Only the freshly shoveled path leading away from the back door connected it with the world. Down the meadow, stone walls and great boulders were smooth white mounds or mountains. In the woods beyond, masses of evergreen stood out dark and sturdy in the white world; the stems of tall leafless trees looked thin and brittle against the sky. Air never seems so fresh as when it has been filtered through ■ heavy fall of snow, and to make the first tracks across a snow-covered field is to know why men go to the North Pole.

■ ■ ■ ■ ■

THE Drifter was absorbed in the light-tracked comings and goings of some sparrows when a bob-sled drawn by two horses went past and down the hill like something out of Currier and Ives. In the muffling snow the antiquated sled—and the steaming breath of horses and men—was visible long after all sound of it had died away, until the Drifter began to doubt its reality and his own eyes. But it was real enough, for its tracks made a narrow foot-path for him up the road. A great white birch shone out of the woods. Pine boughs sagged under their burden of snow. Strange shapes stood out where familiar rocks had been—shapes that the light wind each moment modified. Every twig, every thin edge of ice cast a luminous delicate shadow on the perfect snow. Above, the sky was ■ blue shell blown thin over a fragile world that undermining warmth would soon reduce.

■ ■ ■ ■ ■

THE Drifter was delighted to learn that the storm of February 10 was the heaviest in four years. And he thinks he has discovered why it is that snow storms—or anything else an old-timer can think of—are never so impressive as they were long ago. The Drifter's snow storm has already become several inches deeper than it really was, and by 1940 he will be able to say with the best of them, "Why, I remember back in 1933—"

THE DRIFTER

Correspondence

10,000 Miners' Wives

TO THE EDITORS OF THE NATION:

Ten thousand miners' wives marched to the State House in Springfield, Illinois, on January 26 and presented to Governor Horner a petition signed by the Illinois Women's Auxiliary of the Progressive Miners of America demanding the restoration of civil liberties in the coal fields of Christian and Franklin counties and immediate and adequate relief for the families of miners. The petition read, in part, as follows:

We . . . have come to the seat of government in our State to seek redress from the oppressive and intolerable conditions in the coal fields of Illinois. Thousands of working-class housewives have marched to the State Capitol. This is an unusual event in the history of the State but these are unusual times. It is well for the State that we come while we still have faith in government, for that faith has been terrifically shaken during the past year.

When it was no longer possible for our men to have a voice in determining the conditions under which they worked, because of the usurping of this right by the officials of the old union, they broke away from that organization, to which they had given long years of service and devotion, and established a new union that is responsive to the wishes of the rank and file. A reign of terror resulted . . . in which officials of the old union, the coal corporation, county and municipal authorities, and even the State joined—clubbing, tear-gassing, shooting, killing our people, bombing our homes, making it impossible for ■ to assemble or to enjoy any of the rights to which the Constitution of this nation entitled its citizens.

Not only are thousands of our people victims of terror but they are victims of hunger. . . . In ever-increasing numbers our people are losing their homes. . . . We women who live in rented homes are in constant dread of eviction. . . . We are forced to see our sick children go unattended by doctors. Savings have disappeared. . . . Moreover, our mining communities have been discriminated against in the matter of distribution of [State] aid.

Therefore, in the face of these intolerable conditions, we respectfully petition you, the Governor, and members of the Legislature of the State of Illinois: first, for the immediate and full restoration of civil liberties in the coal fields of Christian and Franklin counties; second, for increased and more equitable distribution of State aid . . . ; third, that you immediately pass legislation for unemployment insurance . . . ; and fourth, that you refuse to burden further the workers by the enactment of ■ sales tax to meet this unemployment emergency. . . .

Not only is our welfare at stake, but our faith in the ability and willingness of the government to protect and serve ■ is menaced. Dare you fail us now?

Governor Horner received us cordially—a big delegation of fifty local presidents and fourteen State officers. The day before, a Communist delegation trying to see him had been clubbed and forced out of his office when they would not accept his offer to receive ■ committee of five. Damage to the Governor's quarters resulted, and the next day when I arrived with 10,000 miners' wives the city was a bunch of nerves, with two companies of soldiers in readiness.

Our army was peaceful and well-disciplined, wanting mainly to demonstrate the solidarity of the new miners' union, which we certainly did. We women assembled in the armory, paraded through the streets with a motor-cycle police escort, and marched

down Capitol Avenue to the State House grounds, where we massed about the statue of Lincoln and overflowed into the Capitol. We were in our uniforms—plain white smocks and head bands with our union's name. After I read the petition to the Governor, he replied point by point, with none of the politician's evasion but with statements far from satisfactory to us on unemployment insurance and increased State aid, to be financed not by a sales tax but by taxes on inheritances and high incomes.

The Governor declared he would see that the civil liberties of all citizens were maintained, by suasion if possible but if necessary by the use of any instrumentality in his power. However, he qualified his position on civil liberties by reminding us that an individual's rights do not transcend the community's rights. He did not make clear his stand in regard to the rights of minorities. He was very friendly and expressed his appreciation of our statement that we still have faith in government.

On the matter of settling the turmoil in the mine areas of Christian and Franklin counties, the Governor referred to the conferences he had been having with the two miners' organizations. He said the trouble could be settled if both sides would leave it entirely to him or to some other disinterested person, but that both sides refused to budge. We women demonstrated in the State capital that the Progressive Miners' Union is the dominant one—there are no women marching behind John Lewis to perpetuate the old union.

Since we presented our petition to the Governor, he has announced that he would select a committee of inquiry, which would not include ■ member of the Illinois National Guard, to investigate violations of civil liberties. I held ■ week of meetings in December, but when John Lewis returned from the Cincinnati convention, he ordered the sheriff to stop me, and as a result ■ thousand women were driven off the streets of West

1933

A Year of Endings and New Beginnings in Soviet Russia

This is a year of transition and stock-taking for the Russian people. On the ■■■ of the second Five-Year Plan, the accomplishment of the first Plan—industrial, social, cultural—stands in sharp focus.

For the seventh year, The Open Road will assist the inquiring visitor. All-inclusive service. Experienced staff in New York and Moscow. Moderate rates.

A new booklet on 1933 group and independent itineraries is now available. When inquiring for rates, please indicate whether you prefer to travel alone or in one of many specially constituted Open Road groups. Also state what phase of Russian life interests you most.

Frankfort and one woman slugged when we met to hold a public meeting. I am going back to Franklin County to see what the Governor's declaration means.

Belleville, Ill., January 28

AGNES BURNS WIECK
President, Illinois Women's Auxiliary,
Progressive Miners of America

February 16. Governor Horner's pledge that constitutional rights would be protected failed on February 5 when thugs and civil officers prevented a meeting in West Frankfort, Illinois, and clubbed women. We took the injured women to the Governor, who advised recourse to the courts, declaring that he could not intervene except at the sheriff's request.

A. B. W.

Academic Freedom

TO THE EDITORS OF THE NATION:

Nineteen students of the College of the City of New York have been suspended for participating in a public trial of their president, Dr. Robinson, and the director of the evening session, Dr. Linehan. The trial was a culmination of student protest against the abrogation of academic freedom on the campus.

A student committee of the major metropolitan colleges has been formed to work for the immediate and unconditional reinstatement of the suspended students. Immediate action is imperative. Funds are necessary to carry on a successful campaign. Contributions should be sent to Sarah Sklar, 217 East Twenty-second Street, New York City.

COMMITTEE FOR REINSTATEMENT

New York, February 8

For Brooklyn Consumers

TO THE EDITORS OF THE NATION:

A "candlelight dinner," instituting a consumers' strike against the Brooklyn Edison Company, will be held at Peter's Tavern, 217 Fulton Street (at Pineapple Street) on Wednesday evening, March 1, at 6:45. The objectives of the strike are the reinstatement of 5,000 employees unjustly discharged and a reduction in electric rates. John Haynes Holmes, Heywood Broun, A. J. Muste, and others will speak.

Brooklyn, N. Y., February 17

Contributors to This Issue

STEWART GRISCOM has recently completed a three-year study of the relations between the Boston press and crime for the Harvard Law School crime survey.

MALCOLM ROSS is the author of "Machine Age in the Hills."

OWEN R. LOVEJOY is the secretary of the Children's Aid Society.

JACOB ZEITLIN is the editor of a collection of Montaigne's writings, the first volume of which will appear in March.

S. E. MORISON, professor of history at Harvard University, is the author of "Builders of the Bay Colony."

LOUIS M. HACKER is coauthor with Benjamin R. Kendrick of "The United States Since 1865."

JOHN CHAMBERLAIN is the author of "Farewell to Reform."

ALTER BRODY is the author of a book of folk plays entitled "Lamentations."

The Menace of the German Crisis!

With the appointment of Hitler as Chancellor the eyes of the whole world are focussed on Germany. To understand the present situation and to gain an idea of what may happen, you need more than a digest of day-by-day newspaper stories—you need a complete picture of the German Republic beginning from its foundation 14 years ago. THE BOOK WHICH GIVES YOU THIS PICTURE BEST IS OSWALD GARRISON VILLARD'S "THE GERMAN PHOENIX". Get a Copy now. \$2.50

Sonnet

By MARK VAN DOREN

What golden spider warmed himself and spun
This web that is the flesh upon your bones—
Warming himself beneath a spicy sun
That caught the winds and let their little moans,
Like woven music, enter every place
To hide until love's fingers should be near?
What artisan was singing at your face?
Who wrapped the rest, that too will disappear?
For time, that made the spinner, lets him die.
He will be long in leaving, yet he must;
So every moistened thread of you will dry—
At first to lace; but then a little dust.
And I—oh, time will take my desolate hand
And sift it on you, letting it be sand.

Small Talk

Small Talk at Wreyland. By Cecil Torr. *Horace: A Return to Allegiance.* By T. R. Glover. *Anecdotes of Samuel Johnson.* By Hester Lynch Piozzi. *A Small Boy in the Sixties.* By George Sturt. The Macmillan Company. Each \$1.

ENGLAND would not be what she is if it were not for two classes of idle men: the country gentleman who stays in the country and the parson who regards his "living" as precisely that. Sometimes they do no more than patronize the local flower show and write letters to the *Times* about the habits of the cuckoo. Sometimes, on the other hand, they adopt more individual pursuits. Who else would write the history of the parish church, edit the more indecent of the Restoration classics, classify the lichens, or make a complete collection of the microlepidoptera of the county? Economically they may be hard to justify, but since they add enormously to the stock of pleasantly useless knowledge, they may be easily defended by a rhetorical question similar to the one asked by the friend of an eccentric professor and reported by Cecil Torr: "Do any of you know of any other man in England who would sit for two hours up to his neck in a Syrian sewer in order to copy an inscription?"

The three sections of "Small Talk at Wreyland" were published between 1918 and 1923, but they are not known as widely as they should be, and the present pocket-sized volume of the best bits is more than welcome. Here, indeed, is the finest flower of intelligent triviality. Mr. Torr finds time to indulge a lively interest in the intimate affairs, past and present, of his forbears and his community. What is even more important, he has the skill to record memories, observations, and reflections with keen humor and exquisite grace. The conversation flows with a truly Boswellian limpidity; it seems instinctively to limit itself to whatever is interesting without being "important"; and it succeeds somehow in conveying something beyond the details with which it is concerned—namely, the flavor of an urbane mind.

Outwardly the life of the English countryside is changing. Vacationists crowd it in summer, and are willing to put up with such primitive accommodations that the author of "Small Talk" has heard of rooms with "Wash in the Blood of the Lamb" in illuminated letters where the washstand should have been. But the language and the beliefs of the farmers remain much what they were. When Mr. Torr asked one of them who had just

performed a magical ceremony over a sickly baby if he thought the treatment really did any good, he got a reply: "Well, as much good as sloppin' water over'n in church." And yet, I feel sure, the cautious skeptic who expressed himself thus had never read Chaucer's similarly ambiguous remark concerning the efficacy of a curse: "For curs wol slee right as assoilling savith." In conclusion some reference may be made to a collection of opinions expressed during the eighteenth and nineteenth centuries concerning the baneful effects of a certain popular liquid refreshment. Cobbett spoke of its "corrosive, gnawing, and poisonous powers," and denounced as a "degrading curse" the use of this "weaker kind of laudanum, which enlivens for the moment and deadens afterwards." John Wesley referred to it as a "wasteful, unhealthy self-indulgence," and adjured his followers to "abhor it as a deadly poison, and renounce it from this very hour." Parson Davy, in his "System of Divinity," was sure that it "drains the very vitals of our national wealth." And there are others. But the point is that the liquor in question was not brandy or gin or even beer. It was tea. Nevertheless, Mr. Torr drank port from the age of two, and was surrounded by people who thought nothing more dangerous than an open bedroom window.

None of the other volumes in this series is quite so delightful as "Small Talk at Wreyland" except, perhaps, that which reprints the well-known gossip of Mrs. Piozzi. Despite the reputation of the author, T. R. Glover's Fry Memorial Lectures, published under the title "Horace: A Return to Allegiance," seem rather thinner and more trumped-up than they need have been. "A Small Boy in the Sixties," reminiscences set down by a literary wheelwright and friend of Arnold Bennett's, is full of meticulously recorded details of life in Surrey. It is interesting without having any of the sparkle of Mr. Torr's writing.

JOSEPH WOOD KRUTCH

The American City

The Rise of the City: 1878-1898. By Arthur Meier Schlesinger. The Macmillan Company. \$4.

HISTORICALLY-MINDED Americans will owe a debt of gratitude to Professor Schlesinger for this, the tenth volume of the series "A History of American Life": here, for the first time, is a rounded presentation of a period that has been strangely neglected by scholars. In the hands of Rhodes and Oberholtzer the history of the years 1878-98 has been largely the uninspired record of the rivalry of two groups of party hacks; in the hands of the followers of Frederick J. Turner, the only school to make a systematic study of the post-Civil War era, it has been almost entirely an examination of the settlement of the West and the influence of Western cultural and political ideas on national development. Professor Schlesinger, however, has retrieved this whole generation from obscurity; and through his patient diggings in the dust heaps of old contemporary records he has succeeded in restoring the first forms of the American metropolitan community.

The central idea of Professor Schlesinger's work is that the social history of the United States from 1878 to 1898 is a reflection in a hundred and one different glasses of the rise of the cities and the growing importance of urban living. The United States, during the years roughly included between the two world's fairs of 1876 and 1893, was perceptibly being transformed from a predominantly rural economy with a provincial outlook into a capitalistic nation whose interests were frankly world wide because our industrialists were scanning every distant horizon for sources of raw materials and markets for fin-

ished goods. Professor Schlesinger has not told this story, leaving its recital to his colleague in the series, Miss Ida Tarbell; but he has caught every faintest nuance of the change so that what we have here, in effect, is an institutional history of the American people during its economic metamorphosis.

The thronging of immigrant hosts and of country boys and girls into the mushrooming cities; the growing complexity of the urban world and the ways in which its many problems of transportation, housing, sanitation, and education were being met; the changing roles of women in the home and in business; the great advances being made in higher education; the appearance of a large band of authentic artists, particularly in painting, sculpture, and architecture; the growing diffusion of taste; the struggle in the churches; the activities of the agents of uplift; the fight for good government: such are the larger aspects of Professor Schlesinger's narrative, and he has embellished it with a wealth of detail that cannot but stir the reader's admiration and wonder. American scholars have developed a surprisingly expert facility in the handling of social historical material; there is no question that "The Rise of the City" is the best example of that technique thus far afforded us.

If this book has a weakness it is that Professor Schlesinger has written his history not so much for the lay reader as for other historians. Everybody is here: in the field of the novel, Lew Wallace together with Henry James; in poetry, E. C. Stedman with Emily Dickinson; in painting, John W. Alexander with Thomas Eakins and A. P. Ryder—mediocrities side by side with talents of the first water, receiving careful consideration equally—and without a difference. Surely Emily Dickinson and Stephen Crane are worth more than a sentence apiece, Charles Peirce and William James more than a couple of lines, Eakins and Ryder more than a negligible footnote. The result has been, at least as far as any but the truly informed are concerned, almost a monotonous cataloguing of men and events with no effort to point up the significant and dismiss the trivial.

If John Hay's "The Bread-Winners" is to be mentioned at all, is it enough to characterize that novel by saying merely that it "dealt trenchantly with the labor problem," thus disregarding its social importance as a tract in defense of the rising capitalists of the day? If we are to have a discussion of the place of the daily press in the life of the generation, isn't it worth stopping the breathless narrative for an instant to indicate that the *Chicago Tribune's* transformation, under the same owners, from a liberal organ of the farmers into a standpatter mouthpiece of the industrial and financial overlords exactly reflected the revolution in the chief economic interest of the Middle West? Bob Ingersoll and Booker T. Washington properly belong in a record of the times; but a flood of light would have been thrown on the socially acceptable agnosticism of Ingersoll if Professor Schlesinger had also told us that Ingersoll was always ready in the law courts and on the stump to defend big business and the Republican Party; and Booker Washington's well-intrenched position in the middle-class world of the eighties and nineties would have been similarly illumined had we been told that the Negro leader preached, not the class solidarity of an oppressed race, but the harmless doctrine of self-help. The author's earlier "The Colonial Merchants and the American Revolution" and his "New Viewpoints in American History" amply prove his title to be called a historian of imagination and insight; it is a pity that here he has occasionally let his zeal for presenting half-forgotten curiosities dull his critical faculties.

But to the initiated these are minor faults. It is to be hoped that Miss Tarbell's companion volume on the economic forces that made possible the rise of the cities during the period 1878-98 will have the many excellences of this one: then we shall have of this important period, actually the precursor of our own, a history that it will be difficult to supplant.

LOUIS M. HACKER

Diplomatic Peep Show

British Agent. By R. H. Bruce Lockhart. G. P. Putnam's Sons. \$2.75.

MOST people surround governments with awe or mystery and therefore like to know what goes on behind the scenes. I think this explains the popularity of Lockhart's book. The writing is good but not distinguished, and from the historical point of view there is scarcely a shred of new information. Lockhart saw Lenin occasionally, and Trotzky and Colonel Raymond Robins frequently, during the first half of 1918 when he was England's ambassador to Soviet Moscow, but he casts no new light on their characters or policies. Yet I suppose the average citizen likes to hear how these statesmen actually talked to one another, and Lockhart makes them and himself very human. Anybody who pulls aside two inches of curtain to reveal, sometimes very inadequately, how Russian royalty or Park Avenue millionaires or the bureaucrats of the Washington merry-go-round live is assured a good sale. Lockhart's effort, too, is a peep show—a clean, diplomatic peep show.

Several years ago, when I was writing a history of Soviet foreign relations, Lockhart read to me from some of the diaries used in the preparation of "British Agent." They were interesting, but served merely to corroborate data already available. About the only unrecorded fact in Lockhart's book is the statement that he got Kerensky out of Russia. Kerensky had been overthrown by the Bolsheviks in November, 1917; he hid in the country, however, for seven whole months, until, with Lockhart's aid, he sailed for England via Murmansk, disguised as a Serbian private.

Lockhart's chief value is that he confirms, on the authority of an insider, things we already know: that the "liberal" Lord Robert Cecil was the most anti-Bolshevik member of the British war Cabinet and relentlessly fought for military intervention against Russia; that Lenin and Trotzky were prepared to help the Allies against the Germans in the spring of 1918; that the Sisson "documents" were "so palpably forged that even our Secret Service would have nothing to do with them"; that Russia was out of the war long before the Bolsheviks took her out officially, and that the Entente should have known better than to try to keep her in; that Czarist Russia was rotten to the core, morally disintegrated and riding for a fatal fall; that the Bolsheviks remained "comparatively tolerant" and even permitted bourgeois dailies to appear "until our intervention intensified the terror"—British intervention, he correctly suggests, raised "false hopes" among the whites and increased their anti-Bolshevik terror (the Cheka really started its work after the assassination of Uritzky and Volodarsky and the attempt on Lenin's life); that British consular and diplomatic agents are just plain petty bourgeois in striped trousers and cutaways; and, finally, that Lockhart intrigued against the Soviet Government while maintaining outwardly cordial relations with it, but was never quite as black as the Bolsheviks wanted to paint him. In fact, Lockhart goes down into history as the one high official who, under Raymond Robins's inspiration, realized from the very first day that Sovietism had come to stay, that it was not German-made, and that it ought to be recognized immediately. Though just thirty-one, he stuck to a most difficult and occasionally dangerous post, enjoying himself with gipsies and women all the while, and defended the only sensible policy against the united opposition of the British government and the permanent reactionaries of the Foreign Office, who ultimately achieved his fall.

Lockhart's stand for normal relations with the new regime was based on his keen understanding of the old. He had watched the last stages of its decay. He had lived with the Russian intelligentsia which could sit up long past midnight "discussing how

to make the world safe by revolution" only to be "fast asleep in bed on the morning of action." (Our own infant intelligentsia, by the way, is now training intensively for the ~~same~~ kind of performance.) Kerensky's coterie were Lockhart's friends before they took office and he penetrated to their impotence. He saw the revolution make "violent reactionaries" of men who had been liberals when liberalism was an inexpensive pose. He knew therefore that the only party with a dominant philosophy which the mass would follow was the Bolshevik Party. This is as true today as it was in 1918 when Lockhart played his little act.

In the end, of course, Lockhart proved that he was nothing more than a small-caliber official; for, when London rejected his policy and decided on anti-Bolshevik intervention, he plotted from Moscow with the whites and subordinated principle to loyalty to his employer. Despite his charm, Lockhart is only another "British agent."

LOUIS FISCHER

Cleveland, Full Length

Grover Cleveland: A Study in Courage. By Allan Nevins. Dodd, Mead and Company. \$5.

GROVER CLEVELAND and his age have found their biographer in Allan Nevins. The qualities of the President and the era are subtly mingled in the historian. Cleveland was thorough, industrious, gifted with enlightened common sense; Mr. Nevins has, preeminently, the same qualities. If Cleveland worked often until two or three in the morning on state papers, Mr. Nevins must have maintained a similar grueling pace in his foraging among documents and the living reminiscences of old men to complete so Boswellian a biography. In political philosophy the President and the biographer are wholly in tune; Cleveland, albeit unconsciously, had Manchester and Adam Smith written all over him; Mr. Nevins, too, is inclined to fall back upon a deep belief in the sanative properties of low tariffs, small competitive business units, the free market. In the matter of literary style, Professor Nevins harks back to the eighties, particularly in his feeling for locale (the eighties were the high noon of the "local color" school). Leisurely, compendious, this book abounds in strolls through provincial America. Everything is here, from the economics of the Gloucester fishing fleet and the history of Buffalo in the Gilded Age to a list of the fish—"tautog and squeteague"—to be caught in Buzzards Bay. Professor Nevins has written a biography that will live as long as the memory of Grover Cleveland. It becomes indispensable reading to those who would understand the relatively placid eighties and the turbulent nineties.

If there is anything wrong with the book, it would seem to rest in Mr. Nevins's acceptance of the political philosophy of Cleveland for his own—an acceptance so pervading that he ascribes "eternal" principles to his subject. Thus, Cleveland's stubborn, courageous, "you-be-damned" defense of the gold standard is the voice of heaven speaking. Personally, the reviewer cannot swallow this; events—such as the development of the cyanide process and the sudden lucky revival of gold mining in the nineties—have made Cleveland look wise and Bryan foolish; but if the gold mines of the world had continued to be niggardly (as they had been since the Civil War), what would have happened? As to the "eternal" principle of the low tariff—if all tariffs were removed, what would there be even then to prevent the recurrent glut of markets, the smashing of price levels, and the imperialist contention for the privilege of developing backward sections? Granted the relative sanity of Cleveland's actions, this question will have to be answered before the reviewer can accept the "eternal" principles of Mr. Nevins; depression, until then, will seem to him endemic in capitalism, gold or no gold, tariff or no tariff.

But doubtless this is quibbling, and certainly the reviewer has no desire to fall in with the Blaines and the Benjamin Harrisons. If Mr. Nevins is inclined to echo E. L. Godkin in his opinion of the Populist mentality (although with modern enlightened recognition of the farmers' crying need), he is wholly fair in his treatment of the Pullman strike. In fact, the account here is the best that has ever been written of that hitherto garbled affair. Making use of new documents, Mr. Nevins puts the blame for mishandling the strikers squarely on the shoulders of Cleveland's Bostonian Attorney-General, Richard Olney, whose motto must have been, "Never give a labor sucker an even break." Olney loaded the dice against Debs in favor of the railroads, and Cleveland was misled by false information. An interesting item, contained in an appendix, argues that Justice Shiras did not change his vote in the Supreme Court income-tax decision of the nineties. Shiras has long borne the blame for invalidating the income tax; the obloquy probably belongs to Justice Brewer.

Mr. Nevins's book will, of course, replace the McElroy biography, which was incredibly reticent about the Maria Halpin interlude, and Denis Tilden Lynch's swirling paean to Cleveland, the "man four-square." Lynch, a political reporter, has more convention and campaign color in his pages, but on every other count Mr. Nevins's work is the definitive one. The Bowers life of Beveridge is superficially more brilliant, but for solid merit Mr. Nevins deserves the Pulitzer prize for biography for 1932.

JOHN CHAMBERLAIN

War as Collective Experience

Company K. By William March. Harrison Smith and Robert Haas. \$2.

THE old-fashioned romanticism of war in which "gory" inevitably rhymed with "glory" and "grave" with "brave" is now to be found only in school readers, but another romantic fallacy is at the base of much contemporary war fiction, hiding itself in realistic descriptions of the horrors of war. Most novels of the war, from Latzko's "Men in War" and Dos Passos's "Three Soldiers" to Remarque's "All Quiet on the Western Front" and Zweig's "Sergeant Grischa," are written from the same angle—the impact of war upon the individual and his reaction to it. Whatever artistic validity these portrayals may have—and they owe not a little of their power to this effective distortion of perspective—in toto they give us an impression of war psychology which is almost as misleading as that of the glorification school. This is because they are individual representations of experiences that in their very nature could not have been individual. The data of psychoanalysis and anthropology point to the existence of a collective psyche in the herd which supersedes the individual psyche in mass experiences, as the Freudian unconscious usurps consciousness in dreams and insanity. Much has been made of the ruthless regimentation which crushes the personality of the soldier, but the spontaneous resurgence of this collective psyche, which overwhelms the ego from within, is even more destructive of individual mental processes. This regression of the ego to a collective level is its normal reflex under fire. The soldier who is unable to make this adjustment is a target for shell shock and insanity. It follows that to represent war as an individual experience is to exaggerate certain emotional responses at the expense of others, to gain certain effects at the expense of others perhaps equally worth elaborating.

"Company K" is an interesting attempt to cope with this problem. Instead of looking at the war through the eyes of one man, the author has taken a whole company as his hero, and views the war through its composite eye. His book is a sort of

"Spoon River Anthology" of the war, consisting of 131 monologues out of the mouths of the 131 members of the company. Each monologue is a dramatic sketch covering a particular incident or a particular angle of it, and by swiftly "trolleying" his focus from eye to eye as they do in the movies, Mr. March achieves a panoramic effect unattainable by straight narration. There is a suggestion in the accent of his characters that Mr. March has attended the fashionable academy conducted by Headmaster Hemingway. But whereas Hemingway's understatement is a stage whisper meant to be overheard, a subtle way of calling a spade a spade and getting you to think of it as a tractor, March's starkness is guileless and lends to his monologues the bleak honesty of drypoints.

Curiously enough, the pacifist thread running through the book does not make part of the pattern. The author's pacifism, like that of many of his contemporaries, would appear to be retrospective. But in a diary of the daily job of war, the book has no equal. Mr. March's technical departure, however, does not completely justify itself. Fundamentally "Company K" remains an aggregation of 131 individuals reacting as individuals. Their experiences are skilfully pieced together into a mosaic portrait which gives one a very faithful likeness of the physiognomy of war, but the composite picture lacks the informing expression of a mass soul. It is of course easier to pose the problem than to suggest the solution. Perhaps such a solution demands an expansion of the forms of fiction beyond the possibilities of the medium. But the modern novel has been a resourceful in adjusting itself to the new dimensions which science has added to experience that one may confidently await further experimentation.

ALTER BRODY

Shorter Notices

Texts and Pretexts. By Aldous Huxley. Harper and Brothers. \$2.50.

Mr. Huxley's "Anthology with Commentaries" begins with a preface composed of more or less detached pensées and then proceeds to rather random commentary upon various not-too-familiar passages from the poets. The author believes that the great poetry of the past has been rendered superficially, but only superficially, out of date by the influence of science upon "the conceptions in terms of which men interpret their experience." He prefers "being sober to even the rosiest and most agreeable of intoxications," and he casts his vote for the kind of poetry which "doth buckle and bow the mind to the nature of things." The commentaries are occasionally interesting, but they are not Mr. Huxley at his best. Too often what should be enthusiastic and spontaneous seems rather painfully pumped up.

The Two Thieves. By T. F. Powys. The Viking Press. \$2.50.

Man is nothing but mortal dust. This has been T. F. Powys's theme from the first, and if the theme itself is considerably older than Ecclesiastes it is a good theme for all that. Mr. Powys has had his own way of saying it and his own corner of the earth, which one suspects may exist only in his own mind, in which to place his hero, God, and His brother, Death. Man, in Mr. Powys's novels, is not even the quintessence of dust, but the mere dust of the plowed fields, the brown earth, strong-smelling, hard, and cruel. In this delineation Mr. Powys has always had two manners, one considerably more elevated and even intellectual than the other. In the first occurs a drawn battle between Good and Evil, in which Death often steps in and claims the spoils. The second manner at its best has been dubious allegory; at its worst it has been merely quaint. The present volume illustrates very well its author's best and his

worst. The first story of the three, In Good Earth, is the tale of John Gidden, eager to sow his seed in good ground after his forbears had for long struggled with barren earth and no harvest. That he should at last find himself the best seed and God's Acre the finest ground for it is the climax of a mood strongly held and firmly advanced to a doom that is felt to be inevitable. The other two stories, God, and The Two Thieves, in the first of which God is a high silk hat out of which riches come and in the second of which he is a thief stealing the allegorical vices which have made a man, for his little time, great, deserve small credit. Mr. Powys remains one of the unique writers of his time, and the best of his books are classics, if minor ones. But he has always written under the threat of his manner, and he has—when it was at its best—succeeded by its distinction. This time its weaknesses have on the whole betrayed him.

Sardinian Sideshow. By Amelie Posse-Brázdová. Translated from the Swedish. E. P. Dutton and Company. \$3.

In 1915 a Swedish girl succeeded in making her way across Germany and Austria to join her fiancé, a Czech painter, in Rome. They had hardly been married when war was declared between Italy and Austria. The painter and his bride were sent to Sardinia for internment. Mme Posse-Brázdová was the bride, and she has now written a book which records her rather unusual experiences and describes the strange island where she and her husband had to live for about a year. But it is not the novelty of its subject matter that has made her book popular; it is the personality of its author. Mme Posse-Brázdová is a woman of the world, and she tells her anecdotes in a manner that the public will find Continental and diverting.

The Cambridge Ancient History. Volume IX: *The Roman Republic, 133-44 B. C.* Edited by S. A. Cook, F. E. Adcock, and M. P. Charlesworth. The Macmillan Company. \$9.

The revolutionary tribunates of the Gracchi; the imperial wars in the East and the conquest of Gaul; the professionalization of the Roman army under Marius; the war with the allies and the enfranchisement of Italy; the civil wars that followed when the leaders of the consular and the popular parties had armies at their backs; the growing impotence of the civil institutions of the Republic and the succession of hastily legitimized dictators—Marius, Sulla, Pompey, and finally Caesar, with his presage of military autocracy; literature, art, social forms, and law during this period—these are the subjects covered thoroughly and on the whole admirably in this ninth volume of the "Cambridge Ancient History." It was a somber period during which proceeded the corruption of a people which, through heroic and successful self-defense, had entered on the destructive career of empire. The city-state did not survive its transformation into an empire, and the stern and capable Roman citizen did not survive the change from responsibility to privilege. The contributors to this volume consider chiefly the political processes of this multiform evolution. Had the economic processes been more closely studied, valuable illuminations would have been gained.

The Decade of Illusion. By Maurice Sachs. Alfred A. Knopf. \$3.50.

"The Decade of Illusion" is a book of enthusiastic gossip about the celebrities of Paris in the ten years after the war. This was a period in which one of the subjects for argument among the intelligentsia was "Is Suicide a Way Out?" So it is not clear what the author means to convey by the name of his book. He says that those were hard years, but when he looks back on them now they seem wonderful. He knew everybody, and he reminisces in order to provide uninformed America with "a sort of panoramic view . . . and Baedeker of its people."

The view is pretty good, but the Baedeker is dull. It is made up mostly of "I met So-and-So at So-and-So's house," followed by what the author thinks of So-and-So's work; thoughts on the whole emphatic and banal, with shrill explanatory overtones, and put forth with an air of patronage toward the reader not in the best taste. Except for a few chapters Mr. Sachs either annoys or bores, but the exceptions are interesting flashes of places and people which build up the feeling of what the studio talk and behavior were like when modern art was young. His boyish Cocteau, oracle of a crowd of preoccupied youths, is vivid and sympathetic; so also are his ambitious, warm-hearted Chanel and his saintly Maritain. Mr. Sachs is proudest of Paris for her peculiar glory, a social habit which makes for intellectual traffic between the great and the brilliant of widely diverse occupations; so that the panorama includes not only the studios but the press, fashion, politics, science, business, music, the stage, the art-loving nobility, and a few American men and women about town. The value of the book is that it records the web of relations which makes Olympus in Paris so fruitful that even gossip about it is worth preserving in print.

Alexander Hamilton. By Johan J. Smertenko. Greenberg. \$3.50.

Aside from its pert and misleading characterizations of Hamilton's opponents, the only contribution of this volume is a theory of the causes of Hamilton's greatness. The author holds that Hamilton was born four or five years earlier than is usually stated, that his mother, a "beautiful but beaten woman," was indiscriminate in her affections, that his father is unknown, and that the stigma of illegitimate birth induced in Hamilton an inferiority complex which his brilliant military and political career was an endeavor to erase. An examination of the facts underlying this theory certainly demonstrates the hazards of psychoanalyzing the characters of the remote past. There is not the slightest real evidence that Hamilton was ever tortured by an inferiority complex. The notion that he was sensitive about his parentage is supported only by far-fetched inferences. As for the dishonor of Hamilton's birth, the author uses some effective indirect evidence, but the absence of references to authorities and the fact that his assertions contradict Hamilton's own words weaken his case. The bibliography shows that the fifty-eight volumes of the Pickering manuscripts in the Massachusetts Historical Society have been consulted, but not the Hamilton papers in the Library of Congress.

Confessions of the Power Trust. By Carl D. Thompson. E. P. Dutton and Company. \$5.

For four years—years, significantly, which marked the blowing up and bursting of the great American bubble—the Federal Trade Commission has been delving deep into the archives of our privately owned utilities and has excavated a rapidly mounting heap of rich material. Contemplating it, Carl Thompson, for many years secretary and executive head of the Public Ownership League of America, correctly concluded that there was gold in them thar' hills. Its extraction was clearly a labor of love. The result vindicates completely the cause to which he has devoted the major portion of his life, and for which he has battled courageously and effectively. With what pleasure he must have uncovered the material showing the efforts of the National Electric Light Association—successful efforts, too—to drive Carl D. Thompson off the public platform and to exclude him from the Chautauquas for the crime of contrasting electric rates in Ontario and in our municipal-ownership cities with the rates charged by the private power companies! He dug into numerous other rich veins—propagandist, political, financial. Irrefutable figures tell the story of how the American people have turned over to private interests their natural resources and for a partial use thereof

are paying hundreds of millions of dollars annually in tribute. The occasional destruction of the power buccaneers amid their victims—the Foshay failure and the Insull fiasco—is carefully described. A chapter is even devoted to "power-company Socialists"—Messrs. John Spargo, Frank Bohn, and F. G. R. Gordon. Here is invaluable information for all who desire to enlist in the struggle to bring the promise of American life somewhat nearer fulfilment.

Architecture

Factory, Meet Garden City!

IT is easy to see what is in the younger architects' minds. At the New School for Social Research in New York there recently closed an exhibition that plainly portrayed it. The same idea will crop up elsewhere throughout the country and will be thrown full-scale against the sky this summer at the Chicago World's Fair. The problem with which the young architects are concerned is the house of the future, the Fordized house, the fabricated dwelling.

The shadow it has thrown has been a long one, suitable to a giant, and now the shadow shortens as the fact approaches. It has crossed Germany, where last summer there was an exhibition of the "expansible house"; and in a dozen industrial laboratories in the United States the secrets are being guarded while patents and merchandising methods are being worked out. Meanwhile, the models of free-lance designers permit us to see what is up. How soon the fabricated house may arrive in force depends on whether the real-estate business will manage soon to strangle itself, and the country with it. At the present moment every lending company, along with every building owner, is obliged to throttle anything new if it can; and should these interests manage to sell their bad debts to the government, we might expect still further delays, to put it mildly.

Yet soon or late every strong idea has its day, and so we may already pay attention to the fabricated house as a future reality. Its elements are these: swift erection (days instead of months); standard parts, light in weight and flexible in arrangement; high standards for efficiency and health; simple credit and low cost. The principle of construction for the next few years seems to be fairly crystallized. Light, wide framing—whether of metal or of wood—will be covered with large sheets or panels, three or four feet wide and as high as the room. In some of these panels the structural support will be integral. Later Buckminster Fuller's suspension principle will win through. In a farmhouse model displayed at the New School, Lawrence Kocher, who organized the exhibition, employed "skylight" framing shapes already on the market. Alfred Kastner showed drawings of most ingenious concrete houses, already published in *Opportunity*, intended for cooperative erection by Negroes for their own use. (Since Negroes are the group least inclined toward home ownership of any in America, it might have been better to set up the project on a rental basis, or for the foreign-born.) Other houses employ novel materials—for example, and not the least attractive, if proved feasible, a heavy, gaily painted cotton duck stretched over wood. Among the many exhibitors were Alfred Clauss, Norman Rice, Oscar Stonorov, and William Muschenheim, not to mention the firm of Howe and Lescaze.

All such displays in miniature project tendencies already under way in industry. At Solon, Ohio, there stands a "porcelain-enamel" house, product of the American Rolling Mills Company, which shows how badly industry needs these young architects. Not realizing that a good idea is its own best advocate, the present builders have misused their enamel product to

Upton Sinclair
PRESENTS
WILLIAM FOX

A Feature Picture of Wall Street and High Finance.
In Twenty-Nine Reels with Prologue and Epilogue.

A Melodrama of Fortune, Conflict, and Triumph. Packed with Thrills and Heart Throbs. East Side Boy conquers Fame and Power. The Masters of Millions envy his Triumph and plot his Downfall. The Octopus battles the Fox. The Duel of a Century! The Sensation of a Lifetime!

Never in Screen History has there come a Feature as Stupendous as this. An inside Story, a First-Hand Revelation of Politics and Finance, with a Ten Billion Dollar Cast of Statesmen and Financiers.

At the same time a Story for the Family, tense and moving, with Love, Loyalty and a Woman's Soul. A Romance so fine, so true, so loaded with Laughter and Tears, that none can resist it.

America waits for this Drama!

Put it at the head of your Program

IT WILL PACK THEM IN!!

* * * * *

Joking aside: This book contains the inside story of the ousting of William Fox from his companies, as told by William Fox to Upton Sinclair. There has been nothing like it since the days of Tom Lawson's "Frenzied Finance." The great names of present-day America are all here: Herbert Hoover, Henry Ford, John D. Rockefeller, Jr., Charles Evans Hughes, Samuel Untermyer, Will H. Hays, Bernard M. Baruch, Adolph Zukor, Louis B. Mayer, Clarence M. Dillon, Albert H. Wiggin, Harry L. Stuart, Harley L. Clarke.

Floyd Dell's opinion:

"There has never been a book on this subject so completely readable by ordinary people. I myself am bored with statistics, I don't like business stories, and I started this book with no hope of ever being able to read it through. It kept me awake all night—I could not stop reading it. The story has terrific interest and suspense. . . . Also it hits the public interest of the times right in the center. It will be in every middle-class home this winter, and millions of people will be talking about it. It is going to be one of the great literary sensations in the history of American publishing."

Clothbound. Price \$3.00

UPTON SINCLAIR, LOS ANGELES WEST BRANCH, CALIFORNIA

achieve a feeble echo of wood shingle, inferior to genuine wood in effect, while they voluntarily forgo all those qualities of metal against which the lumber men never could compete. A halfway building is going to have a half-baked look, do what you will. In Cleveland Mr. MacCornack has developed a whole housing project to be built of fabricated units; and although the set-up and plan seem to be better in another scheme, by Mr. Weinberg, using traditional construction, the hope that housing might re-employ a part of Cleveland's stagnant steel industry is significant. Rumors from Chicago are persistent, even apart from the World's Fair. Parallel with efforts at complete factory fabrication are the researches of the large contractors, such as the Starrrett interests, attempting to save their own form of enterprise. Of such nature, too, is the work of the Allied Construction Industries' Small House Committee of Los Angeles.

It is the Architectural League in New York that has missed the biggest chance. So far as presentation goes, the League's confidence in Joseph Urban, the stage designer, has been more than rewarded—he has almost got them reborn. But let the league now fill in with more content. Next year let it rescue its housing show—an excellent innovation in itself—from its present step-child location in the "morgue." Then let the league borrow from Mr. Kocher some of the fabrication models of its own members. Let the "housing" and the fabrication models be juxtaposed. In this fashion the league will introduce the most fruitful development of the last decade to the essential idea of the next.

The community-planning experts of the immediate past and the industrialists are going to need each other. They should get together firmly and at once. If they don't, both will suffer. Ten years after the industrialists have intrusted their houses to the usual speculative builders, two-thirds of these houses will be blighted. That is how speculators work—witness the madhouse today. And planners will be complaining of another magnificent opportunity lost through failure to plan in advance. They will be on their knees then to the industrialists just as they are now to the dunderheaded realtors, praying and cursing for city-planning sense. They will have forgotten that they themselves scorned the fabricated house in the early days when the chance for influencing it was good.

DOUGLAS HASKELL

Films

Propaganda and Beauty

AT the Acme on Fourteenth Street, which has become this season perhaps the most enterprising of the little houses, there is to be seen in Pudovkin's "Life Is Beautiful" another memorable example of how much new and absolute beauty the camera is able to extract from "the mighty world of eye and ear." The beauty is absolute because it is an end in itself; it is new because it consists in a revelation of values of form and light and mobility which we cannot receive through any other medium.

To be specific, there is Pudovkin's exquisite treatment of water. Throughout there is a lingering on such effects as those of sunlit rain drops falling on a pool, of intermingled light and spray, of rain dropping in sharply vertical bars before some fixed object like a human face. And if such effects have never before been so potently realized on the screen, neither have the similar effects of light playing on the muscular surfaces of the human body at work. This is best illustrated in the shot of a young reaper whose uplifted scythe captures an intense beam of white light which is in turn reflected horizontally across his sweating torso. In addition to this genius for concentrating on

such special effects of photography Pudovkin must be credited with a gift for organic design which places him on a level with Eisenstein and Dovshenko. His compositions may be baldly simplified, as in the Z-shaped staircase of one interior, or richly elaborated, as in the scene in which an old-fashioned droshky draws up at the rear of a dark courtyard. Certain arrangements of objects on a table suggest a Cézanne or Derain working in light and shade alone.

The special beauty of these effects, of course, cannot be described or analyzed. Pudovkin has, among other things, confirmed our faith in the cinema as an art which cannot be reduced to any terms but its own. All that we may ask is how successfully these particular elements have been identified with the theme and subject of the picture as a whole. The question is raised because it is obvious that if the version at the Acme has not been cut, Pudovkin is only vaguely motivated by the propagandist purpose behind most Soviet art. The beautiful things in "Life Is Beautiful" have always existed in life for the artist to discover and translate; the film is therefore the result of an aesthetic rather than a social or economic vision. Nothing that is valuable in it seems logically related to Lenin or to the Five-Year Plan. The story that it tells enters only as an occasional interruption—like an attack of conscience. Certainly the Soviet authorities will find it hard to condone this magnificent lapse—except in a very broad way. Some satisfaction may possibly be found in the thought that other countries which feel the need for propaganda less keenly have perhaps not yet managed to produce the conditions necessary for such absolute beauty as this to be born.

"She Done Him Wrong" at the Paramount will appeal to those who take a particular delight in resuscitations of the Bowery in the nineties, those who admire its classical embodiment in Miss Mae West, and those who are fascinated by the qualities in American life which have produced both. The picture, which owes everything to Miss West's versatile talents, is astonishing entertainment. Someone owes it to the history of our theater to write a serious and exhaustive study of Miss West's acting style. Here it is enough to remark that in her current picture she has united her personal endowments to a long and honorable tradition, and that the result in Lady Lou is as she herself admits, "the finest lady who ever walked the streets."

It is also pleasant to record that in "Topaze" at the Radio City Music Hall John Barrymore gives the most maturely achieved characterization that he has yet managed in the films. The brittle Parisian fable is suavely directed by D'Arrast, well cast in mirror roles with Myrna Loy and Jackie Searle, and well adapted in every respect for adult enjoyment.

WILLIAM TROY

Drama

The Run of the Mill

EVERYONE knows the famous remark about poor dear Kingsley: "He said that he would rather be good than clever—and he had his wish." It contains, moreover, a hint which ought to be noted by all who undertake to write smart plays attacking the smart. Goodness and cleverness are doubtless not wholly incompatible; but unless one is perfectly sure one is both, one had better keep the emphasis on the first quality when setting out to depreciate the second. Virtue, plain and unadorned, has her charm; but Virtue tricked out in second-rate wit does not show to her best advantage. Sound sentiments remain sound even if they seem a little bit inarticulate, but it is

Three important pamphlets!

THE CRISIS

What it is: How it arose: What to do.

By G. D. H. COLE and ERNEST BEVIN

Manchester Guardian says:—"An admirably lucid account of the international causes of the crisis, the working of the gold standard, and the reasons for its breakdown."

WAR DEBTS and REPARATIONS

By G. D. H. COLE and R. S. POSTGATE

Times Literary Supplement says:—"Mr. G. D. H. Cole and Mr. R. S. Postgate have done a real service in presenting the facts of the Reparations and War Debts problem in a short, impartial and intelligible form."

SAVING AND SPENDING

By G. D. H. COLE

In this pamphlet Mr. Cole sets out to state in clear and simple language a very strong case for believing that the present British policy of so-called "national economy" is mistaken and disastrous.

hard to admire a clumsy epigram just because its moral points the right way. Milton, for example, said some very impressive things about female virtue, but he did not make the mistake of allowing the devil to choose the weapons.

These reflections are suggested by a play called "The Sophisticrats" presented at the Bijou Theater. In a general way it sets out to expose the shallowness of the wisecracking fraternity, and to exhibit the ultimate triumph of decency and good sense over smart impropriety. The heroine is a small-town girl who has made something of a reputation in the city with two books of verse entitled "Bedroom Ballads" and "Songs to Many Lovers." The hero is a young man who would rather be good than clever, and who gets the girl as well as his wish. But the trouble is that the bright lines are not bright enough. Better things have been said in favor of promiscuity, and even purity has been made, on other occasions, to seem more attractive.

It is true, to be sure, that the characters are supposed to be only small-town wits rather than the real, big-city things. Whenever an epigram seems a little flat, one is at perfect liberty to assume that it is just so much the more in character. But that, unfortunately, does not make it any more entertaining, and if the thesis is only that it is better to be good than almost clever, then the thesis is hardly important enough to justify the elaborateness of the proof. For the sake of the record the following facts may be added: (a) There are three really good lines—one in each act; (b) the heroine turns out to be only a virgin with a lurid imagination; (c) Helen Brooks, as the good-bad girl, and Lewis Martin, as a swindler who poses as America's greatest novelist, give good accounts of themselves.

"Before Morning" (Ritz Theater) is one act of acceptable drama followed by two acts of a reasonably exciting murder mystery. Here again the heroine is a lady with good intentions but too many fast friends, and here again the hero is a solid young man eager to take her out of it all. He is willing to overlook the past as long as it is vague enough, but when a former lover is found dead in her apartment on the very night of his honorable proposal, even his generous heart—educated in the great open spaces of Detroit and accustomed to dealing only with clean honest automobile manufacturers like himself—is momentarily stumped. Things look even darker when it is discovered that the lover was poisoned with nicotine, and when it is noted that the heroine had a very good reason for wanting to get rid of him. McKay Morris gives a superb performance as a really villainous villain, but since, in these difficult times, even a moderately entertaining play like "Before Morning" is not likely to last long, there is no reason why one should be left in ignorance concerning how it all came out. The lover's wife really did it because she wanted to marry a prominent Italian whose ecclesiastical connections made it impossible for him to unite himself with a divorced woman. Probably this proves something about either the dangers of loose friends or the evils which follow too intolerant an attitude toward divorce. You may take your choice.

"Melody" (Casino Theater) represents George White's determination to become a producer of operetta. After all these years Mr. White has found a plot, and the famous "Scandals" have been replaced by a romantic opus dealing melodiously with the fate of three generations in making their way from the Latin Quarter to a Radio City. The work is elaborately staged, melodiously set, and well sung. Evelyn Herbert has, as a matter of fact, an unusually good voice, and there is also Jeanne Aubert. Yet I must confess that I was never moved to any great enthusiasm. Now that there is a plot, there is perhaps rather too much of it. Perhaps also the *longueurs* of a musical entertainment are more noticeable when the ladies of the ensemble are so elaborately and completely costumed. Mr. White did not use to go in for so many draperies. As Shakespeare asks, "Why are these things hid?"

SUBSCRIPTION RATES: Five dollars per annum postpaid in the United States; Canada, \$5.50; and to other foreign countries, \$6.00.

THE NATION, No. 20 Vesey Street, New York City, Cable Address: NATION, New York. Muriel C. Gray, Advertising Manager. British Agent, Miss Gertrude M. Cross, 23 Brunswick Square, London W. C. 1, England.

GREAT BRITAIN'S EMBARGO on arms to Japan and China is the logical sequence to the League's action in naming Japan as the aggressor in the Far Eastern conflict. France has indicated a willingness to follow suit provided the United States does likewise. Unfortunately, there seems to be little hope that Washington will accept the logical conclusions of the Stimson doctrine. The resolution which would empower the President to declare an embargo, with other nations, against warring countries is buried in Congress, and there is no indication that the pressure necessary to have it exhumed will be applied. President Hoover and Secretary Stimson have both expressed themselves in favor of the use of the arms embargo against aggressor nations, but the State Department now maintains that an embargo would do little good since Japan is already well supplied. But the way to begin is to begin, especially since the war in the Far East is likely to be protracted. It is further pointed out that the British embargo does not apply to outstanding unfilled contracts. That is a sad fact. It may indicate the real reasons for the coolness of the State Department. The propaganda of the munitions manufacturers was apparently sufficiently powerful to dispose of the arms-embargo resolution. Has it now conquered the State Department? President Roosevelt cannot do better than to inaugurate his Administration with immediate action.

If his first official act were to declare an embargo to be ratified by a special session immediately to be called, it would serve as a most effective warning to the mad militarists of Japan that the United States purposes to uphold the sanctity of treaties and to make effective the most crucial venture in international cooperation since the war.

HUEY LONG has undertaken another filibuster, this time to prevent further investigation of his unsavory role in Louisiana politics. In twelve days the Senate's subcommittee on campaign expenditures, sitting in New Orleans, uncovered a story of political corruption, with the Kingfish at its center, a crude and sensational tale that it can only be compared with recent Tammany scandals in New York City. The committee has merely scratched the surface, but an additional appropriation is necessary if the investigation is to be continued. The newspaper accounts of the New Orleans hearings are sufficient to indicate that Huey Long's fitness to remain in the Senate is not entirely clear and that the investigation should be completed. Yet apparently there is danger that it will not be. Senator Long, after giving a performance in New Orleans so brazen and so vulgar that he was held in contempt by the committee—and certainly by every self-respecting American who read the tale—rushed back to Washington to head off any further investigation. Anticipating the request for an additional appropriation, Long spent hours of the Senate's precious time deriding the committee and challenging its authority. He made no attempt to defend himself. That is not his method. Instead, he called the inquiry irrelevant, a waste of money, and attempted to discredit the opposing counsel. The audacity of his attack and the failure of Senators Howell and Carey, who conducted the hearings, to reply adequately to it have inclined many Senators, who apparently do not even read the newspapers, to the belief that the inquiry is not important; while Senator Bennett Clark's incomprehensible support of Long has further confused the issue. If one-tenth of the charges brought against Long and Overton are true, neither one of them should be allowed to sit in the United States Senate. Let the investigation proceed.

THE ENDING of the Seventy-second Congress removes from public life, temporarily at least, several indispensable public servants. The defeated Senator who can least be spared is John J. Blaine of Wisconsin. He has fought consistently on the side of progressivism and against the reactionaries in the Senate chamber and in the White House. He has been the sponsor of considerable wise labor legislation. As a member of the judiciary committee, he was instrumental in blocking confirmation of two wretched judicial appointments—those of James Wilkerson of Chicago and Kenneth Mackintosh of Seattle—to the federal bench. He was among the Senate leaders supporting the Norris anti-injunction and Muscle Shoals bills, and the La Follette-Costigan federal relief measure. He was outstanding in the Senate in his willingness to fight, single-handed if need be, against men and measures he deemed objectionable. A cor-

respondingly great loss will be suffered in the House by the absence from the Seventy-third Congress of Representative Fiorello H. La Guardia. For several sessions he has headed the House insurgents. Through his skill as a parliamentary tactician, his oratorical talent and good humor, his indefatigable industry, his complete information on many important issues, and, above all, his thorough awareness of the people's needs, he became the one effective leader the Progressives there have had in twenty years. Others who will be missed are Representatives Thomas R. Amlie of Wisconsin, John E. Nelson of Maine, Burton L. French of Idaho, C. William Ramseyer of Iowa, Robert G. Simmons of Nebraska, and John M. Evans of Montana. Their early return to the public service is a consummation devoutly to be wished.

POPULAR SENTIMENT in favor of recognition of Russia is now overwhelming; only the diehards persist in their irrational opposition. There is evidence in the hands of Senators that William Green does not reflect the views of the rank and file or even of some leaders of the American Federation of Labor when he opposes normal relations with the Soviet Government. The chambers of commerce which formerly turned their backs on a market of 160,000,000 consumers are today in a receptive mood, and the country as a whole is sufficiently anti-Japanese to wish that the new President would make some definite move which would indicate to Tokio our disapproval of its policies in Manchuria. Soviet recognition would make the Japanese sit up and take notice as nothing that has yet happened in Geneva has done. It would immediately bring business from the Soviet Government. The Russians are eager to buy cotton, textiles, copper, and machinery. Hitherto, the apparent obstacles to recognition have been debts and propaganda. As a matter of fact, the Soviet Government has changed its attitude on debts since it first annulled them fifteen years ago; and it has promised on a number of occasions to pay us what, in the opinion of neutral students, it is actually not obliged to pay. Propaganda is a convenient bogey for the demagogue, but it is not a practical issue. Other nations more exposed to the Communist "menace" have relations with Russia and have not succumbed. If this menace exists, perhaps the best way of combating it is to reduce unemployment by attracting Soviet orders. Mr. Roosevelt is said to be considering immediate recognition. It should also be complete recognition. Piecemeal approaches may do much harm. The reason is simple to those who know how Moscow regards the Far Eastern situation.

WHILE THE WESTERN WORLD is at present concerned with what are doubtless more pressing problems, it must not overlook the extremely important treaty recently signed by the Little Entente countries at Geneva. This treaty, though ostensibly another peace agreement, actually constitutes an alliance for war. Heretofore Yugoslavia, Rumania, and Czecho-Slovakia have been held together rather loosely by a series of independent, bilateral agreements limited both in scope and duration. Under the new arrangement they are bound by a single treaty, upon which no time limit is set and which provides for unlimited military, political, and economic cooperation. The three countries will now have a common general staff, cooperative political headquarters at Geneva, and machinery with which to set

up a common economic and financial policy. In short, as one European commentator described it, there has been created "a new Great Power with a population of forty-five million through the virtual consolidation of the states of the Little Entente." Though the countries of the Little Entente probably needed no prompting, it is easy to trace the hand of France in the conclusion of this treaty. Since the failure of its reparations and armaments policies, which were designed to keep Germany in permanent subjugation, France has had to seek some means of offsetting the inevitable resurrection of Germany as a leading military Power. The previous loose alliance of the Little Entente countries would not suffice. Italy was making appreciable progress in its attempt to detach Rumania from this group; Yugoslavia was faced with menacing internal dissensions. It was necessary to hold the Little Entente together by chaining these two countries to Czecho-Slovakia, the only stable and dependable member of the group. This France has now accomplished.

IF POLITICAL STABILITY and economic recovery were the only objectives of this new Balkan confederation, we should be more than happy to welcome it. But obviously it has a much more significant and dangerous goal. The Geneva alliance was born of fear and is likely to have tremendous repercussions, especially in Italy, Hungary, and Germany. Political leaders in these countries are already talking of "reprisals." By this they probably do not mean that they will take hostile action, but that they intend to form an alliance on their own account to oppose the "new Great Power." The Geneva treaty was at least partly inspired by the disclosure of the shipment of 50,000 rifles and 200 machine-guns from Italy to the Hirtenberg munitions factory near Vienna, presumably en route to Hungary. The Hirtenberg incident brought from France, with British approval, a vigorously worded ultimatum addressed to Austria. Had the ultimatum been sent to Rome it doubtless would have provoked a grave situation, for its language led American correspondents to describe it as "an unprecedented and astonishing attack on the sovereign dignity of a friendly Power." Austria is too weak to offer any real resistance, and has promised to return the arms shipment to Italy. The Hirtenberg incident has passed off without serious consequences, but these recent developments in the Balkans reveal how rapidly the temper of Europe is rising.

AS A RESULT of the opinion of Senator Walsh, Attorney-General in the new Administration, that Congress has not the power to prescribe the time, method, or form of the State conventions to ratify the proposed prohibition-repeal amendment, Congress is now unlikely to attempt to pass any legislation on the subject. But there is no reason why it cannot pass a resolution, not binding or mandatory in character, recommending a certain form of convention to the States. This seems highly advisable in view of the bewilderment in some of the States and the chaos of suggestions for procedure. The whole purpose of submitting the proposed repeal to conventions instead of to legislatures was to secure a direct popular verdict on the sole question of prohibition. There should be only two sets of candidates for the conventions: those who unequivocally pledge themselves to vote for the new amendment and those who just as unequivocally pledge themselves to oppose it. A pro and an anti candidate

may be nominated from each Congressional district or from each State-legislature district, as desired; that question is of no importance. What is important is that the candidates should be voted for as a body, by the whole people of the State, and not individually or by districts. Any other method of voting would probably distort the result. The purpose of submitting the repeal of prohibition to conventions was to secure a referendum on the question. Let the referendum be real, and let its results be accurate.

MEANWHILE liquor-control legislation by the States remains to be enacted. New York State has made a beginning with the appointment of a State commission whose first recommendations include local option and the creation of non-paid boards consisting of persons of high character. The commission, in its initial report dealing with non-intoxicating beer, recommends that it be sold in hotels and restaurants but not across a bar—an obvious attempt to forestall the saloon. But why should non-intoxicating beer be denied equality with the oyster or the milk shake, which are now widely sold across the bar? Competitive advertising of the products of brewery and distillery are to be forbidden. Needless to say, the newspapers will not like this. Most interesting of all is the proposed use of a part of the proceeds of liquor taxation for temperance education. The more consumed, the more funds available for inculcating the evil of excessive consumption—the demon rum is to be sentenced to chasing his tail around the stump. The desire of the commissioners to lessen liquor abuses by limiting the profits is apparent and praiseworthy. But is not public ownership the solution ~~most~~ likely to prevent private profiteering and political corruption, and to insure the maximum of control, as well as of revenue, to State and nation?

AMONG THE PROBLEMS with which the new Administration will be immediately confronted is the public debt. An unparalleled situation exists. More than half of the public debt of \$20,907,000,000 matures or is callable this year. The exact amount maturing or callable in the next eleven months is \$11,349,700,000. Ogden Mills has been our most persistent and most eloquent verbal opponent of inflation; but he has been perfectly content to follow an inflationary policy by continuing Mr. Mellon's optimistic system of financing the government by short-term borrowing. As a result of the present artificial and wholly abnormal banking situation, the government has been able to finance itself with this short-term borrowing at remarkably low rates of interest. But to what extent is this low interest being paid for by the possibility of having to pay very much higher interest in the near future if the situation should change either for the better or for the worse? For if the situation changes for the worse, rates may be raised for the government either by a decline in its credit standing or by a compulsion on the part of the banks to sell government securities. If the situation changes for the better, banks will be more anxious to take their funds out of low-interest government securities and lend them out at higher interest to business. In either case the government, which could still float a long-term bond issue at less than 4 per cent interest, will have missed its market. In any case, Mr. Mills, the apostle of sound finance, the great hard-money man, has preferred to leave the whole problem on Mr. Roosevelt's doorstep.

AN ANCIENT STORY relates that a New York newspaper once sent a cub reporter out to cover a flood in the Middle West. After two or three days all the other New York papers began to publish long special accounts of the disaster, but the cub reporter was not heard from. His paper wired him: "Why aren't you sending anything?" The reply came back: "Can't send anything now. Too much excitement." The report of the New York Joint Legislative Committee on Unemployment seems to have been framed on this principle. The committee announces regretfully that it can recommend no unemployment insurance now; that must wait for the slump to lift. It holds that employers cannot now stand the increased burden on pay rolls, that they would be obliged to dismiss employees, who would have to be taken care of by inadequate State funds. This argument appears to have very little substance. If the insurance were of the general type now widely recommended by economists, under which the State contributes nothing while the employee contributes 1 per cent of his weekly pay and the employer 2 per cent of his pay roll, it would increase total pay-roll expenses by only 2 per cent. At most, this could cause the discharge of one man in fifty. If the argument were sound, it could be used equally well in a period of full employment. But even if one were to grant its validity under present circumstances, there would still be no excuse for the committee's failure to recommend the passage of such legislation now, to go into effect immediately in every firm showing a current net profit, and for all firms without exception at some definite later time. It is true that only direct relief can now help those already unemployed; but if we are to get unemployment insurance at all, we must get it while public opinion is aroused in its favor.

The National City Bank Scandal

FOR many years these columns have recorded the wrongdoings of corporation managers, captains of industry, and bank officials, but never a more outrageous abuse of positions of trust or more flagrant misconduct of men in high fiduciary positions than have been laid bare by the testimony of officials of the National City Bank of New York before the Senate Banking Committee. These are strong words; they cannot be too strong. For brazen disregard of the rights of the lawful owners of the bank, of the depositors, and of the public generally, nothing exceeds the confession of Messrs. Mitchell, Rentschler, and Baker. More than that, they have displayed an indecent callousness in the treatment of the lesser employees of their own institution which, with their other performances, marks them as men set apart from their fellows as betrayers of their trust not merely as bankers, but as human beings.

We refer, of course, to the loan in 1929 to themselves by the officers of this bank, the second largest in the world, of the sum of \$2,400,000 to enable them to carry their commitments for the purchase of stock of the bank when the stock-market crash had jeopardized their personal finances. This loan was made without interest to some one hundred of the leading officers of the bank and the affiliated National

City Company, and only in a few cases did these officials offer adequate collateral. Only 5 per cent of it has been repaid. The utterly reprehensible character of this transaction is thrown into clearer light when one adds the deadly fact that these same officers then proceeded to sell out hundreds of the customers of the bank when the collateral advanced to cover their commitments in the stock became inadequate. Moreover, the clerks of the bank, who had been urged, and in some cases really driven, to purchasing the bank stock at 200 or 220 lest they lose the favor of their superior officers, were given, and have been given, no aid whatsoever by the bank in carrying the shares they bought on the instalment plan. On these thousands of them are paying today, with the result that their very existences and those of their families are being jeopardized by these continuing payments for a stock now worth less than \$30 a share—payments which they dare not suspend lest they lose all their savings. No moratorium for them! No loans to help them carry on! Indeed, it was admitted that their only way of getting out of these payments was to give up their jobs. They are just clerks, and the National City Bank has plainly existed not for them or their interest, or for anybody else except the insiders.

The head and front of this offending is Charles E. Mitchell, whose resignation, promptly offered, was promptly accepted by the directors. It now appears that the privilege of having him act as chairman of the bank and of the affiliated National City Company cost the bank in bonuses about \$3,500,000 for the years 1927, 1928, and 1929, in addition to his annual salary of \$25,000. In other words, he drew a salary of nearly \$1,200,000 a year—the President of the United States receives \$75,000 a year for conducting the affairs of the great American nation. As we have said before in the case of President Grace of the Bethlehem Steel Company, no man on earth is worth any such salary and to no man should it be paid. But more interesting things came out about Mr. Mitchell. In 1929 he sold to a member of his family 18,000 shares of his National City Bank stock at a loss of nearly \$2,800,000, which enabled him to avoid paying any income tax whatsoever in the next year. It is this transaction which led Senator Wheeler to remark on the floor of the Senate that if it was right to send Al Capone to Atlanta jail for an income-tax fraud, "some of these crooked bank presidents" should have the same dose administered to them. But Mr. Mitchell's sale of this stock is probably not illegal in a criminal sense. The income-tax authorities have the power, however, to reopen this tax return and to invalidate the sale. It was not a genuine one in open market, since an arrangement existed to buy back the stock at the same price after the requisite period. "That sale was just a sale of convenience to reduce your income tax?" asked Senator Brookhart. "Yes," replied Mr. Mitchell. "It was a sale frankly for that purpose. . . ."

But this does not end the tale of shamelessness. It was brought out that the City Bank, finding itself in 1927 with about \$31,000,000 of worthless Cuban sugar paper on its hands, proceeded to get rid of it in this way: It increased its stock by an issue of \$25,000,000 which it sold for \$50,000,000. Of the latter sum \$25,000,000 went to the National City Company, which then purchased the stock of a newly formed General Sugar Corporation, and this dummy corporation bought the bad paper for the same amount from the National City Bank—only to lose most of the millions in-

volved in that paper. This was high finance, indeed, with the purchasers of the bank stock holding the bag. The value of the stock of every stockholder was lowered by that transaction without their knowledge. Finally there is one more revealing transaction to record. During the 1929 boom market the National City Company sold its City Bank stock short. To quote Mr. Pecora, the counsel for the Senate Banking Committee: "In other words, the company sold shares of bank stock it didn't own or have on hand." More than that, in order to deliver the stock it had sold when there was none in its possession, it borrowed no less than 15,000 shares from our dear old friend, Charles Mitchell, chairman of the bank and company. In other words, it was gambling in its own stock with the aid of its head. Was there ever a worse record of conscienceless manipulation of a great banking institution? The resignations of Messrs. Mitchell and Baker should be followed by those of Mr. Rentschler and all the other officials and directors who had guilty knowledge of or profited by these transactions.

It goes without saying that the Congress of the United States will fail in its duty if, first, it does not find out what the national bank examiners were doing during these years in permitting these things to come to pass, and, secondly, if it does not immediately pass remedial legislation to make impossible the repetition of such scandals, the mere revelation of which has gravely affected an already serious banking situation. How can people have confidence in any bank when such things are disclosed? And why, indeed, should they? We have no doubt that Messrs. Mitchell, Rentschler, and Baker are members of all the hereditary patriotic societies and are anti-Socialist and anti-Communist. All the 87,000 Communist voters who cast their ballots for Mr. Foster at the last election could not in years possibly do as much injury to our institutions and to the capitalist society to which these banking gentlemen are so devoted as they have done by their misconduct as revealed under oath on the witness stand.

The City Bank and the Press

What has been the attitude of our great and variegated metropolitan newspapers toward the National City Bank exposure? Recall the snappy way these defenders of the common weal day by day excoriated in their editorial columns the tin-box artists of Tammany Hall as their malfeasance was bared by Mr. Seabury.

On Tuesday, February 21, before the Senate Banking Committee, Mr. Pecora brought out that Charles E. Mitchell had paid no income tax in 1929 by making a "sale" to a relative and recording a \$2,800,000 loss, and with his fellow-officers had floated \$50,000,000 worth of additional National City capital stock to take care of worthless Cuban sugar liabilities.

Not a line of editorial comment appeared on Wednesday, February 22, in any New York morning or evening paper.

On Wednesday, February 22, Mr. Pecora brought out that the National City officers had lent themselves \$2,400,000 to protect their margin gambling, appropriating this money without security, charging themselves no interest, and subsequently writing most of these loans down or off, at the same time that they sold out their customers and compelled their clerks to continue payments on stock which these lesser fry had bought.

The New York morning and evening newspapers of Thursday, February 23, were as silent as a bank vault on a holiday.

On Thursday, February 23, came the revelation that National City officials had sold their own bank stock short.

And short of editorial comment on Mr. Mitchell, Mr. Rentschler, Mr. Baker, and the National City Bank were the Friday New York morning and evening papers.

On Saturday morning, February 25, appeared the first editorial mention of this aging scandal in—of all papers—the tabloid *News*. Its editorial conclusion, however, was chiefly that “we” were all largely to blame: “We were all trying to get rich without work; we were gambling to get rich by buying stocks on 10 per cent margin”; and the *News* urged banking reform because “we may all go cocoo again.”

Emboldened by the morning tabloid’s audacious stand, Cyrus H. K. Curtis’s New York *Evening Post* on Saturday afternoon leaped into the fray editorially. Bravely it denounced—the Senate! “The Senate, at this session, has done nothing to restore public confidence . . . and has chosen the worst of all possible times to throw further doubt upon banks through the explorations of its banking and currency committee.” The *Post* felt, however, that the Senate’s “revelations . . . cannot be ignored,” and that, alas, “they break the faith of the people in their financial leaders,” and that the revelations “will lead, inevitably, to one more attempt to legislate a new honesty into the banking business.” It then declares: “Legislation cannot do this”; but paradoxically prophesies that “the Glass bill will be the result.” With the *News*, the *Post* feels sure that “like many of the rest of us, some of our bankers were mad enough to do then what they wouldn’t dream of doing now.”

Sunday’s and Monday’s New York *Times* and *Herald Tribune* continued mute. That brave champion of the underdog, William Randolph Hearst, while printing on his *American* editorial page a series of five articles on banking reform in general, appeared stricken with aphasia as far as the National City and its officials were concerned.

But surely the fearless and progressive Scripps-Howard *World-Telegram* had something to say! When, indeed, was that gallant palladium of our purses silent on corruption? On Wednesday, February 22, it had an editorial on “Tammany Boldness.” On Thursday it attacked “Furniture Grafting” in the city administration. On Friday it denounced “Fixers in the Municipal Court.” On Saturday it roundly spanked S. Howard Cohen of the Board of Elections. On Monday, February 27, it came out editorially against “Multiple Job Holding.” The reader’s eye, on this day also, would gravitate to an editorial headed “Bar the Speculators.” But they were not the speculators of 55 Wall Street; they were only those of the Wallabout Market, Brooklyn. There was also an editorial on “Bank Action.” But that was merely a comment on the signing of the Couzens national-banking law.

To sum up, in five days the New York *Times*, the *Herald Tribune*, the *American*, the *Evening Journal*, the *Sun*, and the *World-Telegram*—all those great molders of public opinion—have had no opinion on the largest bank scandal under their noses since the failure of the Bank of United States. It all recalls that ancient music-hall quip: “If you steal \$25, you’re a thief. If you steal \$250,000, you’re an embezzler. If you steal \$2,500,000, you’re a financier.”

A Farewell to Republicans

AT the risk of gilding the tinsel, let the record be set down finally as *The Nation* takes leave this week of the “only party fit to rule.” American memories are short. Four years from now the public will be asked to restore the Republicans and prosperity.

Let it therefore be recalled, now and henceforth, that four years ago not a cloud even as large as a man’s hand had appeared in the heavens. That it was, from the financial standpoint, a clear blue sky may have had a certain prophetic symbolism which was overlooked at the time. Herbert Hoover was about to assume the Presidency. His predecessor, Calvin Coolidge, in his valedictory message to Congress, had declared:

No Congress of the United States ever assembled, on surveying the state of the Union, has met with a more pleasing prospect than that which appears at the present time. . . . The requirements of existence have passed beyond the standard of necessity into the region of luxury. Enlarging production is consumed by an increasing demand at home and an expanding commerce abroad. The country can regard the present with satisfaction and anticipate the future with optimism.

There was no difference of opinion, no variation in optimism between the retiring and incoming helmsmen of the nation. In his acceptance address the previous August Mr. Hoover had declared:

We in America today are nearer to the final triumph over poverty than ever before in the history of any land. The poorhouse is vanishing from among us. We have not yet reached the goal, but, given a chance to go forward with the policies of the last eight years, and we shall soon, with the help of God, be in sight of the day when poverty will be banished from this nation. There is no guaranty against poverty equal to a job for every man. That is the primary purpose of the economic policies we advocate.

And having achieved office on the basis of this premise and promise, President Hoover reiterated his faith in his inaugural message:

Ours is a land . . . filled with millions of happy homes, blessed with comfort and opportunity. . . . In no nation are the fruits of accomplishment more secure. . . . I have no fears for the future of our country. It is bright with hope.

There is no need to set down once more the repeated mistaken prophecies which issued from the White House as the country sank deeper into economic chaos. Those forecasts were sufficiently quoted during the recent Presidential contest. But Mr. Hoover’s record as a false prophet continued consistent to the end. Throughout the campaign he asserted that his Administration was achieving victory over the depression. In Cincinnati, on October 28, 1932, he said: “. . . we have succeeded in defeating these forces. We have protected our institutions and our people. We have now transformed those measures into an attack on this depression all along the line.” Speaking at Des Moines of the farmers’ plight, he declared: “Happily, we have won this battle.” And at Indianapolis, on October 29, he said:

I pointed out there [at Detroit] that the battle has now changed from successful defense of our country from disaster and chaos to forward-marching attack on one hundred fronts, through a score of instrumentalities and weapons toward recovery. Since that time I have further positive evidence showing that the measures and policies we have set up are driving the forces of this depression into retreat with constantly increasing rapidity.

At St. Paul, on November 6, he stated, ■ he had earlier in the campaign, that a million men had returned to work in the preceding four months, and were returning at the rate of half ■ million a month, adding, "Every business index shows ■■■■ progress somewhere in the nation." And in his final address, broadcast from Elko, Nevada, on the eve of the election, he expressed the hope that the American people would "realize the great crisis we have successfully passed," and contrasted the opposition's "mirage of promises" with his party's "reality of facts."

It is needless to stress the hollowness of these final promises and assertions. Unemployment mounts—thirteen million men out of work is today a conservative estimate; ■ 3.9 per cent drop in employment with ■ 5 per cent pay-roll decrease was recorded for the month ending January 15, according to the latest Department of Labor statistics available. The people's savings continue to be confiscated as banks close at an undiminished pace—272 closed in the month of January, 1933, and toward the close of February they closed, no longer singly, but by States—Michigan, Maryland, Ohio. Bankruptcy is becoming epidemic. The private and local relief upon which Mr. Hoover's policies relied are increasingly inadequate; destitution, undernourishment, actual hunger are spreading through the land.

But we are taking leave not merely of a single Administration. For twelve years the Republican Party has been in power. During ten of those years it controlled the executive and legislative branches of the government. When, a few years hence, an attempt is made to minimize the disaster of this last quadrennium, and to point to a preceding eight-year period of material development and growth, let it be noted that in a purely material sense the American people are much worse off today than they were twelve years ago. Far more than was gained has been swept away. Savings have been dissipated, lives have been blasted, families disintegrated. Misery and insecurity exist to ■ degree unprecedented in our national life. And spiritually the American people have been debauched by the materialism which made dollar-chasing the accepted way of life and accumulation of riches the goal of earthly existence. The record of Republicanism must be judged as a whole, although, in fairness, the consequences of the World War and the major responsibility of the Democrats for putting the United States into it must not be forgotten. The Republicans were ■ eager to make war—and both parties continued, until well after the crash, to be proud of their attitude in 1917. Moreover, economic disaster has been only a part of this sterile decade's legacy, the burdens of which will descend to unborn generations. Our worthiest traditions have been impaired; vital tenets of American life have been destroyed. What has become of that fundamental American axiom "salvation by work"? In all our previous history it has been taken for granted that ours was a land of opportunity, and that rewards bore some relation to initiative, effort, and ability. Granting the large mythical content of

these beliefs, they were more nearly valid in America in the first century and a half of our national existence than anywhere else on earth. They are no longer true today. The promise of American life has been shattered—possibly beyond repair.

Shall we assume that the Democrats, who now take office, offer a better prospect for America? The indicated liberalism of Roosevelt in the present desperate emergency, his power policy, more enlightened than any we have yet had, his nomination of a Cabinet superior to any within a generation, his apparent determination to tread new paths, are auguries of hope. But we should not forget certain fundamentals which *The Nation* has often reiterated: In recent times, certainly, the two major parties have been ■ like as peas, sterile, guided by approximately the same economic philosophy, motivated by the same quest for legal—and some not so legal—loot.

If the thievery of the "Ohio gang"—never atoned for by the Republicans—was wholly a party scandal, it is evident that, considerable as were those peculations, they were trifling beside the legalized plundering which has ever been non-partisan. Behind the Administration façade, capped by the genial and banal Harding, the insignificant Coolidge, and the erstwhile superman, Hoover, have been the real rulers of America, some of whom Mr. Gerard identified in his famous list three years ago. They have included Samuel Insull, always a buyer-in to both parties; his friends and creditors, Owen D. Young and Gerard Swope; Charlie Dawes, also a friend of Lorimer; Charles E. Mitchell of the National City Bank, whose latest performances are discussed elsewhere in this issue; Albert H. Wiggin of the Chase National Bank, whose tale is still to be told; Mr. Mellon of the Colombian oil loans, the recipient, through Will Hays, of Mr. Sinclair's Continental Oil bonds, aluminum monopolist, and the greatest refunder of taxes to the wealthy since before Alexander Hamilton; Eugene G. Grace, Charlie Schwab's million-dollar-bonus boy; Leonor F. Loree, buyer for his private account of Missouri, Kansas, and Texas stock to be unloaded on his company stockholders; George W. Hill, president of the American Tobacco Company, who, only after a blistering Supreme Court opinion rendered in a stockholder's suit, returned 13,440 shares of stock which, upon his own recommendation, had been given him. It was ■ Grand Old Party—for them—while it lasted. Makers and beneficiaries of our politico-economic system, these are the men whose failure is now written large in the towering empty edifices that scrape the New York sky, in the hundreds of thousands of "For sale" and "To let" signs which adorn our cities, in the closed banks, in the foreclosed farms, in the whole picture of devastation which has come under their rule.

Have these captains and kings departed—not to return? The epoch of their wanton and repulsive leadership is ending. Their incompetence and their betrayal are manifest. But much of the evil they have done lives after them. The coming years will see the struggle to purge America, to reassert the promise of American life, to validate, in consonance with the changed times and conditions, the high aspirations of the founders of the nation. Mr. Roosevelt has the opportunity to be the leader of this renaissance, but he will have to forge as his instrument ■ wholly different Democratic Party from that which so long has been indistinguishable from the Republican.

A Good Cabinet

MR. ROOSEVELT has chosen an excellent Cabinet. We say this with full realization that there are weak spots in it, that there is only faint approval of it in Democratic circles in Washington, and that the conservative elements generally fear that it is weak. In the *New York Times* we find a plaint that it does not include men like Newton D. Baker, John W. Davis, Norman Davis, or Owen D. Young, and a reference to the men who formed part of the recent Republican Cabinets, such as Hughes, Stimson, and Kellogg. Well, one of the reasons why we like the new Cabinet is that it is happily free from the leftovers of the Wilson Administration, the "strong men" who have long since grown stale in the public eye, not one of whom has given the slightest indication of any ability to cope with the present crisis, or of having freed himself from the prejudices of a bygone generation of public men.

Senator Walsh's selection as Attorney-General puts at the head of that department for the first time in much more than a decade a man who is not a reactionary and a trusted friend of the "interests," but a relentless and brilliant prosecutor. In his handling of the oil frauds he showed that no power could prevent his going to the bottom of those scandals. As for the new Secretary of the Interior, Harold L. Ickes, it is hard to see how there could be a better choice. The press has dwelt upon his connection with the Bull Moose movement in 1912; far more important is the fact that he has been for years in the forefront of all reform movements in Chicago. With superb courage he told the truth about Samuel Insull in the year 1930, when that noble Athenian was still the greatest figure in his community, and declared that Insull, more than anyone else, was responsible for Chicago's vice and crime. These were his words:

Chicago is not suffering from a breakdown of government, but from a super-government. The name of Chicago's super-government is Samuel Insull. By contributing lavishly to the coffers of both parties, and by exerting his influence in other ways, he has gradually assumed control of the parties. He dominates the business community through his tremendous power. The press apparently fears to attack him. . . . The same public officials who have furnished protection to Insull's public utilities have also furnished protection to racketeers, bootleggers, and professional killers. . . . Thus we have a city administration with the under-world and over-world in dual control.

There spoke a man of just the type we need in the Cabinet in this national emergency.

The appointment of Frances Perkins to the Department of Labor is equally a cause for profound jubilation. The first woman to enter the Cabinet, she is a tried executive and public official, with a national reputation for efficiency, integrity, and courage. Her appointment renders a service to the working men and women of America, organized and unorganized, that can hardly be measured.

For Cordell Hull we have the highest respect. He has for years fought tariff excesses almost single-handed in Congress with great ability and a clear understanding of the principles involved. He is therefore well equipped to nego-

tiate the indispensable international agreements upon which world recovery in no small measure depends. While he has not figured in foreign affairs, he is a student of problems that come before him, a dispassionate searcher after facts. He is, moreover, free from entangling alliances with financial groups with special interests to promote—groups which have so often in the past made the State Department the instrument of their acquisitive purposes in Latin America.

For William H. Woodin, the Secretary of the Treasury, as much, unfortunately, cannot be said. He is a big business man who has displayed few qualities that indicate his fitness for the difficult task ahead. The great corporations which he dominates—engaged chiefly in the manufacture of transportation equipment—have a history depressingly like that of other similar enterprises. They made large profits for the insiders, first, through the manufacture of war materials, then in the post-war boom. But Mr. Woodin's direction displayed no more foresight than the prevailing type of business leadership; his companies overexpanded extravagantly, with the inevitable consequences. Moreover, Mr. Woodin's Cuban connections are unfortunate. Controlling several Cuban companies, he is hand in glove with Machado, whose present Ambassador to the United States is not merely an official of Mr. Woodin's companies, but his right-hand man and trusted confidant. Mr. Roosevelt will have to be on his guard here, and also with respect to Daniel C. Roper, his Secretary of Commerce, who has recently been engaged in representing Cuban sugar interests in the capital. Mr. Roper has the reputation of being a good executive, but his appointment cannot be looked on as anything else than a political recognition of William G. McAdoo's services at the Democratic convention in making possible Roosevelt's nomination.

The other Cabinet posts are relatively unimportant. The nation is engaged in a great domestic war, and we can therefore be reconciled to the naming of Senator Swanson to the Secretaryship of the Navy. His promotion will strengthen the Senate, since it will remove him from the important chairmanship of the Committee on Foreign Relations, to which he would have succeeded under the Senate seniority rule. Moreover, his Senate seat will very probably be filled by former Governor Harry F. Byrd of Virginia, a stronger and better man. Ex-Governor Dern of Utah was undoubtedly given the Secretaryship of the War Department in political recognition of the far West. It remains for him to prove his worth. The Postmastership has, of course, gone to James A. Farley, following a custom—which as such cannot be other than deplored—of thus rewarding purely political services.

Taken as a whole, this Cabinet represents an enormous improvement over those of preceding Administrations. It contains far abler and more enlightened department heads than we have had in a generation. Moreover, it is the general spirit of the Cabinet which counts, and since it will be dominated by Mr. Roosevelt, we cannot but feel that, as a whole, it will be progressive and forward-looking and able to grapple intelligently with the crisis which confronts the country.

THE END OF AN ERA

Issues and Men

And a Woman—Frances Perkins

REALLY, the news that Frances Perkins is to be appointed to the Cabinet of the United States is one of the most inspiring and encouraging events of recent years. My mind is running far back ■ I write. I am thinking of the pioneers who first declared that woman was man's equal in all respects and as such entitled not only to vote but to hold any office within the gift of the American people. How they were derided, how they were laughed at, how they were subjected to vile abuse, and even physical assault! No one can realize what such sensitive and lovely women as Lucy Stone and Elizabeth Cady Stanton, Angelina Grimké, Lucretia Mott, and many others had to suffer when first they dared to take part in the anti-slavery and woman-suffrage agitation nearly one hundred years ago. Indeed, the famous "broadcloth mob" which dragged William Lloyd Garrison through the streets of Boston with a rope around his waist was roused to violence as much by the fact that a group of Boston women had so unsexed themselves ■ to organize an anti-slavery society and hold a public meeting ■ by the fact that the society was to be addressed by ■ English agitator for human rights, George Thompson. Indeed, in 1840 the first World's Anti-Slavery Convention in London refused to seat the American "female delegates" on the ground that for any woman to take part in a public meeting was improper and degrading to the sex!

I remember, too, in later years, the first parade for woman's suffrage held in New York City in which men took part. I was one of the eighty-five members of the sterner sex who were booed and hissed and asked: "Did your wife make you do it?" all the way down Fifth Avenue to Washington Square. Not one of us was sure then that we would live to see the enfranchisement of women, much less be present to rejoice when ■ woman took her seat in the Cabinet room of the White House. Here is a lost cause no longer lost, but come to triumphant success, and if the pioneers of that cause are looking down upon this scene, there will be rejoicing in heaven on the fourth day of March. And this rejoicing should be doubly vociferous because of the character and achievements of Frances Perkins herself. These the editors of *The Nation* are treating elsewhere. I can only add my "me, too." But I am particularly pleased that Frances Perkins is ■ Lucy Stoner—in other words, she has kept her maiden name although happily married and the mother of a most promising daughter. In this hour of depression when the pernicious doctrine is being preached that married women should be debarred from employment by the local, State, and federal governments if there happens to be a husband or another male member of the family who is also working, it is wonderful, indeed, to have Franklin Roosevelt pick not only an extraordinarily able woman of proved ability in public office, but one whose husband is also ■ wage-earner. That ought to stop a great deal of the mischievous propaganda which could only work infinite harm if it should lead to the adoption of this proposal ■ ■ nation-wide policy. No State has the right to deny ■ woman a job, not even in times

of unemployment, if she wants it, has earned it, and is capable of doing it well. Here we have another one of those real issues of personal liberty that ought never to be abridged by sex, or race, or color.

I am so bold as to believe also that the new President has set ■ example which will be followed in the years to come ■ a matter of course, as it has been the custom ever since the coming of suffrage to give women their place on the national party committees. No one thinks that that unsexes them; ■ one now thinks that the women orators in the national conventions are out of place, or the women delegates ■ the floor. No one maintains that the women governors who have been chosen have suffered thereby—"Ma" Ferguson, I fancy, is just about the same woman that she was when she first became Governor. I admit that we have had several unfortunate cases, notably one in New York State, in which women office-holders have played us false. But we have no right to expect women in office to be more upright than men similarly placed; we can only hope that they will do better than the men. But whether they do or not, a share in the actual management of our State and national businesses is their inalienable right. So I should not be surprised if every succeeding Cabinet hereafter had one or ■ women in it. Certainly, if a Republican Administration should succeed Mr. Roosevelt's, it would be hard for it not to "recognize the women voters" in this way.

But after all, I come back to the fact that we need not worry the least bit about this first woman Cabinet ■ member. Her attractive personality, her strength of character, her devotion to the truth which made her leap to the exposure of the misleading statistics of unemployment given out by Mr. Hoover's Administration, all give no room for question as to what her record will be. Also she is ■ forward-looking person, in touch with all reform movements, sympathetic to social control and social responsibility. It will be wonderful to have her in the place of the incredible Mr. Doak, and of the money-grabbing former Secretary of Labor, the present Senator from Pennsylvania, James J. Davis, who is now awaiting trial upon an indictment for misusing the mails. Those were "professional" labor men. They served the cause of labor and their country just about as badly ■ possible. They stood for hatred, bitterness, bigoted intolerance, and narrow-minded and cruel interpretation of the labor and immigration laws. When I think of Frances Perkins's point of view and attitude, her humanity, wisdom, and statesmanship, it seems to me that she will be ■ angel at the Cabinet table in contrast with the sordidness and the inhumanity of her predecessors. I, for one, pledge myself here and now never to cease to be grateful to Franklin Roosevelt for this brave and just and wise action—no matter what fate may have in store for him and his Administration.

Isabel Garrison Villard

The Farmer Learns Direct Action

By FERNER NUHN

A RAW, chilly day. The yard of the farm, churned black in a previous thaw, is frozen now in ruts and nodes. Where the boots of the farmers press, a little slime of water exudes, black and shiny. Through a fence the weather-bleached stalks of corn, combed and broken by the husking, stand ghostly in the pale air. The farm buildings—machine-shed, chicken-houses, pig-houses, corncribs—sprawl and gather again in the big, hip-roofed red barn, and strike a final accent in the thrust of the tiled silo. The farm is kempt and has a going air; there is nothing run down about it. The fields spread away, picking up other farm clusters sections off—remote, separate, dim under the big gray sky. One feels the courage of the isolate units, each swinging its big segment of earth. Perhaps they call for too much; perhaps the independence is doomed; but something of worth will be gone if it goes.

There are 300 farmers here. It is a Quaker community, long established, conservative. The farmers are mostly middle-aged, very workaday in overalls, sagging sweaters, mud-stained boots. They talk quietly in their slow, concrete manner, move about little.

They are neighbors of a farmer who can no longer pay interest on a \$2,000 mortgage. These farmers have known him for years; they know he would pay if he could. They know the debt and the interest are three times as hard to pay off now as when the mortgage was given. Some of them know that soon their own property may be endangered by defaults. They know that this particular mortgage was given on stock, and that the farmer has offered the stock in settlement. And they know that the mortgagee refused the offer, demanded a sale instead—a sale of personal property, as provided by law.

The mortgagee stands off at one side, with his attorney. They are talking with the auctioneer. The farmers look that way once in a while, and while their glances are not friendly, they show no open animosity. The auctioneer comes away. Some farmers surround him; they want to be reassured that no household goods will be put on sale. The auctioneer reassures them. The farmers nod grimly; that much has been accomplished anyway. There are no leaders, no haranguers, no organization. In fact, this is the first affair of the sort in the county.

There is a movement toward the barns. The auctioneer mounts a wagon. The first thing offered is a mare. It is rather strange that live stock is offered first; the usual order is machinery first. The defaulting farmer stands silent holding the mare; he is a man almost elderly, quiet, staid-appearing; and he stands embarrassed, smoothing the mane of the mare. The auctioneer goes through his regular cry. The mare is sixteen years old, sound except for a wire cut and a blue eye. What is he offered, what is he offered, does he hear a bid? He tries to make it sound like an ordinary sale. But the crowd stands silent, grim. At last someone speaks out. Two dollars. Two dollars! Unheard of, unbelievable, why she's worth twenty times that!

The silence of the farmers is like a thick wall. The

rigmarole of the auctioneer beats against it, and falls back in his face. The farmer holding the mare stands with his head hanging. At last, without raising his eyes, he says, "Fifteen dollars." This is a new and distressing business to him, and he is ashamed to make a bid of less than that.

"... do I hear a twenty, a twenty, a twenty? Why, she's worth twice that much." The auctioneer is still going through the make-believe. He keeps it up for five more minutes. A pause, and a voice speaks out. "Sell her." It is not loud, but there is insistence in it, like the slice of a plow, with the tractor-pull of the crowd reinforcing it. The auctioneer hesitates, gives in. The silent, waiting crowd is too much. "Sold." After that there is less make-believe. Three more horses are offered. They are knocked down to the farmer, with no other bids, for ten dollars, eight dollars, a dollar and a half. The farmer is learning. The machinery comes next. A hay rack, a wagon, two plows, a binder, rake, mower, disc-harrow, cultivator, pulverizer. A dollar, fifty cents, fifty cents, a quarter, a half a dollar. Sold to the farmer. His means of livelihood are saved to him.

That night there is a meeting in the country chapel. It is a strange affair; nothing like this has happened in this community before. To conspire against the law! It amounts to that. To obstruct legal justice! There is an anxious, almost a bewildered look on the faces of the farmers. But it isn't justice, even if it's legal! So the debate goes on. Ten-cent corn to pay seventy-five-cent debts; a quarter, perhaps almost a third, of all Iowa farms lost to their original owners in the last seven years for inability to meet obligations.

But there is something more than economics involved. A faith, a dream, is involved, and the jeopardy of it shows in their faces as they talk. A dream of land, of freeholders of the land, self-determining workers of the piece of earth they own. And now—47 per cent of the actual farmers of land in Iowa, richest land in the country, are not owners, but tenants. The proportion is steadily increasing. Many of the less resolute farmers have given up the idea of self-respecting, profitable farming, are resigning themselves to the thought of "a bare living on the land." The shadow of peasantry hangs over them.

But a dream does not die easily. Heat generates from it even in this conservative audience. Old phrases are spoken, spoken with a new meaning. "Justice above the law." "The Boston Tea Party." "The right to save our homes." Someone describes the affair of the afternoon. The farmers cannot help being pleased at its success. It is a taste of direct action. They organize to use it more effectively.

Another county, the county seat. Trucks, Fords, muddy vehicles of all kinds have been pouring into the small town all morning. There is a big empty space of pavement in front of the courthouse, with "No parking" signs. The farmers carefully park their cars down side streets. They gather in the courthouse, in the corridors, on the steps. A young farmer lounges near the door with a coil of rope nonchalantly hung on his arm.

Nothing happens. A sheriff's sale is expected, with the probability of a deficiency judgment, but the creditor's party does not arrive. The gathering is sponsored by the Farmers' Holiday Association. There are 1,000 farmers here. There is organization. Leaders stand up on radiators in the corridors and talk. Make the dollar complete its circuit through the pockets of the big boys, the big-moneyed men, and get back to the producers. Until the American farmer rears up on his hind legs and demands cost of production, we are headed for the poorhouse as fast as we can go. Laws and the Constitution are meant to serve men, and when they cease to do that, the laws should be trampled on.

Still nothing happens. Early in the afternoon the sheriff announces that the sale has been called off. It is just well—for the plaintiff. He hardly wanted to carry on his action in the midst of the thousand farmers. A settlement has been reached out of court. There is little applause. The farmers listen a bit grimly, then slowly disperse and go back to their farms. But they have accomplished their purpose.

These are fair samples of farmers' direct action as it has been going on in the Middle West in recent months. Those who deprecated the Farmers' Holiday movement of last summer as a futile gesture should consider the present development, for it is a direct outgrowth of that movement, finding its precedents and methods in it. The general movement has had a number of results. It has called attention to the plight of the farmer; it has had real success as a method of dealing with specific debt actions; it is hastening legislative action along the whole line of agricultural problems; it is resulting in organization of farmers, extensive and intensive, such as perhaps has no parallel in history; and it is giving farmers a significant training in direct action.

The success of the protest gatherings (which apparently reached a peak in the Middle West in the first part of January, when perhaps a dozen or a score were taking place daily, though the movement has continued since and spread south and west) has been due, in part, to a general fairness of attitude which has kept public opinion with the farmers. Conciliation is tried first. Committees have been acting in many counties to investigate complaints or prospective actions with a view to compromising debts with fairness to both parties. The number of compromises has probably been greater than that of the sale protests. Nor will the farmers' organizations act to stop foreclosures when it is apparent that a member seeks advantage for himself. Farmers at Villisca, Iowa, have even acted to readjust a forced settlement which they felt was unfair to a mortgagee. Conciliation failing, the common practice in a forced sale is to save only chattels and machinery and working stock—the means of livelihood; grain and market stock are freely offered. The intention is to give the farmer a chance to start over again, and not let him be stripped and thrown upon the county.

The chief weapon of the farmer, in his protests, has been simply man power—sheer weight of corporate presence and purpose. Frequently a few lengths of rope are at hand; nooses have been dangled; but it is doubtful if the ropes would ever be used except as threat. In Nebraska the cold water in a horse tank was invoked, but not used, to silence an unwelcome bidder. Intimidation has been used semi-privately. Sheriffs "doing their duty" have been locked in cells, or in brooder houses.

A final weapon is boycott—social and economic. Landlords who have succeeded in removing a tenant are apt to find it hard to place another one on their land. Farming is so much a communal affair that the new tenant can hardly get along without the good-will of his neighbors and their help in silage and threshing. No trucker will haul for him. Usually he does not stay. A farm near Shelby, Minnesota, has been idle for a year; another in Iowa for two years.

Of actual gun play and violence there has been very little on the part of the farmers. In Kansas, however, a real-estate dealer was killed during January after foreclosing a mortgage on a farm, by persons so far not designated. In Wisconsin, Iowa, and elsewhere guns have been used by homestead owners to prevent sheriffs from attaching their property. And at Sioux City recently farm pickets, in a continuation of the local milk war, engaged in a gun battle with truckers in which a number of men were wounded, one fatally. This last incident, while only indirectly related to the debt-protest movement, comes closest to a use of firearms by organized farmers.

But aside from the exceptional violence it is patent that every protested sale, however orderly, has violated the law. State Attorney Good of Nebraska, in a "law and order" statement which hardly recognized the realities of the farm situation, was nevertheless technically right, no doubt, in declaring courts could hold sales void in which bidding was obstructed. Courts, however, have not been voiding such sales. Local judges and sheriffs have done a good deal of nodding, blinking, and looking the other way. The farmer, threatened with losing his home and his livelihood, has set rights up against legalities—and legalities have yielded.

To give a decent form to such yielding has now become the worried affair of legislatures and courts. Governors Schmedeman of Wisconsin and Herring of Iowa made the first move with proclamations asking forbearance in foreclosures. By February 7 the Iowa legislature had passed an act which has apparently become the pattern for legislation of the sort—an act intrusting district courts with distributing rents, incomes, and profits of real estate susceptible to foreclosure toward the claim of taxes, mortgages, and insurance, according to a certain priority, until March 1, 1935. Mortgagee or mortgagor may present a demand for court custody. Similar moratoriums, with varying time limits, were passed or are pending in Kansas, South and North Dakota, Nebraska, Wisconsin, Idaho. Deficiency judgments were the target of legislation in various States. North Dakota and Michigan acted to save property involved in tax delinquency. In a notable decision the Wisconsin Supreme Court ruled that the value of land may not be measured by current purchase bids—a ruling which will allow courts to forestall deficiency judgments. These acts and bills—radical enough, it would seem, as against the sanctity of contracts—indicate the purpose of debt legislation. Two points may be considered. They aim mostly at postponement, and they would treat debt problems individually. This latter condition means that a terrific burden will be thrown on the courts. Other borrowers will be heard from, for the farmer carries only a fraction of the total debts, even on real estate. However, such legislation may avert mob action during the periods designated.

But it is clear, since such legislation only continues debts, that it merely gambles on the hope that prices will rise and

the farmer be able to clear his own obligations within two or three years. The hope seems hardly warranted. It seems very unlikely that an upswing, even if it comes, will rise to such levels that the huge burden of debt can be met on terms at all comparable to the terms under which it was contracted. Consequently, with human rights of borrowers somewhat recognized as they are now, we are quite certain to enter an era of creditor deflation, with real scaling down of debts, or money inflation, in the offing.

Meanwhile the farmer continues to organize. The Holiday movement of last summer, the sale protests of this winter, are only items in a series of possible resorts to direct action. The growth of the Farmers' Union, sponsor of the Holiday and most militant of farm organizations, under such

leaders as Milo Reno, is a sign of the times. The names of local units under its wing are suggestive: Council of Defense, Loyal Order of Picketers, The Modern Seventy-sixers. Its aims, as voiced, for instance, by the highly integrated Woodbury County, Iowa, association, are arresting: "To pay no taxes, permit no foreclosures, stay on the farm until we receive cost of production." Its tactics are patterned after those of militant labor unionism: the combining of members for purposes of strike and embargo. Some concentrated groups, such as milk producers, have already shown formidable bargaining power.

At any rate, the farmer is not taking the threat of loss of ownership of his land lying down. He has tasted direct action. He may use it more drastically.

South America Turns to War

By SAMUEL GUY INMAN

THE struggle between Bolivia and Paraguay over the Chaco jungle reminds me of two bald-headed men fighting over a comb," said a Frenchman recently. But South American countries are, of course, only imitating France, England, the United States, and other civilized nations that have been struggling to control the deserts and jungles of North Africa, Mesopotamia, and Nicaragua.

"To whom does the Chaco really belong?" I asked a diplomat in Buenos Aires who had long studied South American questions. "To the Indians," he replied. And thereby hangs a tale. The disputed boundaries were never clearly determined in the old colonial days or in those of the republics. There was no urgency in the matter until oil and rubber and mahogany and bananas and coffee and cacao and other products that the rich industrialists wanted were discovered in these jungles. Then the disputes flared up. Governments heretofore bankrupt began to spruce up with money borrowed from foreigners who were promised a part of the riches sure to come from the newly discovered resources.

Leticia, for instance, is a little hamlet in a great stretch of jungle where Colombia, Peru, Ecuador, and Brazil come together. The airplane and other instruments of modern life begin to penetrate this hitherto unknown section, and the modern spirit of commerce seizes the inhabitants. A few dozen Peruvians take the town from even fewer Colombians, who had supposed that the Colombian flag was rightly flying there. There follows an international incident. Argentina, "soundest of all South American nations," has a revolution following financial excesses; Uruguay seems too friendly to one of the participants, and diplomatic relations are broken. Brazil overborrows, the internal strain is too great, old political rivalries flare up, and a devastating revolution breaks out, undoing all the political and economic progress of four decades. Chile's administrations sell out her nitrate to a few foreigners and nationals, and drive the common people to desperation, revolution, and chaos. And the last few weeks bring reports that Uruguay, with the most progressive legislation of all American countries, is split hopelessly between the two executive divisions of the government, the President and the newly created Executive Council—a division also caused by economic conditions resulting partly from overborrowing.

Every country in South America is touchy, jumpy, so nervous that any little incident may bring far-reaching results. There has been too much foreign money, too much high finance connected with dictatorial governments. Fascism, not communism, is the great danger in South America, as elsewhere.

The present tension is a hang-over from the series of revolutions in 1930 and 1931, the explanations of which have now become fairly clear. During the World War Latin America was immensely impressed with the power of the machine, and many of its leaders came to believe that rapid material development was essential. At the same time the United States became a creditor nation instead of a debtor, and began searching for places for the investment of its enormous surplus of capital. These two circumstances were mainly responsible for the development of a new type of dictator who looked upon his country as an undeveloped piece of real estate; only money was needed for modernization. The newly appointed agents of the North American bankers assured him that there would be no difficulty about that—providing he would give them sufficiently tight mortgages.

United States investments in Latin America at the beginning of the World War amounted to \$1,242,000,000. In 1929, on the eve of the stock-market crash in New York, they amounted to \$5,587,494,100. Consider the enormous influence of these investments in some of the more backward countries, industrially speaking. In Colombia only \$2,000,000 of American money was invested in 1913; in 1929 the amount had grown to \$260,000,000. Within the same sixteen years these investments, including commercial enterprises and loans to governments, had risen in Peru from \$35,000,000 to \$150,000,000; in Chile from \$15,000,000 to \$550,000,000; in Bolivia from \$10,000,000 to \$133,000,000; in Brazil from \$20,000,000 to \$476,000,000; in Argentina from \$40,000,000 to \$611,000,000.

As long as the strong man can borrow funds to carry out an active program of public works and can keep the support of the army and his friends by awarding contracts and other favors to them, he is likely to hold power. But when a great economic crisis occurs, not only the political malcontents but the growing democratic elements opposed to such dictatorships have opportunity to assert themselves. That is what

happened in Latin America. Dictators, like stocks, tumbled after the Wall Street debacle in 1929—Leguía in Peru, Siles in Bolivia, Irigoyen in Argentina, Ibañez in Chile, Washington Luis in Brazil, Ayar in Ecuador.

These countries are now facing not only the general world depression but enormous charges for foreign debts. Currency is everywhere depreciated and the process continues. Since the dictators made no preparation for democracy, one finds all over Latin America at the present time revolution, militarism, and international strife. And along with this fresh crop of militarism, some of the old boundary disputes have been resurrected. A foreign war, as the imperialists discovered long ago, diverts attention from troubles at home.

The boundary question between Bolivia and Paraguay has existed for a century, but it was only when petroleum concessions and colonizing privileges were granted to American and British corporations and extensive loans were made by bankers of those countries to Bolivia that the question became acute. Large sums were spent in England and the United States for bombing planes and other war material, and General Kundt of the German army was engaged to modernize the Bolivian war machine. The country rose against the dictator Siles in 1930 and he and General Kundt had to flee for their lives. But the military elements were well entrenched and were soon again in the saddle. An undeclared war was launched in the Chaco in the summer of 1932, for which it seems impossible to fix the blame, since squads of Bolivian and Paraguayan soldiers were constantly colliding in the undefined territory. At the close of the year General Kundt was recalled from Germany to carry out the plans he had made earlier for a drive to the Paraguay River.

The need felt by Bolivia for an outlet through the Paraguay River to the Atlantic has been intensified since Chile and Peru in 1929 settled the old question of Tacna and Arica, dividing the two provinces between themselves and leaving Bolivia without access to the Pacific, such as she had before her war with Chile. Recent economic developments originating overseas have further intensified the need. By 1926 the Standard Oil Company had secured control of 3,613,454 acres of land in the lowlands near the Chaco. A British syndicate, with a plan for railways and a port on the Paraguay River, was granted an immense section of land, totaling 50,000,000 acres, also in lowlands. (This whole scheme soon failed because of bad management and stock manipulations.) In 1922 high financing began with the floating of a loan of \$33,000,000 by an American banking syndicate, the nation pledging as security all the shares of the government national bank, a first lien on custom duties, taxes on corporations, mines, and other industries—in fact, just about everything that could be secured. A permanent Fiscal Commission was set up to manage Bolivia's finances, composed of two North American representatives of the bankers and one Bolivian.

The requirements on this loan were so exorbitant that in 1926, for example, out of the country's total revenues of \$14,943,000, 65 per cent was pledged to the service of the loan. In 1926 an additional loan of \$9,088,200 was secured from Vickers-Armstrong for purchases of war material in England, the annual cost of carrying this loan being \$1,440,000. In spite of all this, Dillon, Read and Company of New York floated another loan in 1928 for \$23,000,000. And today, nearly two years after Bolivia has suspended service charges on these loans, she is able to buy all the munitions

and hire all the foreign fighting men needed to push the war to settle the century-old dispute over the Chaco swamps.

Behind the Leticia affair is a similar story of dictators, loans, and ambitions. Bolivia's next-door neighbor, Peru, was ruled by Augusto B. Leguía from 1919 to 1930. He increased the public debt in the first ten years of his regime from about \$10,000,000 to \$111,387,000. And after that several additional loans were floated, for one of which a New York banking house paid a "commission" of \$415,000 to the dictator's son for his influence. Leguía fell in 1930. Peru found it impossible to pay her debts, and service charges on loans were suspended. The two principal candidates for the presidency to succeed Leguía were the military leader of the revolution, General Luis Sanchez Cerro, and the former student leader, Raul Haya de la Torre. The military leader was elected president. Soon the old procession of liberals toward the prisons and exile, started by Leguía, was resumed. De la Torre was arrested and is now in solitary confinement in a Peruvian prison, as are many other political prisoners. A cablegram received last week by the International Committee for Political Prisoners in New York states that 6,000 political prisoners in Peru have declared a hunger strike. There are indications of considerable opposition by the liberal element in the country to a war with Colombia over a far-away jungle town.

Among Leguía's few real contributions to his country's welfare were the solution of the Tacna and Arica question and the settlement of the boundary between Peru and Colombia. The latter was announced in 1922 through the Salomon-Lozano treaty. The territory involved was the Amazon jungle in the region where Brazil, Colombia, Ecuador, Peru, and Bolivia have since colonial days had holdings which were undefined until recent efforts at settlement gradually succeeded. But territorial or any other settlements made by Leguía are not popular at present. Many protests have been made against those settlements; it is asserted that they are not legitimate because they were made without the country's consent. So when a band of Peruvian adventurers captured the little town of Leticia in Colombia within territory recently claimed by Peru, the Peruvian government endeavored to make of the incident a patriotic issue, appealing to the internal opposition to unite in defense of the national interests. Instead of apologizing to Colombia and withdrawing these self-appointed conquerors, the Peruvian government began to raise funds to purchase fifteen bombing planes and concentrated forces near Leticia.

At the same time the Colombian government under President Olaya Herrera, which is having by no means an easy time in dealing with its own foreign creditors, seems not averse to using the same rallying cry of patriotism to head off the opposition party. Bristling with righteous indignation, the government has plunged into preparations for war. It has floated an internal loan of \$10,000,000, bought a number of aeroplanes, and put them in charge of German aviators. Several merchant ships have been equipped with cannon and dispatched around the Caribbean and Atlantic coast to the Amazon and up that river 2,100 miles, to meet the Peruvian forces which are concentrating to protect their fellow-nationals in Leticia. Peru is counting particularly on her air force, organized by an American Naval Mission several years ago, augmented of course by as much new equipment and other war machinery as she can buy from us.

In the meantime Brazil, the most deeply concerned neighbor, is leading in an endeavor to settle the dispute through peaceful means. Brazil proposes to accept Leticia from Peru and hand the town back to Colombia. Peru wants Brazil to hold the town while a new treaty is negotiated. But Colombia says the ownership of Leticia is clear and cannot be arbitrated. Brazil is also unwilling to hold the town during long doubtful negotiations, since it would entail maintenance of an expensive armed force in the disputed territory. The United States and other nations have backed Brazil and are putting considerable pressure on Peru to cease preparations for war. But as was feared, with the armed military, naval, and air forces of both Colombia and Peru concentrated in the territory around Leticia, the first encounter in another undeclared war took place on Tuesday, February 15.

Contrary to general opinion, international wars in South America have been few, the last one being the war between Chile, Peru, and Bolivia in 1879-81. The only one before that, barring those connected with the liquidation of the revolutions against Spain, was the war against Paraguay waged by Brazil, Argentina, and Uruguay from 1865 to 1870. But today the whole continent is threatened because of the undeclared war between Paraguay and Bolivia over the Chaco, and the mobilization of the forces of Peru and Colombia over the Leticia incident. The Latin American nations since the beginning of this century have generally settled by arbitration serious disputes with their neighbors, but South America now lacks the idealistic drive it had when Argentina and Chile settled their boundary dispute in 1904 and erected the

"Christ of the Andes" to commemorate the treaty of peace.

What has become of Pan-Americanism? In the past few years, while talk of Pan-American fraternity has been at its highest, Bolivian conditions have encouraged the building up of military strength sufficient to take the Chaco. Now the Neutral Commission set up hastily by the American nations in Washington finds it asks in vain for peace. Opinion in South America is practically unanimous that much has been lost by the insistence that the peace negotiations be conducted in Washington, rather than near the scene of discord. This accounts for the meeting on February 1 at Mendoza of the Ministers of Foreign Affairs of Argentina and Chile, with the announcement that in the future South America would settle her own affairs without the help of the United States.

In a crisis like the present there are divided councils. The Pan-American Union is not permitted to discuss political questions. Yet the League of Nations, organized for this purpose, is not allowed to offend the United States by attempting to keep peace among American nations, as it does with its other members. The specially set up commission of neutrals called at Washington finds itself unprepared, lacking in prestige, lacking in the power that comes from permanence, and lacking in experience. The Kellogg-Briand Pact was not signed by Argentina and Brazil; so the two strongest South American nations are not particularly interested in it, even if there were machinery for its enforcement. The American ideal of peace is breaking down before the rather simple questions of the Chaco and Leticia. A whole new organization and coordination of American peace efforts is imperative.

The South Goes Legal

By HELEN BOARDMAN

"IF they had caught Crawford at the time," said Brigadier General William Mitchell, "there would have been a burning." It was in Loudoun County, the famous fox-hunting country of Virginia, land of magnificent estates and palatial residences occupied, for the most part, for only a few weeks each year. I had been sent by the National Association for the Advancement of Colored People to investigate and report on certain aspects of the Ilsley murder.

Mrs. Agnes Boeing Ilsley was a charming and popular widow, a member of the fox-hunting set, who lived in the village of Middleburg. She was a woman of forty and her brother Paul, twelve years her junior, lived with her. Paul Boeing was tall and slim, and a sartorial exquisite. He was very dark, with dark eyes and black hair, "patent-leather" hair, smooth and shining. While Mrs. Ilsley was well loved by the village people, her brother kept distinctly aloof, choosing his friends among the rich. The two were fond of each other, their only disagreements being over money. Mrs. Ilsley's income ran to thousands, not hundreds of thousands, and the young brother was reputed to be extravagant.

The Ilsley home, a brick house of some twenty-five rooms, fronts on the main street of the village. It is surrounded by pleasant lawns and gardens and at the back, facing a rear street, is the chauffeur's cottage. On January 12, 1932, Mrs. Ilsley, her brother, and a maid were living in the chauffeur's cottage. The big house had been rented to

the daughter of Mrs. Ruth Hanna McCormick, but she had moved out and on that night it was empty. It was to guard against possible intruders, Paul Boeing afterwards said, that he spent the night in a third-floor room of the big house, leaving his sister and the maid, Mina Bruckner, alone in the cottage. Mrs. Ilsley was an ardent anti-prohibitionist. She went to a meeting that night at General Mitchell's home to discuss the repeal of the Eighteenth Amendment. She drove her own car home, after a cheerful goodbye to her friends. It was the last time they saw her alive.

At nine o'clock the next morning Paul Boeing hurried down the main street, a coat thrown over his pajamas, and went into the bank. Stammering out his incoherent story, at last he made it clear. He had found his sister brutally murdered in her bed, and her maid also, both killed apparently with a hatchet. In a chattering state of hysteria he was taken out to the Hitt estate (Mrs. Hitt is the daughter of Senator Elkins and a close friend of Alice Roosevelt Longworth), where he was carefully guarded and protected against reporters. General Mitchell dominated the scene, directing, suggesting, questioning. Onlookers crowded about, buzzing with suspicion and surmise. There had been no robbery. Jewelry and money were untouched. Who could have done it? It must have been a nigger. Then the cry arose, "George Crawford! Get George Crawford!"

George Crawford was a young Negro of perhaps twenty-

seven years. About the year 1925 he was living with a sister, his only relative, in Richmond, Virginia. There he was arrested on a charge of receiving stolen goods. He was convicted and sentenced to nine years. Perhaps Virginia was short of labor. Anyway, Crawford served in the chain gang five years. Then he became a trusty and afterwards acted as chauffeur to the warden. One day one of the convicts suddenly went for the warden with a knife. George entered the building just in time to see it. Risking his own life he leaped at the convict in time to deflect though not to stop the blow. The warden's throat was cut. Crawford carried him out to his car and drove at top speed to Dr. Holt, the prison doctor. The warden's recovery, Dr. Holt testified, was due to the presence of mind of George Crawford. For this act he was pardoned by the Governor in November, 1930.

Learning that Dr. Holt was living in Middleburg as general practitioner, Crawford went to see him there. The visit resulted in his being employed by Dr. Holt in January, 1931. Dr. Holt had rented and was then occupying the chauffeur's cottage on the Ilsley place. Sometimes Crawford drove Mrs. Ilsley's car for her or did some odd job. He did not sleep on the place, but stayed in a building on the main street, next to the drugstore. In the evenings he sat on the steps in front of the drugstore and gossiped with white men of his age. "A nice boy," one of them called him later, "if he had been white we might have been chums."

One night that spring a store in the village was broken into and some merchandise—chiefly cigarettes—was stolen. Once a jailbird, always a suspect. George Crawford was arrested and questioned. As there was no evidence against him, after a severe grilling he was released. Late in the summer some whiskey was stolen from the Ilsley house. Again, for no adequate reason, Crawford was accused. But again for lack of evidence the case was dropped. Twice was enough. Crawford was tired of being blamed for others' misdeeds. He was saving up the six dollars a week he received, together with stray tips. About the middle of September he left Middleburg and went to Boston, and with him went Mrs. Bertie De Neal, who left her husband and children to accompany him. This was indeed a scandal, and one which the colored people of Middleburg resented. Bertie De Neal stayed with him for some weeks, but finally, homesick and unhappy, she returned to Middleburg early in December, 1931, leaving George in Boston.

On Christmas Eve the Ilsley place was robbed. The house was not ransacked. From many valuables which might easily have been taken, the burglar selected a wrist watch which had belonged to the late Mr. Ilsley and several Christmas presents which had not been taken from their wrappings. George Crawford had gone to Boston. For several months he had not been seen in Middleburg. But from force of habit the blame was put on George. Just three weeks after this came the murder, and habit again asserted itself. To the excited minds of Mrs. Ilsley's friends it was quite clear that Crawford was the murderer. Poses were formed. Windy Hill, the colored section, was searched with minute thoroughness. The chase widened, taking in the countryside. A reward was offered. It was increased. But Crawford could not be found.

During the weeks of the hunt, which stretched to months, no other theory appears to have been seriously considered. One Negro, the furnace man, was closely questioned

and released. Bertie De Neal was held for months in the county jail at Leesburg. Eventually the country was combed from Boston to Florida for a year without finding the missing man. On January 12, 1933, exactly a year after the crime, Crawford was discovered in Boston. As Charlie Smith, a name chosen by Bertie De Neal, he was one of the thousands of Boston's unemployed. After Bertie left him he had spent his days looking for work, sleeping at night in a basement. Finally he was picked up in suspicious circumstances by a policeman, and finger-printed. An enterprising young officer discovered that the fingerprints were identical with those of George Crawford, wanted in Virginia. Rendition proceedings followed, a hearing being held before the Assistant Attorney General of Massachusetts on January 25, 1933. At this hearing the State of Virginia produced three witnesses who testified to having seen Crawford in or near Middleburg in January, 1932. The State also offered an unsigned confession which Crawford was alleged to have made to County Attorney Galleher of Leesburg, Virginia. The hearing was adjourned, to be continued on February 7, 1933.

On January 28 I went to Middleburg, stopping on the way at Leesburg, the county seat. The county clerk told me there would be no trouble when Crawford was brought back. There can be no lynchings in Virginia, he assured me, because there is a law against it. There have only been twenty-six lynchings there in thirty years anyway. But the Leesburg jail is a flimsy structure. It might be safer to put him in Alexandria. Arrived in Middleburg I walked up and down the two blocks constituting the business section of the village, stopping at shops, garages, and filling stations, the drugstore, and the Sandwich Shoppe. The proprietor of one of the first shops, when asked what would be the chance of any demonstration against Crawford if he should be brought back, replied: "Now? Not a bit. Nobody wants any trouble. At the time? Well, at the time, gosh, yes! Why, that night everyone in Middleburg was armed. Say, there were so many guns on the street it wasn't safe to go out! But not now. A year is a long time and you get calmed down. Now I guess everybody wants him tried legally. Sure, he'll be convicted. He did it, all right."

"I don't know," said the next man. "The longer they keep him in Boston the more excited people get. I hear a lot of talk and they're getting hot under the collar, the way Boston's holding him back." "He did it," said many. "That is sure. They've got fingerprints to prove it." This is a common misunderstanding. No fingerprints were found. There was one man, however, who said: "Well, I'm not so sure Crawford did it. There's only circumstantial evidence. If you ask me, there's a lot in that case no one knows—a lot is being covered up. But he'll be convicted, that's sure."

Brigadier General Mitchell and Mr. Hitt, whose estate is near Mitchell's, Mr. Sands, the bank president, and Mr. Luck, the mayor, hope to avoid mob violence. They want a speedy, orderly trial. It will be a big occasion with a large attendance. Loudoun County wants law and order, a "fair" trial, and, of course, a conviction. They all know there would have been "trouble" (no one likes the word lynch) if Crawford had been found during the weeks following the murder, but that feeling is quiescent now.

As justice of the peace, Roy Seaton was one of the first persons on the scene of the murder. He has rooms in the village, in the building next to the post office. He is a

thoughtful man, and not content to follow the mob. For one thing, he is not satisfied with the local way of dividing up between the "common people" and the "high hats." Only by currying favor with the "high hats" can the commoners live. There seems to be no such thing as justice. Take the Crawford case. "Why, that nigger doesn't stand a chance," said Roy Seaton. "The rich people are against him and they'll send him to the chair. That's all right—if he's guilty. But if he isn't guilty—well, he doesn't stand a chance."

"If folks would dare to say what they think," remarked more than one of the village people, "I reckon you'd hear plenty about why they want to get Crawford. Ain't it true that if they convict him no one else can be accused? That's what I hear. Well, in that case they don't want a lynching. I'm sure going to be there when they bring him back to Leesburg, though. There'll sure be a big party to meet him!"

"They do love a nigger in Boston," said a local editor. "We'll get him, though, and put him in the chair, I hope."

I quoted these opinions at the hearing before Assistant Attorney-General Stephen D. Bacigalupo in Boston on February 7. J. Weston Allen, former Attorney-General of Massachusetts, and Butler R. Wilson of Boston were retained by the National Association for the Advancement of Colored People to represent the defendant. After my testimony, which lasted for three hours, there followed a series of witnesses who furnished a complete alibi for Crawford. They were employers, landladies, friends, and associates who produced among them a consecutive account of Crawford's movements from the time he arrived in Boston in September, 1931, until his arrest in 1933. Emphasis was placed on the period before and after the crime, which occurred on January 12, 1932. All the witnesses testified to Crawford's extreme poverty and to the fact that at no time previous to February,

1932, did he have enough money to be able to leave Boston.

The dramatic moment of the day came with the appearance late in the afternoon of the last witness for the defense. This was a good-looking Negro youth of eighteen, who gave his name as Irving Washington. He testified in a straightforward, convincing manner that he had slept with Crawford in the boiler-room of the Hutchins undertaking establishment every night for three weeks beginning not later than January 7, 1932. His testimony could not be shaken, although the Virginia attorney leaped halfway across the table at him in a furious attempt to break him down.

The hearing was adjourned at the conclusion of this testimony until the following morning, when it was resumed at the Charles Street jail. Crawford was put on the stand as a witness. Mr. Wilson examined him chiefly on the alleged confession. He went over it point by point and the witness explicitly denied having made it, and described the attempts of the officials to bully him into admitting prepared statements and later the efforts to make him sign a paper he had not read. His account of his movements in Boston tallied with the testimony of previous witnesses. In cross-examination the Virginia attorney illustrated what Crawford, in his account of the attempt to obtain his signature, had described as "looked like he's goin' to jump right *through* me!" But the witness, never losing his gentle respectful manner, steadily denied the confession.

On February 18 Governor Ely issued a warrant for the extradition of George Crawford. On the same day Mr. Wilson applied for a writ of habeas corpus. It was issued on February 27. The case will be heard on its merits on March 13. George Crawford's fate is still uncertain. Meanwhile, another very grave issue is raised. Is the South learning to use a new, and legal, procedure?

The League Acts

By ROBERT DELL

Geneva, February 12

AT the beginning of this year the League of Nations seemed to be in a parlous state and even its most devoted adherents were tempted to despair of it. Its reputation was gravely compromised by its weak attitude toward Japan, which for sixteen months had been contemptuously flouting the resolutions of the Council and the Assembly and violating the engagements entered into by the Japanese representatives at Geneva. The Disarmament Conference had sat for nearly twelve months without producing any result and the prospects of its achieving anything of importance seemed remote. It is pleasant to be able to record a marked change for the better, at least so far as the Manchurian question is concerned.

The final solution of the Sino-Japanese dispute is still far off and the action of the League in the matter will no doubt be prolonged for many months, but we know already what the final solution will be. In the not very distant future the Japanese will have to accept a settlement of the Manchurian question on the lines of Chapter IX of the Lytton report. They would have been wiser to accept it now when they could have negotiated in conditions much more

favorable to themselves than they will ever get again. The Japanese have shown in this affair that, intelligent as they are, they are not good diplomatists. They have overreached themselves and badly miscalculated. They were, of course, encouraged to be arrogant and uncompromising by the lamentable weakness of the European Great Powers at the outset and, indeed, until the end of last year.

The contemptuous attitude of the Japanese delegation here toward the League, which Matsuoka could not conceal even in his speeches before the Council, showed their conviction that the European Great Powers would never agree on any course distasteful to Japan. In particular they counted on the continued support of the British government. Although it was evident three weeks ago that there was a change in British policy in this matter, the Japanese could not believe it possible that Sir John Simon would desert them. Even on the evening of January 20, the day before the Committee of Nineteen appointed by the Assembly decided to proceed to the report stage under Paragraph 4 of Article XV of the Covenant, Matsuoka's illusions on this point were so strong that he was still convinced that the conciliation procedure would go on.

The most important factor in the welcome change in the attitude of the League has been of course the complete shift in the policy of the British government. Among the causes of that shift were American pressure, the fear of a Chinese boycott of British goods, English public opinion, and, no doubt, tardy recognition of the fact that British interests in China are much more important than British interests in Japan. British support of Japan in this matter has always been incomprehensible, and I have not yet met anybody either in British official quarters or outside them who could give a reasonable explanation of it. I am now inclined to think that the British Foreign Office was not primarily responsible for it and that it was merely part of the Tory tradition which Ramsay MacDonald inherited when he became Prime Minister of what is in fact a Tory government. Undoubtedly the conduct of the Japanese themselves has contributed to the conversion of the British government. They tried to compromise Sir Eric Drummond and Sir John Simon successively by falsely representing them as having gone behind the backs of the Committee of Nineteen and having suggested changes in the texts adopted by the committee. Even so lately as ten days ago the Japanese circulated an absurd report that Sir Miles Lampson, the British Minister to Nanking had suggested to the Chinese government that the Manchurian question should be taken out of the hands of the League of Nations and settled by direct negotiations between China and Japan at Nanking or Shanghai. Moreover, the Japanese put up the backs and exhausted the patience of all the members of the Committee of Nineteen by constantly making obviously unacceptable proposals the purpose of which was clearly to gain time, and by resorting to every sort of equivocation and subterfuge.

Should the Japanese consent to negotiate on the lines that will be laid down by the Assembly, the League would have won a great triumph. It is the general opinion here, however, that the Japanese will refuse to negotiate, that is to say, will refuse to comply with the recommendations of the report made by the Assembly. In that case, if China agrees to negotiate, the only consequence under Article XV of the Covenant will be that members of the League will be bound not to go to war with China. China, however, will have the right under Article XII to declare war on Japan three months after the adoption of the report by the Assembly, and any members of the League will be justified in taking action if they please in support of China. Moreover, by Article X of the Covenant, which has also been invoked by China in its appeal to the League, it will be the duty of the Council to advise upon the means by which the obligation of the members of the League "to respect and preserve as against external aggression the territorial integrity" of China shall be fulfilled. For the continued presence of Japanese troops in Manchuria after the formal declaration of the League that Manchuria is Chinese territory will be a violation of Article X. It is at least a tenable opinion that it would automatically involve the application of "sanctions" to Japan under Article XVI. It is a still more tenable opinion that Article XVI will come into operation if the Japanese invade Jehol, and they seem to have begun the invasion already. The Japanese have no special position and no special rights in Jehol and cannot therefore make the excuses that they made for their action in Manchuria. Their contention that Jehol is part of Manchuria and therefore under the sovereignty of the puppet

government of Manchukuo is unworthy of serious consideration, apart from the fact that the League has now declared that Manchukuo has no legal existence. Article XVI says:

Should any member of the League resort to war in disregard of its covenants under Articles XII, XIII, or XV, it shall ipso facto be deemed to have committed an act of war against all other members of the League.

It has been contended by Sir John Simon among others that a nation cannot be held to "resort to war" unless it formally declares war, but it seems improbable that many jurists will take this view, which makes nonsense of Article XVI and, indeed, of the whole Covenant of the League. If it were accepted, it would be possible for any member of the League to make war with impunity by abstaining from formally declaring it.

In any case, many members of the League are determined that this question shall be settled, and it is quite within the bounds of probability that within a certain period, perhaps six months, the question of applying Article XVI to Japan will have to be taken into consideration. Should it be applied, all other members of the League will be bound immediately to subject Japan

to the severance of all trade or financial relations, the prohibition of all intercourse between their nationals and the nationals of the covenant-breaking state, and the prevention of all financial, commercial, or personal intercourse between the nationals of the covenant-breaking state and the nationals of any other state, whether a member of the League or not.

It is the duty of the Council in such a case to organize armed intervention against "the covenant-breaking state," but it is left to each member of the League to decide whether or not to take part in such an intervention. In view of the very unsatisfactory economic and financial situation of Japan and the necessity of importing nearly all the raw materials essential to Japanese industry, cotton in particular, the severe economic and financial boycott prescribed by Article XVI would probably be effective without any resort to armed force. It would be quite impossible for Japan to hold out long against such a boycott.

Naturally the cooperation of states not members of the League of Nations, and of the United States in particular, would be necessary to make a boycott effective, but it seems to us here hardly possible that the United States could refuse to cooperate if such action became necessary, in view of the pressure successfully brought by the American government last month on the British and French governments to induce them to adopt a firmer attitude toward Japan. It is possible that the question of expelling Japan from the League under Article XVI will also be considered sooner or later. There is a growing feeling here that a state with a permanent seat on the League Council cannot be allowed to defy the League indefinitely and remain a member. Should the Japanese government give notice of its intention to leave the League, the expulsion of Japan might at once be proposed. But we hear no more at present of Japanese threats to leave the League, no doubt because the Japanese have discovered that they no longer frighten anybody. The League has called the Japanese bluff, and the salutary effects of its action show what would have happened if the bluff had been called in September, 1931.

In the Driftway

PRIVATE property, not so long ago, was one of the major deities in the great American religion whose high priests officiated in Wall Street. Now it has fallen upon evil times. Like most deities it was worshiped and propitiated as long as there was anything to be got out of it. Now that rents have fallen below fixed charges, the temples are crumbling into decay and the low priest on the beat closes his eyes to the looting by the populace.

* * * * *

THE Drifter is not indulging in fantasy. He is generalizing from a phenomenon now in process in the middle of New York City. On East One Hundredth Street between Second and Third Avenues, within a few blocks of a police station, three six-story apartment houses are being demolished bit by bit by the poor inhabitants of the neighborhood. The owner, it seems, disappeared last summer. The mortgagees have lost faith. The plumbing and lighting fixtures were long ago torn out and sold to second-hand dealers in declining civilizations, and the woodwork in appropriate lengths is feeding the stoves of slum-dwellers. Two of the buildings are on the point of collapse. In the other a few Negroes still live. The picturesque account of one of these remaining residents is also vivid:

Don't nobody seem to care. The city come along and shut off the water, and then the gas company come along and shut off the gas, and the electric light company come along and shut off the lights.

I goes up the street for a bucket of water, and I sees at night with an oil lamp. Ain't no sanitary what-you-calls-'em. But people ain't got no money don't care. If I don't get no money I stays here from now on until I get some.

* * * * *

IT is recorded in Hodgkins's "Italy and Her Invaders" that Rome overnight became a city without water. The aqueducts were destroyed one fateful evening and never restored. From that day forward, presumably, dust gathered in the "sanitary what-you-calls-'em" of the imperial city. Moreover, the sack of Rome was in part the work of its own citizens. According to Dyer's "History of the City of Rome," the inhabitants of Rome were themselves its principal despoilers. Emperors and popes, as well as private individuals, were not above carrying off anything that struck their fancy from stately columns to decorative bronze tiles, while metal was often extracted by thieves.

* * * * *

THE Drifter does not think that the disintegration in East One Hundredth Street or the tearing down of buildings in big cities in order to reduce property taxes is the beginning of general decay. But he confesses to an old fondness for the perfection of Cassandra's gloom. He finds a certain cosmic satisfaction in the reflection that depressions do not necessarily end, that the decay of American civilization is not impossible, and that history could no doubt withstand the shock.

THE DRIFTER

Correspondence

Tammany Corners Relief

TO THE EDITORS OF THE NATION:

During the last snowfall in New York City, more than a thousand unemployed men stood in line at one of the district headquarters of the Department of Sanitation from four o'clock in the morning until ten, in the hope of getting temporary jobs. Some were hatless, others coatless and rubberless; without exception, they were cold, fatigued, and miserable. It had been reported that the Department of Sanitation could not handle the snowfall with its regular force; and Dr. William Schroeder, Jr., chairman of the department, had stated in a syndicated article that he had given orders that "the first in line be hired in every instance."

After suffering long hours of exposure to snow and biting wind, and the frequent ministrations of impatient nightsticks, the applicants looked on while officials singled out individuals not in the line but loitering unmolested outside of it, and gave them jobs. Moreover, at about eight o'clock more than a hundred men, obviously fresh from sleep and breakfast and adequately outfitted for a day's work, arrived in a body. They were met without delay by the same officials, who led them to the door of the office over the protest of the men in the line, and gave them shovels and time tickets at fifty cents an hour.

Similar incidents are reported to have occurred throughout the city. The newspapers reported that some 18,000 extra men were given work, but it is doubtful that any significant proportion of them came from the ranks of the most deserving unemployed.

New York, February 23

THEODORE MARVEL

The Militant Atheist

TO THE EDITORS OF THE NATION:

I was shocked and surprised at Mrs. Heywood Broun's suggestion in your issue of February 1 that *The Nation* suppress advertisements of the *Militant Atheist*. Mrs. Broun is seriously in error when she writes that "the atheist decides that all who hold religious beliefs are fools and liars." I believe it is more nearly accurate to describe the atheist as one who rejects theistic assumptions.

Girard, Kan., February 3

E. HALDEMAN JULIUS,
Editor the *Militant Atheist*

TO THE EDITORS OF THE NATION:

In your issue of January 11, I read with interest the advertisement of the *Militant Atheist*, and in your issue of February 1 I read a letter protesting against your publication of that advertisement. Among other things your correspondent questions your "good taste and consideration of your Christian readers in allowing such license in abuse of their church and faith"; and she asks, "Why this mania to take from others a privilege we ourselves do not want?"

The quoted question logically implies that one's voice should never be raised against any idea or movement, however erroneous or unjust, which the protestant himself does not favor. If such a policy had been universally practiced in the past, many vital reforms would not have been achieved. Incidentally, one may justly accuse your correspondent of violating her own theory, for indirectly she protests against atheism, which evidently she does not want.

I object to her protest not only because I earnestly believe in free thought and free speech except such as is positively obscene, but also because I strongly believe that within such limits no subject is too sacred to be publicly discussed. Only by such discussion can truth be ascertained and established.

Boston, February 2

CHARLES C. RAMSAY

TO THE EDITORS OF THE NATION:

I should like to thank Mrs. Heywood Broun for her letter with regard to the *Militant Atheist*. I hope it may have some influence. If that outrageous advertisement is to continue I do not see, much as I should miss *The Nation*, how I could allow it to come to me.

Suffern, N. Y., February 2

ELLEN GATES STARR

TO THE EDITORS OF THE NATION:

I was deeply pained and grieved to see the prominence you gave to an advertisement of the *Militant Atheist* in your issue of February 1. Your right to print this advertisement is not questioned; your good taste and judgment are now questioned. Why? Because for its sincere, fair-minded, and honest liberalism, and its accuracy in stating facts, I have always respected *The Nation*.

There is a place for a sincere discussion of God, of churches, of religion—such discussion should be honest, earnest, and sincere. I can see no place for appeals to emotion and hate in a magazine that purports to be the medium of intelligent expression for liberal thought. I feel that you have betrayed my confidence.

Pittsburgh, Pa., February 3

JEROME C. WHITE

The Spanish Socialists

TO THE EDITORS OF THE NATION:

Allow me to point out a few incorrect implications in Bailey W. Diffie's article on The Revolt of the Masses in Spain, in your issue of February 1. In the first place, the present Spanish government is not a Socialist one; it is a Liberal-Socialist coalition; and as the Liberals believe in upholding capitalism, there are obviously great difficulties in the way of the Socialists, who wish to destroy it and who are the less powerful of the two. In the second place, the Spanish Communists are not connected with the Third International; they belong to the Trotzky opposition and they allowed this to become known even before they won over the Catalan unions from the Anarcho-Syndicalists in 1931. Thirdly, it may be appropriate to remark that of the 2,000,000 members of labor organizations which Mr. Diffie mentions, at least 1,041,539 are clearly not anti-Socialist inasmuch as they belong to the Spanish Federation of Labor, a Socialist organization whose membership has increased fivefold since 1930. It would also have been entirely within the scope of the article to say something about the evidence and not uncommon belief that the uprisings, even forgetting Sanjurjo's openly monarchistic coup, were at least in part instigated and financed by the Monarchists. Finally, readers of *The Nation* may be interested to know that the leniency with which the revolts have been treated, particularly in Catalonia, has been the cause of open accusations that the government secretly sympathizes with those who would overthrow it.

Liberal-minded people, and most radicals, have shown a sincere willingness to give the Russian Communists a chance and to understand the obstacles they are faced with, but very few have shown appreciation of the enormous difficulties the Spanish Socialists must overcome. They have a small, poor country with no natural resources to speak of. They must combat a powerful clergy and aristocracy, prevent the extremist groups from playing right into the hands of the former, and carry on a program of gradual socialization under the noses of increasingly distrustful foreign capitalists who have large investments in the country.

This without even a parliamentary majority. They have never ceased in their Socialist task of "expropriating the expropriators," and though they have proceeded slowly they have never retreated. Are they to be condemned because they are doing this unsensationally? They may not be using the time-honored method of two steps forward one step back in socialization—and one step forward two steps back in individual liberty—but let us at least wait and see if slow-but-steady is not one way of winning the race.

New York, February 2

MELOS MOST

Congressional Salaries

TO THE EDITORS OF THE NATION:

In your issue of February 15 you state that Congressional salaries at present are \$10,000 per annum. This should be corrected. Congressmen and Senators at the last session reduced their salaries 10 per cent.

Washington, D. C., February 16

M. COSTIGAN

Consumers' Problems

TO THE EDITORS OF THE NATION:

In view of the growing interest in the hitherto much-neglected consumer, Consumers' Research, in cooperation with the New School for Social Research, is giving a course in Consumers' Problems which will deal with consumers' services and commodities by specific brand name and in simple non-technical terms. Its primary object is to consider the quality, utility, and price of goods on the basis of economic and scientific data. The course consists of a series of twelve lectures which are being given every Friday evening at the New School, 66 West Twelfth Street, by D. H. Palmer of the technical staff of Consumers' Research. The course will be of great value to those who cannot afford to spend a dollar unwisely in their daily purchasing. It will also be of particular interest to teachers and students of the new economics of consumption, since this course is the first given in the East which deals with products and firms by name.

Contributors to This Issue

FERNER NUHN lives in Iowa and writes for various magazines.

SAMUEL GUY INMAN, author of "South America Today" and other books on Latin America, is the secretary of the Committee on Cooperation in Latin America.

HELEN BOARDMAN is an investigator for the National Association for the Advancement of Colored People.

ROBERT DELL, Geneva correspondent of the *Manchester Guardian*, is a regular contributor to *The Nation*.

HOWARD MCKINLEY CORNING is the author of a book of poems, "The Mountain in the Sky."

LAWRENCE DENNIS is the author of "Is Capitalism Doomed?"

MARK VAN DOREN is the editor of "Autobiography of America."

EDWARD DAHLBERG is the author of "Bottom Dogs" and "From Flushing to Calvary."

DOROTHY DETZER is the executive secretary of the Women's International League for Peace and Freedom.

Books, Art, Drama

Mountain Love

By HOWARD MCKINLEY CORNING

How shall I, being true to mountains most,
With them long intimate, be purely wed
To your one-purposed and inviolate bed.
Partial with you will sleep the faithless ghost
Of one who walks in cloud and strangely speaks
With tongues of water; till upon your breasts
The peaks will clamber, until terror rests
Nearer your heart than tears upon your cheeks.
Better to name me for the mountains' own,
And sleep in robes of silk and not in fern.
Be hungry but be whole of self, than learn
A love defenseless to the jealous stone
That carves my body. Let me make denial—
Else you be grieved and both of us be vile.

Bernard's Progress

The Adventure of the Black Girl in Her Search for God. By Bernard Shaw. Dodd, Mead and Company. \$1.50.

A NAKED black girl is converted to the Christian faith by a lady missionary. She takes the admonition to seek God quite literally, and strides off into the African forest with a Bible and a blackjack. She meets first a god who is powerful, cruel, and bloodthirsty, and she tells him so. She meets next an argumentative god, who, nevertheless, fails to explain to her satisfaction why he put evil into the world. She comes then to Micah, who tells her that his god requires nothing of her but to do justice and love mercy and walk humbly with him. She thinks this better, but opines that doing justice and showing mercy is only a small part of life if you are not a judge, and asks what is the use of walking humbly if you don't know what you are walking to? She next encounters a behaviorist who has spent twenty-five years in making experiments on the flow of saliva in dogs; he is of course a complete idiot, and has learned nothing that the black girl could not have told him in twenty-five seconds. Then she comes upon an amiable conjurer, posing on crosses for a sculptor, who tells her that she should love them that hate her. She replies that she does not want everyone to love her and cannot love everybody: besides, that commandment is useful perhaps only once in twenty times, and is not a rule to live by. There is an Arab present who talks of Allah and says that he converts people by the sword. Finally she comes to an old gentleman who looks in the illustration strikingly like Voltaire, and who tells her to give up looking for God and to cultivate a garden. She stays and works, and then along comes a red-haired Irishman who must be Shaw because he is the only character in the book who does not talk like him. She marries him and has coffee-colored children.

The allegory would seem sufficiently obvious, but Mr. Shaw is taking no chances. After the black girl meets the first god a few of the first pages of the Old Testament blow out of her Bible; after she meets the second god more early pages blow out. When the fable itself is finished, Mr. Shaw writes an epilogue explaining it. The point, you see, is that our idea of God has changed. Though humanity unfortunately does not throw the dirty water out of its mind when it takes in clean water, its concept of God has got constantly better. Indeed,

it may be said to have had Mr. Shaw's conception of the Life Force as its secret goal.

There is not a single idea here that could not have been found in Shaw himself thirty years ago. He still feels that it is ridiculous to have an experiment when you can just as well have an epigram. He still feels that a scientist is an ass to want to find out anything for himself when he can much more easily take Mr. Shaw's word for it. He still thinks that his speculations on religion are daringly original, and that the phrase Life Force, when capitals are used, is profoundly revelatory.

HENRY HAZLITT

A Communistic Strachey

The Coming Struggle for Power. By John Strachey. Covici-Friede. \$3.

A WELL-WRITTEN book by a Strachey is not news; but one by a Communist is a literary event. This book has the style and scholastic qualities of Eton and Oxford, combined with the merits which only an idealistic thesis, free from the necessity to compromise, can display. It surpasses the negligible works of American reds and stands well above most of the depression mediocrities of our pale-pink planners. It is a unique experience to read a brilliant Communist who effectively turns against capitalism the weapons of a hard-boiled bourgeois training rather than the passionate maledictions of a pietistic evangelicalism.

Mr. Strachey comes honestly by his ability to envisage the speedy collapse of capitalism and by his will for power to apply socialism today. He comes from a long, very upper-middle-class line which learned the facts of life and the will to command making money in India several generations ago. The family has since had abundant leisure and money to go noble and literary. After a turn as a labor member, Mr. Strachey found that he had no place among working-class laborites who in a crisis would turn to God-fearing bankers for guidance on balancing the budget and maintaining British credit instead of to strong-willed, hard-headed Marxians for leadership toward immediate socialism. Judging from his chapters on Mr. MacDonald and the Crisis, and *The Future of Social Democracy*, it is questionable whether the chapels, factories, and counting-houses will ever prepare the working classes for realistic revolutionary leadership, though the drill sergeant some day may, as in Russia. It is even doubtful whether most Socialists want capitalistic collapse and a turn at running things, or merely a larger dole. There is no doubt about what Mr. Strachey wants, though there may be some doubt concerning just what steps he and his followers, should he find any, would take to seize power. His book, however, betrays no personal ambition for power but a very genuine attachment to Marxism. He concludes that the intellectual, if he masters the historical movement as a whole, "can have no possible doubt as to the necessity of throwing in his lot with the workers."

The scope of the book is too vast for a brief review. The opening history of the free market furnishes a little-known background for viewing the present situation. The struggle against feudalism and the divine right of kings was waged from the Reformation down through the French Revolution to the middle of the nineteenth century, by which time the victory of the trading classes was everywhere complete. Not freedom or democracy, but wage slavery, internal monopoly, fierce foreign trade competition, and nationalism have been the principal results of this triumph. Mr. Strachey makes short shrift of the laissez faire free traders and their modern antagonists, the mar-

ket restorers and planners, as well as of the three alternatives of maintaining the gold standard with recurrent crises, abandoning it and developing closed economies, or having an ideal super-state with peace and profits.

By the middle of the book—the sections on the Birth of Capitalism, Capitalism Today, and the Decay of Capitalist Culture (containing several chapters of orthodox and penetrating Marxian interpretation of religion, science, and literature)—we are prepared to speculate about the successors to a rapidly dying capitalism under a total abandonment of democracy. It is this abandonment of democracy that Mr. Strachey really relies on most of all for the drive toward communism. Unfortunately, Mr. Strachey dislikes fascism too much to discuss it adequately and gives it only one chapter. After all, fascism, in maturity, is a form of definite state capitalism quite as much as is communism. Mr. Strachey errs in regarding communism as inevitably the only ultimate successor to private capitalism. It may so happen, but it is also conceivable that it may turn out otherwise.

The case for the collapse of capitalism is impressive. The exposition of communism is adequate. The book is a brilliant effort to fit John Strachey and many millions of other important Britishers and Americans, who, like him, are not proletarians, into the idealized scheme of the dictatorship of the proletariat and of an ultimately classless society. But I fear the attempt fails. Moreover, it is not shown that, in the classless society of the Communist millennium, after the dictatorship of the proletariat is no longer necessary for the liquidation of the bourgeoisie, there will not remain the classes of the governing and the governed.

LAWRENCE DENNIS

The Puzzle of a Princess

Pocahontas, or The Nonparell of Virginia. By David Garnett. Harcourt, Brace and Company. \$2.50.

IT is hard enough to know how any princess thinks and feels, but an Indian princess offers special difficulties; and when she is Pocahontas she becomes quite impossible. There is not only the fact that Pocahontas belonged to a race which nobody has been able to understand; there is the additional and incredible fact that she who began her life in the forests of Stone Age Virginia ended it among the streets of Jacobean London—that she who had been the daughter of King Powhatan at Werowocomoco was taken in the days of Ben Jonson to the court of King James and Queen Anne at Whitehall.

Mr. Garnett ought to know this better than anybody, since he has told the story of Pocahontas as a novelist would tell it who, having come to the dead end of his researches into the dates and the deeds of his historical heroine, had then to create, as Mr. Garnett himself puts it in his preface, her "emotions and affections." And he does know it. He admits that his task has been an "impossible" one—the task, that is, of deciding what it was that Pocahontas felt when she threw herself on Captain John Smith to save him from the executioners; when she visited the stockade at Jamestown; when she was captured by Argall and made a permanent resident of this stockade; when she married Rolfe; and when she first saw London.

Mr. Garnett, indeed, has known the difficulty too well, has seen the problem too clearly. A less intelligent man who was surer that he knew all about Pocahontas might have written a better piece of fiction than this. He would have blundered oftener in the eyes of ethnologists; but his imagination would have had firmer hold of some individual whom he called Pocahontas. Mr. Garnett has produced little more than a figure who represents a race. When she so far departs from her race as to fall in love with aliens—Smith, Rolfe—she is hardly convincing;

and when she is purely the Indian she is so general as to lose definition.

The book is well written, of course, and brilliant in its author's brittle way. But it has little of that truth which we expect from fiction—unless we expect nothing beyond the kind of truth which a novel can reveal about its writer and his age. The revelation in this case is particularly interesting, and I am not sure but that "Pocahontas" will document a generation quite as nicely as "Death in the Afternoon" does. For it is a cruel and bloody book. Mr. Garnett's theory that the Indians practiced torture as a prelude to lust leads him to dwell, perhaps, too long upon too many acts of sadism. The book can be recommended to anyone who likes good prose; it can also be recommended to anyone who hankers to see human bodies cut into scarlet ribbons with all the refinement of primitive art.

MARK VAN DOREN

Erskine Caldwell, and Other "Proletarian" Novelists

God's Little Acre. By Erskine Caldwell. The Viking Press. \$2.50.

ERSKINE CALDWELL has been compared to Henry Fielding, and it is true that his books, "Tobacco Road," a very original novel, and "God's Little Acre," a much less gifted one, have something of the gamy flavor of that great eighteenth-century writer, though they have none of his structural ingenuity. "God's Little Acre," like "Tobacco Road," is a chronicle of Georgia crackers, of their economic vassalage, slow hunger, and supine lives anaesthetized by inutile hopes. Less a novel than an expanded short story, it has little to recommend it aside from a few highly amusing and picaresque touches and the deft portrait of Pluto Swint.

"God's Little Acre" evokes a half-dozen other "proletarian" novels; and to this whole group what George Saintsbury once wrote of "Tom Jones"—namely, that it lacked a certain height and depth—certainly applies. In the "proletarian" half of "God's Little Acre," a wholly truncated section, the neglected plantation, firmly and irrevocably reproduced, is replaced by a mill town which is almost preternaturally sepulchral. The striking "lint-heads" are disincarnated specters moving in a quasi-Marxian haze ten thousand feet above Georgia and Carolina—and, for that matter, above all American humanity.

The frenetic desire of Will Thompson to open up the mill, turn on the power, and make cloth, which is in direct ratio to his wish to violate Griselda, tear every shred of manufactured garment from her body, sabotage her, as it were, is a strained emotional admixture of D. H. Lawrence and Sherwood Anderson. This apotheosis of dark sex and the humming machine recalls "Beyond Desire." And "Beyond Desire," which never transcends desire, and which is so writhing and inarticulate that it makes painful reading, is a stale repercussion of the events of Gastonia and Mary Heaton Vorse's "Strike." Grace Lumpkin's "To Make My Bread" (awarded the Gorki prize for proletarian literature), whose homespun narrative is inexorably slow from beginning to end, and Fielding Burke's "Call Home the Heart," whose poetical came-the-dawn prose only succeeds in being coy, are reshufflings of the same material. One would suspect after a reading of these "proletarian" novels that it was a bourgeois fault to be able to write well.

The left band-wagonists, who encouraged the foregoing pogroms against literature, have also acclaimed John Dos Passos the white hope of the social revolutionary novel. However, he is not, as his psalm-singers have said, a more pliant and adept literary technician than either Dreiser or Sinclair Lewis. What

characters has Mr. Dos Passos drawn that are as deeply recollected as Babbitt, Jennie Gerhardt, or even Eugene Witla? Compared with these how attenuated and slatternly composed are the fungous figures of J. Ward Moorehouse, Ben Compton, and Joe Williams! And three months after reading Dos Passos how many are able to distinguish Janey Snoddard from Eveline Hutchins?

Mr. Dos Passos's meretriciously naive vernacular seems poor beside the prose of "Winesburg, Ohio." Dismantle "42nd Parallel" or "1919" of its technical accoutrement—the bleary-eyed camera eye, the newsreels, the superinduced biographical portraits—and what remains? Briefly, a sprawling, perforated narrative, dappled and dimpled with girlish Joycisms, which is as competent as the unheightened journalese of "Dodsworth," one of Sinclair Lewis's worst novels.

For the Modern Library edition of "Three Soldiers" Mr. Dos Passos has recently done an introduction the rattling puerilities and gawkish perambulations of which beggar description. Expressing the dilemma of the modern writer in the following words: "Well, you're a novelist. What of it? What are you doing it for? What excuse have you got for not being ashamed of yourself?" Mr. Dos Passos then vouchsafes a new definition of the novel as well as a nostrum for the Doubting Thomases in the word racket: "A novel is a commodity that fulfils a certain need; people need to buy day dreams like they need to buy ice cream or aspirin or gin. . . . All you need to feel good about your work is to turn out the best commodity you can, play the luxury market, and to hell with doubt." The advice of this Marxist Lord Chesterfield to young authors seems much more like a sales letter addressed to what William James called the bitch goddess Success than a manifesto from a social-revolutionary novelist. Mr. Dos Passos and his left-wing backers ought to know that in a civilization in which novels are no more important than gin or ice cream there is little hope for a deeper culture and none for a revolution. But in literary matters the proletarian cheer leaders have always had the faculty of seeing everything but the obvious. However, it seems to be much more important to be on the band-wagon than to be either right or left.

EDWARD DAHLBERG

Militarist Logic

Inevitable War. By Lieutenant Colonel Richard Stockton, 6th. The Perth Company. \$7.50.

IN "Inevitable War," a bulky volume of 112 chapters, 873 pages, and 51 charts, maps and illustrations, Lieutenant Colonel Richard Stockton, 6th (author of "Troops on Riot Duty" and "The Guardsman's Handbook"), gives us the soggy logic of a militarized mind. It is almost impossible to give any summary of this banal document. The book is written obviously to urge the adoption of a military policy by the United States government, and this is perhaps illustrated by quoting two of the twenty-one points suggested for such a policy by the author in his final chapter.

The navy must be free to seek and render ineffective any enemy fleets, and protect our commerce and foreign policies. Its power of maneuver should not be restricted by considerations of local defense. The army should be considered the backbone of our defense against invasion.

The navy should be strong enough to control the seas in the vicinity of the United States, the Panama Canal, and our insular possessions, be capable of maintaining our national policies and of keeping open the essential lanes of commerce of the United States.

In case you may be lured into purchasing this volume instead of sending a fat check to peace organizations, we herewith offer

a few more of the choice morsels from its incredibly dull pages. Colonel Stockton has discovered a "new type of pacifist" who is very much to be feared. Apparently the good Colonel has heard somewhere that "the pen is mightier than the sword," but we should not accuse Colonel Stockton of such non-military power. We should advise him to stick to the sword. He says of the new type of pacifist:

A newer type appeared shortly after the World War, consisting of authors of books filled with all the horrible and loathsome things of warfare. I have read such books. It has seemed to me that the authors of some of them have been cowardly and low in their viewpoint; that the trouble lay more in the author than it did in the war. Horrible things happen in war; war itself is a horrible thing. Loathsome things happen in war, and war itself is a loathsome thing. We find cowards and degenerates in armies as we find them in civil life. Some authors, above all else, saw that which was horrible and that which was loathsome. I believe, however, that the normal man saw much more in warfare. A few shell-shocked men screaming and yelling were not what impressed me most. That which impressed me was the manner in which the everyday citizen went into the hell of action—though not without fear—and calmly went about all that had to be done just as part of the day's work. The thing that stands out in my memory is not the comparatively few who broke down, but the hundreds of thousands who did not break down until *shot down*. [Italics ours.]

As for disarmament conferences, he has some fresh and alluring suggestions. He of course tries to be big-hearted and kind. Of Dr. Mary E. Woolley's services as a delegate to the Disarmament Conference, he says:

It should be made clear that I do not intend these remarks to be construed as any reflection on Doctor Woolley's services as a delegate. However, no matter how loyal and intelligent the individual, it is unwise for any nation to send militarily uninformed delegates, with pacifistic tendencies, to conferences where nations fight for strategic advantages in the wars to come.

If you want to struggle through more of this sophomoric drivel, you can for the tempting depression price of \$7.50.

DOROTHY DETZER

Shorter Notices

The Provincial Lady in London. By E. M. Delafield. Harper and Brothers. \$2.50.

The London *Saturday Review* declares that Miss Delafield's diaries of the provincial lady, of which this is the second, catch "the heart and soul and mind and thoughts of Woman as she was, Woman as she is, and Woman as she ever will be, please God." Without going to these lengths, it may be said that Miss Delafield has a pretty wit and enough perception of the general in human behavior to hit off Woman and even Man oftener than a good many of her profounder contemporaries. Perhaps the most interesting thing about her style—and that is the most interesting thing about her book—is that it seems to be peculiarly English. Its distinguishing feature is elegant malice—sweet, neat, deft bites taken out of persons who seem real enough to be convincingly bitten but not quite real enough to bleed. There is a very faint note of Jane Austen in this; there is a much louder note of Rose Macaulay. But Miss Macaulay has more iron in her, and Miss Austen more gold. Nevertheless, one does not at the moment recall any American writer who attacks in just this way, and reading Miss Delafield re-

minds one that the tooth of satire may be one of the most delightful of weapons, although preferably when it is advanced against flesh and blood.

The Red Hills. By Rhys Davies. Covici-Friede. \$2.50.

Founding a school is a dangerous business for a Master, as there is nothing like a disciple to bring out one's vulnerable spots. "Red Hills" is so much in the manner of D. H. Lawrence that it reads like a parody. It tells of Iorwerth Pugh, an intellectual young Welsh miner "with a bias toward Russian novels," and how he has an affair with Ceinwen, a blowzy country wench—willing enough to perform the chores of sex for him, but unfortunately unable to discard upon it as is demanded of a Lawrence heroine. How he yearns "to meet a woman with a mind and a good strong body she takes an interest in." How he meets her and mates her, and how they talk happily ever after. Because it is otherwise well written, "Red Hills" proves all the better how little is needed to push Lawrence's hieratic attitude toward sex into the sanctimonious. And sanctimoniousness about the body can be quite as tedious as sanctimoniousness about the soul.

Jealousy. By Norah C. James. Covici-Friede. \$2.50.

Miss James's novel touches upon an intangible but important aspect of feminism—namely, the unequal division of jealousy between the sexes. Her thesis, one may say, is that jealousy is an emotion that the male has preempted as his privilege, and that he exploits it deliberately to secure his possessive domination over women. To relieve women of this subtle disability, two solutions are possible—either to give women equal rights in the emotion of jealousy, or to abolish it entirely as a dangerous monopoly; and it is this latter solution that Miss James puts forward as the better one. Catherine Eagle, whose first husband shot himself because of jealousy, would not consent to marry her next suitor until he had completely renounced every trace and vestige of it. Using the flashback method while she shows us Catherine and Michael engaged in a motor elopement, Miss James reveals how Michael achieved the desired emotional catharsis. Her thesis and solution are more interesting than the characters or incidents in the story.

Nature by Night. By Arthur R. Thompson. Robert Ballou. \$3.50.

Mr. Thompson is a naturalist who has spent many nights in tedious waiting for common nocturnal birds and beasts of England. He writes pleasantly, in the style of the expert amateur, concerning the ways of foxes, otters, shrews, voles, owls, and so forth. The text will prove interesting to those with a taste for its subject matter. Almost anyone will be delighted by the more than 100 photographs. They are admirable examples of what can be done with flashlight, and are beautifully reproduced.

Toward the New Spain. By Joseph A. Brandt. University of Chicago Press. \$4.

Mr. Brandt's book covers the history of Spain from 1808 to 1932. The period to 1875 is fully treated, but that from 1875 to 1932 is very scantily sketched, leaving the reader with the feeling that the book was intended as a history of the First Spanish Republic, and that the coming of the Second Republic caused the author to attempt to include a hasty résumé of the events leading up to it. The book's most serious defect is that it seems to treat the history of Spain as the direct result of what a few men did, and to neglect the economic and social changes both in the country itself and in countries adjoining it, which had far more to do with the trend of Spanish social thought than the machinations of politicians within Spain. Although this is not entirely omitted, the emphasis laid upon it is by no means in proportion to its importance. The author has

strained for far-fetched parallels between the first and second republics, neglecting to demonstrate that the forces responsible for each were entirely different, the first being the work of a few intellectual radicals, with little popular support, while the second was the work of proletarian forces which were non-existent in 1873. He fails utterly to bring out the intellectual growth of the last sixty years in Spain, which made possible the present republic. The first part of the book is very good; it is perhaps the best thing in English dealing with Spain's political troubles in the nineteenth century. As an account of the forces behind the present republic, the book is insufficient but useful.

The War Memoirs of William Graves Sharp. Edited by W. Dawson. London: Constable. 18 shillings.

These memoirs are neither the best nor the worst of the lot produced by our ambassadors who served during the World War. There is a certain unphilosophical clarity about Sharp's mind that gives his written word a quality of candor which belies his fundamental confusion. It is one of the remarkable accidents of history that of all our ambassadors of the war period, only one was hostile to the country and government to which he was accredited—James W. Gerard in Germany. This naturally contributed a great deal toward emphasizing the current of opinion in favor of the Allies which was early established on other grounds. While far from being as completely in love with a foreign government as was Walter Hines Page, Sharp was yet entirely without objectivity, and Mr. Dawson, editor of this volume, has apparently never heard of the work of the revisionist scholars on war origins. The result is that the informed student reads Sharp's book with constant impatience at the underlying assumptions, though he may admire, distantly, the author's characteristically American lack of sophistication. If there is anything new to be discovered from this volume, it has escaped this reviewer. Some background material on the Sussex incident is presented, and the matter of German prisoners in France is covered in interesting detail. The French politicians and military men are presented as they were evaluated during the war, and not with any very penetrating insight. The book is a footnote to history. Why it was published in England is mysterious, unless it is that the English appetite for political reminiscences is much greater than the American.

Art

Revolution in Art

CRITICS bred to believe with Clive Bell that good painting is good art only to the degree that it detaches itself from meaningful subject to emphasize form, design, color, and other purely sensory and technical qualities, and that the only business of a critic is to be a "connoisseur of pleasure" and to "put the public in the way of aesthetic pleasure," must serve up the Forain show at the Grand Central Galleries with routine references to Daumier and Goya and with knowing remarks about the forceful design and economy of line which accompanied the artist's humanitarian rage at the white-slave traffic, the lecheries of courts, the horror of life for the bottom dog. And because Forain chose to "illustrate" and "caricature" up to the year of his death, 1931, while most of his contemporaries were concerning themselves with aesthetic revolutions, his stature as an artist is inevitably pegged down by academic modernism with some observation or other to the effect that he did pretty well in spite of his deplorable insistence on "subject." Which is about like saying that Dean Swift wrote well in spite of being a social satirist.

A good many of the Forain pictures would look very much at home in the current show at the John Reed Club, which includes the work of most well-known living American artists, some of whom are guest exhibitors, and others members of the club. But since the pictures and sculptures in this show emphasize social distress rather than sensory pleasure, a phrase with "propaganda" in it seems to be the correct note. Biddle, Coleman, Davis, Dehn, Hirsch, Pollet, Miller, Robinson, Walkowitz, Benton, our happy Pop Hart, and so on to Zorach, have gone slumming. And will recover their prestige somewhere else.

But as a matter of fact this show is as significant as the historic Armory exhibit which brought the aesthetic heresies of twentieth-century Europe to the United States. Not that the walls of the John Reed Club display a blaze of genius. There are a few sound and vigorous pictures whose signatures were new to this critic: H. O. Hoffman, Ben Kopman, Phil Bard, Chuzo Tamotzu, Anton Refregier, H. S. Strom, Prentiss Taylor, and, not so new, Albert Wilkinson and William Siegel. There are also a few pictures which add a new impressiveness to familiar names: Biddle's Sacco and Vanzetti, Pop Hart's Working People, Siegel's Miner's Funeral, Kathe Kollwitz's Visit to the Hospital, Adolf Wolff's sculptured Working-Class Mother.

Like the Armory show this exhibit is not primarily important as a discovery of individual talents, but for what it means as a point of departure for a kind of art sharply different from the current mode in appearance, idea, aesthetics, and function. There is not a single still life among the two hundred pieces in the show. The shift of interest from things to people is aggressively marked; also the shift from decoration to emotional expression, from sensory pleasure to human anger and pain. There is a change in attitude, too—artists trying, with some self-consciousness and strain but with all their strength, to be common people. These things give the show as a whole a beat of life, a connection with the things uppermost in your mind and mine, provocative and stirring after the discreet isolation of row upon row of tastefully framed apples, bottles, picturesque ladies, and pretty landscapes inclosed within other walls.

This to the credit of the rebels. Against most of them a grave mistake can be charged. Modern art, brought into the world by France and artists of various nationalities living in France, signifies primarily, we have been taught, a divorce from "subject." It has no taste, says Bell again, for "contemporary actualities." But if the history of this development is examined closely, the impulse to be seen within it is fundamentally the same impulse at work in a different way in the rebellion at the John Reed Club. For the feeling in modern art is, and was when it broke away from the academic mode of the late nineteenth century, precisely a taste for contemporary actualities. More than a taste, it was a determination to smash the cage of prescription, convention, and dogma in which artists performed like trained monkeys for the edification and benefit of Victorian morals.

Art, going "modern," left the service of religion, ethics, civic virtue, and domestic duty, and gave its attention and sympathies to science. Hence the emphasis on intellectual pleasure and technical experimentation, the search for method, the insistence on aesthetic discovery. The impressionists repudiated studio formulas and went out to look at light through a spectroscope. Picasso used his mind as a laboratory for inquiry into the mechanics and physics of form. And given a neatly mechanistic world destroyed in vibration and flux by modern physics, then Cézanne follows. But since the break for artistic freedom involved a break with nothing less than a social scheme, the hate and bitterness aroused were out of all proportion to the issues which established convention raised as reasons for its violent attack.

The battle was fought longest and hardest on the most superficial, most easily intelligible grounds, which can be summed

up in the question of "subject"; and the spokesman for the defense, therefore, devoted much time, thought, and ingenuity to this point, producing an *ex post facto* set of doctrines and a system of aesthetics expressed in the command: Thou shalt not traffic with "subject." Therefore the artist whose intellect and feeling move him primarily in the direction of contemporary actualities is hampered by modern academism precisely as were the moderns of years past; and he rebels, mistaking the issue, by scrapping the store of knowledge and resource accumulated to his advantage in the previous fight and jumping backwards, as have many of the young artists in the John Reed show, to pre-modern methods—most obviously, to Daumier and Goya. But they cannot adequately and movingly paint or carve their time and place in the technical and emotional terms of another age.

Fifty years of intense and active attention to the material nature of the arts have produced a new comprehension of the nature of materials. In painting—form, light, movement; in sculpture—rock, wood, metals, instruments, structure, and rhythm; in literature—rhythm, typography, sound. New techniques and new modes have been developed in each of these arts. It happens in every kind of cultural development that one phase grows faster than another. Our social scheme breaks through our legal system like water through a paper bag. None of our types of theatrical spectacle can use the auditorium at the Rockefeller Center Music Hall to artistic advantage. A painter can command at least three new and powerful methods—impressionism, cubism, *surréalisme*; convention allows him every liberty in manner, but restricts him in matter. Yet it would be easy enough to trace a development of political and social thinking in the pictorial and plastic arts at least, paralleling the development in style: from Cézanne's snorts about "dirty bourgeois" to the *surréaliste* manifesto prescribing "in politics, communism."

This connection between *surréalisme* and social revolution is generally forgotten or dismissed as irrelevant, for though the *surréaliste* mode significantly shifts weight from intellect to emotion and sensitivity, its expression is more often than not highly personal. Utilizing, however, the interests of subject as presented in dreams, fantasy, visions, and other "enlargements" of emotion and sensory perception, it throws wide the doors to personal and collective symbolism, to tragedy and passion in more than personal terms, to heroic connection between what is visible and what is emotionally significant, super-realistic. *Surréalisme*, as Diego Rivera shrewdly pointed out not long ago, is potentially a revolutionary weapon. The motif—hands—which recurs in the work of most *surréaliste* painters is no more accidental than the cross and halo in Renaissance fresco; though perhaps less consciously symbolic.

Inasmuch as a work of art expresses the cultural prejudices of the artist as well as his personal synthesis with the world in which he lives, his work is propaganda. To object that it is not conscious propaganda is almost equal to saying that the artist did not or does not know what he is doing, and this can be true to a degree. But to minimize the aesthetic value of his work with the observation that it has an ax to grind is to force doctrine upon historical fact. For all art everywhere has had an ax to grind; and what expression of human effort has not? To distinguish, therefore, between propaganda and "pure art" on the ground of presence or absence of easily comprehensible content is itself a distinction with an ax to grind.

The thing which distresses critics who use the word propaganda in a derogatory rather than a descriptive way is, apart from the emotional antagonism to the artist's social attitude, the process of fitting a predetermined set of ideas upon a set of forms in themselves not emotionally and aesthetically expressive. It accuses the artist of a kind of pedagogic dishonesty, of having sold himself to a service, of grinding somebody else's ax. In this sense the word propaganda is most clearly synonymous with advertising; as even a Babbitt cannot put his emotions, his senses,

and his intellect at the service of a brand of ham and not produce work aesthetically false. On the other hand, an artist whose heart and head make him a social revolutionist can make posters and banners which, besides being ideologically militant and immediately useful, may be as beautiful and aesthetically sound as any religious or romantic work of other days. We shall have to admit, if we are honest historians, critics, and connoisseurs, that there is room indeed for good art in what we call propaganda. And we must also recognize that in good propaganda there is no room for bad art.

ANITA BRENNER

Films

Dovzhenko's "Ivan"

CERTAINLY the week just passed was one of more than usual strain on the precarious faith of the moviegoer eager to discover new virtues in the cinema art, to defend it against the easy detraction of the sophisticated. It seemed almost as if producers in all countries had entered into some agreement to unburden their least worthy products on a public that was beginning to become rather spoiled as a result of recent triumphs. For "Mädchen in Uniform" and Lang's "M" we have been made to pay with a succession of insipid German operettas which are not the more endurable because of one or two sentimental tunes. After an irresponsible indulgence in the purely aesthetic beauties of Pudovkin's camera work in "Life Is Beautiful" we have been made to suffer through the earnest but unbeautiful *longueurs* of Dovzhenko's "Ivan." And for the statement of renewed confidence in Hollywood's future prompted by such pictures as "Cavalcade," "State Fair," and "Topaze" we have been rewarded by Richard Dix's characterization of the "Great Jasper" at the Radio City Music Hall. Indeed, the only consoling reflection that occurs after such a week is the commonplace one that no department of art or literature is without these intervals of relaxed inspiration, these challenges to our faith. We must remind ourselves that we have no more reason to expect masterpieces every week in this than in any other field of culture—or entertainment.

The impression gains that the Film Forum, one of the two independent film societies which have sprung up in the last month, has not made up its mind whether it is interested in the cinema as an artistic medium or as a vehicle for social propaganda. The choice of Dovzhenko's picture built around the construction of the Dneiperstroi power plant would certainly seem to indicate that the Forum is headed toward a rivalry with the Cameo and the Acme. Although there could have been no reason other than that of social bias for choosing such a badly integrated and indifferently photographed film as "Ivan," the picture is ineffective even as an example of explicit propaganda. The purpose of propagandist art, we are told, is to incite to action; but the snail-like tempo which Dovzhenko uses to unfold his much-too-simplified story-lesson is likely to induce, in an American audience at least, nothing more potent than sleep. Perhaps this retarded tempo was suitable and necessary for the peasant audiences in Russia for which the picture was intended. But the time has come when exhibitors in this country must realize that a drastic cutting is required to make pictures like this one acceptable to an audience whose psychology has been conditioned by the rapid movement and swift transitions of the American movie. The point has been often enough made in the last few years; but so far one has not heard of any central cutting-bureau being established to reduce by two or three minutes at least such scenes as the one in "Ivan" in which a peasant mother is shown walking up an aisle, or the

one in which the "aesthete" father is made to laugh, not once, but three times, in an increasingly hollow and grotesque manner. It is to be hoped that the Film Forum, along with the other good work that it promises to do in its field, will do something toward the proper preparation of foreign-made films for American enjoyment.

Perhaps such ■ film ■ "The Spell of Tatra," at the Little Carnegie, has ■ special appeal in Germany, where skiing and mountain climbing are very popular; but neither this interest nor anything in its story or photography redeems this "romantic drama of the Carpathians" for an American audience. It follows pretty closely "The White Hell of Pitz Palu" of a few years ago, but fails to extract ■ much dramatic interest out of the setting as did that picture.

WILLIAM TROY

Drama In Modern Dress

A FEW weeks ago Arthur Hopkins expressed the opinion that our theater was dying of its unimaginative realism. When he added that the lift of poetry and sentiment was the need of the hour, one assumed with mild cynicism that he had something of the sort up his own sleeve, and so, it now appears, he had. But "Conquest" (Plymouth Theater) proves the cynicism misplaced, for it is ■ strikingly original play written by Mr. Hopkins himself, and it falls barely short of real greatness. Certain defects are, to be sure, obvious enough, and we will come to them. The fact remains, nevertheless, that there is something large and new and heartening in the whole spirit of the enterprise. Indeed, I remember no other occasion during the present season when ■ serious drama came so near to casting ■ magic spell, when one had—as one has here—the sense of an atmosphere heavy with matters of real import. However fleeting her visit, the muse of tragedy was with Mr. Hopkins for a time, and there are moments at the Plymouth when one is aware of her thrilling presence.

Oddly enough, the chief virtue of Mr. Hopkins's play is the one which the work of our other serious writers most conspicuously lacks. On the stage, at least, poetry and incoherence have come to be almost synonymous. Our poets ■ recognized by ■ certain turgidity, by the sense they give of struggling desperately to say something just beyond them; and in ■ play like, for instance, Mr. Lawson's "Success Story," one only glimpses the deepest meanings through the smoke of a fire unable to burn freely. But Mr. Hopkins, on the other hand, is beautifully clear. The foundation of his dialogue is ■ limpid prose, and when it rises to poetry it rises by virtue of a simple, almost classic dignity. There is no rant in his lines ■ there is none in the characters who utter them, but there is a passionate sincerity and ■ deep feeling.

The story is frankly the story of "Hamlet" reset to modern conditions. The prince is the thoughtful son of ■ conscientious manufacturer; the usurping king is a financial manipulator who "merges" the factory out of existence. Even the love of Hamlet for his unworthy mother is treated at full length—this time in frankly Freudian terms—and, indeed, one occasionally wonders how much of the strength of the play is due to a series of situations which three centuries have proved the most inherently interesting ever devised. But it is not really quite so simple as that. Mr. Hopkins's scorn for the rottenness of the financial world is genuine; he gives it an adequate expression through the old fable; and he could not be so impressive as he is if he did not feel with passionate sincerity.

Perhaps it is, however, worth while to point out that the

ALICE IN WONDERLAND. New Amsterdam Theater. Miss La Gallienne ~~in~~ uptown with her charming company of fabulous beasts.

ALIEN CORN. Belasco Theater. Catherine Cornell in a play by Sidney Howard. Reviewed later.

AMERICAN DREAM. Guild Theater. Reviewed next week.

AUTUMN CROCUS. Morosco Theater. Sentimental English comedy with Dorothy Gish and the new matinee idol, Francis Lederer.

BIOGRAPHY. Avon Theater. An intelligent and sinewy comedy about what happens when a cultivated woman of the world tries to choose between a pompous opportunist and an unmanageable idealist.

CONQUEST. Plymouth Theater. Reviewed this week.

DESIGN FOR LIVING. Ethel Barrymore Theater. Noel Coward and the Lunts having a good time in a play by the former.

DINNER AT EIGHT. Music Box Theater. Lively but pretentious melodrama by Edna Ferber and George Kaufman.

GOODBYE AGAIN. Masque Theater. Fine performances by Osgood Perkins and others make this farce comedy very funny.

ONE SUNDAY AFTERNOON. Little Theater. Unpretentious comedy about a small town dentist. A surprise hit.

PIGEONS AND PEOPLE. Lyceum Theater. Two hours and a half of George M. Cohan in a play by himself. Well worth seeing.

THE LATE CHRISTOPHER BEAN. Henry Miller Theater. Light comedy from the French completely rewritten by Sidney Howard and charmingly played by Pauline Lord and others. All things considered, it is much the most enjoyable comedy of the season.

surprising clarity of the expression and the simple dignity of the characters were made possible by the fact that Mr. Hopkins is returning to something almost forgotten in these later years, to the fact that his concern is with the honor and integrity of the human soul conceived of in terms which even Shakespeare would have been able to understand. I suspect, indeed, that his play will not please "dialectical materialists," despite its attack upon the "capitalist system." They will feel, I fancy, something irritatingly alien in its concern with intangible values, in its assumption that the soul of humanity is the thing to be rescued, and that the integrity of the individual man is the only integrity worth having. But it is because Mr. Hopkins does feel so strongly the importance of such things that his play can have the quality it has. Perhaps only so can a character take on the dignity which makes his fate seem important; perhaps only so can a language raised by its fulness and coherence just a little above the level of ordinary speech be made to seem fitting.

I hinted above that "Conquest" just misses the genuine greatness which at moments it suggests. That is partly because it stumbles occasionally and sinks then to the level of merely didactic prosiness, but it is chiefly, I believe, because of defects in the direction. The actors—Judith Anderson, Raymond Hackett, Jane Wyatt, and Hugh Buckler—are competent players, yet they either could not or were not allowed to pitch their acting to the key of the text. That text is above realism; it obviously calls for a measured and emphatic utterance just this side of actual declamation. Yet it is read, for the most part, in the affected pianissimo made popular by the ultra-smart melodrama, and for that reason it often misses the very effect intended. In the article referred to at the beginning of this review Mr. Hopkins urged that the theater should let the poet in. It looks almost as though he had done so as far as the author is concerned and then slammed the stage door in the face of those who might have realized in the performance his own intention.

The fact remains, nevertheless, that "Conquest" is a thrilling experience just as it stands, and that it brings something back into our theater. We have playwrights like Sidney Howard who show us, with a humorous detachment, what we are; we have at least Eugene O'Neill who can thrill us with the spectacle of emotions just beyond our grasp or understanding. Mr. Hopkins, on the other hand, has something new to this generation: a calm dignity which suggests, if it does not quite reach, the majesty of almost forgotten things. He is more than welcome.

I do not think that the audience at the Plymouth was wholly at its ease, but at the same time another audience just one block away was having a thoroughly good time at "One Sunday Afternoon" (Little Theater). The author of this little comedy, James Hagan, is unknown, to me at least. The comedy itself is simple, unpretentious, and touched with sentiment. But there is also something unaffectedly charming in the story of the dentist who has his old-time rival delivered into the arms of his own dental chair only to discover that he was done an unintentional favor when his girl was stolen away. Perhaps the obvious delight of the audience proves that it has grown weary of sophistication and wants nothing more than a chance to laugh innocently while watching for the pleasant but inevitable happy end. Something, however, must be credited to the beautiful direction of Leo Bulgakov, and something to the very ingratiating performance of a group of actors headed by Lloyd Nolan in the role of the small-town Liliom who didn't get anything he wanted but found out it was just as well. "One Sunday Afternoon" looks like one of those unexpected successes which, after the fashion of "Another Language," will go merrily along for many months to come.

SUBSCRIPTION RATES: Five dollars per annum postpaid in the United States; to Canada, \$5.50; and to other foreign countries, \$6.00.

THE NATION, No. 20 Vesey Street, New York City, Cable Address: NATION, New York. Muriel C. Gray, Advertising Manager. British Agent, Miss Gertrude M. Cross, 23 Brunswick Square, London W. C. 1, England.

THE world has not come to an end—even if a system has. A sense of relief and even of exhilaration has been in the air during these last critical days. The reason is obvious. For the moment, at least, uncertainty has yielded to finality. Almost everyone can endure collapse better than the threat of collapse; and drift has for the moment given way to the promise of action. Moreover, we are all in the mess together—except for those Timid Souls, the big and little hoarders, who must take what satisfaction they can from their private caution—and misery in the company of most of one's fellow-men has some of the flavor of a common adventure. In the rumored phrase of Prince Mike Romanov, "a great many people's checks are now as good as those of a great many others." Whether the jolt will in the long run bring us to our senses or merely knock us silly remains to be seen. Meanwhile, we swap stories of the crash and compare possible losses and express our opinion of our erstwhile betters; we await with simian curiosity the distribution of scrip and take satisfaction in the remarkable circumstance that even though the long-heralded "collapse" seems to be upon us, most of us are still alive, the kitchen table is just where it was, and we are still able to scrape together enough substance to buy the last edition and find out what the gods are up to in their mills in Washington.

SENATOR WALSH'S sudden death on the eve of inauguration was a national calamity. The outstanding figure in the newly appointed Roosevelt Cabinet, his nomination was the guaranty of the Administration's integrity of purpose and an augury of its progressivism. Mr. Walsh's public services have by this time been amply rehearsed in the daily press—the press which, as we suggest elsewhere, gave him scant support when he was on the firing line engaged in a desperate battle against public enemies. It is *The Nation's* view that the services of no Senator now living, excepting only those of George W. Norris, have been as valuable as Tom Walsh's. In these days when the tendency is widespread to cite "the times," "conditions," "changing standards," in extenuation of the weaknesses and betrayals both of public servants and of men in high positions of private trust, the record of Thomas J. Walsh offers a shining example of what a public servant in a democracy may be, and what, single-handed, he may achieve.

HOMER CUMMINGS is not another Tom Walsh, and his presence in the Cabinet, whether temporary or permanent, cannot possibly provide that incomparable quality of ruthless, rugged determination and zeal in the public interest. But Cummings has a good deal to recommend him. He is a brilliant court lawyer and was for ten years State's Attorney in Connecticut. In this post he was distinguished for fair and humane methods almost unique in a prosecutor. His conduct of one particular trial—the Israel case—has become famous in court history. The defendant in this case was a homeless Jewish youth, Harold Israel, who was picked up, in possession of a revolver, some days after the murder of a popular Catholic priest in Bridgeport. After several days of questioning Israel confessed to the crime. His confession and a convincing array of circumstantial evidence were ranged against him. But Cummings, the prosecuting attorney, was doubtful. He made a personal investigation of the case and convinced himself of Israel's innocence. Then, in the face of strong public feeling and police pressure, he presented a brilliant argument for the dismissal of the indictment. In his statement to the court he asserted that "it goes without saying that it is just as important for a State's Attorney to use the great powers of his office to protect the innocent as it is to convict the guilty." Recently Mr. Cummings headed a committee which made a notable report urging fundamental changes in the prison system in Connecticut. All of this is encouraging evidence of his public spirit. If any doubt about his qualifications remains, it lurks in the question of his position on vital economic and social problems. His record is bare of concrete evidence. But it may be said in his behalf that Senator Walsh was one of his oldest and closest friends and had invited Mr. Cummings to act as his chief assistant. And it is also worth recalling that before the convention he vigorously supported Mr. Roosevelt as a candidate whose program would be based upon "sympathetic cognizance of the great producing masses of America," and not upon the claims of privilege and the "overlordship of special interests."

SIR JOHN SIMON, the British Foreign Secretary, is now shedding crocodile tears because other nations have refused to join with England in its arms embargo against China and Japan. He has explained to Parliament that the embargo order may now have to be recalled. Thus Sir John confesses that this "moral gesture" on behalf of peace was simply a diplomatic trick. Under the circumstances it was tantamount to sending the plaintiff as well as the defendant to jail. The smaller Powers at Geneva look upon the machinery of the League as their only protection against the aggression of stronger countries. The Japanese invasion of Manchuria offered an excellent test of this machinery. Japan was fairly tried and fairly convicted. The League then set out to discipline Japan in accordance with the terms of the Covenant. But Sir John upset this program. He took the position, in complete defiance of the Assembly, that both parties to the dispute were "Covenant-breaking states." If the nation aggressed is to be disciplined or penalized along with the aggressor nation, what sort of protection can the smaller Powers expect from the League? Obviously the smaller Powers could not consent to the establishment of such a precedent, and to date they have prevented the League from following Sir John in declaring an embargo against both China and Japan. The United States also refused to follow England. The State Department felt that to declare an embargo against both nations would be equivalent to siding with Japan, for the Japanese now have huge stores of munitions and would not be affected by such an order, while the Chinese have been buying sparingly and so have no large supplies. On the other hand, the department felt that it could not act against Japan alone, for the contrast between the British and American attitude would then have been so striking as to have invited Japanese retaliation. The net effect of Sir John's gesture was to sabotage the program being worked out between Geneva and Washington to call Tokio to account for its deliberate violation of the peace treaties.

JUST HOW do reputable investment bankers differ from "blue-sky artists"? When \$100,000,000 worth of Peruvian government bonds were floated in 1927 and 1928 by a syndicate of American bankers headed by J. and W. Seligman and the National City Company, both these sponsors were independently informed by their own experts that the loans were a bad risk. Lawrence Dennis, sent to Peru by J. and W. Seligman as investigator, repeatedly and categorically counseled the firm against them. He definitely predicted their default within five years. Nevertheless, J. and W. Seligman unloaded these bonds on the American public. While the negotiations for the first \$15,000,000 loan were in process, the firm made the discovery that, to secure it, \$415,000 would have to be paid to Juan Leguía, son of Augusto Leguía, Peru's dictator-president. Close to 1½ per cent of the entire loan was paid to this individual alone, and other "commissions" were paid as well. Henry C. Breck of the Seligman firm testified before the Senate Finance Committee that ½ of 1 per cent would be deemed a high commission, and that the highest the firm had ever paid before was ¼ of 1 per cent. The National City Company's own investigation of Peru produced evidence just as damaging. Victor Schoepperle, one of its vice-presidents, submitted a memorandum before the first loan was floated, declaring

Peru to be "an adverse moral and political risk." Just after this flotation, when loans totaling \$85,000,000 more were contemplated, J. H. Durrell, another vice-president and overseas manager, painted a thoroughly black picture of Peruvian conditions, including the instability of its government, with "a president surrounded by a group of rascals," and the lack of hope for its economic betterment. The company's representative in Peru, Claude W. Calvin, had reported: "The government treasury is flat on its back and gasping for breath." Other memoranda noted Peru's previous defaults and general bad-debt record. Nevertheless, these securities were floated, with the result which Mr. Dennis had so definitely forecast.

ALL THE PERUVIAN LOANS went into default in the first half of 1931. These bonds, sold to the American public at 96 and 91, are now quoted at 7½ and 4½ respectively. The circulars and newspaper advertisements offering the bonds to the public of course made no mention of the adverse conditions of which these banking firms had been fully informed, but instead painted a favorable picture of the prospects and financial condition of Peru. To be sure, these circulars all carried in tiny type at the bottom the usual qualifying sentences: "The above statements are based on information received . . . from official and other sources. While not guaranteeing them, we believe them to be reliable," and so on. This may safeguard these eminent investment bankers under our extremely defective laws. In England corresponding misrepresentation would mean jail for the banking sponsors. But in this country the investor will have to content himself with their expressions of regret and confession of "honest error"—after exposure. For further comfort he may recall the old rhyme:

A very delectable crocodile,
Who sat on the banks of the River Nile
And walled up his eyes,
With a look of woe,
As his tears fell fast
In the stream below.
"I'm mourning," said he,
"The very sad fate,
Of those poor little fish
Which just now I ate."

THE TENDER SILENCE preserved editorially by the press concerning the National City Bank officials, discussed in these columns last week, ended when Mr. Mitchell and Mr. Baker resigned. The *Herald Tribune* felt that "such errors of judgment as Mr. Mitchell has revealed . . . are undoubtedly the defects of his qualities." But the *New York Times* discovered—a week after the revelations had begun—that "the resignation of Charles E. Mitchell was inevitable." "No banking institution," continued Mr. Ochs's paper, "could afford even to appear to approve or condone the transactions . . . there is no safety for anybody, and banks will fall into merited disrepute and distrust if deposits are not regarded as a sacred trust, not as material for reckless speculation." "Not frozen assets, but frozen confidence," concluded the *Times*, "is what is hurting the banks most." Brave words, these, but uttered, oh, how tardily! When has the *Times* spoken out vigorously against the record which it now declares "even in the years before the crash of 1929" was "humiliating and even shameful." The proverbial ounce of

editorial prevention has been conspicuously lacking from the *Times's* columns. Its blame and its praise are a bit belated. On March 3, in a glowing and unqualified editorial eulogy to the late Senator Thomas J. Walsh, it paid tribute to "his unflinching courage, his unflagging labor, his unblemished honor, his illuminative explanations, his implacable logic, his perfection as a cross-examiner"—these last in comment on his investigation of the Fall-Doheny-Sinclair attempt to alienate the naval oil reserves. But what was the attitude of the *New York Times* when Senator Walsh was trying to track down the malefactors in government and high finance who were responsible for this corruption? It never gave support to his efforts. In one single editorial (December 9, 1924) it referred to Senator Walsh's "already a little faded glories in the oil investigation," his "childlike innocence," his "artless manner," his "gossamer assumptions."

WE ARE PASSING through the darkest winter the workers of this country have ever known. Unemployment has been increasing every week, until today there are probably no fewer than 14,000,000 men and women out of work. Of want and hunger there is seemingly no end. Yet Congress, which sat through three months of this extremely critical period, adjourned without having voted a single additional penny for unemployment relief. It took no action whatever on the La Follette-Costigan bill, which would have provided \$500,000,000 to be given outright to the States for relief of the jobless and destitute. It allowed even the far less adequate Wagner bill to die in the House. The Wagner measure would have appropriated another \$300,000,000 to be advanced to the States in the form of R. F. C. loans. While the conservative Democrats are primarily to blame for this failure, Senators La Follette and Costigan and other advocates of direct federal relief were too patient, too generous in their efforts to bargain with the obstructionists in Congress. The unemployment crisis would not wait upon such patience. Senators Costigan and La Follette should have forced the issue. They should have compelled every member of Congress to declare himself on the question of feeding or starving the unemployed. In the face of the widespread hunger very few Congressmen would have dared to oppose this relatively modest federal relief bill. We understand that President Roosevelt intends to incorporate the La Follette-Costigan plan in his general relief program. We hope that this is true and that positive action will be taken early in the special session. Every day that relief is delayed, more men, women, and children go without food and clothing, shelter and medical attention.

"THIS HOUSE will, under no circumstances, fight for its king and country." In these unequivocal words the Oxford Union, famous debating society of Oxford University, registered its pacifism by a vote of 275 to 153 on February 9, and set all England by the ears. The "Thunderer" was able to contain itself and dismissed the Union's vote as the "Children's Hour"; but the letter columns of the other conservative papers were filled with the laments of old Oxonians who had lived to see the day; and shouts of communism, internationalism, and cowards split the English air. On February 16 a group of green-shirted fascist undergraduates invaded the hall of the Union while a meeting was in progress and tore from the minute book the pages recording

what one of them called the "intolerably foul motion"; at the same meeting the president announced the arrival of two consignments, each containing 275 white feathers, or two apiece for the pacifist voters. Did the pacifists retreat? They did not. Instead, they accepted and wore the white feathers. And the fate of the British Empire was officially sealed at a riotous meeting on March 2, during which stench bombs were thrown, when the Union, on a motion to expunge the offending resolution from the records, reaffirmed its pacifism by a vote of 750 to 138. The Manchester University Union on March 3 adopted the same resolution by 371 to 196.

STUDENT VOTES on the most popular this and that are not generally news, but when the seniors of Manhattan College designate "Ann Vickers" as their favorite novel of the year, the fact deserves a headline. Manhattan College, it must be remembered, is a leading Catholic institution which numbers Cardinals Hayes and Mundelein among its graduates; and when one considers this in connection with the fact that the Catholic weekly *America* has recently in its anti-"smut" campaign singled out Sinclair Lewis as a particularly corrupt and corrupting writer whose works should be suppressed, one begins to question the boasted Catholic ability to mold the minds of its charges. Even that, however, is not all, for the heroine of this favorite novel enjoys various unblessed unions, including one with a Tammany politician, and she passionately justifies the abortion of an infant conceived as the result of another episode with a Jewish radical. None of the other student choices is quite so striking, but the selection of P. G. Wodehouse as the favorite writer and of Jack Pearl as the favorite comedian does seem to indicate that the intellectual and aesthetic tastes of these Catholic students are not much above those of students at, let us say, Harvard or Princeton. We believe that these election returns give us the right to reply to *America* with a phrase familiar to all Catholics of sound classical training: Physician, heal thyself!

IT IS ALWAYS A TRAGEDY when a gallant figure among those believing in and working for a better world falls by the wayside, but the loss is more bitter when it occurs in a time of exceptional crisis like the present. It is thus, at least, that we feel about the death of Forrest Bailey, until recently codirector of the American Civil Liberties Union. He was obliged to withdraw from active work almost a year ago on account of impaired health. A paralytic stroke made recovery impossible, although he bore up for many months with remarkable fortitude and cheerfulness. Mr. Bailey's early manhood was spent in his native California, but nearly a decade ago a passion for the fundamental freedoms led him into the American Civil Liberties Union, where his painstaking and intelligent work did much to establish the reputation of that organization for dependability and non-partisanship. He helped to organize the defense of John Scopes—attacked for teaching evolution in Tennessee—and was active in behalf of Sacco and Vanzetti, the Gastonia textile workers, and the Kentucky coal miners. Hatred of sham and pretense was an outstanding characteristic of Mr. Bailey. He despised weasel words in others and scorned to use them himself. His personal relations were tempered with thoughtful kindness and a catholic sense of humor. A remarkable absence of self-seeking in his work and life will not blind others to its value.

Devalue the Dollar—Now

NOW that we have been forced temporarily to close the nation's banks and suspend gold payments, there is no longer any reason for discussing anything less than radical and thoroughgoing reforms in our banking and currency system. *The Nation* recommends these immediate steps:

1. The devaluation of the dollar. The President's bank proclamation suspending gold payments for a few days has taken us at least technically off the gold basis. It is impossible to see how unrestricted conversion of currency into gold can again be permitted. The President should continue the temporary suspension of gold payments, and arrange to have the forthcoming World Economic Conference called at the earliest possible moment. At that conference the United States should urge a uniform devaluation of world currencies by approximately 50 per cent. The only variations permitted should be those necessary to establish either a single international unit or to make one unit an even multiple of the other. The United States should announce in advance, however, that if it cannot secure world cooperation and uniform reduction, it will act alone to devalue the dollar by 50 per cent and resume gold bullion conversion on that basis within **one** year.

2. Congress should pass immediately a constitutional amendment abolishing State banks and compelling all banks to operate under national charters. Our banking system must be transferred from forty-nine controls to one control.

3. If these steps are taken, the immediate currency situation can doubtless be successfully met by the issuance of clearing-house certificates. Wherever the problem is one of mere liquidity, these certificates can be acceptable at 100 cents on the dollar. Wherever banks are not merely illiquid but insolvent, their certificates should be honored only to the extent of 80, 60, or 40 per cent, as the clearing-house committees working in collaboration with bank examiners may decide.

4. There should be no attempt whatever on the part of the government to guarantee bank deposits. Such an attempt would be perilous to the government's finances even under the most favorable circumstances. With a large number of banks insolvent, and with no real control by the federal government over the individual loans of national banks and no control whatever over the policies of State banks, any attempt to guarantee deposits would be disastrous.

5. There should be an end to bank holidays and bank moratoriums.

Other measures will have to be taken later, but these represent a minimum program for immediate action.

The Nation a year ago, in the issues of March 30 and April 6, 1932, published two articles by Henry Hazlitt recommending the devaluation of the dollar. Two considerations have hitherto stood in the way of a persistent advocacy of that course. The first was the remote hope that the crisis would be mitigated by less drastic measures—an adjustment of the war debts, for example, and a reduction of world tariff barriers, particularly our own. The second was the certainty that serious discussion of devaluation by Congress, while gold

was still being freely paid out by the Reserve banks, would precipitate a gold raid that would in itself throw us off the gold basis and perhaps leave us with insufficient gold even to maintain a devaluated dollar. But nothing has been done to mitigate the crisis, the inevitable collapse of confidence has followed, and as the temporary suspension of gold payments has already occurred, devaluation can be discussed without fear of a further gold drain.

If gold payments continue to be suspended or drastically restricted, as seems altogether probable, opinion will divide broadly into two schools of thought. One school will hold that we must inflexibly maintain or return to gold payments at the old parity of the dollar. The other school will rejoice that we are free of our gold shackles and will be content to drift along on a paper basis, fondly imagining that the value of this paper can be "managed" by the Federal Reserve Board by controlling its quantity, and that its quantity will be controllable.

The recommendations of both schools of thought must be rejected. We have maintained the dollar at the old gold parity only at the cost of bringing down our banking structure. Adequate and uniform debt, interest, rent, and wage adjustments to the violent and unparalleled drop in wholesale prices since 1928 have not been and cannot be made. The attempt to make them has merely brought about further disorganization and deflation. Adjustment can be obtained only by doubling the price level, bringing it approximately to that prevailing in 1928; and there is only one dependable way to do this—to cut the measuring rod, the dollar of 25.8 grains of gold, in half.

On the other hand, we cannot have stability and relative certainty, we cannot control inflation, we cannot have as much depreciation in the currency as we want and no more, we cannot have external stability for currencies and a free flow of world trade, unless we continue to make currency redeemable in some standard internationally acceptable; and gold continues to be by far the most satisfactory—or least unsatisfactory—standard for this purpose. If we could secure international agreement for a uniform devaluation, then no country would be repudiating any part of its obligations to another, and we could help to secure the prompt return of Great Britain and her financial satellite countries to a gold basis on which world trade could be resumed. The internal problem of American contracts payable in gold could be met by placing a tax on gold payments, deductible at the source, somewhat higher than the percentage of devaluation.

The need to have all our banks under one national control has always been apparent. Continuance of the present system is now shown to be intolerable. Under it banks are subject to forty-nine different laws, while State and federal governments are both powerless to establish adequate regulations for fear that recalcitrant banks will shift from federal to State charters or vice versa. It should no longer be possible, moreover, for any panicky or ill-advised governor to take an action affecting the banks of his own State that will lead to a spread of panic throughout the country. State legislatures will recognize this now if ever.

Of all ways of dealing with a banking crisis, the bank holiday or moratorium, or the general restriction of withdrawals, is the very worst. If depositors feel that in a short time they will not be able to draw freely on their bank deposits, they will naturally wish to draw out everything immediately. If they have been prevented from withdrawing by a holiday, they will want to withdraw everything as soon as the holiday has ended. If their withdrawals are restricted, they will tend to draw up to the maximum allowed under the restrictions. A banking crisis can be met only by permitting solvent but illiquid banks to make payments in certificates or scrip; and by either closing insolvent banks entirely or, as the new New York State law provides, permitting the free withdrawal of a certain percentage of the old deposits, the issuance of interest-bearing transferable certificates for the remainder, and the entirely free withdrawal of new deposits.

Finally, there is no denying the fact that the intense feeling of outrage in regard to banks and bankers which has swept over the whole country, intensified by the National City Bank revelations, but due chiefly to the banking breakdown, will make inevitable a widespread demand for the complete nationalization of banking.

Hitler Wins

BY adding no less than 5,528,000 to his previous vote, and with the aid of his Hugenberg Nationalist allies, whose vote actually decreased, Adolf Hitler is firmly established in the chancellorship and can now wreak his will upon what is left of the German Republic. He has achieved his goal, and the only redeeming feature of this disaster to the democratic and liberal movements in his country is that he has won the chancellorship by constitutional methods without resorting to violence. The constitution was respected in form, but a matter of fact it was breached at many points. The terrorization of the voters, the wholesale suppression of the Socialist and Communist press, the arrest of the leading Communists, the raids upon the chief Jewish defense organizations—all these made Hitler's victory sure. Indeed, it is remarkable that in the face of this the Communist vote decreased by only 1,132,000 and the Social Democrat by but 135,000. None the less, the battle for democracy is lost. Herr Hitler will unquestionably unseat the Communists by *force majeure* and fraud, thereby obtaining the necessary two-thirds' majority to send the Reichstag home.

And so another fascist dictatorship arises, to remind Americans of the complete failure of our "victory" in the World War to achieve the ends we set ourselves. The world safe for democracy? Democracy perishes in Germany and those in control of her destiny not only represent, in part at least, the most odious forms of big-business and large-landowner control as they existed during the regime of the Kaiser, but are committed to universal military service, rearmament, and every one of the forms of militarism against which Mr. Wilson called all Americans to fight. The only thing lacking to complete the picture is the restoration of the monarchy; that that is not now in sight is largely because of the personal unpopularity of the former Kaiser and the former Crown Prince. But even without that prospect, Germany

faces autocratic one-man rule modeled on that of Mussolini.

The road will not be easy for Hitler even after he has taken all the power into his hands. In the first place, the man himself is incompetent to lead, for he is totally ignorant of economic and financial questions. Whether he will permit himself to be guided by the reactionary hold-overs from the Von Papen and Von Schleicher Cabinets, who form a majority of his own, remains to be seen; he now represents 17,265,000 votes, and the Nationalists but 3,132,000—they actually lost 103,000 votes. He may therefore decline to let the tail wag the dog. Already the Hitler campaign has checked the upward movement in German industry. The agrarian situation is worse than ever, the last doses of high tariffs having naturally failed to bring prosperity to the farmers. If the economic tide runs again, however, in the direction of prosperity, if Hitler can find work for some unemployed, the number of whom is still mounting, he may satisfy the populace for a long time to come. But if even a year hence the economic situation of the country is no better—or is worse—it may be impossible for him to hold together the deluded masses who have looked upon him as a veritable savior. He has promised to lead them out of the wilderness, and if he does not do it, the disillusioned, desperate people will—if they can—turn to someone else. Such desertions he will undoubtedly try to combat by violence, by rewriting the constitution to suit his own purposes, as well as by practically abolishing the Reichstag and using all the instruments of propaganda as he did during the last campaign. That he will stay his hand is unthinkable. The very fact that he has carried the heretofore impregnable citadel of Bavaria, and that he has swept Prussia and completely dominates the Prussian Diet, will encourage him to smash democratic and representative institutions just as rapidly as he can. In the last analysis it will come down to a question whether the German people will permit themselves to be cowed or will rise against the most unprincipled demagogue yet to curse Germany.

By sheer ruthlessness and brutality even an incompetent dictator can hold himself in office a long time; that the policy of the Hitlerites will be "brutal" to the Communists and Social Democrats has been officially stated by one of Hitler's lieutenants. As for the Jews, they are profoundly to be pitied. Hitler may not actually resort to pogroms, as he and his men have promised that they would; he has yet to make good his boast that when he took office "heads would roll in the sand." But in the months, and perhaps the years, to come the Jews will live as marked persons, fearing the loss of their citizenship—also decreed by the Hitler platform—and facing persecution, prejudice, and personal violence. Leave Germany they cannot, unless permission is given to them by the government—even Switzerland has just increased its frontier guards to prevent those in terror of the Nazis from seeking that historic asylum which was so readily and happily granted to the revolutionists of 1848. As for the labor unions, they lost their opportunity to check this movement a long time ago, and they are now weakened and frightened. Altogether the spectacle of Germany is one to make the gods weep. It is, of course, at bottom due to the folly and the wickedness of the Treaty of Versailles. But this does not alter the fact that Germany has now become one of the danger spots of Europe; a source of unrest and international anxiety, and perhaps another threat of war.

The Faith of Roosevelt

ON the very day which marked the ending of an epoch President Roosevelt delivered his inaugural. Never in our national history has there been so dramatic a coincidence as this simultaneous transfer of power and the complete collapse of a system and of a philosophy. At that zero hour Mr. Roosevelt's words had something of the challenge, the symbolism, and the simplicity of a trumpet blast. After a clear presentation of our plight and of the evident truth that it "comes from no failure of substance," he properly indicted "the rulers of the exchange of mankind's goods" for their "incompetence," for their lack of vision, for their "false leadership," for the futility of their efforts "cast in the pattern of an outworn tradition," and delivered this verbal scourging: "The money changers have fled from their high seats in the temple of our civilization."

And then this exposition of his new faith: "We may now restore that temple to the ancient truths. The measure of the restoration lies in the extent to which we apply social values more noble than mere monetary profit. Happiness lies not in the mere possession of money; it lies in the joy of achievement and in the thrill of creative effort." And after decrying "the falsity of material wealth as the standard of success," and demanding "an end to a conduct in banking and in business which too often has given to a sacred truth the likeness of callous and selfish wrongdoing," the President observed: "Small wonder that confidence languishes, for it thrives only on honesty, on honor, on the sacredness of obligations, on faithful protection, on unselfish performance."

Good, Mr. President! There is a declaration of principle which all Americans who cherish what is noblest in our traditions will applaud, a standard to which they may repair. It was perhaps inevitable that this first message of the nation's new leader should be cast in general terms. The crisis was too acute, the cumulation of unexpected events too pressing, to make possible the presentation of a detailed program, even had the time and place warranted it. But the assertion that our greatest primary task is to "put people to work," and that "it is no unsolvable problem," provides a formula which, if materialized with the utmost speed and determination, will mark March 4 as the true bottom to which our nation has sunk, economically, socially, spiritually.

There are those who will view the President's message as empty verbiage, will disparage it as not fundamental, as an attempt to invoke "ancient truths" in the same message which decries "exhortations" and the following of "an outworn tradition." We prefer to believe at this moment that Mr. Roosevelt has come to understand that the changed times demand a new technique and a basically new approach to the problems of society, and that his words are implicit with that knowledge. He cannot very well put "an end to speculation with other people's money" without changing drastically at certain points the profit system which, through the excesses and perversions of the recent past, has created the greatest disaster in our history.

To achieve "social values more noble than mere monetary profit," to "keep the money changers permanently out of the temple of our civilization" (incidentally, it would be well to search them as they pass out) would be to transform

America. It would, of course, be a transformation in terms of the third decade of the twentieth century, in terms of an industrial and highly complex civilization, but directed toward a goal such as Jefferson envisaged—a democracy based on full economic, as well as political, equality. It would be a transformation into what this country might have been, and what, given the right kind of leadership, it may still be. The nation will eagerly await Mr. Roosevelt's fulfilment of these pledges.

Pleasant Sins

THE prisoners in Alimony Row have found a friend at last. Only a few days ago Supreme Court Justice Paul Bonyng ordered the release of one Umberto Politano, and at the same time handed down a decision which may some day be regarded as the divorcé's bill of rights. Politano, an illiterate bricklayer, had already served two years and seven months for the crime of having lost his job. Under our present laws there is no reason why he should not have spent the rest of his life in jail, and it is amazing that we should have had to wait until now to find a judge who would effectively protest against the monstrous law which keeps a man confined until he pays a debt which the confinement itself makes it impossible to pay. Commenting upon the custom of sentencing such delinquents for contempt of court, Justice Bonyng remarked:

If an intruder disturbs the serenity of a courtroom by disorderly or insolent behavior, or interrupts the proceedings of the court, or wilfully resists a lawful mandate, the limits of judicial displeasure are circumscribed by statute to a jail sentence of thirty days and a fine of \$250. However, let a waspish woman pluck the sleeve of the judicial gown, or nudge the elbow concealed therein, and this temperate restraint is immediately cast aside, and the delinquent spouse faces the possibility of unending imprisonment through successive adjudications of contempt.

Unfortunately, however, Justice Boyng did not take time to ask why this cruel absurdity should have found and held its place in our legal system. Many years ago the injustice and folly of imprisonment for debt of any other kind was recognized, but the common sense which abolished the ordinary debtors' prison stopped short of the alimony jail—just as common sense usually stops short of those things which are somehow held "sacred." The crime of the man who does not, or cannot, pay his alimony is a crime vaguely associated with sexual misbehavior, and sexual irregularities are set apart to be treated with a severity otherwise unknown in civilized states. The sexually guilty man is surrounded by an infernal aura which neither mercy nor ordinary sense can dispel.

We punish with the greatest severity those forbidden sins which, consciously or unconsciously, we ourselves should most like to indulge. Perhaps, as the elder Samuel Butler said, we also "compound for sins we are inclined to by damning those we have no mind to," but the truth proclaimed by the Freudian psychology is a newer and profounder truth. The sins we are inclined to are the ones we damn most vigorously. Show us a judge intolerant of divorce and conspicuously severe upon victims of the alimony racket and we will show you one not too satisfied with his own wife.

Issues and Men

James H. Perkins and the National City Bank

N OBODY could possibly envy James H. Perkins, the new head of the National City Bank. There has been dumped upon him a mess which was once a great banking institution. He has not been in the bank, or connected, I believe, with the affiliated National City Company, but has been devoting his time to the Farmers Trust, another part of the aggregation. I doubt if he knows very much about the inside of the bank, and I do not believe he is going to have many happy days as he finds out some of the inside conditions, such as were illustrated again last week by the discovery of a loan of \$10,200 to the general manager of the Port of New York Authority about six weeks after the National City Company had underwritten an issue of \$66,000,000 of Port Authority bonds. As usual, when friends were taken care of, no security was required, no indorsers obtained, and no interest collected. Of course this was not a bribe, or a bid for future business from the Port Authority. Heaven forbid! It was just a generous kindly act to take care of a good man who happened to be in a jam. Why not give him \$10,200 of the stockholders' money and overlook such matters as collateral and interest? That's the way to make friends for the bank! Judging by the reputation which Mr. Perkins has borne in the past this sort of thing will make him extremely uncomfortable. He has a man-sized job if he is really going to clean out the Augean stables which he took over from Mr. Mitchell. But I hope that he has no illusion as to one thing: he cannot restore the bank to the position it should hold in public confidence until he makes a clean sweep. He may not wish to do it now; he may not, in fact, be able to do it until he really sizes up the situation, but if he wishes to win the battle that is before him he can win it only by acts which will demonstrate to the public that he proposes to make the institution as clean as aound's tooth. These include the removal of Mr. Rentschler as president and the retirement of those directors who were so kind-hearted and generous as to make a loan of \$2,400,000 of the stockholders' money to the officers who were loaded up with bank stock and have to this date repaid only 5 per cent of the loan made to them.

Whenever a journalist or a reformer or an honest legislator uncovers a bit of rascality he is always accused of "rocking the boat" and doing his bit of necessary muckraking at precisely the wrong time. In my long years of journalistic service I have never yet blazed away at a bit of capitalistic wrongdoing without being sent for, or waited upon, by some Wall Street magnate who pointed out to me, with much condescension and great pity for my shortsightedness, that I was doing a lot of unnecessary damage by putting a searchlight on the wrongdoers and demanding the punishment of the guilty. The arguments always run thus: (1) The misconduct took place some time ago and therefore is a matter of the past; (2) the guilty men have already resigned or been adequately punished by public opinion; (3) the new management is honest and will do its best to clean house; (4) it cannot do this overnight and it should not be pestered into hasty

action; (5) by harping on the matter public confidence in all important fiduciary matters will be further shaken, thereby creating a dangerous situation; and (6) who are you anyway to set yourself up as a censor, and venture to tell people how they shall run their affairs in which they are competent and you are not? These were the arguments that were used at the time of the unveiling by Charles E. Hughes of the insurance wrongdoing, an achievement which set Mr. Hughes upon the career that nearly put him into the White House, and landed him, whiskers and all, in the Chief Justiceship. That these time-honored arguments have, in this case, been effective in shackling the editorial writers was proved in last week's *Nation*. Even Walter Lippmann is silent.

I have personally experienced this pressure during the last week in connection with my public demand for the resignation of Gordon Rentschler, the president of the National City Bank, and those of its directors who by their votes approved the lending of \$2,400,000 to the higher officials of the bank. It has been pointed out to me that the banking situation is so critical that I should follow the example of the other editors and keep silent about the misdeeds of Mr. Mitchell and his associates. In fact, I have found the Wall Street world far more critical of the Senate committee which brought about the exposure at this time than of the delinquents. It has "rocked the boat." I suppose Mr. Mitchell should have been allowed to go on as chairman of the board which is running the bank. Of course it comes down to an honest difference of opinion. My theory has always been that it is much the best to open up such a sore and let the public see that all its contents are removed, and the wound sterilized. The other theory is that you should hush it all up so that nobody knows that the doctors were operating or what the result has been, and trust that the public will have forgotten the whole matter when times are really "propitious" for ventilating the ills. That would mean, of course, that they would never be ventilated.

Now the fact is that Wall Street has not got much time left to set its house in order. Why talk about rocking the boat? It has sunk. This Mitchell case is not the only one. We have had chapter after chapter, as the files of *The Nation* attest. The West is ready now for the most drastic kind of anti-Wall Street action. It would not astonish me at all if before long we should read proposals for government control and management of all our banking institutions. Russia has it. The German government dominates or owns 60 per cent of its banking institutions. Why, it will be asked, can the United States not take over the whole business once and for all? The editor of the *Tulsa, Oklahoma, Tribune*, Richard Lloyd Jones, asks me why we cannot "kill the Wall Street octopus? It sucks the substance out of the industrial life of every State in the nation."

Walter Garrison Villard

Can the Banks Be Made Safe?*

By LAWRENCE DENNIS

DEFLATION takes the final count. The nationwide credit collapse of March 4 was the inevitable culmination of a 50 per cent shrinkage in economic production since 1929. Three years of sound finance had reduced bank loans and deposits—and employment—by about a third. Earnings, the only true measure of worth of bank assets, had suffered an even greater decline. Prudent bankers had preferred short-term government bills paying $\frac{1}{2}$ of 1 per cent to loans to finance employment. (Production was unprofitable.) But once the public showed banker prudence by preferring gold and currency to insecure deposits, the moratorium was declared overnight. Depositors must now suffer as well as the unemployed. A scaling down of bank deposits and a devaluation of the dollar will doubtless mark the country's awakening from the nightmare of keeping the dollar sound and the nation's industries idle.

Can savings and a fair return thereon be made safe under our present system? Not only does the system not give the workers security in a job, but the thrifty cannot be sure that the savings of their productive years will be available for use in old age or an emergency. Are these conditions inevitable under the present economic system or are they avoidable? Do all savings and investment constitute a gamble on the future course of uncontrollable economic events?

It is commonly assumed that there must be a moral right and a possible way to conserve savings and at the same time to receive what some people pietistically term a fair return on them. The fair return, be it noted, means all you can get in a free, competitive capital market without using fraud, violence, or special advantages in ways forbidden by law. The fair return cannot be predetermined, because it must be fixed by innumerable factors which could be controlled only under a regime which admitted of little or no freedom of contract. But debtors promise a fixed return. Then debtor farmers are evicted from their homes by due process of law for failing to keep a promise which no one should have a right to make, granted everyone's inability to control the factors which condition fulfilment. An interest-bearing loan, by reason of the unpredictability of future economic events, is, of necessity, a gambling operation.

Thinking on this problem is confused by the assumption, which may be correct, that during the brief hundred-year period of frontier and industrial growth the average investor conserved his savings and netted a small return. But the experience of so brief and exceptional an era in the history of mankind establishes no rule that interest is permanently obtainable. Nor does it admit interest to the family of decent social institutions. Nevertheless, the investor who in 1928 wanted 6 to 8 per cent on bonds and 4 to 6 per cent on bank deposits now feels a moral grievance against the bankers who sold him what he wanted, which is now in default. Of course the basic error lay in the public's concept of a banker. The thrifty, who conceived the banker to be a professional public servant charged with the social

duty of administering finance, paying 6 per cent, and preventing hard times, have had a rude awakening. They should have read Jesus, Aristotle, Saint Thomas Aquinas, or John Maynard Keynes on the subject of interest instead of the modern prophets of Mammon. Aristotle, the Roman Catholic church, and the Jewish books of the law, to cite only three reputable exponents of ethical concepts, have denounced all interest as usury and as morally wrong. Some people whose ethical concepts are derived from earlier sources than Bruce Barton find the current moral indignation over the failure of the money changers about as justifiable as that of a man who has been cleaned out by a legally operated Monte Carlo. It is impossible to make usury safe or wholesome for democracy.

Passing from ethics to practice, let us consider honestly whether bank failures and investment losses are due to bad financial management or bad economic events or both. No one will deny that administrative incompetence and overt dishonesty are, occasionally, factors in determining which competing bank will fail first in the period of hard times. But it remains to be proved that any brand of banking judgment could have prevented the present depression, although supposedly the depression should have been foreseen by those closest to the statisticians, experts, prognosticators, and bank economists, who turned out to be as ignorant of coming events as the man in the street. Wise bank management could avert bank failures in a community of failing business only if all banks could be closed without loss in advance of the general decline. And to anticipate the decline requires far more prophetic vision than our kings of finance possessed. Obviously, any attempt to abandon fields doomed to depression would defeat itself, since liquidation could not be effected without a nearly total loss of capital.

The idea that wise bank management can obviate depressions is not unlike a notion that life-insurance companies might avert deaths. Banking and insurance are conducted with a view to bearing just so many and no more losses. Banks could not have functioned since the war on the basis of the expectancy of the present depression. Life-insurance companies could not operate on the assumption of a possible plague which might kill off millions of people in one year. The state may be able to maintain demand in such a way as to obviate depressions, just as medical science, combined with the police power, may be able to avert a great plague. The money and debt merchants, however, are not God, the state, or yet the whole people.

Banks in agricultural regions have failed since 1920 by the thousands for the reason that agriculture, as a business, has been a nation-wide and calamitous failure. It did not lie within the power of the bankers to pick for agriculturists a more profitable way of life and put them into it. No amount of banking wisdom or government control of private, profit-seeking banking can ever make a deposit or an investment anything better than a share in the lot of a given community. Bankers buy deposits from depositors and I.O.U.'s from business borrowers. The banker cannot honor his obligation to the depositors if universal adversity makes

*The first of two articles. The second will appear in an early issue.—
EDITORS THE NATION.

it impossible for large numbers of his debtors to meet their obligations. To prevent bank failures, one must prevent business failures. That the bankers cannot do, as they control neither the state, business enterprises, nor consumers.

Bank credit is created and bank debt is incurred on the basis of certain general assumptions. It is assumed that current output of goods and services, current national income in money, and the prevailing price level are going to be maintained within a narrow margin of fluctuation. If, after a given volume of credit is created, total output, total money income, and the price level are all reduced by one-half—that is roughly what has happened since 1929—it must follow that credits and debts will be similarly reduced. The tragedy of this reduction is that it must take place largely through “the orderly administration in bankruptcy,” bank liquidations, and mortgage foreclosures. Nothing except a legal hanging could be more orderly than these processes, which are conducted by our courts with careful observance of the “due process of law.”

The following figures give some quantitative notion of the extent of the orderly readjustment:

	1929	1932	Percentage of Reduction
<i>(Dollar amounts are in billions)</i>			
Total long-term debts in the United States. Estimate of the National Industrial Conference Board	\$154	*	Probably about 10
Total loans of all banks at the end of September	\$42	\$26	37
Index of industrial production. 1923-1925 equals 100. Federal Reserve Board Index	119	60	50
National income, or the value in dollars of goods and services sold during the year	\$85	\$40	53
Wholesale prices. United States Bureau of Labor Statistics. 1926 equals 100	95	65	32

*In 1932 the outstanding volume of debt had probably been reduced by less than 10 per cent of the 1929 total. A \$7,000,000,000 to \$9,000,000,000 increase in public debt offsets an equal amount of deflation by bankruptcies and other arrangements.

Long-term debt has not yet been reduced proportionately to the decline in money income, production, and prices. This means that a large amount of now outstanding debt in bonds and mortgages included in the \$154,000,000,000 total must be written off sooner or later. Recognition of this probability is reflected in the present quotations of bonds and mortgages. The significance of these coming events is that bank deposits must be scaled down through bank failures at the expense of bank stockholders, depositors, and creditors, or through state assumption of bank liabilities at the expense of the taxpayer. Our banks hold some \$18,000,000,000 in bonds and mortgages which, with the permission of the Comptroller of the Currency and the State bank superintendents, are being carried on balance sheets at the now

fictitious values of four years ago. To write off only 20 per cent of present bank assets of over \$45,000,000,000 would wipe out the total capital and reserves, amounting to about \$7,000,000,000, of all our banks. The impairment of assets, of course, is much greater than 20 per cent.

During the year ended June 30, 1932, according to the report of the Comptroller of the Currency, our national banks wrote off in losses \$490,000,000, or \$139,780,000 more than total profits. For the first time in its sixty-three years of operation the entire national-banking system sustained an operating loss, the amount being 4.94 per cent of total capital and surplus of all national banks. During the worst year of the depression of the seventies there was a net profit of 5.48 per cent, and for the panic year of 1893 the average net profit was 4.5 per cent.

My analysis shows why some 6,000 banks have failed during the depression, why others are sure to fail, and why still solvent banks are feverishly converting commercial loans into government bonds. It also shows why the banks have already borrowed \$600,000,000 from the Reconstruction Finance Corporation and why government assumption of the banking function is ultimately inevitable in this crisis. The banks cannot take the losses incidental to the suspension of half the productive activity of the nation. And I venture to prophesy that the American taxpayer cannot take these losses of the banks and insurance companies unless the government uses the power of the state to restore economic activity to a level which corresponds with the existing debt structure.

The hope of meeting the crisis of nation-wide insolvency by the expedients of further banking concentration and branch banking is pathetic. The performances of the super-creations of Insull and Kreuger, sponsored by the best big bankers, warrant no confidence in mere size. The well-run \$3,000,000,000 United States Steel Corporation had an operating deficit of \$91,000,000 in 1932 and its rate of losses is increasing. The Bank of America National Trust and Savings Association of San Francisco, controlled by Giannini's Transamerica Corporation, our premier billion-dollar chain-bank experiment, had to borrow \$64,900,000 from the Reconstruction Finance Corporation. A bank chain of 146 branches had to close last month in Michigan. There is no evidence that larger bank chains would change fundamental business trends for the better or prove wiser than small unit banks. Bigger and fewer banks mean bigger and fewer failures, or failures so big that they are not allowed to close the banks but are made the liability of the taxpayer and the cause of a currency devaluation.

Our present banking system does not pool our banking resources in a few nation-wide chains. We have at present some 19,000 independent or semi-independent unit banks. From the nature of this system it follows that each bank must react promptly and thoroughly to changes in the fortunes of its respective community. This system has the possible merit of making local bankers men of initiative in their community rather than employees or agents of chain-store banks. The system also gives to a few large banks of New York a higher degree of liquidity and immunity from the first impact of the depression than can be enjoyed by smaller banks. This is necessary in order to enable the New York banks to meet the demands for immediate withdrawal of deposits by smaller banks.

The statement that foreign banking systems have had fewer bank failures than our own may be technically correct but it is substantively untrue. The nineteenth century recorded numerous failures of great bank chains in Europe and Australia. In the post-war period the large bank systems of Britain, Germany, Austria, and even France have been sustained only by unlimited and constant state aid. Canadian banks pay off depositors with their own paper money and not with gold or notes convertible into gold. The Canadian dollar recently touched 83 cents. The Bank of England lost hundreds of millions of dollars in 1931 trying to save the banks and the gold standard. So far it has kept the British banks open by abandoning the gold standard and letting the pound sterling depreciate by one-third of its par value. We have preferred to preserve the gold standard and let 10,000 banks close in thirteen years. It should not be deemed an achievement to keep banks open with the government printing-press or the Reconstruction Finance Corporation—although the R. F. C. has not done it. But it is incorrect to attribute to big banks saved by the state the virtues of solvency lacking in small banks of farmers which have not been so nursed.

The Glass bill, against which Senator Long filibustered so courageously, authorized State-wide branch banking for national banks. As finally amended, the bill authorized branch banking for national banks in States which permitted branch banking for State banks. The Glass bill also provided for the setting up of a liquidation corporation to buy the assets of insolvent banks. This corporation would receive from the United States a gift of \$125,000,000, from the surplus of the Federal Reserve banks some \$65,000,000, and from the member banks of the system a capital subscription of about \$65,000,000. The bill does not attack fundamental problems, but strikes at weak points, such as the security affiliates of the large banks. (These affiliates enabled the big banks to make money during the boom while the honestly run country banks were failing by the hundreds.) The Couzens bank bill merely enlarges for six months the discretionary powers of the Comptroller of the Currency with a view to meeting the supposed needs of the Michigan bank situation.

Those who blame individual moral turpitude for financial ills may think their case is proved by the disclosures of the Senate Committee on Banking and Currency, particularly in its investigation of the National City Bank and the National City Company, both owned and operated by the same persons. Charles E. Mitchell and Hugh B. Baker, after the exposure of their manipulations, said that they had been mistaken, that they were sorry, and that they would not do it again. A few days later they resigned. But are these bankers any more to blame than their reputable directors, who knew and approved all the acts of management, as is established by the records? Or than the reputable downtown attorneys who passed on the legality and propriety of all important acts? Or than the federal Comptroller of the Currency and the New York State Superintendent of Banks, whose duty it was to know about all and prevent many of these acts? And how about the assenting stockholders, especially those who realized 200 and 300 per cent in profits on the sale of City Bank stock at Mr. Mitchell's manipulated prices?

If Mr. Mitchell did wrong in 1929, why was he not ousted, denounced, and prosecuted then? He is guilty of

having shown exceptional boldness, energy, and imagination in the exploitation of a get-rich-quick philosophy which intelligent people have always known to be immoral and impracticable over any length of time. Anyone who accepts this philosophy, as almost all our financial leaders, not excepting Owen D. Young, did in 1929, must, in order to compete successfully, lie to others and to himself, though he may be sincerely self-deceived. In Monte Carlo it is understood that some win what others lose and that the game beats the players. Wall Street assumes impossibly large returns with safety, honor, and public welfare. Bankers, in law and practice, have absolutely no fiduciary relationship to their clients in the recommendation and sale of investments. Like horse traders, they sell on a let-the-buyer-beware basis. If they are to be allowed to ply their trade, the people should be taught from childhood the facts about bankers. Instead, they are taught to ask a banker's advice as to whether they should buy his wares and to treat a salesman as if he were a professional man.

Honest banking would have to be banking for service with the small compensation for management and brokerage which is obtainable over a long period. Laws which would eliminate dishonesty from banking would leave three-fourths of our bankers without a business and reduce the other one-fourth to the role of government officials. The people and big business will prefer today to lay upon such scapegoats as Mitchell, Insull, et al. the sins of a system through which they hope later on to be able to buy bank stock again at 140 and sell it two years later at 560, as Mr. Mitchell enabled a few to do in the late boom. A 300 per cent rise in the market price of a bank stock during a two-year period of falling commodity prices establishes a prima facie presumption of dishonesty.

Bank reforms such as prohibiting the combination of a commercial bank with a security-selling affiliate or requiring bankers to qualify professionally will not reduce dishonesty in finance. Kreuger received abundant accommodation and cooperation the world over from the best commercial banks which had no security affiliates. And Kreuger was universally extolled by respected banking authorities. That wise expert and righteous prophet of business as it ought to be, Sir Arthur Salter, praised Kreuger and his works just a few weeks before the Kreuger scandal leaked out. Where there is a will and a remotely possible way to get rich quick there will be legal and near-legal chicanery which pious profit-seekers will not discover as long as it seems to work, and which they will denounce as soon as it fails.

In final answer to the question, Can the banks be made safe? let me summarize certain conclusions. First, there is no moral right or proved way to conserve savings and receive interest indefinitely in a free market. Second, the banks can be made no safer than a job or a living from a business. Third, the banks, in a free market, cannot control the economic life of a nation, and without a free market the bankers would be the last to be chosen as dictators. Fourth, if a situation has at last arisen in the history of capitalist expansion in which banks cannot operate unless the government pays their losses, then bank credit, like minting coins or printing currency, must become a function of the state, conducted for public welfare and not for private profit. And that would necessarily mean the substitution of some form of state capitalism in place of the present system.

Protect the Depositor

By NORMAN HAPGOOD

THE amount that any person is allowed to deposit in the Postal Savings banks is twenty-five hundred dollars. There is no reason why the amount should not, at least in this crisis, be raised to twenty-five million, or as much more as anybody has; and to take so simple a step would tend to limit hoarding and increase confidence. Such a move would not be isolated. It would recognize a principle that sooner or later—and probably soon—will be recognized anyway: that the body which has the power to inspect and control the banks should assume the risk of their soundness or lack of it. Moreover, it would be an entering wedge for a still larger principle. To those capable of realizing that we are now witnessing the end of an era, it is clear that anything like the existing debt structure cannot exist in the new era which we must build. Yet, unless we are Marxian in thought, we must contrive some method by which the individual may be able to save, and by which he may safely invest his savings.

Banks as we know them will disappear, since they represent a system of borrowing that will be cut down to a remnant. Bonds and stocks will be greatly reduced. Where, then, can the thrifty man turn for safety? He should be able to turn to the one great creditor that has the power to protect his savings, when such power exists at all. He should be able to buy government bonds and annuities from the government, and he should be able to do all of his banking with the government. There is no reason whatever why he should not almost immediately, as part of the restoration of confidence, use the national government's savings banks without limit. That it would be better to invite the public to turn over its money to the savings banks of the government than to guarantee deposits put by the public directly in a multitude of banks, is obvious.

It is possible, as it has been for years, for an observant youth to read on a banknote such words as these: "First National Bank of Blank, United States Depositary." The words are no longer always there, but the fact continues. The ingenuous young person usually imagines that if the bank is sound enough to receive the money of the government it is sound enough to receive his. But he is mistaken. The effect of the action of the government on the safety of this youth's money is precisely the opposite of what he conceives it to be. By the terms of deposit the claim of the government has priority. If there are not enough assets, the government takes what there are. The poor youth is, unknowingly, in the position of a second mortgagee. The government refuses to share the risk which it is its special business to prevent and which it has special powers to prevent.

There has been much criticism of hoarding, and also of starting runs on banks. When a widow, an old man, or anybody else helps to start a run, what is he at bottom doing? He is helping to prevent the United States government from getting money from him under false pretenses. That is the case wherever the bank in question is obligated to pay money to the government, in any form or for any purpose, in preference to paying it to depositors.

The large growth of security companies has meant the attempt to substitute material things for established character as a basis for credit, and the present breakdown shows that it cannot be done. From the point of view of civilization nothing is more regrettable than the disappearance from the scene of the elderly man who, in the days of our grandfathers, was in a position of trust because for a lifetime he had proved himself worthy of trust. The substitution, for him, of the younger man whose asset is that he can get up more steam, crowd in more mere volume of business, is one of the false values that are bringing us down. A large percentage of the security companies are essentially insolvent today.

A few weeks ago a New Yorker associated with one of the big combinations called trusts paid a visit to Washington. To a friend of mine he made a statement to this effect: "I notice that Mr. Justice Brandeis has recently permitted a new edition of his book, 'Other People's Money,' to appear. This presumably means that he is not unwilling to be identified, now that he is on the bench, and in the present circumstances, with the opinions on banking reforms put forward by him twenty years ago. If that is the case, why would it not be a good thing for President Roosevelt to ask him to head a committee to recommend the changes needed, immediately as well as in the end?"

"But the man you are quoting," I said to my friend, "is a passionate conservative."

"Yes," was the answer, "he may be passionately conservative, but he at least thinks that the captains in charge of our system should be honest."

The astute reader will, of course, immediately reflect that there are other points in the crumbling social structure at which a similar test of the relation to one another of government regulation, government money, and private money will have to be applied. The railroads stand plainly in the foreground.

One of the objections to government ownership and operation of railroads, banks, and other utilities—the talk about discouragement to private enterprise—has completely lost its meaning. Our breakdown is the consequence of the search of surplus capital for grounds on which to disport itself. Likewise, the popular theory that rich men were of social use because, not being able to eat up the whole of their incomes, they put the rest into extending production has now become a sorry thesis. If confidence were to come back tomorrow, there would be plenty of effective credit for our needs. When confidence does come back, the danger will not lie in any shortage of capital, credit, or means of production in general. The danger will lie in our return to the kind of "private enterprise" and the kind of extension of business that have pulled down the world. What we need now is—and happily it has become almost a commonplace—more stabilization, security, distribution, and peace; this will be attained not in one step, but in many; and one of the first and easiest steps is to conduct a large part of our banking with the one creditor who represents us all.

Marxism—Dogma or Method?

By SIDNEY HOOK

ON March fourteenth fifty years will have elapsed since the death of Karl Marx. Yet his doctrines command more influence today than the social philosophy of any of our contemporaries. Indeed, history provides no parallel to the rapidity with which Marx's ideas have penetrated the consciousness of the masses throughout the world. It took Christianity centuries to win one people; and at the point of its greatest development it was essentially a Western phenomenon. Marxism, however, may be regarded as the first truly international movement in culture and politics. From its teachings have sprung the guiding principles of the Russian Revolution and the multiform policies of the Russian state. Since 1875 it has been the strongest ideological influence upon the European labor movement. Throughout large sections of China, especially among the younger generation, Marx and Lenin have undermined the spiritual authority of Confucius. In Japan the government has been compelled to recruit a special corps of anti-Marxist lecturers to counteract the spread of Marxism in secondary schools and universities. In the United States, where, until 1929, Marx's ideas were treated with academic condescension as strange creatures from the intellectual underworld, they have emerged from the study and party council to the streets, the factories, the daily and literary press.

In view of the rising tide of social discontent in Europe, Asia, and America, Karl Marx bids fair to become to the modern world what Aristotle was to the ancient and Aquinas to the medieval. With a characteristic difference. Whereas both Aristotle and Aquinas summed up their cultures, carried them, so to speak, to their ideal fulfilment, Marx sought, on the basis of the self-generated antagonistic tendencies in bourgeois society, to *transform* the existing culture. As distinct from all traditional philosophies of acceptance, his is a philosophy of social revolution. This marks his ideas off not only from the past, but from all contemporary forms of social criticism.

Reformists may tilt with reactionaries; progressives of all varieties may engage in blistering polemic with conservatives and with each other; enlightened liberals and humanists may heatedly clash over the nature of man, culture, and values. But these differences appear to be trivial in the light of their common, even if ununited, opposition to a doctrine which challenges the belief they all share: namely, that the ills of capitalist society can be cured either by legislative enactment or by dictatorial decree, by greater efficiency or by greater humanity, by moral exhortation or by scientific fact-finding—in short, by any method save by transferring political power from the class which owns and controls the means of production to the class which lives by their use, or starves by their non-use.

The fact that Marx's philosophy is historically conditioned by the decline of bourgeois society, and class conditioned by the interests of the proletariat, explains some important features of his thought. He projects no Utopias. Only the most general outlines or, more strictly, conditions of Communist culture are indicated in Marx's writings; the

detailed construction is left to the experimental processes of a society freed from class rule. His central concern, theoretical as well as practical, was the preparation of the international working class for the conquest of political power. All his studies converged upon this problem. It provided the starting-point and the criterion of relevance in his objective analysis of the economic tendencies of capitalism. His social psychology was developed from his active participation in the class struggles of his day. His theory of the organization and historical development of culture in terms of the way in which human beings make their living was a hypothesis suggested by his analysis of the contemporary conditions under which successful revolutionary action is possible. Whoever overlooks this unifying principle of Marx's thought can understand neither the man, his achievements, nor the primary source of his influence. This is what Engels meant when he declared at Marx's open grave at Highgate Cemetery: "Before all else, he was a revolutionist."

This is not to assert that the truth of Marx's theories depends upon whether one accepts Marx's class bias. Sombart, Max Weber, Troeltsch in Germany; Beard, Veblen, Hobson, and Tawney in England and America—"bourgeois" thinkers all—have taken over and developed many of Marx's insights. This does not make them Marxists—or even Socialists. What is asserted is that the very meaning of Marx's doctrines cannot be dissociated from his revolutionary objective—and that taken out of this context of class motives, ideals, and action, they can no more be understood than the prescriptions of a physician can be understood without reference to an implicit, regulative ideal of health. The refusal to relate Marx's "objective" analyses to the "subjective" class purposes of the proletariat, which by achieving the social revolution abolishes all classes, has led to the mischievous myth that Marxism is an objective science which can demonstrate both the inevitability of communism and its inherent moral superiority.

The question whether Marxism is an objective science, free from all value judgments and strictly monistic in methodology and assumption, is more than an academic matter. For if it is believed that the nature of society is such that by the development of immanent economic processes communism *must* be realized, that history spirals toward the classless society almost in the same way as the acorn develops into an oak, then human energy becomes a superfluous flourish in a mechanical system of socially determined forces. A theory of economic predestination replaces theological predestination, and the mode of economic production, self-determined, self-sufficient, and self-evolving, plays the same logical function in history as the will of God in the old theodicies. In moments of danger and possible defeat, Marxists of this persuasion make invocations to "the objective development of productive forces inevitably working toward communism," as a pretext for inactivity in waging the class struggle, or as a cloak to cover the ignorance which can only be cured by public confession. On this view it becomes a mystery why Marxists should engage in any political activity, especially in the at-

tempt to convert others to Marxism. Their very activity becomes meaningless in terms of their own doctrine.

This difficulty cannot be evaded by admitting that not all social behavior can be reduced to the laws of physics or biology. For either the specific resultant of the interaction of human wills is determined *in advance* by socio-economic laws or it is not. If it is, then for all human purposes we have not escaped fatalism, since no matter what you or I or anyone else does or thinks, the far-off event toward which all social creation is moving is bound to come to pass. If this is not determined in advance, some other factor or factors which are relatively independent of these laws (but not therefore uncaused) must be introduced, and the strict monistic determinism of the system is shattered.

This conception of Marxism as a monistic, reductive science of social behavior was the official "orthodox Marxism" of the Second International. Logically it was committed to the belief in a block-universe in which class-consciousness and class action had no more influence upon the great historical pattern which was unfolding itself than sparks thrown off by a rotating wheel upon its motion. Where, under pressure of hostile criticism, the existence of plural historical factors was admitted, as well as causal interaction between consciousness and social institutions, orthodox Marxists refused to surrender the notion that communism was inevitable—a surrender which was logically entailed by their admissions. From the theoretical postulates of this science of Marxism, it followed that revolutionary opposition to the World War in 1914 was utopian, because the war and the war psychology inevitably flowed from the objective constellation of socio-economic forces of the time; it also followed that the Russian Revolution was impossible because (a) the country which is more developed industrially presents to the less developed the image of its own future, and (b) no country can skip a phase of social evolution. Indeed, even after the October revolution occurred, some orthodox Marxists proved that it was impossible. Before and during the war right-wing Socialists throughout the world, in order to make the theory of the Social Democracy square with its acts, called for an abandonment of the revolutionary phrase in its program and an open declaration of social reform. Left-wing Socialists, however, like Luxemburg, Liebknecht, and Mehring in Germany, and Lenin and Trotzky in Russia, had for years sought to recall the Social Democracy to the Marxian philosophy of social revolution. The October revolution marked the final breaking-point in the relations of these two schools, and the Third International was born. Although Communists throughout the world follow the program and tactics of the Third International—in which the tremendous importance of class-consciousness, class-will, and the role of the political party in organizing the revolution is recognized—it is amazing to what an extent their theoretical formulations of Marxism are burdened with the necessitarian ideology of the Social Democracy of before the war. Bukharin and Deborin are cases in point.

The key to Karl Marx's thought is to be found in his lifelong struggle against two diametrically opposed social philosophies—mechanical materialism and romantic idealism. The first could not do justice to the historical and practical character of social relationships or explain how man, determined by his environment as he was, could revolutionize it. The second took two forms. Either it was an absolute ideal-

ism, and taught that natural and social processes by an inner necessity would create a society which was objectively desirable—a disguised animism; or it was a subjective and utopian idealism which believed that communism could be introduced at any time in any country independently of the prevailing objective economy.

In his criticism of the idealists Marx performed the gigantic labor of showing in detail how the capitalist system of production generated the necessary conditions of social change. His conclusions concerning the centralization of industry, the concentration of wealth, the decline in the average rate of profits, the squeezing out of the middle class, the existence of an industrial reserve army, the cyclical nature of depressions, have been confirmed even by governmental commissions. Marx's gravest mistake was in not assigning greater values to the temporal coefficients of the process.

In his criticism of the mechanistic materialists Marx insisted that "history is the activity of man in pursuit of his ends," and that human history differs from natural history in that "we have made the former but not the latter." Consequently, no theory which operates with a monistic theory of economic causation can be adequate to the creative role which man plays in every historical situation. Without this reference to possible alternatives of action—no matter how limited—there is no historical problem. Mechanical Marxists have never been able to explain Marx's statement in 1870 that "England possesses all the necessary material presuppositions for the social revolution. What it lacks is the spirit of generalization and revolutionary passion." Marx taught that the development of productive forces under capitalism would narrow the range of possibilities of social change to a point where mankind would have to choose between communism and the end of civilization through a series of capitalist wars. As valid today as ever before is Marx's observation in the "Communist Manifesto" that class struggles "invariably end either in a revolutionary change in the whole of society or else in the common ruin of contending classes." Who can now deny that the belief in Marxism makes a difference to the outcome of the historic process?

Despite the fact that America approaches most closely to the Marxian abstraction—the pure capitalist system—only lately has a wide interest in Marx's thought been manifested here. The cavalier dismissal of his doctrines by most American sociologists is natural in view of their class origins, their persistent use of secondary sources, and their conception that social science is glorified fact-grubbing. The revival of Marxism will have to come from American intellectuals outside of the universities. Unfortunately some American intellectuals going leftward have fallen over each other in their efforts to be "orthodox" Marxists. They have swallowed the jumble of mysticism and mechanism which is called "objective science" without stopping to settle the intellectual difficulties which they themselves raised only yesterday. This is unworthy both of Marxists and intellectuals. To be a Marxist demands a long and critical discipline; and to be an intellectual means to judge a conclusion by the quality of the arguments advanced in its behalf. The subject matter of Marxism is not the whole universe, and its method is not the method of authority. Nor does it profess to have the final truth about what it does concern itself with—the theory and practice of social revolution. It is neither dogma, myth, nor objective science, but a realistic method of class action.

Wanted: Strong Men and Radical Measures

By PAUL Y. ANDERSON

Washington, March 3

WILL there be anything new in the new deal? I feel perfectly sure there will be. Experienced observers invariably judge an incoming executive by his appointments. Thus, four years ago, when Hoover revealed that his Cabinet would contain Mellon, Davis, Hyde, Wilbur, and Mitchell, those of us who knew the ropes in Washington realized immediately that the country was sunk. By the same omen we are led to expect good things of Roosevelt. I have been greatly amused by some of the comment on the new Cabinet. One Wall Street writer hastened to assure his clientele that it was "conservative." A hostile—and ignorant—commentator declared it to be composed of "yes men." Some nitwit of a radio announcer found its make-up very "odd"—and that, mind you, after Doak, Hurley, and Adams. The real tip-off on this Cabinet is very simple. It contains, practically in equal parts, two types of people: (a) strong, independent, and aggressive characters; and (b) personal friends of the President. The selection of Homer S. Cummings to fill the important post left vacant by the tragic death of Senator Walsh is Roosevelt's first major mistake. Only three men measured up to this vacancy. They were Felix Frankfurter, Donald Richberg, and Huston Thompson. The significant fact about the Cabinet as a whole, however, is that the strong, independent personalities are nearly all progressives. To anyone who knows them it is quite obvious that the members of the Cabinet who will exercise a pronounced influence on the policies of the new Administration are Hull, Ickes, Wallace, and Miss Perkins. The others may be expected to follow Roosevelt's lead. Of course, it would have been a stronger combination if the President had followed his inclination to include Donald Richberg and Phil La Follette; the opportunity to strengthen it still exists if it is true that the Cummings appointment is temporary. In general, however, we have no reason to complain. It is the strongest Cabinet of this generation.

IT needs to be, God knows. With banks and business houses popping all over the country, with the disclosure that private credit has fallen under the control of individuals who can only be classified as criminals, with one-third of the nation's earning power destroyed in a vain attempt to maintain dividends, and with the government's credit seriously impaired in a stupid and futile effort to support toppling capital structures, we need strong men and radical measures. Recent revelations before the Senate Banking Committee shed a brilliant light on the shenanigan which brought on this mess. We learn, for example, that Charles E. Mitchell, as chairman of the National City Bank and the National City Company, declared himself in for a cut of more than \$3,400,000 of the profits over a period of three years, while at the same time he was allowing stockholders (although

without their knowledge) to assume \$25,000,000 of loans which are now carried on the books at a value of one dollar. To be sure, there was hardly a dry eye in the house when Mr. Mitchell described himself as the greatest loser from the decline of National City stock, although the general grief was partially assuaged when it developed that Mr. Mitchell paid no income tax in 1929, in spite of an income in that year of about \$1,150,000. Mr. Mitchell helped himself to this measure of relief by taking a "paper loss" of \$2,800,000 by selling stock, as he originally described it, to "a friend." Cross-examination elicited two interesting facts: that the "friend" was a member of his family; and that he subsequently bought the stock back. This is the same Mitchell who had the cheek, less than a year ago, to lecture Congress on its delinquencies, and to deliver his opinion on what was wrong with the country. I understand that very strong pressure is being exerted to displace Mr. Pecora as counsel for the Banking Committee in the stock-market investigation. Recalling the comatose condition into which the inquiry had fallen before Pecora revived it, it is difficult to believe that this movement will succeed. If the committee really wants to know the truth, it will keep him. Those who want the investigation stopped contend that "it is upsetting confidence." However, when a boil is ripe, why not lance it? If there is any comic side to this grim spectacle, let us award the palm to Harold Stuart. After describing the methods adopted by Halsey, Stuart and Company to float Insull stock, Mr. Stuart ventured a recommendation. There should be legislation, he said, to prevent this sort of thing. Mr. Stuart seemed perfectly serious. He did not hear the coarse remark from the press table: "Hold me, boys, I'm about to steal something."

* * * * *

IF Hoover's sensitiveness remained acute to the end, his last days in the White House must have been his happiest. Those who rejoiced over his going were content to give silent thanks, while those of his admirers who remained seized the occasion to become lyrical. In the current number of the *Saturday Evening Post* William Allen White debates the question whether Hoover was "the last of the old Presidents or the first of the new." I say debates, although at numerous points the Emporia Evangelist is so overcome by the knowledge of his hero's fate that he simply breaks down and bawls like a calf. Accepting the doubtful premise that such a division is proper, it should be apparent to a less emotional observer that Hoover belonged to neither class. The *Baltimore Evening Sun* states the case aptly when it suggests that the Hoover Administration will be remembered as one of those eerie scenes in a musical comedy in which the stage is illuminated with a pale green light, and fantastic figures move among unearthly surroundings to the sound of weird music. Certainly there never was anything like it before, and if history has any lesson to teach there will be nothing like it

again. Already it recedes into the past with all the unreality of a bad dream. Who were these people who for four years controlled the government of the United States? Where did they come from? Was there actually a Doak, a Hurley, a Wilbur, a Hyde, a Dolly Gann, a Richey (or Ricci), a Jahncke, a Joslin? Did we really hear such slogans as "prosperity is in sight," and "business has turned the corner"? Did men in responsible positions mumble about "rugged individualism" and refuse to act while millions of Americans slowly starved? We know it happened, but I venture to say that no lapse of time will make it seem more rational.

* * * * *

THE compulsion to speak well of the politically dead has no force with me, and I deem it significant that the most eloquent obituaries pronounced over the late Great White Feather afford not a single grain of new information upon which to render a more favorable verdict. White's is a fair sample of the rest. All of them are characterized by the same moony unreality, the same incoherent babbling about an undefined and undefinable idealism, the same entranced obliviousness to established fact, that characterized the public utterances of their subject. Thus, it is stated that Mr. Hoover was "never at heart a plutocrat"—although he signed the Grundy tariff and has praised it ever since. It is said that his "deep conscientiousness" forbade him to use the tricks which politicians employ—although it did not prevent

him from releasing the Wickersham report with a summary which flagrantly misrepresented its content. At heart, we are told, he really was a progressive—although he vetoed the Muscle Shoals bill, and never raised a finger to speed the submission of the lame-duck amendment. But what about his humanity? One of his stubbornest fights was waged to keep *human food* out of a drought-relief bill. In the face of mounting unemployment he used every resource at his command in opposition to the Wagner bills which would have prevented a large part of it. Nevertheless, one sentence in White's epitaph impresses me by its restraint. He says: "The picture of the President walking his lonely way on the path of duty needs a little retouching, a few dark strokes, to make it human." Yes, "a few dark strokes" will be needed to "make it human" to those who saw his cavalry, his infantry, his tanks, and his machine-gunners move on Anacostia plain the night of July 28, against the thousands of unarmed men, women, and children huddled there in their damp hovels, confidently believing that a kind government would never drive them out. "Human!" A woman who was to have a child in a month had a tear-gas bomb tossed into her lap. A Negro whose only offense was to stand in his back yard was beaten to the ground and dragged away. A nine-year-old boy who went back for his pet rabbit got a bayonet through his hip. And all this was done to show the country that there was a government in Washington which would "protect property."

The American Legion Versus America
